FOREWORD

THE RECORD of the world for the calendar year 1948 is replete with important happenings and developments. The "cold war" between the U.S.S.R. and the western world continued; President Truman won the Presidential election in the United States; Burma became independent, and Mohandas K. Gandhi was assassinated in New Delhi, India; Great Britain's mandate in Palestine ended, and the state of Israel was proclaimed; the European Recovery Program (Marshall Plan) went into effect; Queen Wilhelmina of the Netherlands abdicated and was succeeded by her daughter, Princess Juliana; a son was born to Princess Elizabeth of England; the Republic of Ireland Bill was signed by President Seán T. O'Kelly; and, late in the year, the Prime Minister of Egypt, Nokrashy Pasha, was assassinated.

The editor wishes to express his sincere thanks to all the contributors. Many of them are already well-known to the readers of the YEAR BOOK, and need no introduction here. Among the writers contributing to THE NEW INTERNATIONAL YEAR BOOK for the first time are: Miss Edna H. Barr, U.S. State Department, who prepared the article on SOUTH PACIFIC COMMISSION; The Rev. Henry G. J. Beck, VATICAN CITY; Dr. Eugene M. Blake, Clinical Professor of Ophthalmology, Yale Medical School, OPHTHALMOLOGY; Dallas S. Burch, VETERINARY MEDICINE; Rabbi Abraham Burstein, JUDAISM; Dr. Edwin S. Calverley, ISLAM; Dr. G. Brock Chisholm, WORLD HEALTH ORGANIZATION; Miss Jane Collins, of the R. H. Macy Advertising Department, FASHIONS; William J. Cronin, MOTOR VEHICLES; William B. Dall, Managing Editor, *Textile World*, TEXTILES; Dr. Ed. F. Degering, of the Department of Chemistry, Purdue University, CHEMISTRY AND CHEMICAL TECHNOLOGY; Norris E. Dodd, FOOD AND AGRICULTURAL ORGANIZATION;

Also: Mrs. Dorothea Seelye Franck, AFGHANISTAN, ARAB LEAGUE AFFAIRS; IRAQ; ISRAEL; TURKEY, and others; Miss Ellen Hammer, FRENCH INDOCHINA; John M. Hayes, of Purdue University, BRIDGES; Daniel Z. Henkin, NAVAL PROGRESS; Matthias Hollander, AVIATION, MILITARY; Dr. W. E. Howland, of Purdue University, AQUEDUCTS, DAMS, FLOOD CONTROL; SANITATION; WATER SUPPLY AND SANITATION; Dr. B. Hunningher, of Columbia University, NETHERLANDS LITERATURE; Brother Alexander Joseph, Ph.D., ROMAN CATHOLIC CHURCH; MacEdward Leach, FOLKLORE; Carl F. Bartz, KOREA; Prof. Raymond F. Mikesell, SAUDI ARABIA; E. C. Moore, AGRICULTURAL RESEARCH ADMINISTRATION; Frank Neumann, SEISMOLOGY;

Also: Bruce R. Prentice, General Electric Company, NUCLEAR ENERGY; Miss Frances McReynolds, U.S. Department of State, CARIBBEAN COMMISSION; Dr. Marc Slonim, RUSSIAN LITERATURE; Dr. William Solzbacher, ESPERANTO; Dr. Ralph Stooddy, THE METHODIST CHURCH; Prof. F. W. Stubbs, of Purdue University, CONSTRUCTION; Dr. Leon Edgar Truesdell, POPULATION; Dr. Halbert L. Dunn, VITAL STATISTICS; K. B. Woods, Purdue University, ROADS AND STREETS; T. Cuyler Young, Princeton University, IRAN. To Ronald Stuart Kain, M.A., the foreign affairs editor on previous issues (1930-44) of THE NEW INTERNATIONAL YEAR BOOK, the editor extends his appreciation and thanks for the article on INDONESIA.

The editor also wishes to express his gratitude to the many representatives of Federal, State, and foreign governments, to the heads of the numerous educational and cultural institutions, to Mr. Robert W. Voorhees (Manager of the Funk & Wagnalls Editorial Department), and to the members of the YEAR BOOK Editorial Staff (especially to Miss Gudlaug Kjörsterud-Randby and Mr. Gerald Gottlieb) for their unstinted help and generosity which have made possible the completion of this volume. In conclusion, the editor extends his thanks to Miss Catherine Hayes, of the Funk & Wagnalls Advertising Department, for her timely aid in securing expert contributors for a number of important articles in this YEAR BOOK.

THE NEW INTERNATIONAL YEAR BOOK 1948

ACADEMY, French (Académie Française). The oldest of five academies which make up the Institute of France and officially considered the highest; founded in 1635. The membership is limited to 40. The list of Immortals in 1948, in order of their election, was as follows: 1919—Henry-Camille Bordeaux; 1920—André Louis Chevrillon; 1924—Georges Lecomte; 1925—Duc de la Force; 1927—Mathieu Emile Mâle and Louis Madelin; 1930—André Chaumeix; 1931—Pierre Benoit and Maxime Weygand; 1933—François Mauriac; 1934—Duc de Broglie and Léon Bérard; 1935—Claude Farrère and Georges Duhamel; 1936—Edmond Jaloux, Maurice Genevoix, Admiral Lacaze, Georges François Marie Grente, and Jacques de Lacretelle; 1938—André Maurois and Jérôme Tharaud; 1944—Prince de Broglie, Pasteur Vallery-Radot, and André Siegfried; 1945—Edouard Le Roy and Émile Henriot; 1946—Baron Seillières, Jean Tharaud, René Grousset, Edouard Herriot, René d'Harcourt, Paul Claudel, Maurice Garçon, Comte Charles de Chambrun, Maurice Pagnol, Henri Mondor, Jules Romains, and Etienne Gilson.

ACADEMY OF ARTS, Royal. The Royal Academy of Arts, founded by King George III in 1768, is maintained, through the public support of its exhibitions, for the promotion of the Fine Arts. The membership consists of 40 Academicians and 30 Associates, elected by ballot by the members from among the outstanding painters, sculptors, architects, and engravers practising in Great Britain.

During 1948 the Royal Academy continued to hold till March an exhibition of Art, chiefly from the Dominions of India and Pakistan; its 180th Summer Exhibition (May 1–August 8); and two autumn exhibitions of Design for Industry and of past students of the Royal College of Art.

Officers of the Royal Academy for 1947 were: President and Trustee, Sir Alfred J. Munnings; Keeper, Philip Connard; Treasurer and Trustee, E. V. Harris; Trustees, Sir William Reid Dick and W. Russell Flint; Secretary, Sir Walter R. M. Lamb. Headquarters: Burlington House, London, W.1, England.

ACADEMY OF ARTS AND LETTERS, American. A society founded in 1904 by members of the National Institute of Arts and Letters. Membership is limited to 50, vacancies being filled by elections from the membership of the Institute.

On May 21, 1948, a Special Meeting of the Academy was held, followed by the seventh Public Ceremonial given jointly with the National Institute of Arts and Letters at which new members of

the Academy and Institute were inducted, fifteen \$1,000 "Arts and Letters" grants given, and medals awarded. An exhibition of works by newly elected members of both organizations, and Grantees in Art, was opened on the same day in the Art Gallery, and continued through June 30. On November 23 the Annual Meeting of the Academy was held at the Academy Building.

The membership as of November, 1948, consisted of the following, in the order of their election: Bliss Perry, Archer Milton Huntington, James Earle Fraser, Robert Frost, James Truslow Adams, Adolph Alexander Weinman, Walter Damrosch, Anna Hyatt Huntington, Paulanship, Eugene O'Neill, Henry Dwight Sedgwick, Walter Lippmann, M. A. De Wolfe Howe, Frank Jewett Mather, Jr., Deems Taylor, Van Wyck Brooks, Herbert Putnam, William Adams Delano, Charles Warren, Bernard Berenson, Chauncey Brewster Tinker, Albert Spalding, Sinclair Lewis, Thornton Wilder, Edna St. Vincent Millay, Carl Sandburg, Agnes Repplier, Charles Hopkinson, Eugene Speicher, Henry R. Shepley, John Alden Carpenter, John Sloan, Barry Faulkner, Edward W. Redfield, Gifford Beal, Frederick Law Olmsted, Ernest Bloch, John Marin, Douglas Southall Freeman, Robinson Jeffers, Lee Lawrie, Archibald MacLeish, Gilmore D. Clarke, John Dos Passos, Mahonri Young, John Taylor Arms, William Faulkner, John Steinbeck, Leon Kroll, and Mark Van Doren.

Officers (elected in 1948): President, Paul Man- ship (Walter Damrosch retired in March, 1948); Chancellor and Treasurer, James Truslow Adams; Secretary, Archibald MacLeish. Administrative offices: 633 West 155th St., New York 32, N.Y.

ACADEMY OF SCIENCE, Finnish (Suomalainen Tiede-akatemia). The Finnish Academy of Science was founded in 1908 for the purpose of furthering the advancement of scientific research. Membership totals 105 academicians for the two sections: Mathematics and Natural Sciences, and Humanities. There are also 12 honorary members and 39 corresponding members. Officers for 1948–49 are: President, Yrjö Ilvessalo; Secretary General, Emil Öhman. The Academy publishes *Annales Academiæ Scientiarum Fennicæ* (Series A and B), *Documenta Historica, Communications* (Folklore), and *Proceedings*. Headquarters: Säätytalo, Helsingfors, Finland.

ACADEMY OF SCIENCE AND ART, South African (Suid-Afrikaanse Akademie vir Wetenskap en Kuns). Founded in 1909 for the advancement of the Afrikaans language, literature, arts, science, and technology.

Membership: 600. Officers until 1949: Dr. J. K. Marais, Chairman; Dr. S. H. Pellissier, Vice Chairman; Dr. F. C. L. Bosman, Secretary; I. M. Lombard, Treasurer. Five awards were made during the year 1948. The annual meeting of the Academy will be held in July, 1949, in Pretoria, South Africa. Headquarters: Engelenburg House, Hamilton St., Pretoria, South Africa.

ACADEMY OF SCIENCES, French (Académie des Sciences). One of the five Academies which comprise the Institute of France; founded by Louis XIV in 1666. Membership consists of 96 Members, 12 foreign associates, and 111 correspondents. Officers for 1949 are: President, Charles Jacob; Vice President, Gaston Julia. Permanent Secretaries, Louis de Broglie (Mathematical Sciences) and Robert Courrier (Physical Sciences). The yearly meeting at which prizes and awards are announced takes place in December. The Academy publishes *Comptes Rendus* and *Mémoires*. Headquarters: 23 Quai Conti, Paris 6^e, France.

ACADEMY OF SCIENCES, Royal Netherlands (Koninklijke Nederlandsche Akademie van Wetenschappen). The Royal Netherlands Academy of Sciences was founded in 1851 as an advisory body to the government in scientific matters and as a connecting link between scholars in Holland and abroad. Membership is limited to 50 ordinary, 25 foreign, and 20 corresponding for each of the two sections of the Academy: Sciences and Arts. Library: 200,000 volumes.

The Academy publishes a *Yearbook*; the Section for Sciences issues reports, proceedings, transactions, and *Indagationes Mathematicae*; the Section for Art issues communications and transactions. Annual meeting of the Academy takes place in March or April and monthly meetings are held by each section, except during July and August. On Oct. 30, 1948, the Lorentz Medal was awarded to Professor Dr. H. A. Kramers, Academician since 1929.

Officers for 1949-50 are: President, Dr. A. J. Kluyver; General Secretary, Dr. M. W. Woerdenman; Executive Secretary, M. E. 't Hart; Librarian, R. O. Spanier; President, Section of Sciences, Dr. A. J. Kluyver; President, Section of Arts, Professor E. M. Meyers.

ACADEMY OF SCIENCES, Royal Swedish (Kungliga Svenska Vetenskapsakademien). The Swedish Royal Academy of Sciences was founded in 1739 for the promotion of research, especially in the fields of mathematics and the natural sciences. Membership: 140 academicians; 108 foreign members. Officers for 1948-49: President, Gunnar Holmgren; Vice President, Rob. E. Fries; Permanent Secretary, Arne Westgren; Vice Secretary, T. G. Halle. The Academy publishes: *Proceedings*, eight *Archives* (Mathematics, Astronomy, Physics, Chemistry, Botany, Geology, Zoology, and Geophysics), *Yearbook*, *Annals*, Biographies and Dissertations. Headquarters: Stockholm 50, Sweden.

ACADEMY OF SCIENCES AND LETTERS, The Royal Danish (Kongelige Danske Videnskabernes Selskab). The Academy was founded in 1742 for the purpose of promoting the historical, physical, mathematical, and philosophical sciences. Membership includes 28 academicians in the Section of Letters and 44 academicians in the Section of Sciences. In addition there are 140 foreign members. The Academy publishes *Oversigt* (annual), *Meddelelser* (Communications), and *Skrifter* (Memoirs). Officers of the Academy are: President, Dr. Niels Bohr; Sec-

retary, Dr. Jakob Nielsen; Treasurer, Dr. Mathias Thomsen; Editor, Dr. L. L. Hammerick. Headquarters: Dantes Plads 35, Copenhagen V, Denmark.

ACCIDENTS. There were approximately 81,200 deaths from accidents in the United States during the first ten months of 1948, or 2 percent fewer than occurred in the same months of 1947. The decrease was limited to six months, as shown by the following estimates, made by the National Safety Council.

Month	1948	1947	% Change
January.....	8,100	8,400	-4
February.....	7,600	7,500	+1
March.....	7,700	8,000	-4
April.....	7,700	8,200	-6
May.....	7,700	8,100	-5
June.....	8,400	8,600	-2
July.....	8,700	8,600	+1
August.....	8,900	9,200	-3
September.....	8,100	8,100	0
October.....	8,400	8,100	+4
10 Months.....	81,300	82,800	-2

With accidental deaths in 1948 numbering about the same as in 1947, it is probable that they retained their position as fourth in the list of leading causes of death. In 1947, according to data from the National Office of Vital Statistics, the highest U.S. death rates per 100,000 population were: Heart disease, 321.2; cancer, 132.4; cerebral hemorrhage, 91.4; and accidents, 69.4.

Motor-Vehicle Accidents. There was considerable variation in the 1947-48 trend of motor vehicle deaths from month to month, starting with a 12 percent reduction in January, followed by decreases of 3, 5 and 7 percent in the next 3 months. In May there were 4 percent more deaths than in 1947; in June, the same number as in June, 1947. July and August saw small decreases, but in September and October the death totals were 4 percent and 8 percent respectively above 1947.

The 10-month death total was estimated at 25,720, or 1 percent less than the comparable total for 1947.

The death rate based on vehicle mileage was 7.7, a decrease of 8 percent from 1947, and 33 percent from 1941. It was, in fact, the lowest 10-month death rate on record.

Ten-month reports of 452 cities with more than 10,000 population showed a 7 percent decrease in deaths from 1947. Although this is not the complete urban experience, it suggests that deaths from accidents in rural areas may have numbered somewhat more than in the first ten months of 1947.

Regional changes in the 10-month death totals were:

North Atlantic.....	-5%	South Central.....	+1%
South Atlantic.....	-5%	Mountain.....	+8%
North Central.....	+2%	Pacific.....	-11%

Public Nonmotor-Vehicle Accidents. The 1948 10-month total of deaths in public accidents not involving motor vehicles was approximately 14,600. This was 6 percent less than the total for the same months of 1947. Most types of accidents showed some decrease, with the largest reductions recorded for burns, aviation accidents, and drownings. However, there were more fatal falls than in 1947, and more deaths in water transportation accidents.

All age groups below 65 years shared in the decrease in deaths. Among persons 65 years old and

older there was a substantial increase, largely in fatal falls.

Occupational Accidents. Deaths from occupational accidents in the first ten months of 1948 numbered approximately 13,600, or 6 percent fewer than occurred in the same months of 1947. About half of the decrease came from the fact that the 1947 total included two major disasters—the Texas City ship explosions, and the Centralia, Ill., coal mine explosion. However, even omitting the disasters, the decrease in 1948 was sizable.

Non-fatal injury rates decreased, according to reports of plants in accident-prevention contests. In one group of contests the average frequency rate went down 3 percent; in another group, 13 percent.

Home Accidents. During the ten months there were approximately 28,700 deaths due to home accidents, a 1 percent increase over the January-October total for 1947. Most types of accidents were more numerous than in the previous year, with the largest changes recorded for fatal burns and gas asphyxiations. Increases in mechanical suffocation cases and fatal falls were relatively small. These increases were partly offset by sizable decreases in deaths from poisoning and firearms accidents.

The 1947-48 trend varied considerably from one age group to another, with decreases almost balancing increases. There was a substantial rise in the death rate for children 5 to 14 years old, but an equally large decrease in deaths among young people 15 to 24 years old. Smaller decreases were noted for children under 5 years and persons 25 to 64 years old, which were more than offset by the increase in deaths of persons 65 years old and older.

—A. D. BATTEY

ADEN. A British crown colony on the southern tip of Arabia, about 100 miles east of the Straits of Bab el Mandeb. The island of Perim (5 sq. mi.; pop. 360 in 1946) and the five Kuria Muria Islands (pop. 70 in 1947) are also included in the colony. Total area: 80 square miles. Total population (1946 census): 80,876, of whom 9,456 were Indians, 7,273 Jews, and 365 Europeans. Chief towns: Aden (capital), 32,490 inhabitants (1931); Sheikh Othman, 12,167. Education (1947): 26 recognized schools with 5,705 students.

Aden has a fortified naval base and a large free port which serves as an entrepôt for trade with Arabia and other adjacent territories. Local products are salt (199,236 long tons, 1943), cigarettes, coffee, gums, dyes, spices, feathers, and cotton goods. Trade (1946-47): Rs207,715,257 for imports and Rs95,125,907 for exports. During 1946 the merchant shipping entering the port totaled 5,814,573 net tons. Finance (1946-47): revenue, Rs12,285,773; expenditure, 9,869,652. The colony is administered by a governor, aided by an executive council (4 members in 1947) and a legislative council. Governor: Sir Reginald S. Champion.

ADEN PROTECTORATE. The region in southern Arabia extending east, north and west of the colony of Aden. Area: 112,000 square miles. Estimated population, 600,000, mostly Arabs. The Protectorate is divided into: (1) Western Aden Protectorate, comprising 19 sultanates of which the premier chief is the Sultan of Lahej; (2) Eastern Aden Protectorate, comprising the Hadramaut (made up of the Qu'aiti State of Shihr and Mukalla, and the Kathiri State of Seyun), the Mahri Sultanate of Qishn and Socotra, the Wahidi Sultanates of Bir 'Ali, and the Sheikdoms of Irqa and Haura. The

Sultan of Shihr and Mukalla is the premier chief in the Eastern Aden Protectorate. The island of Socotra (1,400 sq. mi.; pop. 12,000, capital, Tamarida), lies 150 miles eastward of Cape Guardafui, Africa. Education (1945): 41 schools and 3,666 students.

The people are mainly agricultural, the chief crops being corn, bulrush millet, and Indian corn. Other crops are sesame, lucerne, dates and coffee. Fruits and honey are produced in a few areas. The only industries are weaving, dying and charcoal-burning. There are large numbers of sheep, goats, and cattle. The local rulers have protective treaty relations with Great Britain and manage their own affairs subject to the supervision by British officials, under the Governor of Aden.

ADMIRALTY ISLANDS. A group of islands (Manus is the largest) in the United Nations Trust Territory of New Guinea, of which it forms the Manus district. Total area: 800 square miles. Population (June 30, 1941): 14,234 natives. Capital, Lorengau (on the island of Manus). Coconuts are the principal crop. There are also valuable pearl fisheries.

ADVENT MOVEMENT. A religious movement which originated in America with William Miller (1782-1849), who believed in the imminent, personal second coming of Christ.

Seventh-day Adventists. The largest of the five Adventist bodies, with 2,750 congregations, 2,467 ministers, 11,051 other workers, and 228,179 members in the United States and Canada. There are 1,338 foreign missionaries and 20,379 national workers who through 12 world divisions serve 400,415 members overseas. The world church maintains 290 colleges and academies and 3,474 elementary schools with 170,295 students and 8,444 teachers. The church also operates 177 benevolent institutions and 49 publishing houses. Income from home and overseas contributions (1947), \$38,978,496; value of all church properties, \$138,440,570. There were 14,455 baptisms in North America and 40,260 overseas in 1947. Headquarters: Takoma Park, Washington 12, D.C.

ADVERTISING. Advertising, in its broadest sense, includes all forms of commercial expression that are intended to influence special groups or large masses of people to purchase specific products or to accept specific ideas that are calculated to advance some specific interest or advantage of the advertiser.

According to the advertising trade publication, *Printers' Ink*, approximately two percent of our 1948 national income of \$215,500 million has been invested in advertising. That means an expenditure exceeding \$4,000 million, which is the largest amount that business and industry has ever spent in its effort to sell goods or to otherwise influence people.

That record 1948 advertising expenditure was made in the face of many business uncertainties. The continuation of enormous drains on our national economy by European and Asiatic countries and by an otherwise expanding national budget, coupled with labor's drives for higher wages and industry's requirements for higher prices, has contributed to an inflationary condition tending to increase a consumer indifference to buying that, in the latter part of the year, was making itself felt in many trade channels.

The war-created shortages of most consumer goods have been made up, the pipe-lines of supply

are again full, and competition for the consumer's dollar has increased steadily throughout the year. The general effect of these changes on advertising has been an intensified search on the part of advertisers for the most favorable means of realizing greater returns from their advertising appropriation. Their selection of media has become more highly critical. Copy and techniques of presentation have acquired a much sharper selling edge. More attention is being paid to pretesting the effectiveness of individual advertisements before releasing them on full-scale campaigns.

Television. The most conspicuous advertising development during 1948 has been in television. According to one of the leaders in the radio industry, "Television's repercussions within three, or four, or five years will have a more profound effect upon the social, economic, and educational life of the United States than the automobile had in its first twenty years."

The following figures afford some indication of the trend behind that statement. In 1946, there were 6,485 home television receivers in the United States; in 1947, there were 178,571. By the end of 1948, it is estimated that 750,000 homes were covered and, according to the Television Broadcasting Association, there will be 1,106,000 home receivers by the close of 1949. In October, 1948, there were 37 television stations on the air, 86 in process of construction; and the Federal Communications Commission had applications on file for 302 more.

Although the impact of television on radio and on other advertising media is already beginning to make itself felt, it is likely that this brilliant new mass medium will build a niche of its own without too swiftly revolutionizing the positions of radio, newspapers, or consumer magazines.

Radio Advertising. In 1922, the number of homes owning radio sets was negligible. In 1948, there were estimated to be 73 million radio sets in use, including coverage of 37 million homes. Nearly every American family with spending power—the consumer advertiser's objective—has a radio. These listeners were served by 1,962 broadcasting stations. The 1947 advertising investment in radio time, talent, and production costs amounted to over \$530 million. This compares with an expenditure of \$200 million in 1940.

Magazine Advertising. Despite the great growth in radio advertising expenditures, both general magazines and newspapers not only appear to be holding their own, but to be expanding their claims for advertising volume. The final 1947 dollar volume for national magazine advertising as computed by the Publishers Information Bureau was slightly more than \$442 million. This compares with a *Printers' Ink* figure of \$430.4 million for 1946. The Magazine Advertising Bureau estimates a 1948 dollar volume of \$450 million, thus maintaining an upward trend, though at a slightly decelerated rate.

During 1948, *Printers' Ink* published an interesting table showing the course of magazine circulation development from 1905 to 1947, as follows:

COMBINED MAGAZINE CIRCULATIONS

Year	Mail Order	Women's	General
1905.....	23,000,000	5,000,000	10,000,000
1920.....	12,000,000	22,000,000	23,000,000
1930.....	7,000,000	26,000,000	41,000,000
1947.....	36,000	27,000,000	103,000,000

Newspaper Advertising. Newspapers will show a 1948 national advertising total estimated at \$434 million. This is the third consecutive all-time high

and compares with the 1947 expenditure of \$369 million, according to the Bureau of Advertising, American Newspaper Publishers Association. In 1947, there were 1,769 daily newspapers in the country, with a combined circulation of 51,673,276. In 1940, the last full year before the war, there were more daily newspapers, 1,878 to be exact, but the total combined circulation was less, only 41,131,611.

Business Paper Advertising. For the last ten years, the volume of advertising in business and industrial publications has exhibited an unchecked growth. In 1938, the dollar volume was approximately \$58 million; in 1947, it was \$196 million. Partial figures for 1948 indicate a continuance of that upward trend in dollar volume, although actual use of space had decreased somewhat.

Although the business paper share of the country's \$4,000 million total advertising investment is small, the effectiveness of these publications as expeditors of information at the grassroots of our economy is great, and the volume of transactions fostered by business paper advertising is out of all proportion to its low cost.

Direct Mail. The use of the mails for sales letters, brochures, bulletins, booklets, catalogs, and other commercial forms of the printed word not appearing in regular publications very nearly equals in expenditure, if it does not actually exceed, radio's \$530 million. In 1936, expenditures for direct mail advertising were \$266 million; in 1946, \$279 million; in 1947, \$483 million; and in the first nine months of 1948, they were 30 percent over the first nine months of 1947.

Space does not permit recording the conditions and trends affecting and affected by other forms of advertising, such as outdoor signboards, car cards, packaging, premiums, films; nor to discuss the growth of the public and employee relations ideas that business and industry are implementing with increasing expenditures. However, such facts as have been presented suggest the importance that business and industry attach to the use of advertising in its various forms as a selling and opinion-molding tool, increasing as competition becomes sharper and business organizations fight to hold their individual and collective spots in the economic sun.

The problem of distributing the products of industry to the 140-odd million people who inhabit the cities and towns and hamlets and farmlands of America is a problem not only of making those products easily available but of making them known to the greatest possible number of individuals who are likely to be interested in their purchase and use. Advertising is the means of dispersing that information throughout the land.

—J. R. VAN ARSDALE

ADVISORY COMMITTEE ON VOLUNTARY FOREIGN AID.

A committee, established on May 15, 1946 by letter from the President to the Secretary of State and the Secretary of Agriculture, to tie together the Governmental and private programs in the field of foreign relief and to facilitate the organization of voluntary relief resources at home and their administration abroad. It is an advisory and expediting body, successor to the President's War Relief Control Board. There are six committee members: Charles P. Taft (Chairman), William Batt, Dr. William I. Myers, Lessing J. Rosenwald, Dr. Joseph P. Chamberlain, and Francis P. Matthews.

The Committee registers United States voluntary nonprofit relief agencies. These agencies file with the Committee their programs, budgets, financial

statements, and reports of relief exports for public inspection. Based on this information, the Committee formulates policies and procedures to facilitate the operations of the agencies in relation to the controls in the foreign field of the Departments of State, Treasury, Justice, Agriculture, Commerce, and Army, the Economic Cooperation Administration, the International Refugee Organization, and the International Children's Emergency Fund of the United Nations.

Assistance in relief and rehabilitation given by the American people through the voluntary agencies is supplementary to the programs of the United States Government and the United Nations organizations. The value of this assistance sent abroad by agencies registered with the Advisory Committee on Voluntary Foreign Aid during the fiscal year 1948 was \$130,950,301.

—CHARLES P. TAFT

AEGEAN ISLANDS. The islands in the Aegean Sea, near Turkey in Asia. Formerly (1912-14) under the rule of Italy, the islands were officially incorporated in the kingdom of Greece, Mar. 7, 1948. The award was confirmed in the terms of the Peace Treaty between the Allied Powers and Italy, signed at Paris on Feb. 10, 1947, and which came into force at midnight, Sept. 15, 1947. Included in the islands are the Dodecanese (Astropalia, Casos, Lipso, Nisyros, Patmos, Symi, Tilos), Rhodes, and Castelrosso. Total area: 1,035 square miles. Total population (1947 census): 115,913.

Production. Among the agricultural products are grapes, olives, tobacco, oranges, and vegetables. The main industries are sponge fishing, and the manufacture of tobacco, wine, olive oil, oriental carpets, and artistic pottery and tiles. Governor General: Dr. Nicholas Marvis.

AFGHANISTAN. A kingdom in central Asia. Area: 251,000 square miles. Population, according to the latest estimate, 12 million. Chief towns: Kabul (capital) 800,000 inhabitants, Kandahar 100,000 (including suburbs), Herat 160,000, Mazar-i-Sharif 50,000. Afghanistan has an extreme width from the northeast to the southwest of 700 miles, and its length from the Khyber Pass to the Herat frontier is about 600 miles.

Religion and Education. Most of the people are Moslems of the Sunni sect, though there is a minority of a million Shiah Moslems. Persian and Pashto are the principal languages. The legal system is based partly on the Shariat (Moslem laws), and partly on secular Western law.

In 1947 there were 329 primary schools, 49 secondary schools, and 12 technical schools and colleges, four of which form Kabul University, established in 1932. Primary education is compulsory. All schooling is at Government expense. Recently teachers have been brought from the United States, France, and Austria, and government students went abroad to study in the United States and elsewhere. The Education Ministry plans expanded secondary and college facilities.

Production. Agriculture and stock raising are the chief occupations, the main products being cereals, fruits, nuts, vegetables, cotton, wool, hides and skins, and meat from the native fat-tailed sheep. The mineral resources include iron, copper, lead, gold, silver, lapis lazuli, coal, manganese, beryl, and chrome. Although production is below capacity, the early development of mineral deposits is planned. More than 50 corporate business firms (shirkats) with capital ranging from 10 to 350 million afghanis (\$25 million), produce boots, mili-

tary clothing, furniture, matches, buttons, leather, soap, cotton goods, and wool products. Arms and ammunition are state-manufactured.

Foreign Trade. Commerce is mainly with the United States, which takes three-fifths of all exports (primarily karakul fur), India, and the U.S. S.R. Chief exports are: fruits, nuts, timber, spices, cotton, carpets, wool, and furs. Cotton textiles, machinery, gasoline, kerosene, sugar, motor vehicles, and tea are the main imports, coming primarily from the United States and India. Total commercial exports and imports have averaged 1,500 million afghanis annually (\$107 million). During 1947-48 purchase contracts with Japanese and German firms were concluded and the Soviet trade agreement renewed. Negotiations have been begun for a commercial treaty with India.

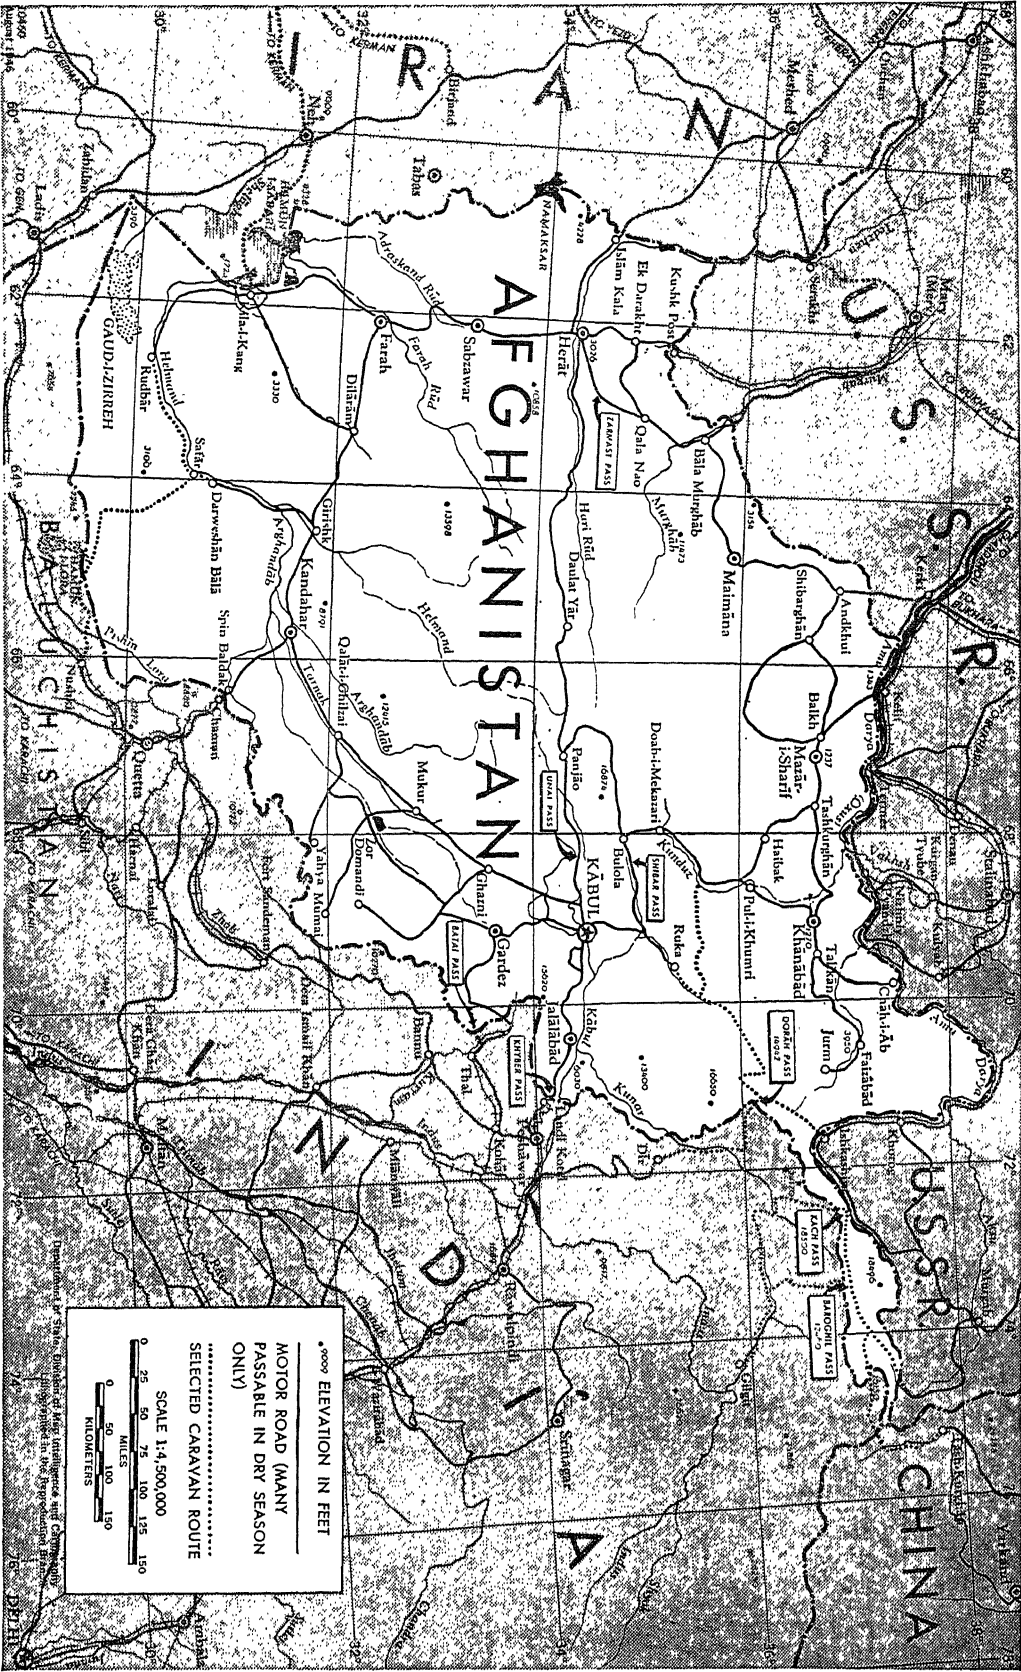

Finance. Government revenues have been increasing sharply. The regular 1947 budget exceeded 400 million afghanis (\$28.5 million). Revenues are derived one-third from export and import tariffs, one-third from cattle, income and land taxes, and one-tenth from governmental commercial transactions and investments, and taxes on monopolies (sugar, petroleum products, and automobiles). Deficit financing through central bank loans was negligible. The Bank Millie Afghan (National Bank of Afghanistan), a large commercial and traders bank, promotes many industrial and commercial enterprises. The Da Afghanistan Bank, operating a note issuing and banking department, is responsible for a stable money system and helps the Finance Ministry control foreign exchange. The paper currency is backed by a substantial gold, silver, and foreign exchange reserve.

Transportation. Afghanistan has no railways and practically no navigable rivers. Four thousand miles of roads are suitable for motor transport in dry weather, and trucks are increasingly replacing pack animals as the chief means of transportation. There is an all-weather motor highway from Kabul to Peshawar, India; a 500-mile motor route from Stalinabad, Soviet Turkestan, to Khorog on the Afghan border; and a trade route linking Kandahar to the Indian railroad at Chaman. Telephones are installed in most of the towns. There is a government-operated radio service.

Government. Under the Constitution of Oct. 31, 1931, Afghanistan is a constitutional monarchy, with legislative power vested in the King, a Senate of 45 members nominated for life, and a National Assembly of 138 elected members. From time to time the Great Assembly (Loe Jirga) of about 1,200 delegates convenes to decide important issues, including war and the king's election.

The reigning king, Mohammed Zahir Shah, succeeded his father after the latter's assassination in 1933. His father's proclamation of the new Constitution was accompanied by a statement reaffirming the abolition of slavery and forced labor first outlawed in 1908. A stabilized central Government and strengthened provincial administration have supplanted the royal family's earlier patriarchal rule over the loosely federated tribes.

Events, 1948. During the year there was an increase in exchange with the United States of teachers, students, and experts. The election of a new Kabul city administration produced significant economic and civic changes. Increased participation in UN (United Nations) affairs was evidenced by attendance at the Conference on Trade and Employment, and by membership in the World Health Organization (WHO) and UNESCO—out of whose November conference

developed plans for a 1949 UNESCO educational survey of Afghanistan.

An agreement between the U.S.S.R. and Afghanistan was ratified at Tashkent on Oct. 31, 1948, fixing the frontier between the two countries. No details were made public.

Economic Development Plan. The government in cooperation with the Banke Millie Afghan (National Bank of Afghanistan), business leaders, and United States and East Indian engineering firms, implemented an economic development plan providing chiefly for road-building and the cultivation and reclamation of much cultivable land through irrigation and modernization of agricultural techniques. Increased crops, some for export, would include cotton, fruits, vegetables, sugar beets, and grains. The plan includes the expansion of the cotton textile industry and electric power stations, and the erection of building-material plants. Total investments were estimated at \$120 million over a 5-year period. Forty percent was to be furnished by business, the remainder by special government loans and foreign exchange reserves.

—DOROTHEA SEELYE FRANCK

AFRICA. The second largest continent, situated in the eastern hemisphere. Area, about 11,710,000 square miles (30,330,000 square kilometers). Population (Jan. 1, 1940, estimate), 157,900,000. See the separate articles on its subdivisions, countries, and territories, such as ALGERIA, EGYPT, ETHIOPIA, KENYA, MOROCCO, FRENCH MOROCCO, SPANISH SOUTH AFRICA, UNION OF TUNISIA.

AGRICULTURAL COOPERATION. Farmers' marketing and purchasing cooperatives, although remaining about the same in number, experienced an increase in their membership and volume of business during 1947.* The number of associations which includes independent local associations, federations, large-scale centralized associations, and sales agencies totaled 10,125, of which 7,268 were predominantly marketing associations and 2,857 were purchasing associations. The total membership in these two groups was 5,436,000, compared with 5,010,000 a year earlier. This membership, however, does not represent the actual number of cooperating farmers since many are members of more than one association. The combined business of these two groups was \$7,116,000,000 for 1946-47 as against \$6,070,000,000 for the previous year. The increase in dollar volume reflects advancing price levels.

Grain cooperatives continued in first place in volume of business. There was a slight decrease in number of associations but substantial increases in membership and volume. Both local and regional cooperatives continued to enlarge elevator facilities and to install new equipment to speed up the handling of grain. They have continued to build up reserves and to improve their financial position.

Dairy cooperatives held second place in the value of sales, showing a substantial increase over the previous year. In general, prices for dairy products were maintained during 1948. Erratic fluctuations, however, provided many inventory headaches for managers of both merchandising and fluid-milk bargaining associations. As a result, milk bargaining and merchandising associations in several areas attempted to devise new means to increase production during the fall and winter months and thus stabilize prices.

Fruit and vegetable cooperatives ranked third

in sales volume. Achievements during the year were characterized by economies of operation and the adoption of improved procedures and merchandising practices. These were prompted by increased costs of labor, materials, equipment, transportation, and other items, coupled with sharp reductions in prices received for many fruits and vegetables. Failure to reestablish exports in the volume anticipated was also felt keenly. Fruit and vegetable cooperatives continued to make progress in processing, and are gradually becoming more active in the packing of fresh products in consumer-size packages.

Livestock cooperatives ranked fourth in the marketing field. The main expansion took place at country points through the establishment of decentralized and localized services for marketing livestock. In some states, there are now as many as 25 points where farmers can market livestock cooperatively. Interest in the cooperative processing and rendering of inedible products continued. Several cooperatives handling wool constructed new warehouses and expanded the service of grading and appraising wool in the producing areas.

Cooperative cotton gins increased in number, particularly in the lower Rio Grande Valley of Texas. Generally, cooperative gins are increasing in size, installing improved cleaning and drying equipment, expanding their services by handling farm supplies, extracting cottonseed oil, and distributing cottonseed. Cooperative cottonseed- and soybean-oil mills are showing increased interest in the new solvent oil extraction process.

Cooperative marketing of poultry products moved along at a steady pace in most instances. A few new associations were organized in 1948 but existing cooperatives are responsible for most of the development. Broiler processing cooperatives experienced difficulties during the past year due mainly to lack of experience, heavy investments for building and equipment, strong competition, and the relative instability of this industry. Turkey marketing cooperatives have continued efforts to create a market for turkeys throughout the year.

Tobacco producers continued to use the services of their cooperative stabilization organizations as agencies to obtain production loans and to market tobacco. Rice producers continued to experience successful operations through their cooperative mills during 1948. Honey producers have been studying possibilities for organizing new marketing cooperatives in different sections of the country to help stabilize prices in those areas. Cooperatives handling dried beans in the West organized a central sales agency which handled 95 percent of their volume this year.

Purchasing cooperatives, in general, experienced their best year in 1948. A few cooperatives had less successful operations than in the previous year due mainly to excessive inventories and accounts receivable and increased competition. The principal development among cooperatives in the petroleum business was the purchasing of eight oil refineries during the year and the acquiring of sources of additional crude oil. Two cooperatives whose major business is petroleum now either own or control approximately 50 percent of their crude oil requirements.

Many new fertilizer mixing plants were built by cooperatives and several also constructed superphosphate acidulation plants. A federation of mid-western regional cooperatives acquired deposits of phosphate rock in Idaho and potash in New Mexico. Several purchasing associations continued the development of marketing services, particularly for

* Figures released by the Farm Credit Administration, Cooperative Research and Service Division in 1948 are for the year 1946-47.

grain, poultry, and eggs. The past year has in general been one of consolidation of gains by feed cooperatives; however, several built new mills. The cooperative manufacture and distribution of farm machinery made definite progress in 1948.

Frozen food locker associations constructed fewer additional plants during the year. High costs of construction and a reduced demand for lockers by patrons were a restraining influence. The associations continued to expand, however, and to diversify their services, particularly those of slaughtering and processing livestock and poultry.

The amount of insurance carried with the farmers mutual fire insurance companies reached an all-time high in 1948, while loss ratios and other costs remained less than average. Several new associations were organized by State Farm Bureaus. Farmers mutual telephone companies generally need a program of rehabilitation, and preliminary work in this direction is being undertaken.

About 850 rural electric cooperatives were supplying power to about two-fifths of the four million farms which had central station electric service on June 30, 1948. During the preceding 12 months, farm electrification increased from 61 percent to 68.6 percent of the nation's farms. More than half of this increase was accomplished by cooperatives financed with loans from the Rural Electrification Administration (REA). These electric cooperatives in 1948 provided service for several hundred thousand additional farms and also for approximately 100,000 other new rural consumers, including non-farm residences, schools, churches, commercial establishments, and rural industries.

During 1948 farmers in many sections of the country showed increased interest in the problems of rural health. Farmer cooperatives joined in health discussions and planning councils, contributed funds to build local hospitals and clinics, and helped finance the education of medical students. The growth of health cooperatives has been slow because of high building and operating costs, shortage of doctors and nurses, and lack of information by local people. Mutual health insurance plans, however, have expanded.

Cooperatives, as a group, entered into many activities designed to improve functional operations and to meet problems of membership and finance. Freight rates have increased about 50 percent since the end of 1946. To help reduce these costs and improve services, some cooperatives inaugurated transportation and shipping associations, or expanded those already operating. The National Council of Farmer Cooperatives set up a national agricultural cooperative transportation committee to serve as a clearing house for its members. Training programs for directors and operating personnel were instituted or expanded by many associations. More associations adopted employee insurance and retirement plans and improved welfare programs.

The large associations recognize the increased difficulty of keeping members informed and maintaining an attitude of ownership responsibility. Several issued informative booklets and all made full use of house organs and strove to increase attendance at annual and other meetings. State cooperative councils have been active in educational work—sponsoring clinics, publishing pamphlets, and getting information regarding cooperatives to the public. The American Institute of Cooperation has worked closely with educational groups, particularly teachers in high schools and colleges. Cooperatives have been interested in projects carried on under the Research and Marketing Act to improve marketing and utilization of farm products.

Increased farm operating costs were reflected in the increased volume of credit extended by the institutions supervised by the Farm Credit Administration during the year ended June 30, 1948. Total loans to farmers and their cooperatives amounted to nearly \$1,800 million compared with \$1,500 million in the previous year. The 503 production credit associations made loans totaling about \$850,000,000. These associations are making continued progress toward complete farmer ownership, the capital stock owned by Farm Credit agencies now being less than 25 percent of their total net worth. The 12 Federal Land Banks and the localized National Farm Loan Associations are now completely farmer-owned and their loans closed during the fiscal year ended June 30, 1948, were approximately \$140,000,000. The 13 banks for cooperatives serving 1,559 farmer cooperatives with a membership of 2½ million made loans totaling about \$547,000,000.

In summary, 1948 was, on the whole, a satisfactory year for farmers' cooperatives, with prices and demand generally stable. Farmers' equities in their cooperatives at the end of 1947 were almost \$1,000 million and there was a substantial additional increase during 1948. These equities, though assuming importance in the list of farmers' total assets, are still only a fraction of the total investment in farms and production facilities. Members and management have increased confidence in the value and stability of agricultural cooperatives. At the same time they are aware of the problems that must be met to maintain and increase the services cooperatives can provide for farmers in the United States.

—HAROLD HEDGES

AGRICULTURAL ECONOMICS, Bureau of. A Bureau of the U.S. Department of Agriculture created in 1922 by the merger of two existing units. It is the central statistical and economic research agency of the Department. It acquires, analyzes, interprets, and distributes economic information relating to agricultural production and distribution and to land utilization and conservation in its broadest aspects. It collects, compiles, analyzes, summarizes, and publishes extensive data relating to agriculture and foods. Chief: Oris V. Wells.

AGRICULTURAL RESEARCH ADMINISTRATION. The Agricultural Research Administration was established late in 1941 to direct and coordinate research in the U.S. Department of Agriculture. The Administration comprises seven research agencies, operates a 12,000-acre research center at Beltsville, Md., and coordinates all other Department research in the physical and biological sciences. Dr. P. V. Cardon is Research Administrator.

Many of the current projects are carried on under the Research and Marketing Act of 1946. Close cooperation is maintained with the State agricultural experiment stations and other research organizations. Brief statements on the functions of the agencies comprising the Administration and a few examples of the past year's research results follow.

Bureau of Agricultural and Industrial Chemistry. The work of this bureau is directed toward finding new and wider industrial and food uses for farm products. It operates four large regional research laboratories and 12 field stations located throughout the United States. Each of the four laboratories works on selected products of particular importance in its region. The Northern Regional Research Laboratory, at Peoria, Ill., deals with corn, wheat, and other cereal crops, soybeans and other oilseeds, and ag-

ricultural residues, such as corn cobs, straws, and hulls; it works for the improvement of fermentation processes and products and maintains one of the largest collections of molds and other micro-organisms in the United States.

The Southern Laboratory, New Orleans, La., concentrates on cotton, peanuts, sweet potatoes, and rice. At the Eastern Laboratory, Philadelphia, Pa., tobacco, apples, potatoes, leafy vegetables, milk products, hides and skins, tanning materials, animal fats and oils, and honey and maple products are the chief commodities under consideration.

The Western Laboratory, located at Albany, near San Francisco, Calif., conducts research mainly on fruits, vegetables, wheat protein, alfalfa, poultry products, wool, and dried beans and peas. In other research divisions the problems considered relate to processing and utilizing the products and by-products of pine gum, tung nuts, sugar plants, and citrus and other fruits; the preservation of vegetables by brining or fermentation; the extraction and processing of rubber from guayule plants; and the production of liquid motor fuels from crop wastes. Fundamental research is conducted on the chemistry and immunology of allergens existing in agricultural products, biologically active chemical compounds, the nature and control of enzyme action, substances with possible medicinal uses, and micro-organisms in processed foods.

During the past year, processes were perfected at the Northern Laboratory for making two types of useful products from wheat straw, nearly half the 95 million tons of which produced annually in the United States is now wasted. Fine paper of the better grades and insulating building-board can both be made commercially from wheat straw by the new processes. For the papers, the straw would be combined with wood pulp.

Leaf meals of high protein and vitamin A value were prepared from field and packing-house wastes of beets, broccoli, carrots, and other vegetables at the Eastern Laboratory. Poultry-feeding tests were of value. An improved process for extracting an oil suitable for salad and cooking from the seed-coating and germ removed from rice in milling was developed at the Southern Laboratory. It is estimated that 20 million lb. of such oil might be recovered as a by-product of the United States rice crop each year.

The synthetic-liquid fuels project reached the stage of converting corn cobs into motor fuel. Blends of 5 parts regular gasoline and 1 part corn-cob alcohol performed in a high-compression motor as well as 90-octane gasoline.

A promising new antibiotic named subtilin was discovered at the Western Regional Laboratory. It was found to be effective in culture against micro-organisms that cause tuberculosis, bovine mastitis, and several other serious animal and human diseases.

Bureau of Animal Industry. This bureau's functions relate to the breeding, feeding, and management of domestic animals, poultry, and fur-bearing animals raised in captivity; control of animal diseases and parasites; improvement of animal products; and the enforcement of livestock laws and regulations, including quarantines, meat inspection, and inspection of other animal products. Many of the bureau's activities are in cooperation with State and other agencies.

Cooperation with Mexico was continued in the effort to suppress an outbreak of foot-and-mouth disease that began in that country in 1946. The original plan to attempt eradication of the disease by slaughtering all affected and exposed animals

was modified. The goal of the less drastic program is prevention of the spread of the disease, especially of its introduction into the United States, gradual reduction of the infected area, and eventual complete eradication.

More purebred animals were certified for entry into the country for breeding purposes during the fiscal year 1948 than in any previous comparable period. Such animals are admitted free of duty except from countries where certain animal diseases are present and from which importations are restricted.

More than a million calves were vaccinated in a campaign to eradicate brucellosis. It was shown that spraying anemic cattle infested with lice with DDT cured the anemia.

Crossbred pullets of Rhode Island Red and White Leghorn breeds produced more eggs than those of either parent breed, in investigations at Beltsville, Md. Benzene hexachloride proved to be effective in treating sheep for scabies.

Bureau of Dairy Industry. The principal functions of this bureau are breeding and feeding dairy cattle for the highest possible production of milk and butterfat, and improving dairy products and by-products. Results continued to be favorable in the cross-breeding experiment with various breeds of dairy cattle. Cows with the mixed blood of three breeds produced more butterfat on an average than their two-breed dams. A requirement for such improvement is the use of sires proved to pass on high milk and fat producing ability to their daughters, regardless of breed.

Feeding tests showed that dairy cows can maintain satisfactory growth and milk production on a ration containing less protein than formerly recommended.

Penicillin was found to control mastitis in 88 percent of affected cows treated in the bureau herd. It appeared that the organism believed chiefly responsible for the disease is less prevalent as a cause than some related forms.

Experiments to determine the effects of thyroprotein when fed to dairy cows to stimulate milk secretion show that feeding the drug increases milk production temporarily if extra feed is given, but that the increase in milk yield is accompanied by accelerated heart action and respiratory activity. The use of thyroprotein by dairy farmers is not recommended. Fortifying milk with vitamin C (ascorbic acid) was found to prolong the keeping quality of milk in frozen storage.

Bureau of Entomology and Plant Quarantine. The search for more effective materials and methods for controlling insect pests, the study of beneficial insects such as bees, and the enforcement of quarantines to prevent the spread of insects and plant diseases are the main functions of this bureau.

Among new insecticidal materials under test are chlordane, chlorinated camphene, and parathion. Each of these promises to be effective against certain insects, in some cases more effective even than DDT. Parathion is especially promising as a killer of certain fruit insects, adult and larval mosquitoes, and adult houseflies. This chemical is highly toxic to man, however, and its general use cannot be recommended at present.

It was shown in both laboratory and field tests that corn growing in soil treated with parathion absorbed enough of the chemical to kill larvae of the European corn-borer feeding on it. A method for detecting the amount of weevil infestation in stored wheat and other grains was developed. Grain samples soaked for 10 minutes in a dye solution containing acid fuchsin and then washed

retain cherry-red dots in kernels where weevil eggs have been deposited. The dots are easily seen and make it easy to calculate the percentage of infestation in the grain.

It was demonstrated that a leaf-hopper transmits the *phloem necrosis* disease of elms, which has destroyed thousands of trees, especially in the Middle West. Control of the disease is now possible through control of the insect carrier.

An automatically operated multiple aerosol spray for clearing airplanes of insects was designed and demonstrated. One switch releases an aerosol through a number of nozzles placed throughout the plane. Such protection is important to prevent the introduction of insects into new territory by means of air transportation.

Bureau of Human Nutrition and Home Economics. This bureau completed 25 years of service to homemakers in 1948. Its functions are the determination of basic human needs for food and other essentials, studies of the nutritional value of foods and of the nature of other products serving human needs, and the finding of more scientific and efficient ways for homemakers to perform their tasks.

A study of the effects of various methods of home-cooking on nutrients in foods was completed and a report issued. The research dealt with 20 vegetables, meats, cereals, and breads. Their vitamin and mineral content was analyzed before and after cooking in two or more ways. Green peas, carrots, and potatoes were studied even more intensively. It was found that vitamin C and thiamine are lost more readily in all methods of cooking than the other vitamins and the minerals. Potatoes boiled whole in their skins retain more vitamin C than when cooked in any other way.

A model U-shaped kitchen was built and exhibited. Plans for building it were made available through the States. Working drawings for a series of easy-to-build kitchen cabinets were also made available. The kitchen was planned on the basis of research findings. Its U-shaped design saves steps and stooping and reaching are reduced to a minimum by the arrangement of cupboards and the establishment of work centers for the various kitchen tasks. Revolving shelves at the corners of the cabinets are a feature.

A report on *How Families Use Their Incomes* was published. It summarizes the findings of a study of the kinds and amounts of goods and services required by families in the United States, both rural and urban. The report is intended especially for use by teachers, social workers, and others who work with families.

Bureau of Plant Industry, Soils, and Agricultural Engineering. Plant breeding, control of plant diseases, the study of soils, the influence of fertilizers on plant growth, farm machinery and buildings are the fields of this bureau's work. Many of the projects are carried on in cooperation with State agricultural experiment stations.

In plant breeding, seven new corn hybrids, new wheat varieties resistant to a number of diseases, a new long-staple cotton, and new varieties of sugarcane and sugar beets were released. New Burley tobacco varieties were developed that increase the percentage of cigarette leaf without reducing yields.

Cauliflower treated with a hormone spray two weeks before harvest kept fresh longer. Easter lilies stored at 28° to 31° F. produced more buds than bulbs of similar size stored at 32° to 35°. The Scarlet Runner bean was found to be resistant to two serious bean diseases. Cracking of sweet potatoes was found to be caused by nematodes in the

soil rather than by any disease of the plant itself.

In the Columbia River basin, where irrigation has been recently introduced, yields of corn were experimentally increased from 20 bushels to 176 bushels to the acre by closer spacing and the use of fertilizer.

Bureau engineers improved equipment for harvesting and drying ramie and kenaf fiber; improved methods for drying peanuts; designed a tobacco-curing barn that requires less fuel; devised a new type of cleaner for removing fine trash from cotton lint in ginning cotton; and developed a method for artificially drying ear corn in farm cribs that saves its own cost.

The Office of Experiment Stations. This office administers Federal grants to the State, Hawaii, and Puerto Rico Agricultural Experiment Stations. These funds totaled \$9,575,808 in the fiscal year 1948. The stations received from State legislatures about four times that amount for research. Over 4,000 lines of research were active under Federal grants, approximately 4,700 under non-Federal funds.

The office assisted in coordinating the research programs of the United States Department of Agriculture with those of the State stations under 1,400 formal memoranda of understanding and took an active part in planning and coordinating cooperative regional research among the stations.

—E. G. MOORE

AGRICULTURE. Total farm production on United States farms in 1948, as measured by the U.S. Department of Agriculture in terms of output for human use, was about 37 percent above the prewar (1935-39) level. It was consequently an all-time record. Corresponding figures for recent years were: 30 percent above prewar in 1944; 29 percent above in 1945; 34 percent above in 1946; and 29 percent above in 1947. The increase over prewar years, though less than that of urban industry, was noteworthy from several standpoints. In the first place it was without historic parallel. Secondly, it mainly reflected steady improvement in farm technology, plus renewed favorable weather.

Crop land used was only about the same as in the 1930's, while the farm labor force was smaller though up from the low point to which it fell in the war years. Agricultural production as a whole usually increases only very slowly from year to year, partly because of its dependence on relatively changeless factors such as land, topography, and climate. Our farmers boosted their output by more than one-third within a decade by means principally of machinery, along with better plants and animals, revolutionary new insecticides and other pest controls, and a record fertilizer use. In food production as distinguished from total farm output for human use, the 1948 increase over the prewar average was 32 percent.

Record Crop Production. Aggregate crop production in 1948, as estimated in December, was the largest on record by a wide margin. Feed-grain production, dominated by a record corn crop, was a new high. Output of food grains was the second largest on record. Oilseed production topped any previous tonnage. There was large production of vegetables and of special crops. Fruit production was only slightly below average. Livestock products continued their downward trend, as a result of the relatively small production of feed grains in 1947. But this trend is likely to be reversed in 1949, because of the huge 1948 outturn of feed crops.

Combined production of all principal crops in 1948, based on preliminary estimates, was 37 per-

cent above the 1923-32 predrought average. It was 11 index points above the previous high mark set in 1946. Contributing to this achievement were record outputs of corn, rice, soybeans, peanuts, and pecans; near-record outturns of wheat, oats, flaxseed sorghum, grain, dry beans, and citrus fruits; a cotton crop one-fourth above the average; and above average crops of barley, all hay, potatoes, tobacco, sugarcane, sugar beets, hops, peaches, grapes, cherries, apricots, and truck crops. Among the major crops, only rye, buckwheat, dry peas, sweetpotatoes, broomcorn, apples, and pears were below average.

CROP PRODUCTION: ANNUAL SUMMARY, 1948

Crop	Unit	Production (in thousands)		
		Average 1937-46	1947	1948

^a Dry weight. ^b Green weight. ^c Bags of 100 lb., uncleaned.
^d All purposes. ^e Short-time average.

Feed supplies per animal unit became the most liberal in history, though carry-over stocks were relatively small. With livestock numbers the smallest in 10 years, the total supply of corn, oats, barley, and sorghum grain rose to near-record size. Hay was in ample supply, with a large carry-over and an above-average crop, but with the possibility

of some shortages in the East North Central dairy section, and dry range areas.

Production of food grains was exceptionally large as a result of a record rice crop and a wheat crop second only to that of 1947. The winter wheat crop totaled nearly 1,000 million bu.; the spring wheat crop for the first time since 1944, exceeded 300 million bu. With a larger carry-over than in the two preceding seasons, the supply provided an ample quantity of wheat for domestic use and as much for export as in either of the previous 2 years. Rye and buckwheat, however, were relatively small crops.

In the year's oilseed production, soybeans and peanuts reached new peaks; flaxseed production was the second largest on record, and cottonseed production was one-fourth above average. In cotton's long history in this country, only six crops of cotton lint have been larger. The yield of cotton per acre was a record, on an acreage slightly above average.

The Crop Reporting Board of the Bureau of Agricultural Economics supplied the figures in the following table on crop production, as of December, 1948, for the United States, from reports and data furnished by crop correspondents, field statisticians, and cooperating State agencies.

Livestock and Livestock Products. The production of livestock and livestock products in 1948 seemed likely to aggregate about 4 percent less than in 1947 and 12 percent less than in the peak year, 1943. Though smaller than in any year since 1941, it will be considerably larger than in any year up to and including 1941. The decline from the previous year was general in all categories—meat animals, wool mohair, dairy, and poultry products. The only item expected to show an increase for the full year was commercial broilers. The expected 1948 total of 41.2 million lb. liveweight of cattle, hogs, sheep, and poultry is about 2.4 million lb. less than that of 1947, but considerably more than in any year prior to 1942.

The number of hens on farms declined in 1948, continuing a downward trend from the 1944 peak. In the first 10 months of the year, egg production was 1 percent less than in the same portion of 1947, but for the year was likely to equal 1947. The number of layers in October was 2 percent less than in 1947, but the rate of lay was at a record level. Total milk production in 1948 fell off about 3 percent from the 1947 total and was about 4 percent below the record 1945 total. Only in the 4 years 1944-47 has the 1948 production been exceeded. Milk flow per cow was at record or near-record levels during the first 10 months of 1948, but at midyear the number of milk cows was 4 percent below a year earlier.

High Domestic Demand. Consumption of agricultural commodities in the United States in 1948 was at a near-record level. Consumption of food on a per capita basis, though slightly lower than in 1947, was 12 percent above prewar and was distributed by economic groups with less unevenness than in prewar years. Civilians consumed a larger proportion of the food supply than in any year since 1941. Shipments out of the country, for United States military uses, U.S. Territories and exports, took only 8 percent. Greater than in 1947 in cotton and dried fruits, the overseas shipments were about the same as in that year in wheat and in fats and oils; smaller in dairy products, fresh fruits, tobacco, eggs, and meats. Though huge by comparison with the exports of the interwar years, the shipments this year came out of the wartime and postwar gain in this country's farm production. Consequently

they involved no hardship to domestic consumers. As indicated, the domestic consumption was exceptionally high.

Consumer Incomes and Food Buying. Consumer incomes continued to increase in 1948 and so did consumer's food expenditures. With salaries, wages, profits, and farm incomes at record peacetime highs, United States consumers spent more money than ever before. During 1947 and the first half of 1948 consumers spent, on the average, 28 percent of their disposable income for food, compared with 23 percent in the prewar period of 1935-39. The actual per capita annual rate of expenditure for food in the second quarter of 1948 was 5 percent more than in 1947 and approximately 3 times that of the prewar period. Per capita disposable income for the same period was about $2\frac{1}{2}$ times the 1935-39 average.

Total utilization or disappearance of food produced in or imported into the United States was slightly smaller in 1948 than in the preceding 4 years, but almost a third higher than in 1935-39. A significant shift in utilization, compared with the war years, began in 1946. Sharp reductions in military takings permitted continued high civilian consumption and large exports to meet both rehabilitation and relief needs abroad.

The nutritive quality of the civilian per capita food supply was considerably better during World War II than in the years 1935-39, and the improvement continued into the postwar period. Significant increases in the daily supplies of minerals and vitamins principally reflected enrichment of cereal products and greater consumption of meat, fluid milk, citrus fruit, and leafy, green, and yellow vegetables.

Foreign Market Somewhat Unfavorable. Foreign demand outlook included important unfavorable elements, notably the shortage of dollars in Europe and throughout the world. This was more important than the year's recovery in world production. Our total exports from fields and factories in 1946-47 amounted to \$12,750 million; exports were above imports in value by about \$7,350 million. The excess of exports over imports was about the same in 1947-48. In order to pay for the difference our customers abroad drew on their credits here, liquidated some of their capital assets in the United States and elsewhere, shipped gold, and relied on loans and grants such as the British loan and what was left of UNRRA money. Such means for settling trade balances were likely to be scarce in 1948-49.

Hope for quick lessening of the dollar shortage was not high on the basis of ERP commitments; the first annual appropriation was only \$5,000 million. Still less favorable was the prospect for recovery in world-earning of dollars. Many authorities were profoundly pessimistic as to Europe's early ability to pay for goods with goods. Farm exports from the United States could evidently decline, with bad effects on the domestic price position. World food need was sure to continue in 1949 and afterward, despite recovery in world agriculture; but economists reminded farmers and others that in world trade it is money rather than need that counts. Worthwhile money is the world's scarcest commodity.

High Food-Grain Exports May Continue. Nevertheless, high authority gave hope for maintenance of our bread-grain exports. D. A. Fitzgerald, director of the Food and Agriculture Division of the Economic Recovery Administration, said western Europe would have to import as much food grain in 1948-49 as it did in 1947-48. Most European countries

in 1948 still had a bread ration. They wanted to increase it; and they placed this desire near the top of their priority for dollars. Our exports of wheat to all countries in 1947-48, with European countries the chief recipients, amounted to approximately 475 million bu. Mr. Fitzgerald expressed the opinion that the effective demand in 1948-49, or the requirement backed by loaned plus earned dollars, would not be much if any smaller. Bread-grain production in European ERP countries in 1948 was about 30 million metric tons, as compared with 21 million tons the previous year and 35 million tons on the average in the prewar years 1935-39. In this comparison the significant item was the 5 million ton deficit from the prewar level. With 25 million more people to feed in western Europe, continued bread-grain production below the 1935-39 level is continued tragedy.

Europe's Need Far from Met. This region was dependent on imports even in prewar years for about one-third of its food and it is now dependent on imports for a much larger proportion. With its farms below par from war damage and its farm machinery scanty and in disrepair, it has no possibility of becoming self-sufficient in food except through calamitous depopulation. Mr. Fitzgerald recognized the dollar obstacle to the satisfaction of Europe's food-grain need, and mentioned two additional qualifications of the prospect for United States food-grain exports; namely, the possibility of increased exports from the U.S.S.R. and the likelihood that increased supplies would be available also from Canada, Australia, and Argentina. Yet he looked for a good world demand for our food grains, along with an increased demand for coarse grains. He was not bullish with regard to exports of tobacco, meats, and dairy products, beans and peas, and one or two other products. Beyond 1949 the indicator for United States farm exports pointed downward in general, yet with fair prospects for cotton.

World Reports Raise Bread-grain Total. Reports in November to the U.S. Department of Agriculture warranted an upward revision in the estimate of the world's bread-grain crop. This revision placed the world's wheat crop at 6,285 million bu., about 35 million bu. more than the September forecast. At the revised figure the production would be a little larger than average and considerably above the small 1947 harvest. The rye production estimate of 1,625 million bu. was 20 million bu. above the previous forecast and about 10 percent larger than in 1947 though below average.

Chiefly responsible for the 35 million bu. increase in the estimated world wheat production were upward revisions for some European countries, notably France, and improved prospects for Australia. Australian harvest begins late in November and extends through January. Generally favorable prospects were reported for Australia, whose crop was forecast at about 185 million bu. This compared with the record crop for 1947 reported at 220 million bu. Better-than-average yields were in prospect. There was a reduction in the estimate for Turkey. The upward revision of 20 million bu. in the rye estimate was entirely in Europe.

Changes in North American estimates were minor; they included a slight increase in the 1948 Canadian wheat crop, counteracted in part by a small reduction in the estimate for the United States. The net increase for North America in wheat was a million bu., offset by a net reduction of a million bu. in the North American 1948 rye production. Hence the estimate for the total bread-grain crop remained virtually unchanged. Canada's

1947 wheat production estimate was revived downward by 4 million bu. in the latest official report.

Estimates for Europe increased by about 30 million bu. of wheat and 20 million bu. of rye, on the basis of the November information. Wheat production in Europe was placed at 1,465 million bu. and rye 660 million. An increase of 25 million bu. in the estimate for France was the only large revision in wheat. The increase for rye largely reflected optimistic reports on Poland, where yields were expected to approach the prewar level.

There were no reports in November as to changes in the estimated 1948 outturn for the Soviet Union, Africa, or South America. The latter continent's wheat harvest was beginning, and was estimated at 245 million bu. The forecast of 180 million bu. of wheat for Argentina was below average and was a sharp reduction from the 1947 outturn of 250 million bu. This estimate took into account damage recently reported from frosts.

Long-time Readjustments Necessary. Briefly, the year-end portents indicated world demand for important American farm products might shortly decline, with unavoidable bad effects on the domestic market. When export supplies back up into storage or into home trade channels, prices fall at home as well as abroad, even if domestic consumption and buying power remain high. This was the farmer's chief prewar problem, and 1948 saw it coming up again.

Momentum developed during the war years left agriculture geared high for the export trade; it had no facilities for quick curtailment. Hence the possibility of a drop in its world trade, with associated price recessions and pressure on Government price supports, was ground for some concern.

Officials of the U.S. Department of Agriculture pointed out that the United States contribution to Europe through ECA, though substantial and very important, should not be expected to serve as a complete offset to the bad effects of the dollar shortage. In other words, the ECA contribution was not a guaranty of increased or even of undiminished farm export trade. The implication was that agriculture should get ready for adjustments to long-time peace conditions.

Agricultural Exports in 1947-48. Exports accounted on a physical quantity basis for 13.8 of our food distribution in the fiscal year 1947-48; they included military shipments of food for relief feeding-programs in occupied areas. Civilians in the United States took 84.7 percent. Our military services took 1.1 percent for troops stationed at home and abroad; non-contiguous territories of the United States received 0.4 percent. Shipments overseas accounted for only small fractions of the meat supply and of the eggs. Exports took 0.7 percent of the meats; civilians in the United States consumed 96.9 percent; our military agencies took 2 percent; and 0.2 percent went to U.S. Territories.

The corresponding distribution of eggs was: exports, 4.4 percent; U.S. civilians, 94 percent; our military agencies, 1.4 percent; and U.S. Territories, 0.4 percent. Civilians in this country received about 90 percent of the cheese distributed, 80 percent of the condensed and the evaporated milk; 98 percent of the vegetables; and 90 percent of the fruits. Nevertheless, exports had economic importance out of proportion to their volume. They contributed to world healing and cleared markets that otherwise might have clogged.

Total food exports of 19,347,000 tons in 1947-48 were slightly larger on a tonnage basis than during the preceding fiscal year, and about 11 percent above the exports in the first postwar year, 1945-

46. Exports of cereal products, including rice, totaled 15.7 million tons, 0.5 million above 1946-47. This increase a little more than offset a small reduction from the level of the previous year in the exports of livestock products and other foods.

Grains, including rice, accounted for about 81 percent of the total export tonnage. Wheat and wheat products represented 67 percent; the other grains, 12 percent; and rice, 2 percent. These products were a larger proportion of the total exports than in the preceding two fiscal years. Grain shipments abroad in both 1946-47 and 1947-48 were restricted to food and seed uses.

Exports of wheat and wheat products amounted to 13,018,000 tons grain equivalent, or 486 million bu. and were the largest on record. They were almost 10 times the average annual exports for 1935-39. Exports accounted for almost half of the United States distribution of wheat for food in 1947-48.

Exports of corn and corn products amounted to a million tons (grain equivalent), only a third of the 1946-47 rate. They represented about 30 percent of the total distribution of corn for food. The outmovement of barley, malt grain sorghums, oats, oatmeal, rye and rye flour totaled 1,234,000 tons (grain equivalent)—slightly above the level of the 1946-47 fiscal year, but $\frac{2}{3}$ greater than in 1945-46 and about 4 times the average annual exports in 1935-39.

Exports in 1947-48 accounted for 54 percent of the total distribution of these grains for food. India and Pakistan received most of the grain sorghums. Rice exports at 407,000 tons (milled basis) slightly exceeded the record of 393,000 tons established in 1946-47. Exports of rice amounted to about 45 percent of the total 1947-48 United States rice distribution. They went principally to those areas where rice is an important food in the local diet—Cuba and the Far Eastern countries.

Exports of fats and oils at 251,000 tons were about 14 percent above those of the preceding fiscal year and almost 3 times the prewar (1935-39) average annual rate, but 19 percent below the 1945-46 level. An improvement in the domestic supply of vegetable oils permitted the increase.

The relatively small quantity of meat exported in 1947-48 reflected reduction in livestock marketings from the levels of the two preceding fiscal years, along with sustained heavy United States civilian demand. Meat exports of 68,000 tons (carcass equivalent) were only a third of the quantity shipped out of the United States in 1946-47; only one-tenth of the average 1945-46 exports.

Exports of cheese, canned milk, and dried milk in 1947-48 totaled 460,000 tons. This was more than 10 percent below the total of the previous fiscal year and 44 percent under the 1945-46 rate, but much above prewar exports. Exports of dairy products consisted mostly of canned milk and non-fat dry-milk solids. They accounted for 37 percent of the dried milk and 16 percent of the canned milk distributed. Nonfat dry-milk solids (dry skim milk) were given to school children in Germany and Japan under a school-lunch feeding program.

Aggregate exports of other foods—principally fruits, vegetables, potatoes, eggs, dry beans and peas, soybeans, and peanuts—amounted to 2,911,000 tons, and were less than in either of the two preceding fiscal years. Peanuts exported to Europe were crushed there for peanut oil. Exports represented almost 30 percent of the total United States distribution of dry beans and peas in 1947-48.

Chief Destinations of Farm Exports. Most of the exports of food from the United States in 1947-48

went to countries cooperating in the European Recovery Program. These European countries received a total of 12,557,000 tons or 65 percent of the total food exports from the United States. European countries not cooperating under this plan received 1.4 percent; Far Eastern countries, 16.4; Latin American Republics, 9.5; Canada, 4.1; and other areas, 3.6 percent.

The bizon or United States-United Kingdom area of Germany received more of the foods exported from the United States than any other country. Germany obtained the largest quantity of wheat (3,720,000 tons), other grains and grain products (514,000 tons), and other foods (661,000 tons). For fats and oils and also dairy products, this area ranked third highest with 35,000 and 44,000 tons, respectively. The dairy products were mainly nonfat dry-milk solids (dry skim milk). Relatively little meat and only a very minor quantity of rice were sent there.

The Far East area under United States military control (i.e., Japan, Korea, and the Ryukyu Islands) was the second largest recipient of United States food exports. The bulk of the receipts were wheat

Farmers' Prices and Earnings in 4th Historic Inflation.

This country was in the fourth great inflationary period of the 150-year record of wholesale prices. War and heavy Government spending accompanied each of these peaks. During most of World War II, inflationary pressures were held in check by various control measures. In 1948, however, most prices rose to new record highs; declines in prices of farm crops were largely offset by rising prices of livestock. During both the world war periods, prices received by farmers went up faster and higher than did prices paid by them. In early 1948, average prices paid and also average prices received by farmers were at a new high. The ratio between the two reached a peak of 132 in October, 1946; after some decline, it stayed well over 100 in 1948. The prices of feed grains advanced sharply during 1947 and reached an all-time high early in 1948. Prices of oats and barley dropped sharply in the spring and summer of 1948 down to the Government price-support levels; prices of corn declined contrary to the usual seasonal trend. Because of record production, the prices of feed grains in 1948-49 averaged lower than in 1947-48;

SUMMARY OF FOOD EXPORTS FROM THE UNITED STATES BY MAJOR GROUPS, AVERAGE 1935-39
AND FISCAL YEARS 1945-48
(In long tons)

Period	Wheat and wheat products (grain equiv.)	Other grains (grain equiv.)	Rice (milled)	Fats and oils	Meat (carcass equiv.)	Dairy products (product weight)	Other foods	Total food exports
1935-39.....	1,366,000	1,335,000	83,000	87,000	55,000	17,000	1,280,000	4,223,000
1945-46.....	10,504,000	1,306,000	352,000	310,000	614,000	816,000	3,596,000	17,498,000
1946-47.....	10,629,000	4,166,000	393,000	220,000	181,000	514,000	3,057,000	19,160,000
1947-48.....	13,018,000	2,232,000	407,000	251,000	68,000	460,000	2,911,000	19,347,000

and wheat flour (1,214,000 tons), other grains and grain products (382,000 tons), and other foods, most of which were soybeans (364,000 tons).

France and French North Africa received the third largest quantity of food exported by the United States in 1947-48—1,858,000 tons. This total consisted principally of wheat and wheat flour (1,605,000 tons) and other grains and grain products (141,000 tons). This area, with 37,000 tons, ranked second among the countries receiving fats and oils from the United States.

About 1,833,000 tons of food were shipped to the Latin American Republics. Exports of wheat and wheat products totaled 903,000 tons; other grains and grain products, 179,000 tons; rice, 246,000 tons; fats and oils, 66,000 tons; meat 10,000 tons; dairy products, 55,000 tons; and other foods, 374,000 tons. Most of the rice went to Cuba, a country which has always been a large market for rice produced in the United States.

Other areas which received large quantities of food from this country in 1947-48 were Italy (1,619,000 tons), Greece (775,000 tons), Austria (766,000 tons), and Netherlands (765,000 tons). All of these countries are participants in the European Recovery Program.

Belgium and Luxembourg, which also ranked high among the recipients of United States foods, obtained the largest quantity of dairy products—89,000 tons. The United Kingdom received only 363,000 tons of food, the smallest quantity since before World War II. In 1947-48 meat exports of 23,000 tons, approximately a third of the total exported, went to the United Kingdom of Great Britain and Northern Ireland.

The large volume of exports to Germany and the occupied area in the Far East was principally under the direction of United States military agencies.

they were unusually low in relation to prices of livestock and livestock products.

Net Farm Income Lower than in 1947. The Bureau of Agricultural Economics reported that the peak year in real income to farmers was 1946 and in net income 1947. In prices received the peak came in January, 1948. The parity-index, or the ratio of the prices received to the prices paid by farmers, reached its peak in August, 1948. It seemed in November, according to the BAE, that the net farm income of 1948 would be about 8 percent less than that of 1947, owing to an increase that took place in 1948 in the farmer's costs of production. Nevertheless, the drop in net farm income from the level of the previous year left the farmers in a very strong position. Their net income in 1947 was nearly double the peak reached in 1919 after the first world war. Moreover, fewer farm workers earned the 1948 net farm income—10 millions as compared with 11 millions in 1919.

In both these postwar peak years the net earnings of farm workers averaged nearly as much as those of industrial workers. Specifically, the net income per person engaged in farming in 1948 averaged \$2,050 as compared with the industrial worker's average of \$2,500. In 1919 the farm net-income average was \$969—the factory worker's \$1,188. These comparisons imply a substantial advantage on the farm side, because net income on the farm goes further than in the city and farm life includes other values. It should be noted, however, that the comparisons take the *whole* net income of agriculture but only the wage-earner's portion of the factory income. Hence the resemblance is accidental or arbitrary rather than truly significant.

Cash from Marketings. Cash receipts from marketings came close to the 1947 total of 40,000 million dollars, with gross farm income about the same as in the previous year. Payments by the Government to farmers totaled some \$300 million as com-

pared with \$342 million in 1942. Value of farm products used in farm homes increased; but so did the expenses of farm production. Allowance for the rise in costs indicated the net income of farmers, or what they had left after paying production expenses, interest, and taxes, would be around \$17,000 million as compared with \$18,000 million in 1947.

Costs in Farming. Farmers' expenses of production averaged 5 percent or more above 1947, with hired labor, operation of motor vehicles, fertilizer, and maintenance and depreciation of buildings and equipment showing the greatest rise. Farm wage increases added substantially to farmers' cash costs. The rates were about four times prewar compared with a threefold increase in net farm income. Nevertheless, the wages of hired farm labor did not hold their own with increases in rural living costs. In other words, real farm wage rates declined.

There were more motor vehicles on farms; and repairs, parts, and fuel for these vehicles were more expensive. Maintenance of buildings and equipment was more expensive. Payments by farmers for taxes and farm mortgage interest were higher than in 1947. Taxes reflected rising costs of local Government; mortgages reflected higher interest rates and rising farm land values.

Outlay for fertilizer was greater than in 1947, at slightly higher prices. This reflected continued optimism about agricultural prices. Fertilizer applied at high rates was profitable on innumerable farms. The cost of fertilizer is rather stable. Fertilizer prices have risen less since the prewar period than most other prices paid by farmers. Fertilizer prices may decline less in the event of a recession. Farmers may reduce the quantities used, but will tend to maintain much of the recent increase.

Technology Lowers Unit Costs—Boosts Cash Costs. Better technology lowered total unit costs of farm production, but increased the farmers' cash costs, and resulted in more farm specialization. Gasoline, tractors, combines, and other necessary equipment added to cash costs. Moreover, the wheat farmer bought bread and the dairy farmer bought butter and cheese. In short agriculture continued to move away from farm self-sufficiency. Technical progress varied greatly among farms; many farmers on farms too small for machinery were not prosperous and could not keep step with changing markets and methods. According to the census in 1945, the upper third of the farms in the United States produced 80 percent of the total value; the lower third only 4 percent. In 1940, the upper third produced 78 percent of the total value; the lower third 5 percent. Large numbers of relatively unproductive farmers on small, hilly, or otherwise unsuitable land eked out a scanty farm income with earnings from non-farm work.

The Costs of Agricultural Marketing. The retail value of farm food products increased to around \$37,000 million in 1948, but farmers received little, if any, more than in 1947. The nation's bill for marketing farm food products was \$15,500 million in 1947; it totaled about \$17,500 million in 1948. Farmers received \$19,400 million out of the retail value of \$34,900 million in 1947.

The greater instability of farm prices in the market place as compared with wages and non-farm prices showed up in the farmer's share of the consumer's food dollar. As usual, this share varied with farm prices, in part because inflexible items were a large portion in distribution costs. It also varied widely among different commodities. About 32¢ in 1932 and 54¢ in 1945, it had fallen in early 1948 back to the level of early war years.

An important factor in the nation's marketing bill was direct labor costs, which normally make up about half of the total food-marketing costs. Marketing charges in 1947 were almost 50 percent more than in the prewar period 1935-39. Hourly earnings in 1947 were about double the 1935-39 average. However, an increase in labor productivity per man hour and a decrease in marketing services held the labor cost per unit of food marketed down to 78 percent above the prewar period. Hourly earnings in the food marketing services in 1948 were higher than those of 1947.

Agriculture's Assets. Farmers' assets in 1948 were about double those of 1941, doubled chiefly because of higher prices. Their physical plant was much higher in value than before the war, though heavy production had depleted or endangered soil resources. Equipment had been increased, but much of it was badly worn, and buildings needed repairs. But debts have been reduced and liquid assets tripled. Farmers were in a position to rebuild their physical plants, protect the soil, and weather any moderate financial storm. Farm land values continued to increase.

Higher prices, higher incomes, higher rents, more cash on hand, and a decrease in notes in the bank were powerful causes. Land was not as much above prewar as rents, prices, or income; nevertheless, farm land values set new high records. Values on July 1, 1948, in the United States as a whole were 109 percent above the 1935-39 average, and 2 percent above the peak reached in 1920. Until 1947 land values in the Great Plains and the Midwest increased less relative to farm incomes than in the rest of the country. In 1948 these regions were mainly responsible for the increase in the national farm land-value average.

Farm Family Spending. The Department of Agriculture reported changes in farm family spending, deduced partly from reports on the accounts that farm families keep and send to the State Colleges of Agriculture. Reports from Iowa, Illinois, Kansas, and Minnesota, and other States furnished data over an 11-year period. Comparable data for urban family spending were not available. Possibly data from these account-keeping farm families would differ from an average for all farm families. Account-keeping farm families are the more prosperous ones. Nevertheless, the farm family accounts gave the best picture available. These account-keeping farm families generally spent less money for various consumer goods than the per capita average for all consumers in the country. They got some food and fuel from the farm; moreover, many carried part of their housing expenses as a business cost. Also, many often could buy farm products cheaply from neighbors. True, the farm families had on the average less to spend, at least in the 1930's and early 1940's, than city families.

Spending by these account-keeping farm families for consumer goods more than doubled from 1940 to 1947. Significantly, the spending increased more than prices of consumer goods. Farm families greatly stepped up their spending for clothing. They spent one-fifth more for new clothing in 1947 than in 1946. Their expenditures for medical care increased. In 1947 these yardstick families paid two and one-half times their 1940 figure for medical care. Farm families also modernized their homes and bought household equipment. They put a large share of their additional family-living funds into furnishings and household equipment. On the average, they spent \$500 more for family living in 1947 than in 1946, with nearly a third of the additional sum going into furnishings and equipment.

Electrification Boosts Farm Spending. Extension of electricity to rural areas stimulated many farm families to modernize their houses and to buy household equipment. The Rural Electrification Administration reported that, in 1947, 61 percent of all farms were receiving service, compared with 11 percent in 1935. Many farms remained without electricity, especially in sparsely settled States such as the Dakotas, Nebraska, Montana, and in some Southern States. Funds are available for new loans to extend the program, but materials are still scarce. From 1940 to 1947 the number of farmhouses with modern bathrooms nearly doubled, and more than a million were supplied with running water. However, as of April, 1947, two-thirds of the farmhouses still had no running water; four-fifths were without modern bathrooms.

Livestock Numbers as of Jan. 1, 1948. Each year the crop reporting board of the Bureau of Agricultural Economics reports on the numbers and value of livestock and poultry on farms (including ranches) as of January 1 for the United States. It uses information furnished direct by livestock and poultry producers, reports collected with the assistance of the Post Office Department through the rural mail carriers, and data assembled by field statisticians and cooperating State agencies. Livestock and poultry *not* on farms are not included.

In its report for Jan. 1, 1948, the crop reporting board said the number of livestock on farms and ranches declined during 1947 to the lowest level since 1939. Numbers had dropped 4 years in succession since the peak of Jan. 1, 1944. The decline during 1947 was somewhat larger than in 1945 and 1946 but less than in 1944. For the second year consecutive numbers of each species of livestock and of chickens and turkeys were lower at the end than at the beginning of the year.

The decline in livestock and poultry numbers resulted from various causes. High prices for meat animals encouraged heavy slaughter. Reduced feed supplies in the last half of the year, accompanied by high feed prices, curtailed livestock feeding operations and prompted increased marketing and closer culling of flocks and breeding herds. A decline in workstock represented further mechanization. Comparatively low prices for workstock offered little incentive to check the downward trend.

Cattle and Hogs. Cattle numbers in the United States were in their fourth year of decline since the peak number of 85.6 million on Jan. 1, 1945. In previous cycles practically all the decline was in cattle other than milk cows. Milk cows accounted for a substantial part of the reduction during 1948. Important in the total decline was the fact that cows, heifers, and steers were sold for slaughter and not replaced from the large calf crops. A high percentage of calves raised have recently been slaughtered in their first year.

Hog production remained far below the 1943 peak made possible by large carry-overs of corn. Production in 1948 was about as large as was possible in view of the small 1947 corn crop; corn supplies were fed down to unusually low levels at the end of the 1947-48 feeding year. Banner production of corn in 1948, along with hog-corn price ratios that rapidly became more favorable to hog producers, probably will result in an increase in the production of hogs ahead of other meat animals. A substantially larger pig crop in the spring of 1949 than a year before would provide more pork for the late fall. Numbers of sheep continued to decline, though at a slower rate than in recent years.

Livestock (excluding poultry) numbers on Jan.

1, 1948, were 4 percent below a year earlier and about 16 percent below the record high numbers of Jan. 1, 1944. In terms of feed-grain consuming units, numbers were down 3.9 percent; including chickens, they were down 3.7 percent. In terms of roughage and pasture units, the total was down 4.1 percent.

Farm Value of Livestock. Nevertheless, the farm value of livestock and poultry on Jan. 1, 1948, hit a record high of \$13.451 million—12 percent above 1947 and 90 percent above the 1937-46 average. Values per head of cattle, hogs, sheep, chickens, and turkeys were the highest on record. Values per head were lower than in 1947 for horses and mules. Stocks of feed grains on farms on Jan. 1, 1948, were down more than livestock numbers. The supply was well below the average for the preceding 10 years, though somewhat better than on Jan. 1, 1944, when livestock numbers were at an all-time peak. The supply per unit of livestock was about 23 percent below that of Jan. 1, 1947, and 13 percent below the 1938-47 average.

Decrease in Livestock. The decrease in cattle numbers during 1947 amounted to 2,643,000 head and was one of the largest on record. It resulted from a record slaughter of cattle and calves, accompanied by reduced imports of cattle from Mexico. A bet-

SUMMARY OF LIVESTOCK CENSUS JAN. 1, 1948.

Class of Livestock ^a	Number on farms (1,000 head)		Farm value per head (in U.S. dollars)

^a For more specific description, see tables by States in USDA report "Livestock on Farms, Jan. 1, 1948." ^b Includes horses, mules, cattle, all sheep, and hogs. ^c Includes horses, mules, cattle, all sheep, hogs, chickens, and turkeys.

ter-than-average calf crop in 1947 was a partial offset to the heavy slaughter. The downward phase of the cattle numbers cycle started in 1945. It indicated a consistent and large decline in milk cows and a rather irregular and smaller decline in other cows. Over half of the decrease in all cattle in 1947 was in cows.

Hog numbers, down 3 percent from Jan. 2, 1947, were the lowest since 1941, as a result of heavy marketings of hogs during the last quarter of 1947 which more than offset the increase in the 1947 pig crop. All of the decrease was in the number of hogs over 6 months old.

The number of horses and mules declined sharply, though the decrease in numbers was less than in 1946 or 1945. The downward trend began in 1915 for horses and in 1925 for mules. In 1947

there was a record slaughter, along with the smallest crop of both horse and mule colts on record. Exports, however, were below the shipments in 1946.

Chickens on farms on Jan. 1, 1948, were down 2 percent in number from 1947 to the lowest level since 1941. Pullets were about the same, the decrease being in hens and other chickens. A drastic reduction of 32 percent was recorded for turkeys. This brought the January 1 inventory to the smallest number of record in 1929. Turkey breeder hens were likewise the fewest of record.

Liquidation of sheep numbers continued but the rate of decline during 1947 was less than in any year since 1942. Stock sheep for 1948 were the fewest since records began in 1867. Sheep and lambs on feed showed a 16 percent decrease from a year earlier, but were numerous in relation to the number of stock sheep. The decline in stock sheep was relatively greater for farm flocks than range flocks. There was a further drop in the number of farms keeping sheep. Several Western sheep States showed fairly marked increases in the number of ewe lambs, an indication that the downward trend was being checked in these States.

Meat Production and Consumption. Production of meat in 1948 was down about 9 percent from 1947. Output of pork declined least; the spring pig crop was only 3 percent smaller than the 1947 spring pig crop, despite sharply reduced corn supplies. Production of beef fell short of the 1947 level, which had been increased by rather sharp liquidation of herds. Further reduction in numbers of cattle probably occurred in 1948 also, and the slaughter contributed to the supply of beef for the year.

Production of lamb and mutton continued the fast decline that began in 1944. Production of meat may be about the same in 1949 as in 1948, especially if cattle slaughter is reduced enough to stabilize cattle numbers. Production of pork probably will increase, with additional supplies coming in the fall as hogs from the spring pig crop are slaughtered. Prospects are that output of lamb and mutton will decline again.

About ten years ago consumption of meat per person in the United States began to rise after having declined steadily since the beginning of the century. The new uptrend was stimulated by improving consumer incomes, and made possible by higher yields of feed grains and reduction in the quantities of feed needed for workstock. Early in this century, consumption of pork and of beef was nearly equal, but in later years more pork than beef was consumed.

This change resulted partly from a decline in meat exports, which transferred more pork than beef from foreign to domestic consumers. Pork exports remained substantially larger than beef exports, until both became small in the last few years. A record 155 lb. of meat was consumed per person in 1947, when reduction of cattle herds sent more animals to slaughter and added to meat supplies. With fewer cattle on hand and a short 1947 corn crop cutting down meat production, consumption dropped to 144 lb. in 1948. It may remain at approximately 1948 level in 1949; increased pork will about offset reduction in beef, lamb, and mutton.

Dairy Conditions Favorable. Output of milk per cow continued its upward trend, in reflection of heavy culling of low producers and relatively high feeding rates. Further decline in numbers of cows during 1948 resulted from below average dairy-product feed-price relationships, high slaughter

values for dairy animals, and relatively favorable alternative farming opportunities. Numbers of young stock were at record levels relative to milk cows. Dairy-product feed-price relationships seemed likely to be above average throughout 1948-49; but returns from other farm enterprises promised to be above average in relation to dairying.

Feed Supplies for 1948-49. The very favorable growing season in 1948 resulted in a record production of feed grains, 7 percent above the previous record in 1946, and 38 percent larger than the small crops of 1947. The increase from 1947 was pronounced in the Corn Belt. The record 1948 corn crop was fully adequate to meet domestic needs, provide larger exports, and still leave the largest carry-over in recent years. Production of hay in 1948 was the smallest since 1941, but adequate for the fewer hay-consuming livestock now on farms.

Supplies of commercial byproduct feeds will continue large through 1948-49. Oilseed cake and meal will be in record supply, and an above-average supply of byproduct feeds will be available from grain milling. Total supply of feed concentrates for 1948-49 will be the largest in recent years, and only a little below the record supply of 1942-43. With livestock on farms below the wartime peak, supplies of feed concentrates per animal are the largest on record. Ample feed supplies for 1948-49, in contrast with the small supply in 1947 ensures liberal feeding of livestock, increased exports, and the largest carry-over of feed grains in recent years.

Wheat Production, Acreage, and Prices. As mentioned, the production of wheat in the United States in 1948 was nearly 1,284 million bu., second only to the 1947 record total of 1,365 million; and world production of wheat at about 6,285 million bu. was above average and considerably above the production of 1947. Nevertheless, cash wheat prices on November 22 were 10 cents a bushel above the Government loan rate. At Minneapolis on the same date cash wheat was 15 cents above the loan value. These prices were a big advance from the low point touched in August.

Wheat at Kansas City on August 2 was about 18 cents below the loan rate. Moreover, the Department of Agriculture said in November that prices might strengthen further in the early months of 1949. In short the year-end wheat situation from the farmer's standpoint was better than had been expected in view of our near-record production and the improved bread-grain situation throughout the world. Prices seemed to reflect improvement in world buying power based partly on ECA loans and gifts, plus knowledge that in many countries especially in Europe cereal supplies would still be short of requirements.

Wheat disappearance in the United States for the 1948-49 marketing year, according to the U.S. Dept. of Agriculture, will probably reach 500 million bu. for food, 93 million bu. for seed, and 110 million bu. for livestock feed. This will leave about 775 million bu. for export or carry-over July 1, 1949. In 1947-48 United States exports of wheat (as grain or flour) were 480 million bu., the largest quantity ever exported in a single year by this or any other country. Our wheat exports amounted to about half the world trade in bread grains. Abnormal world demand, financed to a substantial extent by American loans and gifts, was the basis for this tremendous wheat-export movement, as had been the case for the entire period since World War II came to its end.

In the years between the world wars United States wheat exports were low, as a result partly of lowered production in the United States and partly of self-sufficiency efforts in many countries. With exports in 1948-49 down to some extent from the previous year's high, building up of carry-over stocks may reach 300 million bu. by July 1, 1949, as compared with 196 million bu. on July 1, 1948. Marketing quotas will not be in effect for 1949 United States wheat production and price-support is to be continued for another year at 90 percent of parity. Consequently farmers will probably seed more than the 77.7 million acres seeded for the 1948 harvest.

Cotton in Crucial Period. Supply of cotton in the United States for the 1948-49 season was about 18.1 million bales and probably will exceed the disappearance by slightly over 5 million bales. There will be 14.8 million bales from the 1948 crop, a carry-over of 3.1 million bales, and imports of about 250,000 bales. Mill consumption in 1948-49 is expected to be about 9 million bales, slightly lower than in the preceding year. Exports of cotton textiles will probably be lower. Exports of 4 million bales in 1948-49 will be required to balance foreign production of commercial cotton against foreign mill consumption. Such exports would be the highest since 1939 when over 6 million bales were exported with the assistance of a subsidy program.

World production of commercial cotton in 1948-49 is estimated to be about 28 million bales and will exceed world mill consumption for the first time since the crop of 1944. Expected increases in consumption over last year by foreign mills will more than offset the prospective decrease in consumption in the United States and will bring the world total above 27 million bales. Even so, stocks of cotton at the end of the current season would be nearly 1 million bales larger than at the beginning of the season. The U.S. Department of Agriculture says the 1949-50 season will be a crucial period in cotton. Prices of cotton already are at loan levels and prospects are that both the domestic and world carry-over will increase. Marketing quotas will not be in effect for the 1949 cotton crop. A large crop in 1949 might result in a return to quotas for the 1950 cotton crop.

Tobacco Products and Exports. Production of cigarettes again attained a new record in 1948—about 4 percent above the previous year's high and 2¼ times that of 10 years ago. Production of cigars and snuff in 1948 was probably slightly larger than in 1947. Smoking tobacco was being produced in moderately larger quantities, but the 1948 total was substantially lower than either prewar or war years. Production of chewing tobacco in 1948 was estimated to be about the same as in 1947, the lowest on record. Per capita consumption of all tobacco products combined increased to a level strikingly above prewar with continued growth in per capita personal income. The large increase in cigarettes was the major factor in the gain in per capita consumption of tobacco; as per capita trends of other tobacco products, after fluctuations during the war, continued downward.

For three crop years prior to 1947-48 average exports of tobacco leaf almost equaled the 600 million lb. average (farm-sales weight) of 1925-29. However, the proportions of the various types in total exports changed considerably. Flue-cured tobacco increased from less than 70 percent of the total leaf exports in 1925-29 to nearly 82 percent during the last three years; meanwhile dark types (flue-cured and dark air-cured) de-

clined from more than one-fourth to 10 percent or less of the total. Burley exports trebled.

Effects of Dollar Shortage on Tobacco Exports. United States exports of tobacco leaf during the 1947-48 crop year were about 30 percent below 1946-47 and approximately the same as the 1934-38 average. The sharp drop below the previous year was the result of limited dollar resources of foreign purchasers, the biggest factor being the sharp decrease in purchases of flue-cured by the United Kingdom—our largest foreign customer. Tobacco exports in 1948-49 are expected to be larger than in 1947-48 as countries of western Europe increase their imports.

Domestic Demand Continues High. The 1947 season average price of flue-cured tobacco was the lowest in four years as total supply in relation to disappearance reached the highest level since the 1942 marketing year. The 1947 drop in disappearance was due to a 35 percent decline in exports from the previous year; domestic consumption continued large. The 1948 production of flue-cured was substantially smaller than 1947 because of the smaller acreage allotment, but total supply for 1948-49 is only slightly lower than last year due to a larger carry-over. In the year ahead, domestic consumption is expected to continue high and exports will improve as trade is stimulated by the ERP. The active demand for flue-cured tobacco generally kept average prices above the support level of 43.9 cents per lb.

Cigarette production and domestic consumption, at a new record in 1948, may go higher in 1949. Flue-cured, burley, and Maryland tobacco growers will benefit by the marked preference of American smokers for cigarettes. With high-level economic activity, cigarette production may top the 1948 record of about 385,000 million.

Sugar Production Recovers. Sugar supply was back to prewar. World sugar crop for 1947-48, estimated at 34 million tons, was only about 2 percent less than the 1935-39 average. Year-end information indicated an increase of 1.5 million tons or more in 1948-49, enough to bring world sugar production above prewar. An increase of 30 percent was expected in Europe exclusive of the U.S.S.R. Russia was expected to return to prewar levels. Sugar production was recovering rapidly in the Far East, in Central and South America, in Africa, and in India. Output in Oceania was gradually returning to prewar levels.

Sugar production in the United States, in its insular areas, and in Cuba in the 1947-48 crop year amounted to 11,355,000 tons, the highest on record—37 percent more than the 1935-39 average. Production was expected to continue high in 1948-49, with a crop in the above-named areas of possibly 10.5 million tons—about 8 percent smaller than the 1947-48 crop, but 27 percent larger than the 1935-39 average. In Cuba the crop seemed likely to be reduced about 1 million tons from the 1947-48 production of 6,675,000 tons.

Conditions of the United States mainland sugar crops on Oct. 1, 1948, indicated a drop of about 9 percent from the 1947-48 output. Production in Hawaii was expected to increase about 10 percent from 860,000 tons, back to approximately its prewar level. Recovery was continuing in the Philippines with an expected increase in production in 1949 of about 50 percent over the 1947-48 crop year of 500,000 tons. Production in Puerto Rico in 1949 was expected to be at about the same level as in 1948, 1,108,000 tons.

Fruits. Aggregate production of oranges, grapefruit, and lemons in the United States more than

trebled between 1928 and 1948. Much of the increased production of oranges and grapefruit of the last ten years was canned as juice. Before the war, prices tended to decline with increasing production; during the war they rose substantially because of unusually strong demand. With the end of wartime demand, prices dropped to near prewar levels. Continued large production and low prices are in prospect for the next few years. Prices received by growers for both apples and citrus fruits were at high levels during the 1920's; they declined sharply during the 1930's. During the war period they again advanced rapidly. In 1946 and 1947 prices for both apples and citrus fruits dropped sharply. In 1947 prices for citrus fruits were near the 1935-39 level, whereas prices for apples were still more than twice that level.

Fats and Oils. Production of fats and oils from domestic materials totaled nearly as much in 1948 as in 1947. Imports amounted to moderately less. A moderate decline occurred in total domestic disappearance, with most of the reduction in the use of fats for soap. Consumption of food fats and use of drying oils was about the same as in 1947. Prices of fats and oils probably will be moderately lower in 1949 than in 1948. Except in 1935-37, when production was curtailed by drought, United States exports of edible fats and oils exceeded imports in all years of record. Lard was the leading export item. Net imports of industrial fats were severely reduced during the war. Imports of tung oil and coconut oils have recovered to the prewar level, but imports of palm oil are still far below prewar. Net trade in both edible and industrial fats is expected to be somewhat smaller in 1948 than in 1947.

Edible use of peanuts increased greatly during the war years because supplies of many other foods were scarce. After the war, foreign countries bought large quantities of peanuts for crushing. It was evident in 1948, however, that this market would diminish as world export supplies of fats, oils, and oilseeds recovered.

United States imports of fats and oils (including oilseeds in terms of oil) were smaller in 1948 than in 1947. Imports of copra declined because of smaller output in the Philippines. Large crops of flaxseed produced in the United States in 1947 and 1948 brought about reduction in our imports of linseed oil. Exports of fats and oils probably will decline moderately in 1948, but not enough to offset the reduction in imports. —ARTHUR P. CHEW

AGRICULTURE, U.S. Department of. A Department of the U.S. Government, created by Act of Congress, May 15, 1862, and directed by law to acquire and diffuse useful information on agricultural subjects in the most general and comprehensive sense. The Department performs functions relating to research, education, conservation, marketing, regulatory work, and agricultural adjustment. It conducts research in agricultural and industrial chemistry, the industrial uses of farm products, entomology, soils, agricultural engineering, agricultural economics, marketing, crop and livestock production, production and manufacture of dairy products, human nutrition, home economics, and conservation. It makes research results available for practical farm application through extension and experiment station work in cooperation with the States.

The Department provides crop reports, commodity standards, Federal meat inspection service, and other marketing services. It seeks to eradicate and control plant and animal diseases and pests. It administers more than 50 regulatory laws designed

to protect the farmer and consuming public, and enforces the Sugar Act of 1937 and the Commodity Exchange Act, June 15, 1936. It promotes the efficient use of soils and forests. It provides rural rehabilitation, and guarantees farmers a fair price and a stable market through commodity loans and marketing quotas. It also provides agricultural credit, assists tenants to become farm owners, and facilitates the introduction of electric service to persons in rural areas.

Principal agencies of the Department include the following: The Agricultural Research Administration, which directs and supervises most of the scientific research activities of the Department. Agencies which report to ARA include: the Bureau of Agricultural and Industrial Chemistry, the Bureau of Animal Industry, the Bureau of Dairy Industry, the Bureau of Entomology and Plant Quarantine, the Bureau of Human Nutrition and Home Economics, the Bureau of Plant Industry, Soils, and Agricultural Engineering, the Office of Experiment Stations and the Agricultural Research Center of Beltsville, Maryland.

Other important agencies of the Department are: the Extension Service which cooperates with State agricultural agencies in education programs; the Farm Credit Administration, organized to provide a complete credit service for farmers and farmer cooperative associations; the Farmers Home Administration, which makes loans and gives technical supervision to family-type farmers unable to get sufficient credit elsewhere; the Forest Service; the Rural Electrification Administration; the Soil Conservation Service; the Bureau of Agricultural Economics; and the Office of Foreign Agricultural Relations.

Legislative Basis of Action Agencies. In 1929 the Agricultural Marketing Act was passed, followed by the establishment of the Farm Board. The Foreign Agricultural Service Act was enacted in 1930. Enactment of the Agricultural Adjustment Act May 12, 1933, resulted in the setting up of many "action agencies" in the Department. This act was designed to establish and maintain such balance between the production and consumption of agricultural commodities, and such marketing conditions therefor, as would reestablish prices to farmers at a level that would give farm products the purchasing power they had in specified earlier base periods. The base period for most commodities was 1909 to 1914.

Subsequent legislative acts authorized other parts of the Department's action program. These measurements included: the Emergency Farm Mortgage Act of 1933; the Farm Credit Act of 1933; the Federal Farm Mortgage Corporation Act and the Jones-Costigan Sugar Act of 1934; the Soil Conservation Act of 1935; the Soil Conservation and Domestic Allotment Act, the Rural Electrification Act, and the Flood Control Act of 1936; the Agricultural Marketing Agreement legislation; the act placing functions of the Federal Surplus Commodities Corporation in the Department; the Bankhead-Jones Farm Tenant Act; the Norris-Doxey farm forestry legislation; the Sugar Acts of 1937 and 1947; the marketing-agreements and surplus-diversion programs, authorized in 1937-38; and the Flood Control Act, the Agricultural Adjustment Act, and the Federal Crop Insurance Act of 1938.

The Research and Marketing Act, which became law Aug. 14, 1946, provided for extension and expansion of Department research and marketing service programs. A National Advisory Committee was appointed October 24, and an administrator

for the act was designated Dec. 5, 1946. The Farmers Home Administration Act became law Aug. 14, 1946, abolishing the Farm Security Administration as such, providing for establishment of the Farmers Home Administration, and giving it various functions and responsibilities, including some formerly in Farm Credit Administration. Secretary's Memorandum 1171, August 19, established the Farmers Home Administration as of Nov. 1, 1946.

Important Agencies of the U.S. Department of Agriculture are presented in this volume under their own titles. See AGRICULTURAL RESEARCH ADMINISTRATION; COMMODITY EXCHANGE AUTHORITY; FOREST SERVICE; FARM CREDIT ADMINISTRATION, etc.

—ARTHUR P. CHEW

AIR-CONDITIONING AND REFRIGERATION. The air-conditioning and refrigeration industry in 1948 was notable for the record dollar volume of equipment sold and for two or three innovations which were outstanding as extensions of established practice rather than as new theoretical developments. Sales records were set by manufacturers of air-conditioning equipment during the year. The high rate established in 1947 continued contraseasonally through the first quarter of 1948, and estimates set the probable total for the year at over \$250 million.

After 15 years of development, gas all-year air-conditioning now is an established service in the gas industry. Systems are in commercial production by at least four companies and include winter heating, summer cooling, and humidity control. Gas-operated heat pumps also are coming into production.

Central station air-conditioning was provided for the 16-acre shopping center of the New York Life Insurance Company's Fresh Meadows housing project on Long Island. This is the first such system to be installed. Stores will be charged on a Btu basis established by measuring both volume and temperature of supply and return chilled water piped to the premises.

Installation of air-conditioning systems in three New Orleans public school classrooms was made in an experiment to determine the effect of air-conditioning on school children and their grades. Systems will operate for three years with one split grade working in identical rooms except for air-conditioning in one. The plan is to install air-conditioning in third-grade classrooms and study students through the fifth grade in conditioned and non-conditioned rooms. Servel Corporation supplied \$15,000 worth of equipment.

Regulation of the use of water for air-conditioning and refrigeration installations in Illinois was recommended in a State water survey citing five deficient areas. The practice of "once through" use of ground-water for cooling was listed as a heavy drain on resources. An Indiana law effective in 1948 forbids removal of more than 200 gallons per minute of water from the ground for cooling unless it is circulated through cooling devices or returned to the ground through recharging wells.

Aircraft capable of flight speeds over 500 m.p.h. require continuous and highly flexible cabin-cooling to offset friction and other heat gains characteristic of high-speed flight.

For planes using jet engines, an air-cycle refrigerating unit consists of an expansion turbine which bleeds air from the jet compressor. This air can be used for heating, cooling, ventilation, and pressurization. On the cooling cycle, the jet-compressor air is cooled in a heat exchanger and then further compressed in a centrifugal compressor, cooled

again in a second heat exchanger, and finally cooled by expansion in the turbine and ducted to the cabin. Power derived from the expansion turbine is used to drive the centrifugal compressor. For heating, some of the jet-compressor air is bypassed around the cooling unit and introduced to the cabin through a mixing valve.

Air-conditioning became a collective bargaining issue with publication by the Textile Workers of America (CIO), of a 60-page technical report on air-conditioning in textile mills. The report was sent to companies under contract with the union and in it President Emil Rieve urged that employers take it under advisement and act on its suggestions.

Scientists at Ohio State University set up experiments to develop temperatures near absolute zero (0.00001° Kelvin). Dr. Herrick L. Johnston, director of the University's cryogenic laboratory described methods of using a property of matter whereby some substances, weakly magnetic at higher temperatures, become strongly magnetic near absolute zero.

Revision of the safety code for mechanical refrigeration was undertaken by a committee set up under procedures of the American Standards Association and working under leadership of the American Society of Refrigerating Engineers. Said to be the largest in the world, the Alford Refrigerated Warehouse in Dallas, Tex., will provide 1,000 tons of refrigeration to 7.5 million cu. ft. of cold storage space and 8 million cu. ft. of air-conditioned dry storage space.

A new continuous process for making ice was described by its inventor, John R. Watts, assistant professor of mechanical engineering at the University of Texas. In this method, a machine using direct expansion-freezing cylinders extrudes ice in continuous columns which can be cut into cakes.

The Florida Citrus Canners Cooperative started at Lake Wales a plant for concentrating fruit juices which works on a new principle using a refrigerating machine instead of a boiler to heat citrus juice and drive off excess moisture. The same machine at the same time cools and condenses the water vapor under vacuum. Juice is evaporated so quickly and at such a low temperature that flavor and food values are preserved. Fresh juice and pulp are added to the concentrate to reinforce the flavor; the product is passed through continuous freezers, sealed in cans under vacuum, hardened, and sold in frozen condition. The consumer adds three cans of water to one can of frozen concentrate.

The U.S. Army tested a new type of Arctic troop shelter, light enough to be transported by glider with a detail of troops and, thermostatically controlled to provide an inside temperature of 70° F. while outside temperatures hit 70° F. below zero in a wind velocity of 125 m.p.h. Inside relative humidity will be kept below 35 percent.

Winter heating and summer cooling of a large office building by means of a heat pump (reversible refrigeration cycle) was accomplished for the new 12-story office building of the Equitable Savings and Loan in Portland, Ore. Heat is extracted from, or dissipated in, wells by refrigeration machines.

—WILLIAM B. FOXHALL

AIR FORCE, Department of the. The past year has been one of notable achievement by the U.S. Air Force. In the first full year of its existence as an autonomous branch of the Armed Services, perhaps its foremost activity was the Berlin airlift. "Operation Vittles" began on June 26, 1948, in a joint effort by the Western Powers to overcome the land

blockade of Berlin. In all operations by year-end, 729,605 tons of food, fuel, and other vital supplies had been delivered by 99,593 flights, averaging 7¼ tons per trip. The USAF, augmented by the resources of the U.S. Navy and the British RAF, was increasing the scope and size of its effort as 1948 ended. Other milestones were the assignment to tactical units of the North American B-45, the first jet-propelled bomber in mass production; the successful launching of a tiny McDonnell XF-85 parasite fighter from the belly of a B-29 "mother ship" and its return hook-up after completing a simulated interceptor mission; and a new official world's record of 670,981 m.p.h. set by a North American F-86 jet fighter.

It was announced that the Bell X-1, a USAF aircraft, had flown faster than the speed of sound (762 m.p.h. at sea level) many times. Designed to fly at 1,700 m.p.h. at an altitude of 80,000 feet, the X-1 had not yet reached the ultimate limit of its potentialities. In cooperation with the Navy, the USAF established the Military Air Transport Service and acted as executive for that interservice command. By the end of 1948 the USAF had enlarged its over-all composition to 59 air groups toward an ultimate goal of 70 groups. Present strength includes two groups of Consolidated B-36 bombers with a range of 10,000 miles carrying a 10,000-lb. payload. With an appropriation of \$1,542 million awarded in June, the USAF ordered 2,451 new planes, of which 2,100 were to be delivered by July, 1950.

The Continental Air Command was set up in a move to centralize authority for hemispheric air defense and to augment the Reserve Forces training program. Gen. Carl Spaatz, first USAF Chief of Staff, retired from active duty in June, 1948, and was succeeded by his Vice Chief of Staff, Gen. Hoyt S. Vandenberg. Gen. Muir S. Fairchild became the new Vice Chief of Staff. No changes in top civilian administrative posts occurred. The Hon. W. Stuart Symington continued to serve as Secretary of the Air Force and Arthur S. Barrows as Under Secretary.

ALABAMA. An east south central State. Area: 51,078 sq. mi. Population (July 1, 1948): 2,848,000, compared with (1940 census) 2,832,961. Chief cities: Montgomery (capital), 78,084 inhabitants in 1940; Birmingham, 267,583. See AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS, etc.

Finance. For the fiscal year ended Sept. 30, 1946, total revenue amounted to \$124,327,000; total expenditure, \$124,569,000.

Elections. In the November election, Truman's name did not appear on the ballot, and Thurmond, nominee of the States' Rights party, received the large majority usually accorded the candidate of the Democratic party. The 11 electoral votes of Alabama thus went to Thurmond. Democratic Senator Sparkman was reelected. Democrats won all 9 seats in the lower house, as usual. There were no Statewide contests for major state offices.

Officers, 1948. Governor, James E. Folsom; Lieut. Governor, J. Clarence Inzer; Secretary of State, Sibyl Pool; Attorney General, Albert A. Carmichael; State Treasurer, John Brandon; State Auditor, Dan Thomas.

ÅLAND ISLANDS (Åvenanmaa). An archipelago at the entrance to the Gulf of Bothnia, 15 miles from the coast of Finland and 25 miles distant from the coast of Sweden. This group of some 300 islands, 80 of which are inhabited, forms an autonomous

department of Finland. Total area: 572 square miles. Population (1940): 27,672. Capital, Maarianhamina.

ALASKA. The territory of Alaska lies in the far northwest corner of the North American continent and includes the Aleutian Islands which extend westward more than 1,200 miles toward the Kamchatka Peninsula. The area of Alaska, inclusive of inland waters, is approximately 586,400 square miles or approximately one-fifth the area of continental United States. Three-fourths of Alaska is in the North Temperate Zone.

Population. According to the 1940 census the population of Alaska was 72,524, of which whites numbered 40,066 and natives (Indians and Eskimos) 32,458. Eskimos accounted for 15,576, Indians for 11,283 and Aleuts for 5,599. The population of Alaska in 1947, excluding members of the armed forces, was estimated at 91,000. Juneau, the capital of Alaska, had a population of 5,729 in 1940 and was estimated to have 7,000 in 1947.

Education. Alaska has two school systems, one supported wholly by the Territory and its individual municipalities and school districts; the other for natives (Indians and Eskimos) administered by the Federal Government, through the Office of Indian Affairs. The University of Alaska, founded in 1922, had an enrollment of 334 in 1946-47. In the same year there were 13,254 students enrolled in the primary and secondary schools.

Production. The leading industries of Alaska in order of their importance are fishing, mining, and fur farming. The value of manufactured fishery products in 1947 was \$90 million. Salmon fishing and packing, which formerly accounted for 80 percent of the people employed in Alaska, has in recent years been supplanted as the No. 1 employer by the construction industry. The normal annual salmon pack for Alaska runs 6 million cases (of 48-one-lb. cans). Alaska alone accounts for 60 percent of the world's supply of salmon. There are 90 salmon canneries and they employ about 25,000 persons. Other fish caught in Alaskan waters and marketed commercially include herring, halibut, cod, shrimp, crabs, etc.

Mining, which ranks second in importance as an industry, was seriously curtailed during World War II and has not yet recovered its prewar levels of production. Gold, the leading mineral export, ranks second to salmon exports, but in 1947 only \$10,580,465 was produced, in contrast with \$26,178,000 in 1941. Other minerals mined in Alaska include coal, mercury, silver, copper, lead, and platinum. Total value of mineral production (1947): \$14,341,000.

Alaska's third leading industry is fur farming and the sale of furs derived from trapping. The production of furs during 1947 amounted to \$3,830,839 (excluding fur seals). Mink pelts (valued at \$1,945,110), and sealskins are the two leading products. The Pribilof Islands account for 85 percent of the world's supply of sealskins, the herd being estimated at 3.6 million fur seals.

The three principal farming areas in Alaska are located in the Kenai Peninsula (Homer Area), Tanana Valley (near Fairbanks), and the Matanuska Valley (near Palmer). The products grown are largely for local consumption, i.e. vegetables, livestock, dairy products, poultry, and potatoes. Most crops common to North America can be grown in Alaska. One of the most interesting experiments in agricultural colonization ever undertaken under Government sponsorship was the Matanuska Valley Colonization Project, fifty miles from

Anchorage at the head of Cook Inlet. To this area in 1935 were moved 200 families from Minnesota, Wisconsin, and Michigan. Farms in Alaska produced an estimated \$2,250,000 worth of products in 1947.

The national forest area covers 20,883,421 acres (1946) and yielded 68.1 million board feet of timber in 1947. The estimated stand is approximately 85,000 million board feet, of which 73 percent is hemlock, 21 percent spruce, and 6 percent cedar.

Trade. The total commerce between the United States and Alaska since 1867 exceeds \$4,500 million. Exports of Alaskan products to the United States in 1946 totaled \$73,775,896. Imports from the United States by Alaska totaled \$75,007,229.

Finance. Revenues of the Territorial Government for 1947-49 are estimated at \$6,686,000. Since appropriations totaled \$10,159,184, and since the Organic Act which Congress passed respecting government in Alaska prohibits the incurring of a debt, the Territorial Board of Administration is regulating expenditures so as to stay within the income of the territory.

Government. Although Alaska was purchased from Russia in 1867 for \$7,200,000 it did not become an "incorporated Territory" until 1912 when Congress passed an "Organic Act" creating the Territory of Alaska. Under its terms the Territory does not merely belong to the United States, but is a part thereof. The Constitution and laws of the United States are automatically in force with the exception of certain provisions which are clearly not applicable. The Territorial Government is headed by a Governor appointed for a four-year term. He is assisted by a Secretary of Alaska. In addition, there is a Territorial Legislature which meets for a period of 60 days biennially beginning with the fourth Monday in January of uneven years. Commencing with the 1945 session the number of members in this body was increased to include 16 Senators and 24 representatives. A delegate (Edward L. Bartlett in 1948) is elected by Alaskans every two years to represent Alaska in the U.S. Congress. He is empowered to prepare and introduce legislation, and act as a member of Committees, but he has no vote. Most of the functions of government, including administration of health, welfare, education, etc., are responsibilities of the Territory, but expenses of the legislature and judiciary have remained a Federal function. Governor: Ernest Gruening (first appointed 1939).

Events, 1948. Alaskan events during 1948 centered around the continued drive for Statehood. This drive began in 1946 when the electorate voted to seek admission to the Union on a basis of equality with the other 48 States.

Some progress towards this end was recorded during the year. In February a subcommittee of the House Committee on Public Lands recommended full Statehood for Alaska. This was the first hearing ever given any bill to make Alaska a State. On Apr. 7, 1948, legislation granting Statehood was unanimously approved by the House Public Lands Committee. The approved bill eliminated State recognition of tribal rights and granted the proposed State an added million acres of land. Alaskans felt that the election of President Truman would assure Alaska of Statehood at the next session of Congress.

Concern was expressed over the poorest salmon fishing season in the Territory's history. The salmon pack is the basis of economic life and many communities are greatly affected by the poor catch. By the end of August southeastern Alaska had

canned but 80,000 cases, as against 340,000 the previous year.

Culminating the efforts of some 30 years to establish paper mills in Alaska, the U.S. Forest Service in August accepted bids of the Ketchikan Pulp and Paper Company to establish a paper industry at Ward's Cove. The proposed mill was estimated to cost from \$20 to \$30 million. The total timber involved in the deal was approximately 8,000 million cu. ft., to be cut on a sustained yield basis.

ALBANIA. A Balkan republic on the eastern shore of the Adriatic Sea. Area: 10,629 square miles. Population: 1,063,000 (Jan. 1, 1940). Chief towns: Tirana (capital), 30,806 inhabitants (1930); Scutari (Shkodër), 29,209; Koritsa (Korçë), 22,787; Elbasan, 13,796; Durazzo (Durrës), the chief port, 8,739.

Education and Religion. Great strides are being made to reduce the country's high illiteracy. In 1946-47, 450 new schools brought the total to 1,759 elementary schools. On the secondary level, there were 56 schools with about 15,000 students. Primary education is compulsory. The population, by religion, includes 688,280 Moslems, 210,313 Orthodox Christians, and 104,184 Roman Catholics.

Production. By the end of 1946 some 200,000 landless peasants, constituting about 25 percent of the farming population, had been allotted land. Chief crops are maize (86,000 metric tons in 1946) and wheat (60,000 metric tons in 1946). Other products are tobacco, timber, wool, dairy products, olive oil, cattle, and hides. Estimated livestock (1946): Horses, 50,000; asses, 40,000; cattle, 345,000; sheep, 1,548,000; goats, 854,000. With few exceptions, the mineral wealth of the country remains undeveloped. Copper mines, bitumen mines, and salt pits are being worked successfully. Crude oil production reached prewar levels in 1946. Work on a hydroelectric power plant near Tirana was begun in 1947. Since World War II, the country's foreign trade has been confined almost entirely to barter.

Transportation. Of the 1,759 miles of highways (1940), 750 were suitable for motor vehicles. But the network was badly damaged during World War II. Construction of a railway between Durazzo and Elbasan, the first in Albania, was begun in May, 1940.

Government. Albania was proclaimed a republic on Jan. 12, 1946, following general elections held on Dec. 2, 1945. The dominant party is the National Liberation Front, led by General Enver Hoxha (Hodja), who is Prime Minister and Minister for Foreign Affairs. A new constitution was promulgated on Jan. 12, 1946.

Events, 1948. Hoxha's régime is controlled from the U.S.S.R., with Soviet advisers in the Ministries and Russian organizers in the army. The government refused to participate in the Marshall plan, in spite of the great need for outside help. Although no treaties of collaboration were signed with the U.S.S.R., Hoxha carried out Moscow's instructions and was repeatedly accused by the U.N. Balkan Committee of aiding the guerrillas operating against Greece. Opposition to Hoxha was evidenced by the purge of more than 3,000 persons in August and the growing number of Albanians who reportedly fled across the frontier into Yugoslavia. In October, a purge of "Trotskyists and Tito's friends" resulted in the downfall of Interior Minister Koci Xoxe and five other top Communist leaders, including Pandi Christo, a member of the Albanian Politburo, and the appointment of a new

Army chief of staff, Major General Mehmet Shehu, a Moscow-trained soldier.

Serving as the spearhead of the Cominform attacks against Tito, Albania severed trade relations with Yugoslavia on July 3, in spite of the disastrous food situation in the country, and ordered Tito's military, political, and cultural missions to get out (thus violating the economic treaty of November, 1946, drafted for a 30-year period). Jakova, Minister of Industry, accused Tito of trying to absorb Albania into Yugoslavia, and announced that the Soviet Union would sell goods to Albania "four times cheaper than the price fixed by the Yugoslavs." In September, the United States, Great Britain, and France charged Albania with failing to disarm Greek refugees who fled across the frontier. On October 1, the United States State Department sharply attacked the Albanian rejection of a request of the United States, Great Britain, and France that the United Nations Special Committee on the Balkans be permitted to operate in Albanian territory. The Corfu incident was debated before the United Nations Security Council which decided, 7 to 2, that the mines "had been placed with the knowledge of the Albanian Government." The case was heard by the International Court of Justice in November, Great Britain charging that Yugoslavia had laid, in Albanian waters, the mines that blew up two British destroyers on Oct. 22, 1946.

As an ideal place from which to exert pressure on Greece, the U.S.S.R. used Albania to support Markos' rebels against Greece. In fact, in August, when Greek Army troops hammered Markos' flanks in the Grammos Mountains, Markos moved his headquarters and most of his provisional government to Nikolitza, in Albania. On November 10, the Political and Security Committee of the UN General Assembly charged Albania (together with Yugoslavia and Bulgaria) with endangering peace in the Balkans and decided to keep the United Nations on-the-spot observation committee at work in Greece for another year.—JOSEPH S. ROUCEK

ALBERTA. One of the prairie provinces of Canada lying between Saskatchewan and the Rocky Mountains. Area, 255,285 square miles, including 6,485 square miles of fresh water. Population (1948 estimate), 846,000. Vital statistics (1946): 22,184 live births; 6,601 deaths; 9,478 marriages. Chief cities: Edmonton (capital) 113,116 inhabitants in 1946 (quinquennial census), Calgary 100,044, Lethbridge 16,522, Medicine Hat 12,859. Education (1945-46): 181,228 students enrolled in Alberta's schools and colleges. Religion: United Church 193,664, Roman Catholic 191,343, Anglican 113,279, Lutheran 84,630, and Presbyterian 68,910.

Production. The gross value of agricultural production for 1947 was \$354,895,000. Value of all major field crops produced on 13,967,000 acres in 1947 amounted to \$273,235,000. Chief field crops (1947): wheat 103,000,000 bu. valued at (\$136,990,000), oats 75,000,000 bu. (\$52,500,000), barley 52,000,000 bu. (\$52,520,000), rye 4,250,000 bu. (\$14,960,000), flaxseed 2,150,000 bu. (\$11,180,000), sugar beets 366,000 tons (\$5,483,000). Livestock (June 1, 1947): 1,654,000 cattle (\$126,136,000), 410,900 horses (\$19,619,000), 964,100 swine (\$21,940,000), 613,800 sheep (\$6,053,000), 10,916,000 poultry (\$10,016,000). Fur production (1946-47): \$3,738,788. There were 1,027 fur farms (1946) with fur-bearing animals valued at \$3,049,500. Marketed value of fisheries (1946) was \$1,339,083. Dairy products (1947) included

32,068,000 lb. of butter (\$16,355,000); 3,111,000 lb. of cheese (\$1,172,000); 6,507,000 lb. of honey (\$1,366,000). Estimated total farm value of poultry and eggs was \$20,095,000 in 1947. Mineral production included 8,070,430 tons of coal (1947) valued at \$36,439,158; 6,770,477 barrels of oil; and 44,106,643 M cubic feet of natural gas (\$7,745,886). The total value of mineral production (1947) was \$67,432,270.

Manufacturing production (1946) in 1,315 establishments employing 22,694 persons had a gross value of \$257,031,867. The slaughtering and meat-packing industries ranked first in importance in 1946. Other important industries were flour and feed mills, petroleum products, dairy products, and breweries.

Finance. For the year ended Mar. 31, 1947, revenue totaled \$42,588,038; expenditure \$31,939,342; net general debt \$126,146,821.

Government. The executive power is vested nominally in the Lieutenant Governor but actually in the ministry of the Legislature. There is a Legislative Assembly of 57 members elected by direct vote of the people. Party standing at latest general election (Aug. 17, 1948): 51 Social Credit, 2 CCF (Co-operative Commonwealth Federation), and 4 others. Alberta is represented by 6 Senators (appointed for life) and 17 elected commoners in the Dominion Parliament at Ottawa. Lieutenant Governor, J. C. Bowen (app. Mar. 20, 1937); Premier, E. C. Manning (app. May 31, 1943, Sept. 12, 1944, and reelected Aug. 17, 1948). See CANADA.

ALEUTIAN ISLANDS. An archipelago extending for 1,000 miles westward from the extremity of the Alaska peninsula, and forming a part of the Territory of Alaska. The Aleutians comprise four main groups: Near Islands (Attu, Agattu, and the Semichis), Rat Islands (Amchitka, Semisopochnoi, Kiska, Little Sitkin, Rat, Chugul, Davidof, and Khwostof), Andreanof Islands (Atka, Adak, Unimak, Adak, Kanaga, Tanaga, etc.), Islands of Four Mountains (Chuginadak, Herbert, Carlisle, Kagamil, and Uliaga), and Fox Islands (Unimak, Unalaska, Umnak, and the islands of the Krenitzen group—Ugamak, Tigalda, Avatanak, Rootok, Akun, and Akutan). Total area: 6,821 square miles. Population (1939): 1,300.

ALFALFA. In 1948 the alfalfa hay crop of the United States amounted to 34,083,000 tons. The yields of the principal producing States (in tons) were: California 4,162,000; Kansas 2,411,000; Nebraska 2,192,000; Idaho 1,968,000; Wisconsin 1,948,000; Minnesota 1,804,000; Michigan 1,606,000; Iowa 1,509,000; Colorado 1,435,000; Illinois 1,323,000; Montana 1,316,000. Alfalfa seed produced in the United States during 1948 totaled 989,900 bushels. See HAY.

ALGERIA. A territory of France in northwest Africa. The country is divided into Northern Algeria (comprising the departments of Algiers, Oran, and Constantine) and Southern Algeria (comprising the territories of Ain Sefra, Ghardaia, Tougourt, and Saharan Oasis). The estimated population on Jan. 1, 1947, was 8,488,000 including 1,048,000 Europeans and 7,440,000 Moslems. Chief cities (estimated 1947 populations): Algiers, 360,000; Oran, 252,500; Constantine, 121,200; Bona (Bône), 82,400; Tlemcen, 71,400; Blida, 65,600; Sidi-Bel-Abbes, 65,500.

Education. In 1946-47 there was a total of 2,043 elementary and secondary schools with 322,905 students, and 5,143 students were enrolled at the

university in Algiers. Six Normal schools provide teacher training.

Production. Agriculture and stock raising are the chief occupations. One third of the total area under cultivation (15,600,000 acres) is owned by Europeans. Principal crops in 1946 were (in metric tons): cereals (wheat, barley, and oats), 1,665,100; citrus fruits, 110,000; alfa, 100,000; dry dates, 30,470; potatoes, 1,100,000 quintals; legumes, 130,000 quintals. Other products were (in U.S. gallons): wine, 244,197,412; brandies, 13,784,000; and olive oil, 1,956,400. Wool, mohair, and hides are also exported. Mineral output (in metric tons) was: natural phosphates, 584,827 (1946); pyrites, 40,359 (1946); iron ore, 1,560,000 (1947); coal, 214,885 (1946). Local canneries processed a total of 3,080,021 kilos of fish in 1945.

Trade and Finance. The 1947 imports totaled 45,384,000,000 francs; exports, 35,796,000,000 francs. Budget estimates for 1947 placed revenue at 22,386,438,796 francs; expenses at 22,340,000,560 francs. A separate post office budget was estimated to balance at 1,644,500,000 francs for 1947.

Transportation. In 1946 Algeria had 3,396 miles of railway line in operation; some 20,000 miles of road, 4,316 miles of which were paved national highways and 14,841 miles were secondary gravel roads. Air services connect Algiers with Marseille, France, with the United States, and with other parts of Africa. Construction of a trans-Saharan railway, begun in 1941, was interrupted in 1942.

Government. The over-all administration rests in the hands of a Governor General, who is responsible to the government of the Fourth Republic in Paris, in particular to the Minister of the Interior. Northern Algeria is divided into 3 departments (Constantine, Algiers and Oran), which before World War II sent elected representatives to the French Chamber of Deputies and Senate. Natives were represented only on local bodies, including the largely consultative *Délégations Financières*, and even for these the number of Moslem electors was greatly restricted. After the liberation of France the franchise was broadened and Algeria was represented in the National Assembly. On Sept. 1, 1948, the latter body adopted a new Statute for Algeria, permitting even greater Moslem participation in government.

Events, 1948. The outstanding political event in Algeria during 1948 was the April election. This was the first poll taken under the new Statute and its results were awaited with anxiety by both the French government and Algerian public opinion. The Assembly to be filled by the election was composed of 120 seats, divided equally between two electoral colleges. The first college comprised some 600,000 voters, of whom all were Europeans except some 80,000 Jews and 100,000 Moslems (the latter having special educational or service qualifications). The second college consisted of approximately 1,200,000 Moslems, or about 40 percent of the adult males of Berber and Arab ancestry.

Contesting the 60 seats in the first college were, in general, the same parties prominent in the political life of metropolitan France, including the Communists. The two main parties running in the second college were the movement for the Triumph of Democratic Liberties and the Democratic Union of the Algerian Manifesto. The first, led by Messali Hadj, was for outright independence and an orientation toward the old-style theocratic Islamic state. The other, captained by Ferhat Abbas, though also separatist in its objective, was more aimed at providing Algeria with a European political structure and economy and at giving Al-

gerians the same rights as Frenchmen. In addition there were a number of conservative independents unwilling to break the tie with France, and the Communists, regarded as anti-Islamic.

The first round of the election was held on April 4, with violence marking the occasion in several places, notably at Aumale where several persons were killed in a fight between police and nationalists. The results of the voting showed a need for run-off polls in 23 constituencies in the first college and 19 in the second. This was considered to represent a high proportion of decisive results on the first round. The second vote was set for the 11th, and in the intervening week many candidates withdrew and various deals were made, particularly to prevent the Communists from gaining any seats—they had won none in the first round.

The run-offs confirmed the moderate trend already manifested in the earlier voting. Final results were as follows.

In the first college: Union Committee and R.P.F. (De Gaulle), 38; Independents, 14; Radical, 1; Socialist Radical, 1; Socialist, 4; Communist, 1. In the second college, where the number of abstentions appears to have been about 30 percent, the division of seats was: Independents, 43; Messali Hadj's party, 9; Ferhat Abbas' party, 8. The moderates thus not only dominated each college but actually provided the $\frac{2}{3}$ majority necessary for important questions. Under these circumstances it was felt that the new assembly might function without too much friction with the French administration. In any case, its powers were very definitely limited.

Observers were quick to remark the relatively poor showing of the two separatist parties and of the Communists. The latter had steadily lost ground since the end of the war. They no longer had representatives of their party in the government in Paris who could give a helping hand to the comrades in North Africa. They further had less economic distress on which to play. The party's leaders decided that in the future they must identify the Communist platform with nationalist aspirations among the Moslems throughout French North Africa. Algeria was important because it alone had a representative, elective assembly through which native opinion could effectively make itself heard. Even in Algeria less than half the adult males held the franchise. The fact that the Communists were still regarded as dangerous is indicated by the action of the Council of the Department of Algiers in October when it voted 24 to 2 to demand the dissolution of the Communist Party.

Communist propaganda could, of course, feed on the perpetual shortage of food and other necessities among the masses. The population of French North Africa was increasing faster than the means of subsistence. At the same time, the cry for land reform meant, if carried out, dividing up the European-controlled farms into small plots, which would further decrease the productivity of the soil since the natives' methods of farming were very backward. In order to furnish expert advice on how to improve the agricultural output of North Africa, the French government asked Walter Clay Lowdermilk, noted American reclamation engineer, to carry on an extensive study in Morocco, Algeria and Tunisia. Upon returning to the United States in October after a four-months tour, he reported that an attack on the problem had already been launched. He recommended classifying the land for its most suitable use (cultivation, pasture or forest), and employing such tried American tech-

niques as contour-plowing, crop rotation and water control in order to conserve resources and increase production.

In mid-November, America's greatest wheat-grower, Thomas D. Campbell of Hardin, Montana, left for a tour of French North Africa to investigate and report to the French government on the possibilities of increasing grain production in those countries.

—ROBERT GALE WOOLBERT

ALIEN PROPERTY, Office of. A Division of the U.S. Department of Justice; established pursuant to Executive Order No. 9788 of Oct. 14, 1946. An Assistant Attorney General is Director of the Office and exercises the functions and powers on behalf of the Attorney General in controlling, directing, managing, supervising, vesting, and liquidating properties vested from enemy nationals and enemy governments.

The vested properties consist of business enterprises; patents, copyrights, and trademarks; estates and trusts; and real and personal property. It is the policy of the Office to liquidate, except patents, copyrights, and trademarks, properties vested from enemy nationals and their governments as soon as practicable through a program of public sales. The return of properties vested from certain non-hostile persons and the payment of debt claims is authorized by statute. The net proceeds available after the liquidation of properties vested from the governments and nationals of Germany and Japan are to be made available for the settlement of certain types of war claims of United States civilians and military personnel.

Pursuant to Executive Order No. 9989 of Aug. 20, 1948, control over blocked assets of certain foreign governments and their nationals was transferred from the Secretary of the Treasury to the Attorney General and is being administered by the Office of Alien Property. The policy of releasing blocked assets is designed to aid the European Economic Recovery Program. Director: David L. Bazelon, Assistant Attorney General.

ALUMINUM. Domestic and world demand for aluminum was tremendous in 1948 and could not be satisfied by reduction facilities which were limited by world-wide power shortages. The heavy demand was caused in part by shortages of steel and nonferrous metals, and by a market transition in favor of aluminum caused by price rises less severe during the year than in most other metals.

Domestic production of primary aluminum was approximately 620,000 tons, up from 571,750 in 1947. This was a peak postwar tonnage, and more than two-thirds of the wartime production peak in 1943.

Prices of pig aluminum and primary ingot were advanced 2 cents per lb. during the year, to 16 cents and 17 cents, respectively. Mill products were also advanced appreciably, and extra charges were revised. Although the industry sets its prices on the basis of f.o.b. plant with minimum freight allowed, one producer discontinued the freight allowance on pig and ingot in November.

Aluminum scrap was very scarce throughout the year and competition for it was active between ingot makers and primary producers. Secondary ingot prices, in consequence, were pushed up to a top range of 27 cents to 31 cents per lb., well above the price of comparable primary ingot.

All primary producers of aluminum were required by the shortage to place customers on a quota basis. In addition, they restricted consumption largely to applications expected to continue

when other metals become plentiful. Development and promotion of new fields of application were held in abeyance.

To the end of September, the Economic Cooperation Administration had issued authorizations to western European nations to permit them to purchase 100,000 tons of Canadian ingot aluminum at U.S. Government expense. The principal beneficiary was the United Kingdom, granted more than 90,000 tons. By the end of August, imports of aluminum scrap, ingot and sheets from that area had reached significant proportions. In the five months since the inception of the ECA program, imports totaled 21,000 tons. The shortages of all forms of aluminum during the year fostered the growth of gray market operations.

The Bonneville Power Administration, beset by the rapidly growing power needs of the Northwest, was forced to restrict the power available to all aluminum reduction plants in that area toward the end of the year, and served notice that further curtailment might be necessary during a two-hour a day interruptible period. The maximum restriction would involve an ingot loss estimated at 23,000 lb. a day out of total capacity of 1.6 million lb. a day.

Construction of a new reduction plant at Point Comfort, Tex., was begun by the Aluminum Company of America. It will have a capacity of 35,000 ingot tons a year. Natural gas will be the source of power, to be converted by a battery of diesel engines into 80,000 kva. This departure of the industry from the use of conventional hydroelectric power signifies an important step in the direction of higher power costs.

The government-built Massena, N.Y., reduction plant, adjacent to a plant of its own, was bought by the Aluminum Company of America from War Assets Administration for \$5 million. A consideration in the purchase was an agreement made by the company to release all its alloy patents and its most important process and fabricating patents for the free use of the entire aluminum industry.

Inadequate power will prevent both plants at Massena from being placed into full production. There will be a net gain of only 4 percent in ingot production until more power is made available. Next year the company's old plant at Niagara Falls will be closed down. This will represent a loss of 20,000 tons annual capacity.

Consumption of aluminum by the rearmament program was just beginning to make its effect felt by the end of the year when the first evidences of procurement for the 70-group air force and for airborne equipment were observed. The National Military Establishment is giving much consideration to the construction of a great variety of military equipment in light metals.

Production of secondary aluminum was restricted throughout the year by the scarcity of scrap. Secondary smelters had produced 136,519 tons by the end of September, down from 144,171 tons in the same period last year. Imports of crude aluminum from Canada had reached 73,970 tons by the end of November. U.S. exports, to the end of August; sheets, plates and strip totaled 37,790 tons; crude metal, 1,147 tons. Canadian ingot production was approximately 375,000 tons in 1948.

Domestic production of bauxite, almost wholly from Arkansas, constituted only one-third of the raw material used by alumina plants of the United States in 1948. The balance was imported, principally from Surinam.

—JOHN ANTHONY

AMERICAN FEDERATION OF LABOR (AFL). Founded Nov. 15, 1881, a federation of national and interna-

tional unions, state federations of labor, city central bodies, departments, directly affiliated local unions, and councils of unions employed in overall industries. Its purpose is the advancement of workers' interests economically, politically and socially. Dues-paying membership as of August, 1948, was 7,220,531. President, William Green; Secretary Treasurer, George Meany. Headquarters: A.F. of L. Building, 901 Massachusetts Ave., NW, Washington 1, D.C.

AMERICAN LABOR PARTY (ALP). A political party organized in 1936 for independent political action in the State of New York. The ALP is the New York State arm of the Progressive Party. In the 1948 elections, the ALP achieved the highest state-wide vote in its twelve-year history by getting 508,000 votes for Henry A. Wallace. This exceeded the previous record high of 496,000 votes for Franklin D. Roosevelt in 1944.

Major planks of the ALP program included resumption of peace talks between the United States and the Soviet Union, repeal of the Taft-Hartley Law, effective price and rent control, outlawing of discrimination, and extension of social security. Chairman, Vito Marcantonio; Secretary, Douglas L. MacMahon; Treasurer, Alvin Udel; Executive Secretary, Arthur Schutzer. Headquarters: 570 Seventh Ave., New York 18, N.Y.

AMERICAN LEGION, The. An organization of American veterans of World Wars I and II. The original organization was founded in Paris, France, in 1919. On Oct. 29, 1942, President Roosevelt signed Public Act 767, making honorably discharged veterans of World War II eligible for membership. The organization is nondenominational and nonpolitical, and is active in promoting the interests of veterans, particularly of disabled veterans, and their dependents; and in work for Americanism, adequate national defense, community service, child welfare, rehabilitation, youth training, and other social needs. The annual observance of American Education Week was originated by the Legion in 1921. Its campaign for Americanism involves a continual fight against the inroads of communism and other alien "isms." The American Legion has successfully championed many laws providing for adequate care of disabled veterans, war widows, and orphans.

The Legion has two national publications, *The American Legion Magazine* and *The National Legionnaire*, as well as a number of weekly, semi-monthly, and monthly state, district, county, and post news organs. In 1947-48 the membership was 3,072,048 in 17,176 posts. National Commander for 1948-49: Perry Brown, Beaumont, Texas. National Adjutant: Henry H. Dudley, Indianapolis, Ind. Headquarters: 777 North Meridian St., Indianapolis 6, Ind.

AMERICAN LITERATURE. There was an undercurrent of vitality and maturity in American literature of 1948. The best-seller lists included an increasing number of distinguished books and very few adolescent daydreams disguised as costume romance. The war was rediscovered and came in for full treatment both by the novelists and by the architects of our military victory.

Biography. Biographers continued to favor American historical figures. Douglas S. Freeman published the first two volumes of his monumental six-volume work on *George Washington*. Other Revolutionary figures were treated in Dumas Malone's *Jefferson The Virginian*; Karl Lehmann's

Thomas Jefferson: American Humanist; Irving Brant's *James Madison: The Nationalist*, the Constitution years only; and Herbert S. Allen's *John Hancock: Patriot in Purple*. Morris Bishop wrote a life of *Champlain*; and Lincoln's law partner and first biographer was studied in David Donald's *Lincoln's Herndon*. Biographies of more recent figures were W. C. Richard's *The Last Billionaire*, a study of Henry Ford; Frederick Palmer's *John J. Pershing: General of the Armies*; Ernest Samuels' *The Young Henry Adams*; Basil Matthew's *Booker T. Washington*; and Wilson Whitman's *David Lillienthal*.

Biographies and autobiographies of figures of the Roosevelt era continued, of which the most valuable for the historian were Robert Sherwood's *Roosevelt and Hopkins* and Henry L. Stimson's autobiography *On Active Service*. Elliot Roosevelt edited the second volume of *F. D. R.: His Personal Letters*. Any tendency to hero-worship of Roosevelt was countered by James A. Farley's *Jim Farley's Story* and John T. Flynn's vitriolic *The Roosevelt Myth*. Roosevelt's Secretary of State published his two volume *Memoirs of Cordell Hull*. Roosevelt's predecessor, Herbert Hoover, was given uncritical eulogy in Eugene Lyons' *Our Unknown Ex-President*.

Autobiographies of general interest were *A Man Called White*, the Negro leader; *So Far, So Good* by Morris Ernst; *Enjoyment of Living* by Max Eastman; *My Life as Teacher* by John Erskine; *All Our Years*, by Robert Morss Lovett; *Family Circle* by Cornelia Otis Skinner; and *The Making of an Insurgent* by Fiorello H. LaGuardia.

History and Current Issues. The tremendous events of the last two decades continued to absorb the attention of both the active participants and professional historians. The most important book on the military aspect of the war was Gen. Dwight D. Eisenhower's *Crusade in Europe*. The deeds of the three services were recounted: Fletcher Pratt wrote *The Marines' War*; S. E. Morison published the third volume of his *History of U.S. Naval Operations in World War II*, called *The Rising Sun in the Pacific*; and the Historical Division of the Army issued *U.S. Army in World War II: The Army Ground Forces*. Theodore H. White edited *The Stilwell Papers*, our war in the CBI theater. The period preceding the war was detailed by Frederic L. Paxson's *Post-War Years: Normalcy 1918-1923*; Dixon Wecter's judicious *The Age of the Great Depression*; and Charles A. Beard's *President Roosevelt and the Coming of the War*. In *Washington Witch Hunt* Bert Andrews exposed the hysteria and stupidity of the Loyalty Tests. Major books about other nations included: *The United States and China* by John K. Fairbank; *I Saw Poland Betrayed* by Arthur Bliss Lane, our ex-ambassador to that country; *The Silent People Speak* by Robert St. John, about Yugoslavia; and *A Russian Journal* by John Steinbeck.

New interpretations of earlier phases of American history included Max Savelle's *Seed of Liberty: The Genesis of the American Mind* and Louis B. Wright's *The Atlantic Frontier*, both studies of Colonial culture; and Carl Van Doren's enthusiastically received *The Great Rehearsal*, the story of the adoption of the Constitution. The Civil War period was treated in Roy F. Nichols' *The Disruption of American Democracy*, the tragedy of weakness under Buchanan; E. Merton Coulter's *The South During Reconstruction*, volume eight of his *History of the South*; E. S. Miers and R. A. Brown's *Gettysburg*, an editing of official reports and eyewitness accounts of America's most glamor-

ous battle. The newly opened Lincoln papers were described in David Mearns' *The Lincoln Papers*; and William B. Hasseltine wrote the story of *Lincoln and the War Governors*. Morris Cohen's *The Meaning of History* was a profound study but far less metaphysical than Toynbee's famous work.

The American Scene. There was a slight falling off in the number of appreciative works on the various regions of America, and a steady increase in books which take up our unsolved social problems. The whole field of minority groups was analyzed by R. M. McIver in *The More Perfect Union*; the story of the Negro in American life was effectively presented by Roi Ottley in *Black Odyssey* and Arnold Ross in *The Negro in America*; the case against anti-Semitism by Carey McWilliams in *A Mask for Privilege*; and in Mordecai Kaplan's *The Future of the American Jew*. In a readable but scholarly way John Collier wrote about *The Indians of the Americas*; while the Indians of the American West were treated in Stanley Vestal's *Warpath and Council Fire*. Sumner Welles' *We Need Not Fail* pleaded for support of the UN; while Crane Brinton's *From Many One* and Paul McGuire's *Experiment in World Order* went beyond to discuss problems of real world government.

Regional studies continued. *The Tennessee* by Donald Davidson and *The Mohawk* by Codman Hislop were added to the Rivers of America Series. Roderick Peattie wrote about *The Berkshires: The Purple Hills*. Two volumes were added to the Society in America Series: *Washington Cavalcade* by Charles Hurd, and *Memphis Down in Dixie* by Shields McIlwaine. Elliot Paul recaptured the traditions of the old West in *A Ghost Town on the Yellowstone*. Wright Morris's *The Home Place* was a vivid presentation in picture and text of the culture of Nebraska.

Many books came to grips with what is called the "Cold War." Three notable ones were Martin Ebon's *World Communism Today*; Fritz Sternberg's *How to Stop the Russians*, a plea for democratic reform; and David Bradley's *No Place to Hide*, the implications of Bikini.

Prose Fiction. The year opened auspiciously with Ross Lockridge's *Raintree County*, an epic novel of the Middle West. Novels interpreting the tensions of modern life included: Irwin Stark's *The Invisible Island*, race prejudice in New York City; *This Very Earth* by Erskine Caldwell, the poor white in the South; *Plunder* by S. H. Adams, corruption in Washington; and in Waldo Frank's *The Invaders* the A-bomb explodes over New York. Hiram Haydn's well received *The Time is Noon* treated youth in the '20's. Outstanding war novels were Norman Mailer's *The Naked and the Dead*, war in the Pacific; Irwin Shaw's *The Young Lions*, centered in the E.T.O.; John Cobb's *The Gesture*, air force men in England; and J. G. Cozzens' *Guard of Honor*, an army air base in Florida.

The vogue of the historical novel continued, but its quality was up sharply. Both Carl Sandburg's *Remembrance Rock* and Esther Forbes' *The Running of the Tide* were widely acclaimed. In *The Ides of March* Thornton Wilder rewrote Roman history; Pearl Buck's *Peony* described the assimilated Jewish community in China; and *My Glorious Brothers* by Howard Fast, the Maccabean revolt.

Novels based on American history included *Toward the Morning*, the third of Hervey Allen's series about a white child and the Indians; *Eagle in the Sky* by Van Wyck Mason, a novel of the Revolution; *Great Mischief* by Josephine Pinckney,

Charleston before the Civil War; and *The Great Blizzard* by Albert E. Idall, the famous blizzard of '88.

The Gilded Hearse by Charles Gorham; *The Great Ones* by Ralph Ingersoll; *Important People* by Robert Van Gelder; and *The Locusts Have No King* by Dawn Powell all illustrate the moral bankruptcy that comes with success. *The Inheritance* by Allan Seager; *The Patchwork Time* by Robert Gibbons; *The Moth* by James M. Cain; and *Other Voices, Other Rooms* by Truman Capote took up the frustrations of childhood and adolescence.

The abnormal was revealed in Gore Vidal's *The City and the Pillar*, homosexuality; Charles Jackson's *The Outer Edges*, normal people's reaction to murder; and in William Faulkner's first novel in eight years, *Intruder in the Dust*, a brilliant study of morality and murder. In *The Wild Country* Louis Bromfield returned to his earlier style; in *One Clear Call* Upton Sinclair took his Lanny Budd series through the ninth volume; while George Stewart wrote about a forest fire. Two first novels of unusual promise were *The Lower Part of the Sky* by Lenard Kaufman; and *The Golden Net* by Ruby Redinger, about university faculties.

Outstanding collections of short stories were Robert Penn Warren's *Circus in the Attic*; Peter Taylor's *A Long Fourth*; Willa Cather's posthumous *The Old Beauty and Others*; and Harry Sylvester's *All Our Idols*.

Poetry and Drama. The year marked the advent of no new poet of magnitude, although *The Dispossessed* by John Berryman, and *Terror and Decorum* by P. Vieneck marked the work of two poets of unquestioned promise. Several of the established poets added both to their canons and their reputations, notably Archibald MacLeish with *Active and Other Poems*.

Other prominent poets to publish during the year were Robinson Jeffers with *The Double Axe and Other Poems*; Kenneth Fearing, *Stranger at Coney Island*; Theodore Spencer, *Poems*; Mark Van Doren, *New Poems*; Muriel Rukeyser, *The Green Wave*; Allen Tate, *Poems: 1922-1947*; Richard Eberhart, *Burr Oaks*; Walter Benton, *Never a Greater Need*; Randall Jarrell, *Losses*; *The Cantos of Ezra Pound*, 84 of the projected 100 cantos; Norman MacLeod, *A Man in Midpassage*; and John Peale Bishop, *Collected Poems*, edited by Allen Tate. Wallace Stevens published *Three Academic Pieces*, a critical essay and two illustrative poems. Waldemar Hill edited *The People's Song Book*. American ballads were collected by John A. and Alan Lomax in *Folk Song U.S.A.*

Two noteworthy dramas were published: *Anne of the Thousand Days* by Maxwell Anderson; and *A Streetcar Named Desire* by Tennessee Williams.

Literary Criticism. Two landmarks in criticism were the *Literary History of the United States* in three volumes, a collaboration of many scholars; and the beginning of the American Men of Letters Series with Joseph Wood Krutch's *Henry David Thoreau* and Emery Neff's *Edwin Arlington Robinson*. The year marked also the appearance of *The American College Dictionary* and the second supplement of H. L. Mencken's *The American Language*.

Criticism of individual authors included *Nathaniel Hawthorne* by Randall Stewart; and *Hawthorne: The American Years* by Robert Cantwell, both of which received praise. Brom Weber's *Hart Crane* was perceptive; as was W. G. Rogers' *When You See This Remember Me*, about Gertrude Stein. Leonard Unger compiled T. S. Eliot: *A Selected Critique*. Interpretations of foreign writers

included Richard Ellman's *Yeats: The Man and the Mask*; George Bullet's *George Eliot: Her Life and Her Books*; Eric Bentley's *Bernard Shaw*; and Harold March's much praised *The Two Worlds of Marcel Proust*.

Science. A much discussed and praised work of science that became a best seller was *Sexual Behavior in the Human Male* by Alfred C. Kinsey and others. Conservation was eloquently pleaded by Fairfield Osborne in *Our Plundered Planet*, and by William Vogt in *Road to Survival*. Two books sought to interpret science and human culture: *Man and His Works* by Melville Herskovits and *Science, Servant of Man: A Layman's Primer for the Age of Science* by I. Bernard Cohen. *Race and Nationality* by Henry Pratt Fairchild was a scientific analysis of the various racial groups in the United States.

Philosophy and the Fine Arts. The continued search for a non-authoritarian basis for human values was found in *Life and Morals* by S. J. Holmes and in the highly praised *Man For Himself* by Erich Fromm. *Ideas Have Consequences* by Richard Weaver preached a return to medieval spirituality; *Of Flight and Life* by Charles A. Lindbergh for some modern spirituality. *The Proper Study of Mankind* by Stuart Chase was completely secular in its approach to the social sciences.

Two art forms were interpreted in *An Approach to Modern Painting* by Morris Davidson, and in Sigmund Spaeth's *History of Popular Music in America*. Eric White's *Stravinsky* was an appreciative study. *American Building* by James Marston Fitch showed American architecture as an expression of social forces. (See ENGLISH LITERATURE.)

—ARTHUR E. JENSEN

ANDORRA. A small republic in the Pyrenees between France and Spain, under the joint suzerainty of the French chief executive and the Spanish Bishop of Urgel. Area, 191 square miles. Population, about 6,000. Capital town, Andorra. The language spoken is Catalan. Sheep rearing is the main occupation of the people. A governing body called the council-general consists of 24 members elected for 4 years (12 elected every 2 years). The council-general nominates the First Syndic (President) and Second Syndic (Vice-President).

ANGLO-EGYPTIAN SUDAN. A British-Egyptian condominium in northeast Africa. Area: 969,600 square miles. Population (estimated): 7,498,090, including 41,760 non-natives. Chief towns: Khartoum (capital), 44,950 inhabitants; Omdurman, 116,196; Khartoum North, 91,530; Atbara, 19,757; Port Sudan, 18,554; and El Obied, 17,500.

Production and Trade. Cotton (167,201 short tons of seed cotton produced in 1946-47) and gum arabic (30,928 tons exported in 1946) are the chief export products. Great millet and bulrush millet are the principal grain crops. Other products are sesamum, groundnuts, dates, vegetable ivory, mahogany, ghee, shea nuts, salt (21,101 metric tons in 1946), and gold. Livestock (1944): 20,000 horses, 500,000 asses, 3,195,000 cattle, 4,808,000 sheep, 3,991,000 goats, and 1,109,000 camels. Trade (1946): imports were valued at £E11,467,962 and exports at £E9,267,831, of which cotton accounted for £E4,712,152; and gum arabic for £E1,564,383.

Transportation. At the end of 1946 there were 14,240 miles of roads, 2,001 miles of railway open to traffic, 2,325 route miles of river transport, and regular air service from Khartoum to various points in Africa. There are 35 wireless stations.

Finance. In 1946 revenue amounted to £E8,288,985 and expenditure to £E8,207,802. The budget estimates for 1947 were balanced at £E9,208,880, including a prospective surplus of £E60,539. The Egyptian pound (£E) divisible into 100 piasters, is exchangeable at 97.5 piasters to the pound sterling.

Government. The condominium of the Sudan was created by the Anglo-Egyptian convention of Jan. 19, 1899, and confirmed in the Anglo-Egyptian Treaty of 1936. A governor general heads the administration, which in its lower and middle levels is largely staffed by Sudanese. There are eight provinces, each administered by a governor and each advised by local councils. For details on the changes introduced into the Constitution in 1948, see *Events*. Governor General: Sir Robert Howe (app. April, 1947).

Events, 1948. The Sudan continued to be a stumbling block to the formulation of a new Anglo-Egyptian treaty. Egypt insisted on preserving "the unity of the Nile"—which meant ending the condominium with Great Britain and making the Sudan an integral part of Egypt, with certain rights of autonomy. The British maintained that the existing arrangement should give way only to fuller self-government and eventual independence for the Sudan, if the people of that country should choose it.

The Constitution of the Sudan was generally admitted to be in need of reform. The Egyptian Government itself had been aware of this, and early in the year a conference was planned between British and Egyptian officials to discuss these reforms. A British note accepting an Egyptian suggestion for such a conference was published on February 23. But Egyptian public opinion, stirred up by the press, obliged the Government to reject this proposal early in March.

The Egyptians declared that the scheme was aimed merely at perpetuating British rule in the Sudan. The full reasons for the Egyptian Senate Foreign Affairs Committee's rejection of the draft agreement on the Sudan, signed by the British Ambassador, Sir Ronald Campbell, and Foreign Minister Khashaba Pasha, were discussed in the Senate on June 7. A few days later Khashaba resigned, presumably on this issue.

Meanwhile, the British Government had gone ahead with its intention to draw up a new Constitution. The draft was discussed by the Advisory Council for the Northern Sudan in March. On June 14 the British announced that they were going ahead without the Egyptians. Therefore, five days later, the Governor General, Sir Robert Howe, promulgated the ordinance which provided for the establishment of an Executive Council and Legislative Assembly for the entire Sudan. The terms, largely the result of reconciling the opinions of the Sudanese themselves, may best be described in the words of an editorial in the London *Times* of July 6:

"The pivot of the scheme is a Legislative Assembly broadly representative of the whole country. So diverse are conditions in north and south, and even in different areas inside these main divisions, that no uniform method of election has been found practicable. Of the 65 elected members, 10 are to be directly elected by the more advanced parts of the north, while less developed areas will return 42 members by secret ballot through a system of electoral colleges, in the composition of which direct election, however, plays an important part. In the relatively backward south, 13 members are to be chosen by the councils of the three provinces

of Equatoria, Upper Nile, and Bahr el Ghazal. The legislature, which will enjoy extensive powers, is linked to the executive by its right to elect a Leader, who will himself be a Minister and whose views the Governor General will consider, in appointing other Ministers, all of whom must be non-official Sudanese.

"The Ministers, together with under-secretaries—also Sudanese—whom the Governor General will appoint after consulting the Leader of the Assembly, will form the main Sudanese element on the Executive Council, which is to be collectively responsible to the Governor General for the administration. At least half its members must be Sudanese, but the Governor General is empowered to nominate up to 3 ordinary and up to 4 ex-officio members. He retains certain powers in his own hands, but it is plainly intended that they shall be exercised mainly to safeguard the working of the Constitution and to deal with such matters as foreign relations which are for the present outside the competence of the legislature.

"The new scheme seems well fitted to give the Sudanese people the opportunity of showing their capacity to manage their own affairs, while providing against any major disasters which might arise from administrative inexperience."

The elections took place on November 15, not without violence and some loss of life. The political group favorable to union with Egypt—the Ashigga Party—boycotted the voting and its demonstrations in various towns resulted in the arrest of several hundred persons. It also organized a general strike, fairly effective at Port Sudan.

In the 10 urban constituencies, only 7 to 34 percent of the voters went to the polls. The indirect system of voting was used in the 28 rural constituencies, and here from one third to three quarters of the electorate participated. Due to the boycott, practically all of the elective seats went to the Independence, or Umma Party, led by El Sayed Sir Abdel Rahman el Mahdi Pasha. There still remained 25 members to be named by the British administration. An aftermath of the violence accompanying the elections was the trial of pro-Egyptian political leaders in the Sudan. The British authorities refused to let them be defended by lawyers from Egypt. This led to student riots in Egyptian cities in which on November 28 two were killed.

—ROBERT GALE WOOLBERT

ANGOLA (Portuguese West Africa). The largest colony in the Portuguese empire, extending for some 1,000 miles along the south-west coast of Africa. Area, 481,351 square miles. Population (1940 census), 3,738,010, of whom 44,083 were Europeans and 28,305 half-castes. The Negro population is predominantly of Bantu stock and tribal in character. Chief towns: São Paulo de Loando (capital, pop. 62,000), Lobito, Malange, and the future capital, Nova Lisboa. Educational facilities are limited to 161 primary schools with 10,408 pupils and 12 secondary schools with 1,602 pupils.

Production. Principal crops in 1946 were coffee (883,100 bags of 60 kilos), maize, sugar, palm oil and kernels, cotton, wheat, tobacco, cocoa, and sisal. Minerals include valuable diamond deposits. Copper and lignite exist but are not exploited. Chief exports are coffee (774,751 bags in 1946), diamonds, sugar, wax, and coconut, while imports consist mainly of foodstuffs, textiles, and coal.

Foreign Trade, etc. The 1946 imports totaled 799,582,000 escudos; exports 962,251,000 escudos. Revenue for the year 1946 was placed at 525,827,000 escudos; expenditure, 482,173,000 escudos.

Transportation. A total of 1,442 miles of railway is open to traffic. The Benguela railway runs from the Atlantic Ocean to the border of Belgian Congo and continues to the east coast. There are 21,772 miles of good roads. Angola is connected with the Belgian Congo and Equatorial Africa by air. In 1946 a total of 446 vessels of 628,067 tons entered Angola ports.

Government. By a 1946 decree the country is divided into five provinces and sixteen administrative districts. Administration of the colony is headed by a governor-general assisted by an advisory council composed of appointed and elective representatives from among the European inhabitants. Governor-general: Captain Silva Carvalho.

ANTHROPOLOGY. The year 1948 marked the continued growth of anthropology in all its phases and branches, most notably in the United States, but in significant degree elsewhere as well. At the opening of the fall term eighty universities and colleges in the United States were offering courses in anthropology leading to the bachelor of arts degree, either as independent departments or combined with one or another of the social sciences. Of these eighty institutions, eighteen have staff and other facilities that warrant the granting of master of arts and doctor of philosophy degrees in anthropology. This expansion, which represents an over-all increase of several hundred percent during the past three years, answers an increased general interest in anthropological concepts and methodologies and an increasing employment of trained anthropologists in various social research programs, in numerous state and national government departments, bureaus, and services, as well as on university and college staffs. No comparable data is available for European nations, though it is known that systematic instruction and research has been variously established, re-created or expanded in universities and museums in France, Italy, Austria, Poland, Germany, England, Scotland, Norway, and Sweden. In Latin America the same trend is observable, most notably in Mexico, Colombia, Peru, Venezuela, and Brazil, though on a somewhat more limited scale.

During 1948 a third and much more comprehensive International Directory of Anthropologists was gotten under way. This enterprise is being carried out under the auspices of the National Research Council, through its Committee on International Cooperation in Anthropology, and will probably be completed and in print by the end of 1949.

Organizations. The Third International Congress of Anthropological and Ethnological Sciences was successfully held in Brussels, August 15 to 23, inclusive. About 500 persons were in attendance from most European countries, the United States, and a number of nations and colonies in Latin America, Africa, the Near East, and Asia. The program consisted of special exhibitions of archaeological and ethnological collections and of about 150 papers devoted to various topics in all branches of anthropology.

The American Anthropological Association has continued to grow in membership and in its effectiveness as a professional organization. Two new classes of membership were instituted during the year: Foreign Fellows and Liaison Fellows. The former gives recognition to anthropologists in countries other than Canada and the United States who are of professional status; the latter gives recognition to outstanding scholars in other disciplines who share interests with anthropologists in certain problems. A Western States Branch of the Associa-

tion was formed during the year, thus making a total of six local and regional affiliated and derivative organizations in the Association. The annual meeting of the Association was held in Toronto, Canada, Dec. 28 to 30, 1948, and had about 300 persons in attendance. The Association undertook to be host organization to the 29th International Congress of Americanists, to be convened in New York in September, 1949, an undertaking made possible by a substantial grant from the Viking Fund.

Publications. The growing academic interest in anthropology is exemplified by the publication of four general textbooks during the year: C. S. Coon, *A Reader in General Anthropology* (Holt); John Gillin, *The Ways of Men* (Appleton-Century); Melville J. Herskovits, *Man and His Works* (Knopf); and A. L. Kroeber, *Anthropology* (Harcourt, Brace). Among the many monographs and specialized studies to appear during the year, of special note are volumes 3 and 4 of the *Handbook of South American Indians* (Bureau of American Ethnology, Bulletin 143) to which a large number of specialists have contributed. The rapidly developing interdisciplinary field of studies in personality and culture was graced with the appearance of Clyde Kluckhohn and Henry A. Murray (eds.) *Personality in Nature, Society and Culture* (Knopf). Other representative titles during 1948 are: in human paleontology and development of races, R. Ruggles Gates, *Human Ancestry* (Harvard); in the field of religion in nonliterate societies, William Howells, *The Heathens: Primitive Man and His Religions* (Doubleday); and in social anthropology, Robert H. Lowie, *Social Organization* (Rinehart).

Exchanges. An increased number of exchanges among students and researchers were effected during the year under the auspices of various universities, foundations and governments. Thus, Drs. Hilda Kuper and Audrey I. Richards, respectively of Johannesburg (S. Africa) and London, have been visiting professors at the University of North Carolina, Professor I. Schapera, of Capetown, S. Africa, was a visitor to the University of Chicago, and Prof. Emilio Willems, of São Paulo, Brazil, was among the participating faculty in the Institute for Brazilian Studies at Vanderbilt University during the summer months.

The Conference Board of Associated Research Councils, Washington, D.C., has undertaken the processing of applications for the exchange of professors, specialists and research scholars under the Fulbright Act. Similar exchanges of students are being handled through the Institute of International Education. At both levels, anthropology and anthropologists will benefit as more agreements are made with various nations in accordance with the terms of this act.

The Institute of Social Anthropology of the Smithsonian Institution sponsored a visit to the United States of Señor Luis Duque Gomez, director of the Ethnological Institute, Bogotá, Colombia, with the purpose both of stimulating field work in Colombia and encouraging a greater exchange of museum specimens.

D. B. Stout, under the auspices of the Viking Fund, spent the summer months in Sweden on a mission to increase the collaboration between Swedish and American anthropologists through exchanges and the encouragement of joint research projects.

Though the outlook for the international exchange of anthropologists has improved during the year, the exchange of books and periodicals in the

field of anthropology is still seriously hampered by controlled currencies in many nations and the lack of dollar credits. To date no entirely satisfactory means of overcoming this difficulty has been devised.

Physical Anthropology. Warfare and political unrest have continued to block further search for fossil evidences of human evolution in eastern Asia and Indonesia, though the materials already at hand from these areas give promise that important discoveries will be made here when conditions permit. In South Africa further information has been published by Professor Raymond A. Dart concerning *Australopithecus prometheus*, noted in the previous *Year Book*. This fossil form is now regarded as having had a brain capacity of about 650 cc., though in body size it was of pygmoid stature and delicately proportioned. The use of fire seems clearly established (hence the species name), and as a fire-using proto-human *prometheus* is interpreted, on geological evidence, as antedating the previously known earliest user of fire (*Sinanthropus pekinensis*) by from 300,000 to 500,000 years. At the end of 1948 announcement was made of the discovery, also in South Africa near Johannesburg, by Dr. Robert Broom, of the greater part of a massive fossil jaw containing teeth which indicate a giant humanoid believed to be larger than the giant forms of Java man (*Meganthropus paleo-javanicus*). This discovery has been named "Swartkrans Man," and will, no doubt, be given a binomial classification in the near future.

The third Summer Seminar in Physical Anthropology was held June 20 to 30 at the Viking Fund, with somewhat wider international representation than previously. Among the outstanding authorities in attendance was Dr. W. E. Le Gros Clark, of Oxford University.

Archaeology. The most extensive field activity was carried out in the United States, mainly along rivers where inundation of thousands of important Indian sites is imminent as a result of nationwide Federal river development programs. The scientific aspects of this work are under the direction of the Smithsonian Institution, but with assistance from several other government agencies and services and in cooperation with various research councils, universities, and museums.

Other major archaeological expeditions were undertaken during the year by Harvard University to the Aleutians, by the National Museum, Denmark, and the University of Alaska to the Norton Sound area of Alaska, and by the Peabody Foundation for Archaeology, Andover, Mass., to the Yukon area. It is noteworthy in all these archaeological investigations that the expedition personnel included botanists, geologists, physical anthropologists and other specialists whose techniques enable more precise archaeological field activity.

Systematic cooperation with physicists was begun during the year by archaeologists on the matter of possibly dating archaeological specimens through the measurement of the radioactive Carbon 14 content in them. To date, results are inconclusive as to extent of usefulness of this procedure.

Cultural Anthropology. The Institute of Social Anthropology in the Smithsonian Institution continued its program of field research in Mexico, Peru, and Brazil in collaboration with local ethnologists. The study of acculturation processes in Negro communities in the New World, mainly by investigators trained at Northwestern University, has continued to grow during the year and now include researches in Honduras, Cuba, Haiti and Brazil. In addition, many universities, museums,

and foundations supported smaller field researches of shorter duration in various places in the New World. Field expeditions in ethnology of international scope, other than those limited to American nations, are still relatively few in number, however, because of political difficulties and the restrictions on monetary exchanges. The University of California African Expedition, southern section, included extensive field researches among the tribes of northern Southwest Africa, under the direction of Dr. Edwin M. Loeb. Professor R. L. Sharp, of Cornell University, departed for extended community researches in Siam.

Interdisciplinary Developments. Area programs, noted in the previous YEAR BOOK, EVENTS of 1947, have remained the most prominent development wherein specialists in the various branches of anthropology are teamed up with other social scientists and with natural scientists in the joint attack on large-scale problems through field study and analysis. Anthropologists have played an important role in the design, pursuit and assessment of such programs and have been the recipients of a number of research and travel grants from several foundations supporting area research. Further planning was carried out during the year for the establishment of an International Institute of the Hylean Amazon, sponsored by UNESCO, in which ethnologists would be participants.

Prizes and Awards. The Viking Fund Medals and Awards for 1947 (announced at the end of 1947 and early in 1948) were awarded to John. O. Brew (archaeology); E. A. Hooton (physical anthropology); and Robert H. Lowie (cultural anthropology). The Loubat Prize, awarded quinquennially in the United States by Columbia University and in Scandinavia by the Swedish Royal Academy of Letters, History and Antiquities, was granted in 1948 to Dr. Stig Rydén, of the Ethnographical Museum, Gothenburg, Sweden, for his many contributions to South American Indian archaeology. Dr. Manuel Gamio, one of Mexico's foremost anthropologists, was awarded an honorary Doctor of Letters degree by Columbia University.

Necrology. The ranks of anthropology were seriously depleted during 1948 through the deaths of Ruth Benedict, author of the milestone publication *Patterns of Culture*, of Sylvanus G. Morley, world-renowned specialist in Maya archaeology, and Franz Weidenreich, authority on human paleontology and proponent of the hypothesis that human evolution included giant forms.—D. B. STOUT

ANTITRUST DIVISION. A Division of the U.S. Department of Justice charged with the enforcement of the antitrust and 30 kindred acts. The Division receives complaints and, in cooperation with the Federal Bureau of Investigation, conducts investigations which, where appropriate, lead to criminal prosecutions or suits in equity designed to break up monopolies, and attempts to monopolize, restraints of trade, such as conspiracies to fix prices, allocate territories, engage in exclusive dealing arrangements and other illegal practices including unlawful cartel agreements with foreign corporations, and restrictive patent arrangements.

The Division has, as a result of increased appropriation, expanded its staff, including its offices located at Boston, Chicago, Denver, Los Angeles, New York City, San Francisco, and Seattle. It has opened new offices at Cleveland, Detroit, Jacksonville, Philadelphia, and Kansas City, Kans. These offices receive complaints from the public, institute investigations, and prosecute antitrust cases. The Small Business Section of the Division receives

complaints and appeals for help from small business concerns throughout the country and, when justified, represents their interests in their dealings with both larger private business concerns and Government agencies. If the investigation indicates a violation of the antitrust laws, this Section recommends appropriate action by the Division. Assistant Attorney General in charge: Herbert A. Bergson.

AQUEDUCTS. A relatively new development in aqueduct construction is pre-stressed reinforced concrete pipe. A 78-mile line, consisting of 48 miles of 48-inch pipe, 27 miles of 36-inch pipe, and 3 miles of 24-inch pipe (all of this special construction), was completed this year. It extends from Lake Huron to a filtration plant at Saginaw, Mich., and to one at Midland. The pipes were precast in 16-foot lengths, shipped to the job in trucks and then lowered into the trench. The pipe consists of an interior concrete core, a thin steel cylinder outside of this formed from flat sheets all welded on the job, and then outside of this, pre-stressed high tensile wire embedded in a rich covering of cement mortar. Vibration of the concrete and steam curing of cement mortar are essential features of the casting operation. Ten pipe-laying crews worked simultaneously in placing the pipe. Joints were sealed with solid rubber gaskets inserted in grooves provided in the galvanized steel joint rings at the spigot end of the pipe. The project cost \$12 million. A 2-mile length of 66-inch steel pipe extends from the shore to a crib out in Lake Huron to constitute the intake to the pipe line. Its capacity is 100 million gallons per day.

Another pipe line of the same type of construction has been built this year for Montreal, Canada. It is an 84-inch diameter intake, 9,500 ft. long, receiving water from the St. Lawrence River, and extends 2,000 ft. out into the river from the shore. The pipes were precast in 18-foot lengths. Economy in the use of steel is made possible by this type of construction.

One of the great undertakings for transporting water now under way in this country is the Colorado-Big Thompson Project for diverting 310,000 acre feet of water annually from the western to the eastern slope of the continental divide through a 13-mile tunnel. The water will be pumped 187 feet vertically through three conduits 87 inches in diameter.

Another noteworthy water supply project under construction this year is the Second Mokelumne Aqueduct in northern California that will ultimately increase the system to 200 million gallons per day of water from the Sierra Nevada to the East Bay Municipal Utility District, east of San Francisco. The work now under way consists of the installation of a new steel pipe line. To finance the work, \$12 million was provided by a bond issue. The total cost is estimated to be \$21.7 million. The new line follows closely an earlier plan which called for the progressive installation of booster pumps or of parallel lines to increase flow as the demand for water should increase.

The first step was the installation of 6,100 ft. of 60-inch steel pipe, $\frac{3}{8}$ -inch thick, which was war surplus material originally intended for Manila. The remaining portion of the line will be of 67- and 68-inch diameter steel pipe. All joints on the new line are to be welded; in the old line the field joints were riveted. Bids showed steel to be cheaper than concrete. The shell varies in thickness from $\frac{7}{8}$ to $\frac{1}{2}$ inch. It is lined with spun-cement mortar and covered with $\frac{1}{4}$ -inch pre-stressed wire which

in turn is sprayed with a mortar coating $\frac{3}{4}$ -inch thick.

Preliminary work has been begun on a \$5 million tunnel project in the Pacific Gas Company's \$61 million Feather River hydroelectric development. It will be of a 26-foot horseshoe section 17,800 ft. length, to be driven through solid granite, and will be completed in 1949.

The San Diego Aqueduct, built by the Bureau of Reclamation, was completed just before the beginning of 1948 and has been operated successfully. Minor difficulties with small fish interfering with air relief valves have been experienced and corrected. The 7 tunnels along the line were designed to carry 100 million gallons per day, which is the full allocation of water to the city from the Colorado River supply. The aqueduct consists of 149,142 feet of 48-inch reinforced concrete pipe; 115,088 feet of 54-inch; 64,028 feet of 72-inch; and 9,840 feet of 96-inch reinforced concrete pipe. The tunnels vary in length from 500 feet to over a mile.

It is interesting to note that wood pipe is still being used. A contract has been let for 3,600 feet of 36-inch pipe for St. John, N.B. This year, the 40-ft. diameter diversion tunnel, which is 2,150 ft. long, at Downsview Dam on the Delaware Water Supply System for New York City was holed through.

Among the other aqueducts under construction in 1948, the following are of interest: The Central Valley Project in California, by the Bureau of Reclamation, for which \$41.4 million has been appropriated by Congress, included the Friant-Kern and Delta-Mendota canals, construction of which was to be pushed this year. The total length of the former will be 153 miles, and of the latter, 120 miles. Also the Bureau has under consideration the Santa Barbara project, to include a 6-mile tunnel and a 20-mile conduit. The city of Baltimore has advertised for bids for a 10-foot diameter water tunnel, 10 miles long.

A \$1.62 million contract for completion of the Salt Lake Aqueduct has been let for the Metropolitan Water Board of Salt Lake City. It calls for the installation of $7\frac{1}{2}$ miles of 69-inch concrete pipe. The fully completed line will be 40 miles long and will carry water from a pumping station in Provo Canyon to Salt Lake City. —W. E. HOWLAND

ARABIA. A large peninsula in southwestern Asia. Area, approximately 1,000,000 sq. mi.; population, upwards of 10,000,000. The political subdivisions are Aden, Aden Protectorate, Bahrain (Bahrain), Kuwait (Koweit), Muscat and Oman, Qatar, Saudi Arabia, Trucial Oman, and Yemen. (See the separate article on each country.) Other countries in the Middle East with Arab-speaking populations, but not included under the heading "Arabia," are Egypt, Iraq, Lebanon, Palestine, Syria and Transjordan. The various parts of Arabia may be divided into two broad political categories: independent states, and territories under British sovereignty, protection or influence.

They are all inhabited by almost solidly Moslem populations, though of diverse sects. The ancient Arab stock, still overwhelmingly predominant in the interior, has been diluted with African, Indian, Iranian and other elements along the coasts. Education is still largely religious in nature and confined to males, except where British or missionary influence has been felt. Economically the region is probably on the threshold of a renaissance due to the billions of barrels of oil in its subsoil, now in process of exploitation.

ARAB LEAGUE AFFAIRS. The Arab League, representing Egypt, Syria, Lebanon, Iraq, Transjordan, Saudi Arabia, and Yemen, was organized in 1945. In the face of expanding Zionist ambitions, the League aimed to strengthen relations between member states, coordinate their policies, and safeguard their independence. At first the Palestine war inspired coordinated League action, distinctly raising its prestige in the Arab world, thanks to genuine Arab fear not only of a limited Zionist state, but also of further Zionist expansionist pressure. The latter fear was fanned by large-scale Jewish immigration and the belligerent statements of Zionist supporters.

The League's legal argument for armed intervention was: United Nations jurisdiction was limited to helping transfer government from the departing British mandate to a state based on the wishes of the majority in Palestine. The Arabs could not accept as binding the two-thirds Assembly vote for partition which to them was UN tyranny. The League considered that since partition and the resulting creation of a Zionist state were unlawful, its members had to defend the right of Palestine's majority to establish a unified democratic state.

As ire mounted against the United States and the Soviet Union, both of which had actively campaigned for partition, demonstrations broke out in the Arab countries. Particularly difficult was the position of those Arabs who had supported the United States; for them the American support of what all Arabs considered another form of Western imperialism was incredible, particularly in the light of American unwillingness to accept refugees itself. Moderates were forced to agree with extremists that no compromise was possible.

A secret League Council meeting to discuss action was followed by a series of conferences both of League representatives as a whole and various leaders separately. Stern statements were issued and fighting flared up in Palestine in spite of British efforts to maintain peace. Yet, the League Secretary General, Azzam Pasha, commenting on a March switch in the American position toward trusteeship, said that the Arabs would accept a truce if the Jews did likewise. A Beirut meeting in March ended with a decision to insist on British proposals for a temporary trusteeship, a democratic government guaranteeing minority rights to Jews and acceptance into Arab countries of Jews then detained in Cyprus.

But military events and UN debates ground on. The American return to support of partition and President Truman's precipitate recognition of Israel while the American delegation was discussing a UN truce proposal confirmed earlier Arab suspicions of American foreign policy aims.

Even while attempts were being made to present a unified front, undercurrents of conflict developed, both between Arab countries and within them. A May report indicated King Abdullah of Transjordan and Syrian President Shukri al-Kuwatli met to relieve the strain in their relations caused by Abdullah's espousal of the "Greater Syria" plan envisaging a combination of Syria, Lebanon, Iraq, Transjordan, and Palestine, presumably under Abdullah. With the establishment of Israel in May the Arab League, and government representatives in it, faced a loss of prestige among their own people, which meant a setback for the moderate, Western-educated leadership, thereby contributing to the size and influence of the extremist pan-Islamic Moslem Brotherhood.

Meanwhile the various countries took economic

PARADOGS AID IN ALASKA RESCUE. Eskimo huskies are trained to bring help to isolated airmen. The paradog has just been dropped from the cabin of the rescue plane.

steps on their own. Egypt warned all shipping to stay out of territorial waters along a 20-mile coastal strip of southern Palestine. Iraq cut off oil through the pipeline ending at Haifa (under Zionist control); its Director General of Economics said Iraq would only resume pumping if the refinery were placed under international control. An Anglo-American-French request to reopen was refused on December 27 until "the Arabs' just demands are met." Shortly after the UN partition resolution, the Arabian-American Oil Company had announced that work on its pipeline from Saudi Arabia had been temporarily stopped because of the attitude in Transjordan, Syria, and Lebanon on the UN vote.

THE ARAB LEAGUE AND ITS NEIGHBORS

In January, Syria's President said Arab League policy would determine whether the pipeline's right of way through Syria would be granted. After the League's decision that no American companies should be permitted to lay pipelines across member states until the United States had changed its Palestine policy, Syria refused. But by year's end the wavering front was reflected in two developments: (1) the report that a special committee of experts from Egypt's Ministry of Commerce and Industry had recommended establishing a Suez oil refinery in cooperation with American oil companies, and the resumption of talks for terminating the Saudi Arabian pipeline at an Egyptian port; and (2) a November meeting of Syrian and Lebanese leaders to reconsider the earlier pipeline decision.

The latent conflicts crystallized with the League announcement on September 20 of the formation of an Arab Government for Palestine with headquarters at Gaza. Transjordan's King Abdullah informed the League he would not recognize the formation of a government "within the security zone of the Transjordan Government, which extends from the Egyptian kingdom's frontiers to the frontiers of Syria and Lebanon." Nevertheless,

the Gaza Government's Prime Minister telegraphed the League that "the inhabitants of Palestine, in the exercise of their right to determine their own fate and in accordance with the decisions of the Arab League Political Committee, have decided to declare all Palestine . . . an independent state . . . based on democratic principles."

An 11-man Cabinet was announced and an October 1 meeting of the Assembly elected the Mufti, Haj Amin al-Husseini, its President. By the middle of October Syria, Lebanon, Iraq, and Egypt had recognized the Gaza Government. But not Transjordan. Abdullah appointed Omar Mattar Governor General of Palestine areas held by Transjordan's effective Arab Legion, and demanded dissolution of the Government at Gaza. He said he was "determined to bring peace to the Arabs of Palestine and to avoid . . . disagreement among the Arab nations." A week later the head of Transjordan's delegation to the League meeting in Cairo denied a rumor that Transjordan would make a separate peace with Israel.

A December 1 meeting in Jericho, of mayors of nearly all Arab-held towns, resolved to declare Palestine and Transjordan "an indivisible whole" with Abdullah as king. An electoral law was also drafted. Although the Transjordan Cabinet consented to Abdullah's accepting the crown, he did not commit himself. Nevertheless the verbal storm descended on him and the League warned that it would take "serious action" against him unless he abandoned the plan.

Iraq remained neutral in the debate, possibly because of close ties with Transjordan through the common Hashimite family rule. Abdullah's Palestine supporters, taunting the others with failure to support the Palestine Arab cause effectively on the battle field, said that the Gaza Government represented 80 people and their group $\frac{1}{10}$ of the Palestine Arabs. While the original Mufti, Haj Amin al-Husseini, continued to guide Gaza affairs Abdullah took it upon himself to appoint another Mufti.

Although Britain's Foreign Minister Ernest Bevin had supported plans for unifying Transjordan and Arab Palestine (as originally proposed by UN Mediator Count Bernadotte), the League split was embarrassing to Britain since her relations with neighboring Iraq and Egypt were equally important and delicate. While heated Arab words were exchanged, popular dissatisfaction with the Palestine outcome exploded in a succession of serious demonstrations in the various countries.

The Palestine conflagration pushed down to the bottom of the League's agenda, matters of concern such as the status of Arab North Africa, the future of Libya, and the Dutch invasion of Indonesia. But League policies were supported in varying degrees at meetings of the UN and its constituent organizations by sympathetic Moslem states including Iran, Afghanistan, and Pakistan.

The various measures of coordination in commercial exchange proposed by the League's Economic Committee contributed to the growth of interregional trade. The League supported in principle the formation of a UN Middle East Economic Commission; a UN Economic Affairs Department report having included a Middle East survey stressing the awakening interest of those nations in economic advancement. The agricultural officials from all Arab states participated in UN Food and Agriculture Organization conferences, considering unified programs for increasing Middle East food production (see also PALESTINE and individual countries).

—DOROTHEA SEELYE FRANCK

ARCHAEOLOGY. During 1948 archaeological activities were continued in most parts of the world. Excavations were conducted largely by local authorities, but there were a number of foreign expeditions, on a less lavish scale than before the war. The effect of the past war is shown by the fact that many of the discoveries in Europe are a direct result of repairs being made following wartime damage.

India. Commercial relations between the east coast of India and the Mediterranean at the beginning of the Christian era are suggested by recent discoveries at Sisupalgarh 2 miles east of Bhuvaneshwar. A fortified site, which may be the ancient Kalinganagara, capital of the emperor Kharvela, has yielded one type of pottery showing Roman motives and clay bullae reminiscent of Roman coinage of ancient times. (*Archaeological Newsletter*, No. 10.)

Iraq. Discoveries of revolutionary importance for our knowledge of Mesopotamian prehistory continue to be made at Eridu where a second campaign took place last winter. The site of the seven successive predynastic temples reported last year was excavated down to bedrock, and a shrine located for each of its sixteen strata. In the lowest appeared a miniature shrine about 4 m. square already incorporating all the main features of later Sumerian temples, such as a niche-recessed altar and a central offering table with traces of burnt offerings. Associated with this temple of the 5th millennium B.C. and the lower strata is a new type of pottery, slightly resembling the Tell Halaf and Samarra pottery of northern Mesopotamia. This proves that the Ubaid people were not the earliest arrivals in southern Iraq, as was previously thought, but so far no traces of this new culture have been found on any other Sumerian sites, and thus Eridu's claim to high antiquity seems confirmed. In addition to the temple site, a cemetery containing over 1,000 graves of the Al'Ubaid period was partially excavated. These early 4th-millennium graves are rectangular, constructed of sun-dried bricks, and contain the usual pottery, as well as such unique offerings as a clay model of a sailing boat, a 6-inch fringe of black and white beads adorning a woman's skirt, and the skeleton of a pet dog buried with his youthful owner and provided with a meat-bone for the afterworld. (*Illustrated London News*, Sept. 11, 1948.)

The remnants of a new law code about 200 years older than the famed Hammurabi code have been discovered this past winter among the 2,500-3,000 cuneiform tablets from Tell Harmal, a fortified site near Baghdad, being excavated by the Department of Antiquities. This new code of ca. 1900 B.C. is in Old Babylonian; another, in Sumerian, of ca. 1800 B.C. has recently been reported by Kramer of the University of Pennsylvania. We thus now have valuable information as to two probable sources for the codification of Hammurabi.

Egypt. At Helwan, the Early Dynastic cemetery across the Nile from Sakkarah, the 6th campaign financed by King Farouk I, was undertaken last winter. More than 5,000 tombs have already been opened, containing the usual inventory of stone vases, jewelry, flint knives, and ivory statuettes comparable to those from Abydos, including a particularly fine one of a kneeling hunchback. Exact chronology is furnished by mud jar-stoppers with impressions of royal seals, one being that of Den, fifth king of the 1st Dynasty. This site has necessitated a revision of the opinion that stone archi-

tecture did not originate until the 3rd Dynasty, for several tombs use cut stone for the facing and flooring of underground chambers. The remarkable preservation of flax cloth and human hair, of assorted colors, is noteworthy. (*ILN*, June 5, 1948.)

Work was resumed last winter at Amarah in the Anglo-Egyptian Sudan. This seat of the deputy of Kush in Ramesseid times is unique among the towns of Pharaonic Egypt because of its excellent preservation, buried under sand. In addition to the temple of Rameses II discovered before the war, the town itself is being excavated and its history recovered from inscriptions in the governor's palace. The site was relatively short-lived (from ca. 1806-1080 B.C.) and shows three building periods with a later reoccupation as a poor fishing village. Its importance was due partly to its strategic location on an island where it could control both river and land travel, and partly to the exploitation of gold mines in the desert. The abrupt abandonment of the site was apparently caused by the silting up of the river channel which made Amarah part of the mainland and subject to violent north winds and sandstorms. (*ILN*, April 17, 1948.)

Palestine. The Christmas issue of *Life* (Dec. 22, 1947) reported pictorially what may be the earliest evidence for Christianity. A chamber tomb of the 1st century B.C. to the 1st century A.D. was discovered in 1945 close to the Jerusalem-Bethlehem road, and its 14 ossuaries have since been the object of study by E. L. Sukenik. Ten of them are conventional, but four suggest a family with Christian affiliations: one has a Greek cross in charcoal on each side; two are inscribed in Greek with the Jewish name "Jesus;" and one in Hebrew with a name deciphered as "Simeon Barsaba," suggestive of the disciples Joseph Barsabas and Judas Barsabas mentioned in *Acts*. If Prof. Sukenik's readings and interpretations are accepted, this find is one of paramount importance, evidence for Christianity perhaps contemporary with Christ himself. (See also *American Journal of Archaeology* 1947, pp. 351 ff.)

Manuscripts of the Old Testament are part of the most important manuscript find in recent years, a deposit of vellum scrolls discovered by Beduin smugglers in a cave near the Dead Sea. These include an almost complete Hebrew copy of *Isaiah* not later than 100 B.C. and a Hebrew commentary on *Habakkuk*, and are about 1,000 years older than any previously known Old Testament manuscripts. (*Newsletter* No. 9.)

Turkey. Discoveries of great epigraphical importance are perhaps the most significant result of current excavations. At Karatepe, a late Hittite castle in the mountainous region northeast of Adana, the University of Istanbul has discovered on one of the three gateways with flanking lions and sphinxes bilingual inscriptions, in Hittite hieroglyphs and an old Semitic script. The latter thus furnish an important clue to the decipherment of the hitherto mysterious hieroglyphic script. At Labranda, mountain-sanctuary of Zeus, where a Swedish expedition has just begun work, two fairly extensive inscriptions in Carian have been found and should greatly increase our scant knowledge of this language.

The year 1947 saw the concluding season of Sir Leonard Woolley's important excavations at Tell Atchana (Alalakh) near Antioch. The discoveries are too numerous to be reported in full, but attention may be called to the elaborate funerary ritual of a Hittite king reconstructed from evidence beneath the funerary chapel of the 18th-century B.C. monarch, Yarim-Lim. Although the

excavations had to be cut short, due to mechanical difficulties, before the actual cremation urn and funeral offerings were reached, they did reveal within a great pit an amazing ritual of superimposed mud-brick chapels and purification through burning and strewing of earth.

Cyprus. This island was the scene of excavations by the local department as well as French, Swedish, and American expeditions during the 1947-48 season. Mention may be made of Dikaio's discovery of a new Neolithic site at Sotira, a few miles inland from Kourion; of the continued French excavations at the Late Bronze Age site of Enkomi which confirmed and made more precise the important discoveries reported last year; and of the University of Pennsylvania's clearing of the Sacred Way leading to the Temple of Apollo Hylates at Kourion. Important new evidence for the Greek colonization of Cyprus comes from a Swedish excavation last spring at Sinda about 20 miles east of Nicosia, where a Late Bronze Age citadel with massive walls and gateways was explored. Mycenaean pottery of a late type hitherto almost non-existent on the island was found in abundance in a stratum preceding destruction by fire in the early 12th century B.C. This pottery, apparently locally made, has no direct antecedents in Cyprus and points to the arrival of new Greek settlers in the general period of the Trojan War.

Greece. Gratifying word has come that the museums of Athens are being reopened. The most ambitious excavation was the 13th American campaign in the Athenian Agora last spring. Concerned mainly with clearing and study of known monuments prior to the erection of a museum, the excavation did make several significant new finds: a large building of the 5th century at the west foot of the Areopagus, tentatively identified as one of the law-courts or dikasteria; a richly furnished cremation grave of the early Geometric period (ca. 900 B.C.) containing among other offerings two pairs of miniature terracotta shoes; and a superb marble torso of a youth, a Greek original of the Classical period belonging stylistically with the Parthenon frieze and other works of the third quarter of the 5th century. Its scale and preservation suggest its attribution to the lost pedimental composition of the Hephaisteion (Theseion).

Although on a small scale this past year, the American excavations at Corinth had the good fortune to reveal long-awaited evidence for a Mycenaean settlement. Over 50 years of excavation had uncovered no traces of habitation in the 2nd millennium, despite Homeric testimony that Corinth was a wealthy and powerful city. This mystery is now explained by the fact that the Late Bronze Age city is to be sought to the east of the later Agora in a region hitherto undug, commanding Peirene and other springs. The evidence comes from three rough-hewn pits near the Julian Basilica, which, although reused in later periods, were evidently cut in the Mycenaean period, probably as storage rooms under a large building. The southern pit contained at the bottom a deposit of Mycenaean pottery, including a fine early 13th-century krater decorated with chariot scenes. (*ILN.* Aug. 28, 1948.)

New York University's Institute of Fine Arts reopened excavations, under the direction of Karl Lehmann, at Samothrace this summer. Their main task was the installation of their prewar finds in a new museum.

Italy. Most of the digging was in the hands of local regional departments, but a French excava-

tion was active at the Etruscan site of Volsinii, and the American Academy in Rome began excavations at another Etruscan settlement, Cosa, in the spring.

From Rome it is reported that one of the horses' heads from the West Pediment of the Parthenon has come to light in the basement of the Belvedere Museum, and that traces of the Republican city-wall have been revealed in the construction of a new underground station.

The repair of bomb damage at Palestrina has disclosed a monumental architectural ensemble designed by Sulla's architects to connect the new city in the plain with the citadel which was redesigned as a grandiose sanctuary of Fortune.

Recent excavations of the archaic cemetery of Montelusa at Agrigento have produced evidence for the presence of strong bodies of Greek settlers before the official founding of the city in 582 B.C.

The year 1948 marked the bicentennial of excavations at Pompeii, commemorated with a special program. Ground is being cleared for a new museum to replace the one which was destroyed during the war.

France. Excavations at Marseilles, France, occasioned German dynamiting of the "quartier du Vieux-Port," have laid bare the ancient city, founded as Massalia by Phocaean Greeks ca. 600 B.C. Remains of a Greek theater, the first uncovered in France, the pavement of the Agora, the Greek beach and Roman docks are among the most important discoveries.

The remains of a 2nd or 3rd-century A.D. Roman bath have been recovered during excavations this spring beneath the gardens of the Cluny Museum in Paris. (*Newsletter* No. 8.)

Holland. Two Roman temples, among the first pagan religious buildings discovered in this country, were revealed in the summer of 1947 in the course of repair to the war-damaged Reformed Church at Elst. The earlier temple belongs to the beginning of our era, the second which had a Corinthian peristyle is probably 2nd century.

British Isles. Medieval frescoes, which had been whitewashed at the time of the Reformation, have recently been uncovered in the Church of St. Andrew, Pickworth, Lincolnshire. Their presence became suspected during the war when bomb concussions knocked loose some of the whitewash. In addition to a Last Judgment over the chancel arch, the paintings consist of an Ascension and a French Morality of the Three Living and Three Dead, and can be dated ca. 1380. (*ILN.* Jan. 3, 1948.)

A Celtic farmstead of the 8th to 10th centuries was excavated at Lissue near Lisburn in North Ireland. In its later period it consisted of one large circular building 120 feet in diameter with central hearth and concentric rows of wooden posts supporting a flat sod roof. Among the most interesting finds are an oak swinging churn 2 feet high mounted with iron bands, a slate slab with 22 incised ornamental patterns, probably used by an itinerant metal-worker for tracing his designs, and a number of fragments of leather boots of a type previously unknown. (*ILN.* Jan. 10, 1948.)

Mexico. Excavations by Mexican archaeologists have been continued at Xochicalco, the city of the Toltec predecessors of the Aztecs in central Mexico, and at Monte Alban the center of the Zapotec civilization which lasted from ca. 400 B.C. to 1400 A.D. The former site shows interesting Mayan connections in the 11th century, and the latter site is distinguished by a series of reliefs of dancers carved in a vigorous realistic manner and dating to the first period. (*ILN.* Jan. 17 and Apr. 10, 1948.)

United States. Considerable activity took place in this country during the past year, mainly under the auspices of State universities and the Federal government. No less than seven universities had summer field sessions for graduate and undergraduate credit. The River Basins Survey under the supervision of the Smithsonian Institution conducted large-scale reconnaissance and surface surveys in the Great Plains and Missouri River Basin, in areas to be flooded by the construction of projected dams.

Attention is called to the new popular periodical *Archaeology*, published by the Archaeological Institute of America, and to the new section, *Archaeological News*, in the *American Journal of Archaeology*, which presents in its four issues a complete coverage of current discoveries in the Near East, Classical Lands, Europe, and America. See ANTHROPOLOGY. —SARA A. IMMERWAHR

ARCHERY. Larry Hughes of Burbank, Cal., won the national target title, the women's championship being won by Jean Lee of Greenfield, Mass. The men's team laurels went to the Ozark Archery Club of Springfield, Mo., and the women's crown to the Golden Gate Archers of San Francisco, Cal. E. H. Perkins of Oakland, Cal., took honors with the crossbow.

Other national champions were Jack Stuart, Austin, Tex., flight, regular style; Verne Trittin, Salt Lake City, Utah, women's flight, regular style; Paul Berry, Middletown, Ohio, flight, free style; Ruth Diffendal, Osborn, Ohio, women's flight, free style; Russ Reynolds, Cleveland, Ohio, clout, 180 yards; Ann Weber, Bloomfield, N.J., women's clout, 140 yards; Verne Trittin, women's clout, 120 yards; Roy Dill, San Diego, Cal., field, and Mrs. Henry Bitzenburger, Los Angeles, Cal., women's field.

—THOMAS V. HANEY

ARCHITECTURE. Wars bring an aftermath of architectural change. After World War I, there was a drawing together; after World War II, apparently a drawing apart of different major regions, despite the basic similarities that distinguish an age. In Europe, during 1948, the functional emphasis was weakened. Some architects, although they still built on the earlier functional forms, sought for more spontaneity rather than logic in arrangement, more refinement and invention in detail rather than the former restraint. Others interrupted the modern movement altogether, by a return to classicism influenced, knowingly or not, by Hitler's style evolved under Albert Speer; in both cases the deviation was explained on grounds of "humanness" contrasted with an imputed superhuman, or inhuman, austerity. In the Soviet Union, another sphere of influence, the earlier tenets of Marxism were being stood on their head; architecture was officially promoted that should be nationalistic (especially in Russia itself, where the tradition was "discovered" to have been influenced much less by Europe than had been previously supposed) and regional, and subject to popular taste, and based definitely on the cultural "inheritance" as opposed to Western architecture which propaganda associated entirely with the "decadence" of "constructivism" and "mechanization" rather than to "the human soul." In Latin America, by contrast, there was continued brilliant development on lines laid down originally by Le Corbusier, romantically modern, ever more richly plastic and colorful; a trend with some echoes in France and Italy. In the U.S. the trend was setting in ever more strongly toward "modern" architecture, with

some voices raised in favor of more "humanism" (but the practice modified, as it was not in Europe, by the strongly coherent creativeness of Frank Lloyd Wright) and again with other architects deliberately practicing the restraint of more honest and straightforward form, and yet another group, strongly technological in bent, carrying the earlier functionalism forward into a rounded "environmental" development for which both Europe and Russia lacked the technical means.

A good deal of this architectural practice and discussion was rather narrowly confined in its bearing on building as a whole. For reconstruction, in Europe, materials were badly limited; England, where such material was stringently rationed in favor of residential, school, and hospital building, was doing better than countries such as Italy with no controls. The French Minister of Reconstruction developed interesting regional plans, along Le Corbusier lines, of which acceptance by the arch-conservative population was dubious; Germany's efforts, under hydra-headed occupation, were pitifully distorted and meager. In countries within the Soviet sphere, some, like Poland, made rather rapid progress, especially in the advanced replanning and slow rebuilding of Warsaw. Others, such as Czechoslovakia, which had been in the advance guard of European technology, suffered badly by being coupled with technically retarded Russia.

United States Architecture. By conservative calculations, building construction activity for 1948 represented approximately 16,000 million dollars (F. W. Dodge figures for 37 Eastern states, plus allowance for Western states). The Bureau of Labor Statistics reported construction of approximately 950,000 dwelling units.

Architectural events of major significance included the conclusion in February of the "Jefferson National Expansion Memorial Competition" for St. Louis, on which an Association of the same name expended \$100,000. First prize (\$50,000 in all) went to a team composed of Saarinen, Saarinen and Associates, Architects, and others (Eero Saarinen, designer; J. Henderson Barr, associate designer; Alexander Girard, painter; Lily Saarinen, sculptor; Dan Kiley, landscape architect). The outstanding feature of the design, a proposed 550-ft. high parabolic arch of stainless steel, symbolizing the "gateway to the West," was placed as to frame a vista, from across the Mississippi, to the Old Court House; the waterfront area as a whole being treated as an informal park which with artful simplicity and spaciousness accommodated a beautifully organized grouping of the requisite cultural and recreational buildings and facilities. The jury, headed by W. W. Wurster, hailed this design as a "work of architectural genius" promising to "rank among the nation's greatest monuments." Dependent on Congressional appropriations for execution, the design was still a paper concept at year's end.

If direct observation of finished buildings is substituted for abstract discussion among different schools of thought, there can be discovered a rich variety irrespective of label. Mature accomplishment prevailed in 1948, especially among houses. The house of Hugh Stubbins, Jr., for himself, at Lexington, Mass., was exhibited by the Museum of Modern Art along with a new house for himself by Marcel Breuer at New Canaan, Conn. (with a compact plan and a remarkable "floating" quality due to sophisticated use of carpenter-built expedients for cantilevering out the house beyond its basement), and a house in Chicago by Ralph Rapson, all of them selected as outstanding post-

war houses. Breuer achieved a larger house outside Williamstown, Mass., that might be considered his masterpiece to date. Its long raking "butterfly" roof fit it handsomely to the Berkshire hills, and was carried out as a dramatic visor shading the outdoor terrace; stone fences running out from the glass walls served to anchor the house sculpturally to the ground; spatial sequences were woven knowingly in and out of rooms, courts, passages, and even through high roof openings of a plan splendidly adapted to an active sports-loving life.

In Florida, Twitchell and Rudolph were creating a series of strongly architectural houses; very different again was the very spontaneous, easy, unforced character of the M. P. Davison house at Fresno by Wurster, Bernardi & Emmons, and a group of houses by Henry Hill remarkably blending the architectural discipline of a Harvard training with the naturalness of the West. Republication of Walter Gropius' house for himself at Lincoln, Mass., in *House & Garden* after ten years of use showed how wide of the mark those critics had been who accused him of mere mechanization. Under full planting development and continued occupancy the strong geometry had taken on a noble full-blooded grace and dignity.

On a far wider base, the year witnessed a couple of milestones with the marketing of the Lustron prefabricated house of porcelain enamel at a fairly large scale, an unusually acceptable product for "ordinary people"; on the other hand the Harmon Corporation wound up an operation that once looked promising, by setting up its full remaining stock of prefabricated houses on a Long Island site. For Bemis Foundation, Carl Koch developed a highly attractive little house, the "Acorn," to be transported folded on a truck, and literally to unfold its story on the site.

In the apartment house field, too, a log jam was broken when New England Mutual Life Insurance Company and Massachusetts Institute of Technology jointly began construction of a 12-story, 1,000-room, 261-apartment building facing the Charles River Basin in Cambridge, Mass., on a building plan hitherto unique in the United States, and highly attractive in its consequences. It was the so-called "skipfloor corridor" plan, meaning that elevators stop at corridors on only every third floor, so that apartments on intermediate floors (reached by short stairs) go transversely through the building, from wall to wall, and consequently have through-ventilation. Also, the nature of this plan type made it possible to give every apartment, without exception, a living room (with living balcony) faced both to the view and the sun. The fact that the architects had put the building through the Cambridge building code gave courage to architects elsewhere, doing apartments for insurance investors or public housing authorities, that they might escape the boredom of planning all large apartments as crosses, or double crosses, or modified crosses in their layout. The new type can be made up of building elements in the form of long, thin, up-ended slabs. (Architects were M.I.T. staff members Wm. Hoskins Brown, Carl Koch, Robert Kennedy, Vernon DeMars, Ralph Rapson; engineers, Thomas Worcester, Inc.)

Among commercial buildings, a major opus was the Cincinnati Terrace Plaza Hotel, by Skidmore, Owings & Merrill, with its base raised eight stories above the ground (two large stores underneath), a spacious roof terrace taking all the setback requirements in a single step. The hotel was distinguished not only by carefully redesigned guest rooms (more like living lounges than the custom-

ary bedrooms) but by the use of modern murals and sculpture in public rooms (the gay brightly-colored Miro mural occupying the only solid-wall segment of an intimate, glass-encircled roof restaurant; the more successful Steinberg mural in the large dining room at terrace level, with witty calligraphic things and creatures more nearly afloat against the background and thus continuing the "sky" effect of the contiguous glass).

Another ambitious commercial building was Harris Armstrong's headquarters building for American Stove Company at St. Louis, a colorful cubic composition (though not in best proportions) on a glass base, with careful daylighting for offices and a striking lobby enhanced by Noguchi's sculptured ceiling abstractly suggesting foundry processes and forms. Large numbers of stores were finished in the familiar modern streamlined baroque (e.g. Wurdeman & Beckett's Pasadena store for Bullock's); much rarer was the rich simplicity of the Knoll furniture showroom in New York, enhanced by Herbert Matter's spatial fancies in inexpensive string; the year's masterpiece might have been Rafael Soriano's seed store in San Francisco for Hallowell, its impact being that of nothing but an extremely pleasant seed store, and the extremely subtle architectural devices being apparent to none but the close student.

Educational buildings made rapid strides, particularly the University of Miami, with its splendid master plan by Marion Manley, university architect, and Robert Law Weed & Associates. The first classroom and dormitory buildings, finished during the year, were brilliant solutions for a subtropical climate, and with clean and more than satisfactory contemporary form. Public schools continued to be in the architectural vanguard; probably the most satisfactory solution of the year was Bamberger & Reid's little addition to the Fairfax school near San Francisco, producing a happy and euphoric environment without that patronizing attitude toward children by adults.

Among hospitals, in which there was enormous activity, an outstanding completion was that of the Sloan-Kettering Institute for Cancer Research in New York, again by Skidmore, Owings & Merrill, immediately adjoining the Memorial Hospital. Church work lagged in quality, since it was increasingly difficult to obtain either funds or skilled hands, in drafting room or on site, to execute the archaic models considered suitable for religious purposes, while there was reluctance on the part of church boards to accept the interpretation of divinity as ever-new creation. An outstanding little church was the Episcopal chapel, the Church of St. Clement, at Alexandria, Va., by Joseph H. Saunders, Jr. It was based upon an entirely windowless and air-conditioned interior, with congregation of 400 divided so as to face the center, not the end, of the hall; at this center was the altar and above it a plain oak cross hung from the ceiling. In an interior otherwise as dark as a motion picture house, the altar, cross, and pulpit were spotlighted in such manner as to suggest being self-luminous, and an atmosphere was created conducive to quiet meditation.

Industrial buildings remained in the same trends as before. Architecturally, a distinguished though not exciting result was obtained by Gropius in the Greensboro, N.C., plant of the Container Corporation of America. Had there been the same degree of happy skill in the Johnson & Johnson program of humanized factories in rural setting, they might have raised themselves to a very high rank of architectural achievement.—DOUGLAS HASKELL

ARGENTINA. A Federal Republic of South America. The Andean highlands occupy approximately one-third of the country; the remainder consists of plains. In the lower plateaus of the northwest, the climate is subtropical and dry in the winter. In the eastern part, the climate is wet and temperate, and in the high Andean Plateaus and the southern steppes, it is cold and arid.

Area and Population. Area, 1,079,965 square miles. Population, 16,107,876 (1947). Principal cities: Buenos Aires (capital), Rosario, Córdoba, Tucumán, La Plata and Santa Fé.

Education and Religion. Over 85 percent of the population are literate. Primary education is free and compulsory. In 1946, there were a total of 14,759 elementary schools with an enrollment of 2,081,521 students; 459 public secondary schools with 148,568 students; 584 private secondary schools of various kinds, with an enrollment of 49,515, and six large universities. According to the Constitution, the government supports the Roman Catholic Church, and to be President of the Republic, it is necessary to belong to that faith, although the Constitution also provides for freedom of worship.

Production. Agriculture, stock raising, and manufacturing are the principal occupations. Estimated yields of the principal agricultural crops in 1947 were (metric tons): wheat, 5,615,000; corn, 5,815,000; barley, 1,235,000; flaxseed, 1,034,000; oats, 831,000; sugar cane, 7,444,600; sunflower seed, 688,000. Pastoral products: number of cattle slaughtered in 1946, 7,140,000; sheep, 11,820,000; pigs, 2,550,000. Packinghouse output in 1946 (metric tons): beef, 592,000; lamb, 175,000; pork, 114,000; wool, 238,000. Monthly averages of industrial products in 1947 (metric tons) included cotton yarn, 5,490; butter, 4,300; cheese, 6,900. The production of crude petroleum during the year 1948 was estimated at 23,243,000 barrels, as compared with the production for the year 1947 of 21,847,000 barrels (in 1948 the daily average totaled 63,500 barrels). In 1946 the production of wine was 894,000,000 liters, and beer 252,000,000 liters. Mineral production in 1946 included 76,000 metric tons of metallic ores and 14,987,000 of non-metallic ores.

Foreign Trade. Total exports in 1947 amounted to \$1,587,900,000; imports to \$1,308,300,000. Exports in the previous year totaled 3,973,100,000 pesos (one peso is equivalent to 0.24 U.S. dollars); imports 2,331,700,000 pesos. The United Kingdom continued to be the leading market for exports in that year, followed by the United States, France, Belgium, and Brazil. The United States was the chief supplier of imports, followed by Brazil, the United Kingdom, and Sweden. Argentina's trade in 1948 continued to increase and during the first three months, exports totaled approximately 1,740,000,000 pesos, imports 1,577,000,000 pesos.

Transportation. Argentina has the largest rail-transportation system in Latin America, covering 43,252 km. which in 1947 transported 751,000,000 passenger-kilometers, and 1,301,000,000 net ton-kilometers of freight. There are important national airlines, in addition to numerous foreign-owned lines that link the country with the rest of the world. In 1946, there were approximately 300 vessels with an aggregate tonnage of 354,000. On Mar. 16, 1948, a decree was issued by the government requiring that all imports and exports be handled on Argentine rather than on foreign ships. Argentina has 253,115 miles of highway; nearly half a million motor vehicles; 1,336,000 radio sets, and 460,857 telephones.

Finance. The budget for 1947 was 2,523,700,000 pesos. Internal public debt in 1946 amounted to 10,721,200,000 pesos and the external debt to 109,100,000,000 pesos. Gold exchange holdings at the end of 1947 amounted to \$1,071,100,000 indicating a decline of about 38 percent over the previous year. Currency in circulation on the same date amounted to 4,674,000,000 pesos and deposits to 6,247,000,000 pesos. A severe exchange control has been established. Cost of living in December, 1947, was 192, taking 1937 as the base year.

Government. Argentina is a federal republic, composed of 14 provinces, 9 territories and a federal district. The constitution of May 1, 1853 is still in force, with several amendments. Legislative power corresponds to a Congress formed by a Chamber of Deputies and a Senate. There are two Senators for each province and two for the Federal District, elected for nine years. Deputies are elected for four years, in the proportion of one for each 33,000 inhabitants or a fraction no smaller than 16,500. The President and Vice President are chosen by an electoral college for a term of six years. Juan Domingo Perón was elected President on Feb. 24, 1946, and took office on June 4, 1946.

Events, 1948. Early in January, the political climate of Argentina was affected by the partial elections to be held in March, and by the efforts of the five-year plan. International attention was focused on the development of effective commercial agreements with European countries and with neighboring Latin American states.

Partial elections. Elections were held early in March and helped restore a legal status to the province of Buenos Aires, which had been under an unconstitutional situation since the de facto government of 1943. Of more importance to the nation as a whole were the elections to fill 83 vacancies in the Chamber of Deputies. The Peronista Party played up the success of their policy of economic nationalism, notably the acquisition of the British-owned railroad, which was celebrated with due pomp. The elections gave the Peronistas a total of 446,307 votes with 109 seats in the new Congress, against 247,474, or 49 seats, for the opposition. The victory encouraged the Peronistas to plan a constitutional amendment, under which Perón may be reelected when his term expires in 1952.

Commercial Internationalism. Due to her advantageous economic position with regard to her neighbors, Argentina succeeded in signing supplementary agreements with Bolivia to acquire 8,000,000 tons of tin annually for five years, as well as other merchandise; Argentina to contribute 2,000,000 pesos for the establishment of a development corporation in Bolivia. On April 3, a commercial treaty was signed with Spain, allowing a credit of 1,750,000 pesos to be used in the purchase of foodstuffs in Argentina; Franco's government to construct ships for Argentina in Spanish shipyards, and a general warehouse in a free zone of the Port of Cádiz to serve commerce between the two countries. This credit covers a four-year period, expiring in 1951. Democratic groups opposed the treaty on the grounds that it would serve to bolster the difficult economic situation of Spain.

On June 12th, economist Miguel Miranda, considered one of the most influential men in Argentina today, stated that his country would not vary its policy with regard to prices on export foodstuffs, in view of the high prices Argentina is forced to pay abroad for manufactured articles. He added that the agreement regulating the price of wheat was directly intended to affect Argentina, since

the signatory nations, notably the United States and Great Britain, did not adhere to its principles with regard to their own export goods.

Inter-American Cooperation. At the end of March, a political rapprochement with Mexico was seen. The Presidents of both countries made radio speeches, in which they underlined their feelings as to the importance of maintaining world peace, and against imperialism. A few days later, President Perón spoke again for world peace and in favor of social justice and economic independence. This was interpreted as an effort to prepare a solid inter-American front for the coming Bogotá Conference (see below International Events.)

Parliamentary Crisis. In June, a serious parliamentary crisis affected the country. Opposition deputy Ernesto Sanmartino commented in Congress, in strong terms, on the suppression of political freedom established by the Peronista government. The Peronista deputies considered the remarks offensive to the President, and entertained a motion asking for the expulsion of Deputy Sanmartino, which was approved by Congress. The 42 deputies of Sanmartino's Radical Party resigned from Congress, thus removing one of the few remaining active opposition forces, which lent Perón's government a semblance of democracy. Before the incident, the Radical deputies had strongly opposed the Peronista proposal for a workers' university, because of the partisan ideology behind the project. They also attacked the absolute control over education in institutions of higher learning.

Attempt on Perón's Life. On September 24, the government announced that a serious plot to assassinate President Perón and his wife had been discovered. According to the police, the attempt was to have been carried out on October 12, Columbus Day. Many arrests were made, among them two naval chaplains, other members of the navy, a Catholic priest, and labor leaders. The sensational aspect of the plot was the official accusation made by the government against John F. Griffith, former Cultural Attaché of the U.S. embassy in Buenos Aires, who was removed from his post last spring, charged with participation in a bank employees' strike. From Montevideo, where Griffith resided, he energetically denied the accusations, stating that he had had no contact with Argentina for several months. President Perón himself singled out and accused Mr. Griffith in a public speech.

The announcement of the plot caused a number of pro-government rallies, and the General Confederation of Workers declared a 14-hour sympathy strike. The Peronista press took advantage of the opportunity to express their nationalism, and violently attacked "Yankee imperialism." The plot had one serious political effect in the resignation of Minister of the Navy, Admiral Fidel Anadón, who also held the portfolio of Foreign Affairs, due to the absence of Juan Atilio Bramuglia, at that time representing the government at the UN meetings in Paris. It was rumored that his resignation was due to the Navy chaplains' complicity in the affair. The chaplains were suspended by a decision adopted by all the bishops of the nation. The investigation of Griffith's participation was still under way in December, 1948, when the Argentine Chief of Police went to Montevideo for an interview with President Batlle of Uruguay. The parties of the opposition denied all association with the plot and several deputies demanded a congressional investigation.

International Front. In the world affairs of the year, Argentina took an active part. Most important events were her claims to Antarctic lands, her ener-

getic intervention at the Bogotá Conference, and the preeminent role played by Prime Minister Bramuglia in the UN Security Council.

Early in the year, President González Videla of Chile started a campaign to claim part of the Antarctic territories for his country, he found warm support in Argentina, whose important interest in that region does not conflict with Chile's. Argentina's traditional policy has always been non-recognition of Great Britain's sovereignty over the Falkland Islands, in spite of the good political and economic relations maintained with the United Kingdom. Her support of Chilean claims was interpreted as a plan to reopen the issue of the Falkland Islands and an effort to reach a compromise with regard to Argentina's claims. The Buenos Aires press stressed the importance of bringing the case before the Bogotá Conference and of reaching a decision on all European possessions in the Western Hemisphere, thereby backing Guatemala's claim to Belize.

At the Ninth Inter-American Conference of American States, held at Bogotá in April, Argentina played an important role. In the economic discussions, she fought for the creation of an inter-American bank to help the countries suffering from shortage of dollar exchange and to facilitate a more efficient hemisphere economic cooperation. This proposal met with a cold reception from the United States delegates, and was referred to a future economic conference.

In the political field, she endorsed the condemnation of communism and all forms of totalitarianism, and became signatory to the Charter of the Americas, which gave a new institutional and juridical structure to the inter-American system. Argentina tried to reach a solution with regard to the European colonial possessions, but the matter was referred to a committee. The Argentine delegation unanimously backed the proposal to continue the sessions when they were interrupted by the April 9 revolt (see COLOMBIA, 1948).

On the European front, Argentina from her position in the Security Council, fought gallantly for world peace. Foreign Minister Bramuglia headed the group of nations that insisted on a solution of the Berlin issue (see UNITED NATIONS).

Political Finale. At the end of the year, political tension was focused on the elections for the Constitutional Assembly scheduled for December 5. Admiral Teisaire, speaking for the Peronista Party, summarized its program in the following way: Nationalization of public services and organization of the wealth of the country in hands of the Argentinians; respect for the principle of free enterprise, but state control over imports and exports; legal and social equality of all citizens; outlawing of the exploitation of man by man; definition of property as a social function; agrarian reform and division of latifundia. On the political-domestic front, the most important change sponsored by the Peronistas was the constitutional amendment doing away with the ban on reelection of the President. They stressed that the ban was undemocratic, since it prevented the people from reelecting a President if they so wished.

The results of the December election showed that the Peronistas had received 63.1 percent of the total vote, and obtained the election of 109 delegates in the Convention. Forty-nine seats were won by the Radical Party. —MIGUEL JORRÍN

ARIZONA. A mountain State. Area: 113,956 sq. mi. Population (July 1, 1948): 664,000, compared with (1940 census) 499,261. Chief city: Phoenix

(capital), 65,414 inhabitants in 1940. See AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS, etc.

Legislation. Several special sessions were called in 1948, dealing principally with urgent requirements for additional water resources. In addition, the state public health department was reorganized; a hospital survey act was adopted; and limitations on municipal budget increases were relaxed for one year.

Important changes were ratified by the voters in November. Provision was made for succession to the Governorship; for a State merit system with job and salary classifications; for a public employees' retirement system; for special sessions of the legislature called by the legislators; and for a right-to-work labor law.

Finance. For the fiscal year ended June 30, 1947, total revenue amounted to \$56,263,000; total expenditure, \$54,573,000.

Elections. The 4 electoral votes of Arizona went to Truman whose popular majority over Dewey was somewhat less than that of Roosevelt in 1944. Arizona's 2 House seats remained Democratic. In State races, Dan E. Garvey, Democrat, was reelected to a full term as Governor. Other successful candidates included: Secretary of State—Wesley Bolin; Attorney General—Fred O. Wilson; Auditor—Ana Frohmiller; Treasurer—J. W. Kelly; Superintendent of Public Instruction—M. L. Brooks.

Officers, 1948. Governor, Sidney P. Osborn; Lieut. Governor, None; Secretary of State, Dan E. Garvey; Attorney General, John L. Sullivan; State Treasurer, Mit Sims; State Auditor, Ana Frohmiller.

ARKANSAS. A west south central State. Area: 53,335 sq. mi. Population (July 1, 1948): 1,925,000, compared with (1940 census) 1,949,387. Chief city: Little Rock (capital), 88,039 inhabitants in 1940. See AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS, etc.

Finance. For the fiscal year ended June 30, 1947, total revenue amounted to \$94,218,000; total expenditure, \$93,057,000.

Elections. Truman won a popular majority and captured the 9 electoral votes in the race against Dewey and Thurmond. Senator John L. McClellan, Democrat, was reelected, and all 7 House seats remained Democratic. In the contest for Governor, 36-year old Sidney S. McMath, World War II veteran and supporter of the regular Democratic ticket, was successful. Also elected to State office were the following, all Democrats: Lieutenant Governor—Nathan G. Gordon; Secretary of State—C. G. Hall; Attorney General—Ike Murry; Treasurer—J. Vance Clayton; Auditor—J. Oscar Humphrey.

Officers, 1948. Governor, Benjamin T. Laney; Lieut. Governor, Nathan Gordon; Secretary of State, C. G. Hall; Attorney General, Guy E. Williams; State Treasurer, J. Vance Clayton; State Auditor, J. Oscar Humphrey; Land Commissioner, Claud A. Rankin.

ARMY, Department of the. The Department of the United States government which is charged with the responsibility of organizing, training, and maintaining the Army, and with certain non-military activities; created by the National Security Act of 1947 (effective midnight Sept. 17, 1947) as one of the three armed components of the National Mil-

itary Establishment to succeed the War Department, which in turn was created in 1789 to succeed a similar department established prior to the adoption of the Constitution.

The Department of the Army, administered as an individual executive department by the Secretary of the Army, is the headquarters in Washington, D.C., for planning and administration. Headquarters for Army Field Forces is at Fort Monroe, Virginia. Secretary of the Army, Kenneth C. Royall (named the first Secretary of the Army in July, 1947, having earlier succeeded Robert P. Patterson as Secretary of War); Under Secretary of the Army, William H. Draper, Jr. (appointed August, 1947: charged with the supervision of occupied territories); Assistant Secretaries of the Army, Gordon Gray (appointed September, 1947: exercises supervision over procurement and related matters) and Tracy S. Voorhees (appointed June, 1948: acts as Food Administrator for the Occupied Areas).

Events, 1948. Shortly after Gen. Omar N. Bradley was sworn in as Chief of Staff on Feb. 7, 1948 (succeeding Gen. of the Army Dwight D. Eisenhower), he announced the Army's plan for an 18-to 25-division striking force, to be built up gradually by 1952. The objective for the fiscal year 1948-1949 was announced as 18 divisions—12 of which would be Regular Army and 6 National Guard—organized, manned, equipped, and trained. The plan calls for additional divisions to be added yearly until the final objective of 25 divisions is attained, with the National Guard providing 13 of these divisions and the Reserve Corps organized with service and combat units to support all 25 divisions.

Courts-Martial. Under amended Articles of War (as provided in the Selective Service Act of 1948 and a new *Manual for Courts-Martial*—U.S. Army, 1949), enlisted personnel are eligible to sit as members of general and special courts-martial when such request is made by an accused enlisted man. The use of coercion or unlawful influence in obtaining a confession is now made a criminal offense, and procedures are changed to emphasize the presumption of innocence in trial by courts-martial. A guarantee of proper enforcement of the new law is provided by two key changes—the requirement that the law member, the trial judge, be a qualified military lawyer; and the provision for a final appellate court of review, to consist of military legal specialists of long experience in that field.

Changes for Enlisted Men. As of Aug. 1, 1948, the enlisted grade structure of the Army was changed. The following table gives the grade, the former title, and the present title for each grade, together with the changes in monthly base pay.

Grade	Former Title	Present Title	Monthly Base Pay *
1st	Master Sgt.	Master Sgt.	\$165—\$247.50
2nd	Tech. Sgt.	Sgt. 1st Cl.	135—202.50
3rd	Staff Sgt.	Sgt.	115—172.50
4th	Sergeant	Corporal	100—150.00
5th	Corporal	Pvt. 1st Cl.	90—135.00
6th	Pvt. 1st Cl.	Private	80—120.00
7th	Private	Recruit	75—112.50

* With a 5 percent increase in base pay for each 3 years of service up to 50 percent.

The new promotion system places the enlisted soldier in recruit status for the first four months of his service, with automatic advancement to the 6th pay grade assured on completion of basic training.

The sleeve insignia of the grades were changed

as follows: 3 arcs under the chevrons for a Master Sergeant; 2 arcs under the chevrons for a Sergeant 1st Class; 1 arc under the chevrons for a Sergeant; 2 chevrons for a Corporal; and 1 chevron for a Private 1st Class. No sleeve insignia are worn in the 6th and 7th grades; Private and Recruit, respectively. In addition, sleeve chevrons are to be changed to approximately two-thirds their present size, and will differentiate by color combat and non-combat personnel.

Women's Army Corps. Passage of the Women's Armed Services Integration Act on June 12, 1948, marked the first time that women outside the medical services had become a part of the Regular Army. Initially, a build-up by the end of two years after passage of the act authorizes the Women's Army Corps a strength of 500 officers, 75 warrant officers, and 7,500 enlisted women. A training center for the Women's Army Corps has been established at Camp Lee, Petersburg, Va. Director of the WAC: Col. Mary A. Hallaren (sworn in Dec. 3, 1948).

Reorganization. A high-echelon reorganization of Headquarters of the Department of the Army, to place that service on a functional "peace-or-war" footing, became effective on Nov. 15, 1948. The new organization, incorporating many of the features of the World War II set-up, is designed to obviate the necessity for sudden or drastic change in the event of a national emergency. See MILITARY PROGRESS, NATIONAL MILITARY ESTABLISHMENT.

ART. The breaking of the engagement of the Whitney and Metropolitan Museums (with the latter establishing a new department of contemporary American painting); a brief, if negative, revival of Federal interest in art; the decline of industry as a patron; and the accelerated criticism of "modern" art were the outstanding developments of 1948.

Museums. When the merger of New York's Metropolitan and Whitney Museums was announced in 1943, there were many who deplored the move and wishfully predicted that it would never actually come about. In October, 1948, their prediction came true. The Metropolitan announced that "The trustees of the Metropolitan Museum have consistently indicated their willingness to carry out the proposed coalition, and greatly regret the decision of the trustees of the Whitney Museum to abandon this plan which would have made available to the public a comprehensive exhibition of American art by combining the artistic resources of both museums."

Two months later the Metropolitan announced the establishment of a new department of Contemporary American Art and the appointment of Robert Beverly Hale, Art Students League instructor, as its associate curator. Mr. Hale's duties were not clearly defined as the year ended, but it was generally understood that he will supervise purchases from the more than \$100,000 Hearn Fund, which is earmarked for the work of contemporary American artists. He will continue his classes in anatomical drawing at the Art Students League.

Simultaneously with the Metropolitan's October announcement, the Whitney Museum of American Art issued a statement calling attention to the fact that it "has always aimed impartially to represent the many diverse tendencies of the art of our time. In the years of contact between the staffs of the Whitney Museum and Metropolitan Museum, it has become increasingly apparent that there were serious divergences in the attitude toward contemporary art of the two institutions, especially

with respect to the showing of advanced trends in the art of today.

"This disagreement in fundamental principles raised grave doubts, whether the Whitney Museum's liberal tradition could be preserved after coalition. This consideration outweighed the many advantages to coalition. The Whitney will be continued as an independent institution, carrying on the liberal purposes on which it was founded."

With the opening of its "Annual Exhibition of American Painting" on November 13, the Whitney also announced that Hermon More, former curator, had been appointed director and Lloyd Goodrich, former research curator, appointed associate director, following the death in August of Juliana R. Force, director of the Whitney for many years and staunch champion of living American artists. The Whitney annual (see below) amply illustrated the continuance of the Museum's stated policy.

The growing concern during 1948 over "radicalism" in art (as in politics) which brought about the Whitney-Metropolitan dissolution caused reorganization of two other American museums. In Boston the Institute of Modern Art abruptly changed its name to the Institute of Contemporary Art, because it had decided that the word "modern" gave opportunity for "double talk, opportunism, and chicanery at the public expense." In New York a group of artists immediately met at the Museum of Modern Art to protest what they called "Boston's reactionary attitude." In answer to such protests, the new Boston "Institute" opened an exhibition of the work of Oskar Kokoschka, leading European expressionist, whose works had never before been assembled for an American exhibition.

In Des Moines, Iowa, the director of the Art Center, Paul Parker, resigned only a few weeks after the June 2 opening of the new building designed by the famous modern architect Eliel Saarinen. His stated reason was "complete disagreement between the Edmunston Trustees [custodians of the foundation which operates the Center] and myself regarding the acquisition policies." The nature of this disagreement was defined by a writer in the Des Moines *Register* as being similar to the Boston and New York difficulties—Mr. Parker's championship of "advanced trends" in art. To succeed Mr. Parker the trustees appointed Richard Foster Howard, former director of the Dallas Art Museum.

Iowa's neighbor State, Illinois, revealed a less excited attitude toward "advanced trends." The University of Illinois' recently inaugurated annual exhibition of contemporary American painting, aimed at presenting a cross section, awarded \$7,500 in purchase prizes to artists representing just that. One went to Eugene Berman for his almost surrealist *Portrait of Rico LeBrun*, another to Karl Knaths for an abstraction, and still others to more representational painters Julian Levi, Raymond Brien, Joseph de Martini, Lester Schwartz, and Hazel Teyral. The catalog of the exhibition called attention to the fact that nearly 100 colleges and universities in the United States now have art museums and regular exhibitions, and that 25 of them have separate museum buildings.

Also unplugged by disagreement over modern art was the San Diego Fine Arts Gallery, which reopened its building after 5 years of service as a naval hospital. Forty-eight new paintings had been added to the collection in the meantime, including Mantegna's *Virgin at Prayer* and Memling's *Young Man with Folded Hands*. But most dramatic acquisition was the diorite carving *Rest on the Flight into Egypt* by the contemporary sculptor, Donald Hord. It had been delivered to the Gallery on

Pearl Harbor day, only to be returned to the artist's studio for the duration. It occupied a place of honor at the Gallery's reopening.

The Worcester Museum celebrated its 50th anniversary with an exhibition of its own and borrowed works during May. The wealth of its own collection recalled the days around the turn of the century when Stephen Salisbury, a leading citizen, casually left a \$25,000 check after each visit. To supplement this collection for the exhibition, Worcester borrowed from the Metropolitan (whose director, Francis Henry Taylor, left Worcester for his present position) its *Adoration of the Shepherds* by El Greco and *Venus and the Flute Player* by Titian. Other famous paintings were also loaned by the museums of St. Louis, Minneapolis, Chicago, Kansas City, Cleveland, and Detroit.

The Museum of Modern Art in New York held the first of a series of exhibitions planned to commemorate its 20th anniversary in 1949. Called "The Timeless Aspects of Modern Art," the exhibition brought together such objects as a cast of the 25,000-year-old *Venus of Willendorf* and sculpture by the late Gaston Lachaise in an attempt to show that there is nothing especially radical or strange in the forms that 20th century artists use to express their ideas.

Exhibitions. Most visited exhibition of the year was that of the German-owned paintings found in a salt mine by U.S. Army Engineers and brought to this country in 1945 for "safe-keeping" over the protest of the American Federation of Arts, the College Art Association, and numerous other organizations and individuals. Shown at the National Gallery during the first weeks of the year, the majority of the 202 paintings were then sent on tour by the Army for the benefit of German children in the American zone.

Nearly a million visitors thronged the National Gallery to see the famous Rembrandts, Bellinis, Brueghels, and other masterpieces from the Kaiser Friedrich Museum, and millions more saw them in New York, Philadelphia, Chicago, Boston, Detroit, Cleveland, Minneapolis, and San Francisco during 1948. In 1949 they will tour St. Louis and Pittsburgh, and will be packed up for return to Germany after the final showing ends in Toledo on March 31.

On the same day (May 17) that the Metropolitan Museum opened its exhibition of the German paintings, another controversial exhibition opened at the Whitney, whose director, Juliana R. Force, had led a movement to have the German paintings sent back to Germany in 1946. This was the collection of 79 oils and 38 watercolors which the State Department had purchased in 1946 for \$66,000 to circulate abroad as examples of "Advancing American Art."

They were recalled the following year because the Congress and the American public had found them too "advanced," and on May 17 were put up for auction at the Whitney Museum by the War Assets Administration. The art world waited anxiously to see if the bids would prove its contention that the State Department had made a good investment instead of "throwing away the taxpayers money on junk" as was charged.

When the bids were opened, it was found that the collection had increased in value by more than \$13,000. Tax-supported institutions and veterans had priority with a generous discount, and as a result the University of Oklahoma and Alabama Polytechnic Institute each got 36 paintings. The University of Georgia got 10; University of Washington, 6; Rutgers University, 4; Texas A. and M., 2; the Honolulu Department of Public Instruction,

5; Oswego (N.Y.) Public Schools, 3; New Trier Township High School (Winnetka, Ill.), 2; Dallas Museum, 1; Lancaster (Pa.) Public Library, 1; New York City Board of Education, 1.

Three veterans bid successfully: Charles Friedman of New Rochelle, N.Y., got 3 paintings; Ernest Apfelschutt of Brooklyn, 1; and Russell Reinke of Cleveland, 1. Highest bid was that of the St. Louis Museum for an oil by John Marin—\$10,000.

The year witnessed a number of less spectacular but equally important exhibitions in various cities. In April the Philadelphia Museum of Art held the largest showing of the work of France's dean of the modern movement, Henri Matisse, at which 271 paintings, prints, and drawings were exhibited, dating from 1893 to 1948. Most interesting aspect of the exhibition to American viewers was proof (in the realistic *Copy of Still Life by de Heem*) that Matisse, one of the "wild men" of modern art is also one of the world's greatest living draughtsmen.

Harvard's Fogg Museum held an exhibition of drawings in honor of its retired director, Paul Sachs, which was undoubtedly the greatest assemblage of old-master drawings ever to be shown in America. Yasuo Kuniyoshi, instructor at the Art Students League, was honored in April by the Whitney Museum with the first one-man exhibition of a living painter it has held. Kuniyoshi was also honored at a banquet sponsored by Artists Equity Association, of which he is president.

John Sloan was honored by a retrospective exhibition at the Kraushaar Gallery in which one of his famous "Ash Can School" paintings was exhibited, *South Beach Bathers*, of 1908. At the New York Historical Society 300 years of American children's portraits were exhibited beginning in November, entitled "Up From the Cradle." Most important exhibition held at New York's Museum of Modern Art was a great collection of oils by the French modern master, Pierre Bonnard.

California's growing interest in painting manifested itself in art exhibitions at two State fairs and a huge regional exhibition at Los Angeles. At Sacramento prizes totaling several thousand dollars were divided between "modern" and "conservative" artists, with \$1,000 going to Richard Haines for his expressionist *Grunion Hunt* and another \$1,000 to Ejnar Hansen for his academic portrait, *Sadakichi*. The Los Angeles County Fair staged a national exhibition in September, and awarded a \$700 purchase prize to the New York artist Louis Bosa for one of his characteristic city scenes, *Never Again*.

The Los Angeles County Museum held perhaps the largest regional exhibition of the year under the direction of William R. Valentiner and James H. Breasted. Total number of works submitted by 1,021 local artists amounted to 2,102. Of these 236 were admitted for exhibition, and a first prize of \$500 was awarded to Howard Warshaw.

Most sensational regional of the year was held at the Corcoran Gallery for "Artists of Washington (D.C.) and Vicinity." A jury consisting of Dorothy Gaffly, Walter Stumpf, and Willis F. Woods selected only 20 out of 1,000 works submitted, and found only one of these worthy of a prize. They explained their unprecedented action in the following statement:

"The business of being an artist is a serious one. Thousands of people in the United States are painting. Only a few of them are artists. These few are scattered all over the country. Within the past 10 or 15 years, there has been such an increase in the number of amateurs that their work confuses the

art issue both for the public and the art jurymen who must sift from innumerable paintings of little merit, a handful that will stand a rudimentary test of craftsmanship.

"If the Washington and Vicinity Exhibition indicates a trend, it points up the existence of two poles in American art today—the art of the amateur, which occasionally has flashes of intensive originality, and the art of the skilled professional. Between the two poles lies a vast waste of mediocrity and imitation. If a regional exhibition is to be judged on the basis of quality, the accepted works will be found in the first two categories.

"The overbalance of the mediocre, however, is becoming so alarming and is so detrimental to art and artists in their relation to the public, that the jury feels its duty is to throw its weight on the side of honesty and knowledge."

The action brought about a Salon des Refusés, also at the Corcoran.

Painting. The disparity of opinion about modern art in America was well demonstrated in 1948 when, early in the year, *Look* magazine published the results of a survey it had made of leading museum directors, critics, and editors, asking them to name America's 10 foremost living artists. In order of majority choice, the following were named: John Marin, Max Weber, Yasuo Kuniyoshi, Stuart Davis, Ben Shahn, George Grosz, Franklin Watkins, Lyonel Feininger, and Jack Levine.

Yet only two of these artists, Davis and Levine, won prizes at any of the important annual exhibitions. Davis won a prize at the 59th annual watercolor exhibition held by the Art Institute of Chicago for his abstraction, *Ana*, and Levine won the Jennie Sesman Medal at the Pennsylvania Academy's 143rd annual for his *Apteka*, a characteristic city street-scene which had won a top prize at the Corcoran Biennial the year before.

The Carnegie Institute annual, formerly international and now limited to "Painting in the United States" chose a conservative jury to award prizes from the 300 paintings chosen by director Homer St. Gaudens. John Carroll, Alexander Brook, and Luigi Lucioni awarded the \$1,500 top prize to comparatively unknown Raphael Gleitsmann for his richly painted *Medieval Shadows*. Second prize (\$1,000) went to Andrew Wyeth for his *Christina Olsen*, a meticulously detailed portrait, and third prize (\$700) went to Carl Zerbe for *Actors*, a highly subjective painting by Boston's leading expressionist. The exhibition itself, however, ranged all the way from abstraction to illustration as is proper in a democratic country.

The National Academy's 122nd annual exhibition revealed a courageous effort to present all sides of the modern art question that vexed other institutions during the year. The top award Altman Prize of \$1,200 went to John Carroll for his portrait of Claire Luce as *Camille*, but the Oberg Prize went to John Heliker for an abstraction entitled *Perilous Night*. Other prize-winners were Raphael Soyfer for *Seamstress*, Zsissly for *Yakuima Boy*, Martin Johnson for his metropolitan scene *Tintype*, Jacob Arkush for a solidly executed figure study called *Leona*, and Ruth Ray for *Navajo Land*, a western still life in the manner of Georgia O'Keeffe.

The Whitney annual once more illustrated its published intent of representing "the many diverse tendencies of the art of our times." As in former years, two galleries were set aside for completely abstract paintings by George L. K. Morris, Ralston Crawford, and others, while the other rooms were filled with paintings ranging from academician Kenneth Hayes Miller's *Waiting for the Bus* to

left wing Ben Shahn's *Allegory*, a violent red wolf suckling the 20th century descendants of Romulus and Remus.

Prize-winners at Chicago's 59th annual watercolor exhibition reflected that Institute's determined recognition of "advanced trends" in art which it demonstrated by its wholly abstract exhibition of 1947. Top awards were given to native son Iven Le Lorraine Albright for his highly subjective painting, *Roaring Fork*, to Jacob Lawrence for one of his Negro *Migration* series, Karl Priebe for his expressionist *Lady with Bird*, Stuart Davis for an abstraction entitled *Ana*, Nicola Zirola for a two-dimensional portrait of *Man with Razor*, and an entire room was devoted to 16 watercolors and gouaches by Morris Graves, the West Coast painter whose sensitive pictures of shore birds were first shown at the Museum of Modern Art in 1942.

The Pennsylvania Academy's 143rd annual exhibition revealed the catholicity that is generally associated with this oldest of American annuals. As already noted, one prize went to Jack Levine, one of America's leading young expressionists, and another to Steve Raffo for a representational landscape, *La Cas de Dios*. Serving on the jury were Peppipino Mangravite, Louis Bouche, Bernard Karfiol, Richard Lahey, and Walter Stumpfeg.

The Virginia 6th Biennial of Contemporary American Paintings also presented a cross section of talent, and purchased paintings by Lamar Dodd, Henry Varnum Poor, and comparatively unknown Charles Augustus Smith. The *Art Digest* said of it, "Conservative painting is becoming less traditional, while the artists who have been exploring the modern trail have found their directions, and now are more concerned with refining their methods than with experimentation."

This gradual softening of the line between modern and academic was also highlighted by the National Academy's announcement in April of its newly elected members. Among the following names are bedfellows which a few years ago would have seemed strange indeed:

Painters: Alex Brook, Peter Blume, Louis Bouche, John Carroll, Edwin Dickinson, Ernest Fiene, Henry Mattson, Henry McFee, Henry V. Poor, Zsissly.

Graphic Artists: Fiske Boyd, Howard Cook, Lewis Daniel, Helen W. Heller, Rockwell Kent, John Menthan, Hans Mueller, Benton Spruance, Prentiss Taylor.

Watercolorists: Henry Gasser, Hardie Gramatly, Dong Kingman, Emo Kosa, Jr.

Sculptors: Jose De Creeft, Sylvia Shaw Judson, Henry Kreis, Ivan Mestrovic, Eleanor Platt, Carl Schmitz.

Sculpture. The Worcester Museum's exhibition, "Sculpture at the Crossroads" was the only notable sculptural event of the year. Opening in March, it revealed a carefully chosen group of work ranging from bronzes by Despiau to the stone carvings of Charles Cutler, one of America's most promising young sculptors. Its theme was more or less the same as implied in the criticism of the Virginia Biennial—that our younger sculptors have now assimilated the innovations that began with Rodin, and are now more concerned with content than style.

At the annual Whitney watercolor and sculpture exhibition, however, were many examples of experimental work. Seymour Lipton, Theodore Rosak, David Hare, and Herbert Ferber all showed a more than willingness to experiment in linear forms and unusual materials, making the modernism of Worcester exhibition appear academic.

The Sculptor's Guild staged a highly successful outdoor exhibition on Washington Square, exhibiting 60 pieces including *Aspiration* by Gwen Lux, which was commissioned by the Los Angeles Gallery of Associated American Artists. Others who exhibited included Harold Ambellan, O'Connor Barrett, Mark Friedman, John Hovannes, Margaret Bassler Kane, Warren Wheelock, Seymour Lipton, Mitzi Solomon, Jose DeCrefft, Louis Slobodkin, and William Zorach. An admission fee of 25 cents was charged.

Prints. The National Serigraph Society's 9th annual exhibition was this year thrown open to both members and non-members, and a distinguished jury of museum print curators was invited to make awards. Jurymen A. Hyatt Mayor (Metropolitan Museum), Una Johnson (Brooklyn Museum), and Carl Zigrosser (Philadelphia Museum) awarded first prize to Doré Bothwell for a surrealist *Memory Machine*. Second prize went to Henry Mark for a semiabstract print entitled *Birds*, third prize to Frank Davidson for his linear *Oh Willie, Come Sell Your Fiddle*, fourth to Hulda Robinson for *Beacon*, and fifth to Marion Cunningham for his technically interesting *Scientific Expedition*.

The Library of Congress continued its policy of acquiring work from its "Prints of the Year" exhibition, purchasing 33 of the exhibited prints. Included among the artists whose works entered the Library collection were Benton Spruance, Arthur M. Capps, Lynd Ward, Ivan Le Lorraine Albright, Federico Castellon, Francis Chapin, Fritz Eichenberg, Ernest Fiene, Douglas Gorsline, Maurice Lasansky, and Zsissly. Arthur W. Heintzelman, well-known etcher and keeper of prints at the Boston Public Library was honored by the French Government, which awarded him the medal of the Chevalier de la Legion d'Honneur.

Most extensive, and in many ways the most interesting print exhibition of the year was the history of lithography exhibition arranged by A. Hyatt Mayor, new curator of prints at the Metropolitan, who succeeded William Ivins. Well-written captions and tastefully hung exhibits made what might have been a tiresome list of dates and methods into a fascinating show.

Acquisitions. The ancient complaint of contemporary artists that the museums buy only the work of their dead (and non-eating) predecessors was interestingly illuminated by an exhibition at the Colorado Springs Fine Arts Center under the direction of Fred Bartlett. Called "New Accessions U.S.A.," it opened on July 12 as the result of a questionnaire sent to American museum directors in an effort to discover the facts underlying their acquisition policies. Following are the questions and answers:

How many contemporary paintings purchased (or received as gifts) and how many were considered between June, 1947, and June, 1948? Answer: An average of 14 or a total of 420 out of 75,000 considered.

Of total funds available for all acquisitions, what percentage was spent for contemporary American painting? Answer: 5 to 41 percent.

What major obstacles toward the purchase of contemporary American painting have had to be overcome? Answer: Lack of funds.

Who made the decisions? Answer: Director and staff; only three complained of trustee antagonism.

Most spectacular acquisition of the year was that of the Boston Museum which acquired the entire Spaulding collection of modern masters, including Cezanne's *Turn in the Road*, Degas' *Father Listening to Pagans*, and Toulouse Lautrec's *Woman in a Studio*. In the collection are also 40

American paintings, including 10 by Winslow Homer. Boston also acquired in December what the *Art News* called the most important acquisition of the year, Titian's *St. Catherine of Alexandria*, formerly in the Escorial.

Art and Industry. Both La Tausca Pearls and the Pepsi-Cola Company suddenly announced the termination of their art competitions after completing highly successful exhibitions. La Tausca distributed \$6,750 in prizes to Nicholas Vasilieff, Stuart Davis, Charles Howard, Everett Spruce, and Yasuo Kuniyoshi. Pepsi-Cola was more generous in 1948 than ever before, awarding \$41,500 in prizes. Top winners were Michael Jamieson for a detailed landscape (\$2,500), Nan Lurie for her semiabstract *Blue Table Still Life* (\$2,000), Margaret Thompson for *The Assemblage* (\$1,500), and John Taylor for his landscape, *The Gulf* (\$1,000). Other paintings were purchased for the annual calendar, and each of the competing artists was given \$100 as a rental fee for his picture during the period it would tour on exhibition, an agreement reached the year before between the company and Artists Equity Association. Predictions of cynics that industry would stop buying art and awarding prizes as soon as the excess profits tax was abolished proved true.

Sales. The decreasing gulf between the very rich and the very poor that characterizes our economy was manifest in the year's record of art sales, which totaled \$5,228,218 at Parke Bernet, the leading auction house. This was \$1.5 million below the record total of 1945-46. Although some individual prices remained high, the increased number of middle-income buyers brought down the medium prices.

Gainsborough's *Portrait of a Young Girl* brought \$13,500, Constable's *Malvern Hall, Warwickshire*, \$8,700; Greuze's *L'Amoureux Desir*, \$8,000; Murillo's *Saint Justa*, \$8,000; Degas's *Trois Danseuses*, \$8,000; Jacob Van Ruisdael's *Wooded Landscape with a Stream*, \$4,000; and a Gilbert Stuart *Washington*, \$4,000.

Prices of modern art were reflected in Crowninshield and Whittemore sales with \$5,080 being paid for Monet's *Isles on the Seine at Port Villiers*; \$5,000 for *Mary Cassatt au Louvre* by Degas; \$4,900 for *Le Bouquet d'Anemones* by Matisse; \$4,750 for *Mother and Child Before a Window* by Mary Cassatt, and \$4,200 for a landscape by Pissarro.

—JOHN D. MORSE

ASIA. The continent of Asia, including the Asiatic part of the U.S.S.R., has an area of about 16,752,600 square miles and a population estimated at 1,200,000,000. See separate articles on ARABIA, CHINA, INDIA, JAPAN, and the other Asiatic states.

ASSEMBLIES OF GOD, General Council of the. Incorporated in Arkansas in 1914 by a group of independent pastors devoted to evangelistic mission work. There are 6,000 churches, 6,200 pastors, and 253,016 enrolled members. The church maintains 12 Bible Institutes and Colleges, 1 home for retired ministers and missionaries, and 3 children's homes. Foreign missions have about 200,000 members in more than 50 mission fields served by about 650 missionaries. Income from contributions for home and foreign missions: \$2,219,700. Headquarters: 434 W. Pacific St., Springfield, Mo.

ASTRONOMY. The world's largest and most powerful telescope, the 200-inch Hale reflector on Palomar Mountain in California, was dedicated on June 3 in the presence of Mrs. George Ellery Hale and more than 800 scientists and invited guests. The

late Dr. Hale, whose vision and genius were largely responsible for the project, was also the founder of the Yerkes Observatory with its 40-inch refractor and the Mt. Wilson Observatory with a 100-inch reflector.

At the dedication, in an address entitled "The Challenge of Knowledge," Dr. Raymond B. Fossdick, President of the Rockefeller Foundation, stated "We need in this sick world the perspective of the astronomer. We need the detachment, the objectivity, the sense of proportion which this great instrument can bring to mankind. This telescope is the lengthened shadow of man at his best. It is man on tiptoe, reaching for relevancy and meaning, tracing with eager finger the outlines of order and law by which his little life is everywhere surrounded. There is nothing which so glorifies the human race, or lends it such dignity and nobility as the gallant and inextinguishable urge to bring this vast, illimitable complexity within the range of human understanding. In the last analysis, the mind which encompasses the universe is more marvelous than the universe which encompasses the mind. . . . So we dedicate this instrument today in humbleness of spirit, but in the firm belief that among all the activities and aspirations of man there is no higher peak than this."

Addresses were also made by Dr. Vannevar Bush, President of the Carnegie Institution of Washington, Dr. Max Mason, Chairman of the Observatory Council, Dr. L. A. DuBridge, President of California Institute of Technology, and Dr. Ira S. Bowen, Director of the Palomar Mountain and Mt. Wilson observatories. In commemoration of the dedication, the United States Government issued a 3¢ postage stamp showing the observatory building.

The construction of this mighty tool of science was truly a masterpiece of modern engineering, from the casting and grinding of the 200-inch diameter, 25-inch thick, 15-ton reflecting mirror, to the fabrication of the 60-ft.-long, 500-ton mounting driven by only a $\frac{1}{2}$ th h.p. motor, and the erection of the housing, 165-ft. high and 138-ft. in diameter, with its 1,000-ton rotating dome. No part of the instrument deflects more than $\frac{1}{16}$ th of an inch.

The focal length of the mirror is 666 inches, relative aperture $f/3.3$. The paraboloidal curve of its surface is within a few millionths of an inch of absolute perfection. Its optical range is 1,000 million light-years (the distance light travels during 1,000 million years at a speed of 186,000 m.p.s.), enabling astronomers to photograph stars of 22nd magnitude with an accuracy of .001 magnitude. This increase in telescopic power in the last 40 years is represented by a factor of more than one million in brightness and 20 in accuracy. With its surface area four times that of the 100-inch at Mt. Wilson, it will penetrate twice the distance and eight times the volume of space previously explored.

There remain yet several months of critical testing, and also adjusting of auxiliary apparatus, but it is expected that some time late in 1949 the world's greatest eye will be pronounced ready for the venture into realms beyond our present known universe.

What are some of the questions to which astronomers will seek answers with the 200-inch reflector? Dr. Edwin P. Hubble has given the following representative examples of the types of problems to be solved, which he states would alone justify the construction of the Hale telescope. The new instrument has greater power in three respects:

1. **RESOLUTION.** The so-called canals on the planet Mars could be photographed, if they exist, thus settling finally the question of whether there are, or have been, intelligent beings on that planet. Such photography will be possible because of the great "speed" of the mirror which will permit instantaneous exposures during the few brief moments of the extremely good visibility required.

2. **DISPERSION.** The relative distribution of chemical elements in the stars and throughout the universe is determined from spectra. The 200-inch reflector will obtain spectra of higher dispersion and resolution than ever before possible, revealing much new data concerning the sources of stellar energy, the origin of the elements, and the history and future evolution of the universe.

3. **DEPTH PENETRATION.** The 200-inch reflector will probe the depths of space to check on the distribution of galaxies and their apparent recession from our own position in space. It is not yet firmly established that this motion is a real one and indicates an expanding universe. Perhaps there is some unknown behavior of light itself which makes it appear more red when coming to us from these remote universes.

Dr. W. T. Skilling points out that the 200-inch reflector will not be used for anything that a smaller telescope can do. Its time will be jealously guarded for hunting big game of the universe. Its work will be largely recorded on photographic plates to be studied later by research specialists. The Hale telescope will bring into view about eight times as many stars, nebulae, and other celestial objects as can the 100-inch reflector. In addition, such objects as are already known may be studied in much greater detail because of the additional light collected from them. Previous long-time photographic exposures may now be considerably shortened, and in many cases instantaneous exposures made; the latter are not so much subject to the distortions due to atmospheric turbulence.

It is of course possible, perhaps likely, that the Hale telescope will raise more questions and problems than it solves, but man's thirst for knowledge cannot be quenched. With the 200-inch telescope astronomers will reach much farther for the clues hidden throughout our physical universe.

A fifth satellite of Uranus was discovered on February 15 by Dr. G. P. Kuiper of McDonald Observatory. This moon was detected on a photographic plate made with the 82-inch reflector. Its magnitude is 17, period of revolution about 30 hours, and distance from the planet about .64 that of Ariel, previously the innermost known moon of Uranus.

On February 18 a "daylight" bolide or exploding meteor was seen over Norton, Kans. Reports from persons in Colorado, Nebraska, New Mexico, Oklahoma, and Texas stated that the occurrence was ground-shaking and was followed by a terrific roar lasting ten seconds. A streak of blue-gray vapor remained visible for more than an hour. Many fragments of the meteorite, classified as an achondrite, were recovered. The largest piece, weighing about one ton, was acquired by the University of Nebraska and the Institute of Meteoritics of the University of New Mexico.

Two comets of special brilliance were seen this year. Comet Honda-Bernasconi (1948g) was discovered on June 2 in the constellation of Perseus. Between June and September its brightness diminished from 3rd to about 12th magnitude. It was closest to the sun on May 15, passing it at a distance of about 18 million miles.

The Great Comet of 1948 was first seen on No-

vember 6 by a number of observers in Australia. It was visible to the naked eye and situated in the constellation of Hydra. Its tail was reported as about 25° long, the brightness of its head about 2nd magnitude. This was the brightest comet seen in the northern hemisphere since Skjellerup's comet in 1927. The comet was rather favorably placed for observers in the southern United States, but was photographed from as far north as Troy, N.Y. It passed the sun on October 27 at a distance of 12 million miles.

Dr. H. W. Babcock of Mt. Wilson Observatory has discovered a strong magnetic field in certain stars of spectral class A. It is believed that this is the missing factor long sought in the explanation of the production of this type spectrum. Still unsolved are the questions of the variation in the magnetism, as well as the source of the field itself.

On February 26 the moon was televised with equipment at the Franklin Institute in Philadelphia. A 7-inch reflector telescope, f/10, was employed to deliver the image to the television camera. Astronomical phenomena had previously been successfully televised on Apr. 7, 1940, when the annular eclipse of the sun was transmitted from the RCA building in New York City using a 4-inch rich-field reflector made in the workshop of the New York Amateur Astronomers Association at the Hayden Planetarium.

New observations by Drs. Joel Stebbins and A. E. Whitford at Mt. Wilson show that distant galaxies are much redder than nearby ones, this reddening being in addition to the well-known red shift in spectrum lines due to recessional velocities. It has been tentatively suggested that the new effect might be due to absorption influences of material in the vast open spaces between the galaxies. In this research, use was made of the newly developed electronic photo-multiplier tube.

Recent additions or improvements in instruments include the following:

(1) A photo-electronic telescope employing a surface of (e.g.) cadmium which, under the effect of light, emits electrons. These electrons may be accelerated to increase the intensity of the desired light-signals while the sky background light and other unwanted turbulence may be scanned away. The telescope may be automatically guided and its images also televised for mass-production study.

(2) A new camera capable of taking 11 million pictures per second has been constructed at the University of Rochester by Dr. Brian O'Brien and Gordon G. Milne. While some definition is sacrificed for speed, the camera should be of especial help to solar physicists and others in recording transient phenomena of very short duration.

(3) Photo-electric guiding now in use on the 100-inch at Mt. Wilson operates on the principle of the rotating knife-edge, employing a 1P21 photo-multiplier tube. A part of the light from a star is reflected across a rotating half-disc at the focal plane. A photocell picks up the modulated light and activates a compensating mechanism to re-orient the telescope.

(4) Research work has been reported by scientists at the General Electric Company on the application of infra-red image tubes (Farnsworth 1P25) to astronomical telescopes. The tubes are made to change infra-red images into visible light. When such a tube is placed at the prime focus, it is claimed that planetary and moon images are seen with more steadiness since infra-red light is disturbed by the atmosphere less than visible light.

In contrast to Dr. R. A. Millikan's belief that cosmic rays originate in interstellar space and re-

sult from annihilation of atoms in collision, Dr. D. H. Menzel of Harvard Observatory suggests a new theory which places their origin in the local ion clouds near the earth. The ions receive long-wave radiation energy from the sun and in turn release showers of cosmic rays.

Following a recommendation of a committee of the American Astronomical Society, the U.S. Office of Naval Research has allotted \$50,000 for the support of some 20 projects in basic astronomical research, at 17 institutions, involving the work of about 30 astronomers.

A new model of the universe was proposed by Dr. G. C. Omer, Jr. of the California Institute of Technology. Dr. Omer assumes a non-homogeneous distribution of matter which has, however, a spherical symmetry. He accepts the red shift in the spectra of galaxies as indicative of a recessional motion, but cautions that the shifts for the more distant galaxies have not been actually measured but merely extrapolated. The complete validity of the expanding universe has still to be established.

After an interruption of ten years, the International Astronomical Union again had a full session in Zurich, Switzerland, with nearly 40 commissions activated. The meetings, attended by more than 400 astronomers, were arranged by the Swiss Federal Observatory. Dr. Bertil Lindblad of Stockholm Observatory, Sweden, was elected President, and Dr. Bengt Stroemgren, University of Copenhagen Observatory, Denmark, Secretary. Commission 39 reported the completion of specifications for the location and equipment of an international observatory and efforts to obtain a grant of \$50,000 from UNESCO to conduct a site survey.

ATOMIC ENERGY. See NUCLEAR ENERGY.

ATOMIC ENERGY COMMISSION. The U.S. An administrative agency of the Federal Government, that continued during 1948, under the direction of the five original Commissioners, appointed by President Truman in 1946 and approved by the Senate in April, 1947. They were: David E. Lilienthal (Chairman), Robert F. Bacher, Sumner T. Pike, Lewis L. Strauss, and W. W. Waymack. Public Law 898, 80th Congress, approved July 3, 1948, as an amendment to the Atomic Energy Act of 1946, extended the terms of office of the Commissioners through June 30, 1950. [Commissioner Waymack resigned on Dec. 21, 1948.]

The Commission's principal areas of activity during the year were the production of the fissionable materials uranium-235 and plutonium; the development, production and testing of weapons; the conduct of a comprehensive program of research, including research directed toward the development of useful atomic power; and the construction of new research, production and housing facilities. At the end of the year, nearly 1,000 contractors, prime subcontractors and consultants were engaged in the work of the Commission.

During April and May, the Commission, with the assistance of the armed forces, conducted tests of three atomic weapons of new and improved design at the AEC Proving Ground at Eniwetok Atoll in the Pacific Ocean. As a result of the tests, which were executed under the technical direction of scientific personnel from the atomic weapons center at Los Alamos, New Mexico, it was announced that the position of the United States in the field of

atomic weapons had been substantially improved.

In the field of atomic power research, the Commission announced in September that two nuclear reactors for the study of atomic power production were under design, one for construction at the Argonne National Laboratory, Chicago, Illinois, and the other at the Knolls Atomic Power Laboratory, Schenectady, New York. A third reactor for general research use, scheduled for completion in 1949, was under construction at the Brookhaven National Laboratory, Patchogue, Long Island. Construction was also begun during the year on two new multi-billion-volt atom splitting machines, the largest in the world, to be located at the Berkeley Radiation Laboratory of the University of California and at the Brookhaven National Laboratory. They will be completed in from three to five years.

During 1948 the distribution of radioactive and stable isotopes from the Oak Ridge National Laboratory, Oak Ridge, Tennessee, was steadily increased. At the end of the year more than 180 varieties of Commission-produced isotopes were being used in 1,000 different medical and research projects at over 300 laboratories and hospitals in the United States and abroad. By December, 25 foreign nations had qualified to receive U.S.-produced isotopes under the Commission's program to share the benefits of nondestructive atomic energy with the rest of the world.

The Commission in 1948 continued to support a comprehensive research program in the atomic energy aspects of medicine, biology, agriculture and the physical sciences through contractual arrangements with private and governmental agencies, and established a fellowship program in co-operation with the National Research Council and a large number of universities and research institutions throughout the country. Under this program, more than 240 AEC fellowships had been awarded by December 31.

Production of fissionable materials continued during the year on a maximum-capacity basis at the plutonium plants of the Hanford Works, Richland, Washington, and the uranium-235 plants at Oak Ridge, Tennessee. To stimulate domestic discovery and production of uranium, the Commission in April established a program comprising a guaranteed 10-year minimum price for domestic refined uranium, a bonus of \$10,000 for the discovery and production of high-grade ores, and a guaranteed minimum price for low-grade ores of the Colorado Plateau.

Extensive new construction of housing and community facilities was started during 1948 at the Commission's townsites at Richland, Los Alamos and Oak Ridge, and major construction of technical facilities was carried on at the Mound Laboratory, Miamisburg, Ohio, the Hanford Works, and the Argonne, Brookhaven, Knolls, Los Alamos, and Radiation Laboratories. —MORSE SALISBURY

AUSTRALIA. A self-governing dominion of the British Commonwealth of Nations, consisting of 6 states and two territories. The Commonwealth of Australia also has administrative control of Papua, Norfolk Island, the Ashmore and Cartier Islands, the uninhabited Australian Antarctic Territory, the Territory of New Guinea (UN Trust Territory) and Nauru (UN Trust Territory). Capital, Canberra.

Area and Population. Australia proper has a total area of 2,974,581 square miles and a population (census June 30, 1947) of 7,580,820. On the same date the population of states and territories was as follows: New South Wales, 2,985,464; Victoria,

2,055,252; Queensland, 1,106,269; South Australia, 646,216; Western Australia, 502,731; Tasmania, 257,117; Northern Territory, 10,866; Australia Capital Territory, 16,905. Chief cities: Sydney, 1,484,434; Melbourne, 1,226,923; Brisbane, 402,172; Adelaide, 382,604; Perth, 272,586.

Education and Religion. Elementary education in Australia is free and compulsory from 6 to 15 years of age. State school systems are supplemented by denominational and undenominational private schools. Each of the 6 states has a university in its capital city, with affiliated residential colleges conducted for the most part by the chief religious denominations.

The chief religious denominations at the census of 1933 were: Church of England, 1,143,493; Roman Catholic, 556,106; Presbyterian, 257,522; Methodist, 203,042.

Production. Australia is the world's largest producer of wool and accounts for approximately 25 percent of world production. Wheat and meat are the other important products of the land and, with wool, make up the country's chief exports. The 1947-48 harvest of wheat totaled 228,390,000 bushels, exceeding the record crop of 1932-33 by 6.3 percent. The average yield per acre was 16.30 bushels. Meat produced amounted to 906,000 metric tons in 1947. Dairy products are also important. The 1947 wool clip was valued at \$480,000,000.

Manufacturing was stimulated by World War II to the extent that the country has recently been able to meet many of its domestic requirements. Value of output in 1945-46, £A886,004,777. Coal and gold are the most valuable mineral products.

Foreign Trade. In the year 1947-48 Australia had a favorable commodity trade balance, with exports at £A406,218,000 and imports at £A338,241,000. With the dollar areas of the United States and Canada there was a deficit of £A41,937,000. About two-thirds of the sales to the United States and one-half of those to Canada were wool. Britain remained Australia's best customer and largest source of supply. Australian butter and meat went almost entirely to Great Britain. Principal imports from the United States were textiles, metals and metal manufactures, machinery, and petroleum products.

Finance. The financial year ended June 30, 1948 showed record revenue of £A466,000,000, with a small surplus of about £A1,000,000 instead of the anticipated deficit of £A30,000,000. This was the first surplus since 1939-40. National income in 1947-48 was £A1,571,000,000, an increase of 24 percent over the preceding year.

Transportation. At the end of 1946 Australia had more than 27,000 miles of government-owned railways and a few miles of privately-owned lines open for general traffic. An act passed in 1946 provides for the opening of a north-south railway and the conversion of the various gauges used by the separate states to standard-gauge track. There were 33,719 miles of regular air services. Net tonnage of registered shipping was 311,931.

Government. Executive power is vested in a Governor General appointed by the Crown and in a ministry responsible to the Federal Parliament. Both Houses of Parliament were enlarged by 1948 legislation: the Senate from 36 to 60 members and the House of Representatives from 75 to 121 members. The method of electing Senators, 10 from each state, was changed to proportional representation. Governor General, William J. McKell; Prime Minister, Joseph B. Chifley, Majority party, Labor.

Events, 1948. Australia's Minister for External Affairs, Dr. Herbert V. Evatt, was abroad for a con-

siderable part of the year, acting in behalf of his government in international discussions. Evatt was elected President of the United Nations General Assembly in Paris on September 21. In that capacity he appealed directly to the heads of the United States, British, French and Soviet Governments on November 13 to undertake direct conversations to end the disputes over Berlin. In this and related appeals he acted jointly with Trygve Lie, Secretary General of the UN. Prime Minister Chifley, speaking in Canberra November 15, supported Evatt's methods, but American representatives took other positions. On November 22 Australia offered a resolution asking for reconsideration by the Security Council of the applications of five countries, including Eire, for membership. All five applications had been vetoed by Soviet Russia.

In October Australia gave the United Nations \$1,127,000 as part of that country's contribution to the UN Appeal for Children, with the promise that the campaign in Australia would be continued. An agreement by which Australia would supply Poland with raw wool to the value of £A350,000 was signed at Lake Success on June 3. Poland was the first country to accept Australia's offer to supply wool to European countries under the United Nations General Assembly's post-UNRRA program.

Earlier Evatt opened the first meeting of the South Pacific Commission in Sydney in May, and headed his country's delegation to the meeting of Commonwealth Prime Ministers in London November 11-22. Prime Minister Chifley, who was in London for a few days in July, conferring with Prime Minister Attlee and other ministers, was not able to return at that time.

In August Australia was requested by the UN Trusteeship Council to give the people of the trust territory of New Guinea more chance at self-government and a larger share of economic and social benefits. It was also suggested that Australia's much-debated proposal to combine New Guinea with Papua in an administrative union might be referred to the International Court of Justice. In Australia the United States' proposal for the international control of Antarctica produced conflicting views. Evatt opposed it, but Minister of Finance Dedman preferred control by a condominium provided that the United States took a major part.

Commonwealth Relations. The calling of the conference of the Commonwealth Prime Ministers in London on October 11 was a matter of deep satisfaction to the Australian Government. The Government for some time had been urging a stronger Commonwealth. Evatt insisted in speeches and broadcasts that with the addition of India, Pakistan, and Ceylon the Commonwealth was in a new stage of development and that a review of the whole machinery of cooperation was desirable.

Evatt took an active part in the conference. With St. Laurent of Canada and Fraser of New Zealand, he brought to Chequers two Irish Ministers to discuss with the old Dominions and with Britain in the person of Prime Minister Attlee the implications for Commonwealth trade preferences of Eire's proposed severance of all links with Great Britain. Again in the middle of November the representatives of the Eire Government were persuaded to go to Paris for conferences with Evatt (Deputy Prime Minister of Australia) and the others.

Australia's deep reliance on Commonwealth ties showed itself again when it was observed that the final statement of the Conference of Commonwealth Prime Ministers failed to contain the word "British." Press and public gave signs of shock and

disappointment; and it was reported that some Australians were saying openly that they would rather have a small, closely-knit Commonwealth to which the word "British" was applicable than an amorphous group including hundreds of millions of Asiatics to whom the word and its associations were alien.

It was significant that Prime Minister Chifley soon made two public statements on the issue. One was on October 29, when he said that Australia itself was unlikely to drop the word "British" from its references to the Commonwealth. Another was a broadcast on November 7, in which Chifley urged his countrymen not to get "worked up" about proposed changes in the Commonwealth. The Prime Minister argued that the reality behind the changing forms was the willingness of purely British units to work closely with the others.

The conference as a whole was a disappointment to Australians, for it produced no signs of closer ties. However, the announcement on November 8 of an agreement between five Commonwealth countries (including Australia and New Zealand) with Japan for exchanges of \$220,000,000 worth of trade in 1948-49 was expected to ease the anxieties of those who had not known of the negotiations.

The cancellation of the Royal Family's proposed visit to Australia in 1949 because of King George's illness was a deep disappointment to Australia, for the visit had promised to cement the bond so highly valued in the Dominion. Chifley, in telegraphing his sympathy, urged the King to give first consideration to his health.

Aid to Britain. The first conspicuous gift of the year came from the tiny island of Nauru (8½ sq. mi.) a trust territory inhabited by 1,400 people. The head chief of Nauru sent Prime Minister Chifley £A700 for the purchase of food for Britain. Chifley, in announcing the gift on January 20, described it as "magnificent."

Australia continued to ration butter and to prohibit the consumption of cream in order to maintain exports of those commodities, 90 percent of which went to Britain and 10 percent to destinations named by Britain. In January a British food mission went to Canberra to plan for future food contracts. An egg export agreement was soon announced, and in September a British contract to buy all Australia's butter and cheese for the 7 years ending June 30, 1955, was made public. Increased prices were to be paid, and shortly afterwards the prices of frozen meats were also raised.

In September the House of Representatives voted a grant of £A10,000,000 to Britain, in view of Australia's fortunate sterling position. The grant was praised by ECA Administrator Hoffman as helpful for the recovery of Europe.

Dollar Shortage. Australia continued in 1948 the steps to reduce dollar imports begun in 1947. After June 30 imports of clothing, sheeting, and rayon dress materials were banned, except industrial cloths used in Australian manufacture. Only the cheapest types of American automobiles were permitted to enter, so that the amount available could cover more cars. Chifley told the House of Representatives in September that he had had to reject some American companies' offers to invest capital in Australia because Australia lacked the dollars necessary for plant, payments of royalties to parent companies, and dividends.

When New Zealand restored the pound to parity with the British pound in August, Australia declined to take the corresponding step partly on the ground that the country's dollar shortage did not

permit the discouragement of exports, especially in the primary production field, or the encouragement of imports. The question was raised repeatedly, however, and again on November 23 Prime Minister Chifley assured the House of Representatives that Australia contemplated no change.

Referendum Defeat. The Commonwealth Government was decisively defeated in the May 29 referendum which would have transferred from the States to the Commonwealth the power to control prices and rents. The "No" vote of 2,119,818 carried a majority of 579,821, and in all of the six states the proposal was turned down. The vote was "No" in Chifley's and Evatt's constituencies and strongly so in the states with Labor Governments: New South Wales, Queensland and Tasmania.

Prime Minister Chifley had threatened to withdraw price-stabilization subsidies if the Commonwealth Government lost its power of price control. This was soon done, and by the end of August all federal subsidies were gone except those on butter, tea, and superphosphates.

In August the states agreed on a list of 30,000 items, representing 60 percent of those controlled by the Commonwealth, which would be released from price control on September 20 when the Commonwealth left the field. Commodities which were still controlled included meat, bread, flour, butter, sugar, and a number of other foods. Meat and clothing rationing was discontinued in June. On the other hand gasoline rations were cut by one-fifth on October 1.

Another dispute between the Commonwealth and State Governments was that connected with taxation powers. The Premiers of the State Governments met with the Prime Minister on August 23 to request £A80,000,000 to help balance their budgets, and protested against the Commonwealth's monopoly of the income tax. On the first issue they were rebuffed for not having improved their revenues (except in New South Wales) by increasing railroad rates, and were told that all they could have was £A54,000,000. On the second point they were informed that the Commonwealth would never give up its monopoly.

The session of Parliament which opened on September 1 was given over in large part to the budget. The budget proposed by Chifley, who was Commonwealth Treasurer as well as Prime Minister, lowered income taxes, corporation taxes, and sales taxes, but increased the expenditure estimates for the social services. Since the national income was rising and the preceding budget showed a surplus, these changes were possible.

Bank Nationalization Dispute. In February the High Court began its hearings on the constitutionality of the 1947 legislation nationalizing the commercial banks (see YEAR BOOK for 1947, p. 44). The suit was brought by the State Governments of Victoria, South Australia, and Western Australia and by 11 private trading banks. The judgment, delivered on August 11, declared so much of the legislation invalid as to make it inoperative and an injunction was issued restraining the Commonwealth Government from putting the legislation into effect.

Few recent issues had so shaken Australia as the bank nationalization act. Opposition Leader R. G. Menzies probably overstated the situation, however when he said, commenting on the High Court's decision, "Many Labor members of Parliament have cursed the day when bank nationalization was introduced." Prime Minister Chifley, who had appeared to take a deep personal interest in the bank nationalization act from the moment of its incep-

tion, was not willing to accept defeat. The Federal Government decided to appeal the case to the Privy Council in London, although it was against the traditional policy of the Australian Labor Party to take its problems outside Australia.

The Government's action was immediate. A copy of the judgment was at once sent to Paris for Evatt, who combined the duties of Attorney General with those of External Affairs and Deputy Prime Minister. Solicitor General Bailey left for London on August 19 to meet Evatt and confer on the details of the appeal, the first step of which was to obtain leave to appeal. On November 11 special leave to appeal was granted to the Commonwealth of Australia and the Commonwealth Bank of Australia by the Judicial Committee of the Privy Council in London.

Other Socialization Measures. The Commonwealth Government's free medicine plan went into operation on June 1, after a four-year boycott by the Australian British Medical Association, which protested against the limitation of the drugs and medicines that could be prescribed and against the severe penalties for breaches of routine. On November 24 a bill was introduced in the Senate outlining national health services but leaving the details for further legislation.

Legislation for the establishment of a Commonwealth Government shipping line was being drafted at the time of the opening of Parliament on September 1, but the date of its completion was uncertain. Chifley told New South Wales coal miners in September that the Government had neither the power nor the intention to nationalize the coal mines as long as they were giving good service under private control. In announcing its proposal to transfer broadcasting to a new board, Chifley denied any intention to socialize commercial broadcasting.

Immigration. Australia's goal of 70,000 immigrants a year was energetically pursued in 1948. Minister of Immigration Calwell worked with the British Ministry of Transport and the steamship lines until he had a promise of transportation for 72,000 persons in 1949. In October 17 vessels, including four carrying migrants exclusively and 6 under charter to the International Refugee Organization, were moving 14,000 immigrants to Australia.

Australian representatives were sent to Italy to study the situation there, with respect to the Australian plan of absorbing 200,000 refugees over a period of years. Italian migrants were already on their way to Australia in the autumn, but a general proportion of two British migrants to one of other nationalities was planned. In the House of Representatives in June Evatt said that no change in the "White Australia" policy was contemplated.

—ALZADA COMSTOCK

AUSTRALIAN LITERATURE. Although the Australian publishers during 1948 felt the pinch of high costs, the year was fairly productive of significant, worthwhile books. Writing of esthetic intent was perhaps not as rich as it often has been in recent years, but the number of books dealing with politics and social affairs was unusually large. Much energy was put into bringing standard books back into print.

Before discussing important books of 1948, a few which escaped the net in the account of 1947 should be noted: *Aranda Traditions* by T. G. H. Strehlow was a valuable anthropological study, *Lachlan Macquarie* by M. H. Ellis was a major biographical study, and *Public Libraries in Aus-*

tralia by L. R. McColvin was the most important critique since the Munn-Pitt report of 1935.

Current Events. Several books of 1948 dealt with international affairs on a strikingly high level. Dr. Herbert Vere Evatt in *The United Nations* (orig. pub. Cambridge, Mass.) offered an historical critique of great importance. W. Macmahon Ball, formerly Commonwealth representative on the Allied Council for Japan, in *Japan: Enemy or Ally?* studied occupation policies and criticized some developments severely. Paul Hasluck, formerly Counsellor-in-Charge of the Australian Mission to the UN, offered a critical account of the work of the UN, particularly the Security Council. Only a shade less notable was *Near North: Australia and a Thousand Million Neighbors*, edited by R. J. Gilmore and Denis Walker, a free-running account of affairs in South and Southeast Asia by a company of journalists. Closely related to current international affairs was John M. Ward's *British Policy in the South Pacific, 1786-1893*, which serves admirably to explain the background of Australia's Pacific islands policy.

A miscellany of books on domestic affairs appeared. J. MacDonald Holmes' *The Murray Valley: A Geographical Reconnaissance* was a full-dress study of the largest irrigable area in Australia, somewhat controversial in character. *Australian Government Today* by Geoffrey Sawyer admirably covered the subject announced in the title. *Decentralization*, by various hands, examined a problem which many Australians feel has special urgency. A. G. L. Shaw and G. R. Bruns once more studied the coal problem in *The Australian Coal Industry*. J. S. Maslin's *Hagley, the Story of a Tasmanian Area School* was an important study of an educational experiment. H. C. Trumble's *Blades of Grass* was the fascinating autobiography—notebook of a grasslands expert.

History. In the field of history, in addition to John Ward's outstanding volume, there was *Edmund Barton* by John Reynolds, a biographical study of a distinguished father of the Commonwealth constitution and the first Commonwealth Prime Minister, somewhat "preliminary" in character but nevertheless valuable; Malcolm Uren's *Land Looking West: The Story of Governor James Sterling*, a distinguished contribution to the history of the founding of West Australia; *A Century of the English Church in New South Wales* by E. C. Rowland; and *Social Services in Australia 1900-1910* by T. H. Kewley, which provided the indispensable historical background of the present-day services.

Roy Bridges' *That Yesterday Was Home* was a reminiscent volume built around the story of a Tasmanian family; C. E. W. Bean's *Gallipoli Mission* was an account of a close study of the World War I battleground three years after the fighting had ceased; and *They Struck Opal* by E. F. Murphy was a reminiscent volume about the mining of the beautiful, semi-precious stone. An outstanding compilation of historical documents was Geoffrey Sawyer's *Cases on the Constitution of the Commonwealth of Australia*. Frances McGuire's *The Royal Australian Navy* discussed "its origin, development, and organization."

Wallumetta by M. C. I. Levy was a notable local history of a New South Wales municipality. Professor George Mackaness added *Memoirs of George Suttor 1774-1859* to his growing series of reprints "Historical Monographs." Much material relating to Australia's part in World War II appeared in memoirs of and by American leaders, for example Eisenhower and Hopkins.

Fiction. In literature, Katherine Prichard continued her notable trilogy on the West Australian gold fields in *Golden Miles* but showed acute signs of wavering disastrously between fiction, social history, and left-wing politics. *I Camp Here* by Esther Roland was a rather conventional novel of station life that gained a literary prize. Joan Colebrook's *The Northerners* (orig. pub. N.Y.) introduced a new talent to the reading public. *The Dupe* by Robert Close was another of his vivid but brutal novels of the sea. The American edition of Tom Collins' *Such is Life* (Univ. of Chicago), with an afterword "About Tom Collins" by C. Hartley Grattan introduced that formidable writer to the American audience for the first time. A hitherto unknown Collins manuscript was revealed in *The Bulu-Bulu and the Brolga*. The annual sampling of short stories *Coast to Coast* held no surprises.

Poetry, Drama, Miscellany. In poetry Ernest Moll added *The Waterhole* to his lengthening list of distinguished volumes; Francis Webb revealed a robust talent for the first time in *A Drum for Ben Boyd*; and the annual poetry anthology *Australian Poetry, 1947* showed that the Australian Parnassus was still numerous inhabited. Lionel Shave's *Five Proven One-Act Plays* further expanded the printed drama available and revealed a vivid talent. Far and away the most important autobiographical volume by an author was H. H. Richardson's posthumous *Myself When Young* (orig. pub. N.Y.). In *The Flesh and the Spirit* Douglas Stewart collected his book reviews and occasional articles to form a vigorous volume of literary criticism.

Much writing of first-class importance in all fields continued to appear in the magazines. A guide to all of it relevant to the study of public affairs is to be found in *Australian Social Science Abstracts* which reached No. 5 in September, 1948.

—C. HARTLEY GRATTAN

AUSTRIA. A republic in central Europe, under the control of the Allied Council (composed of the four commanders-in-chief of the occupying powers: General Emile-Marie B  thouart, representing France; Col. Gen. V. V. Kurasov, representing the U.S.S.R.; Lt. Gen. Sir Alexander Galloway, representing the United Kingdom; Lt. Gen. Geoffrey Keyes, representing the United States). Area, 32,388 square miles. Population in 1947, including displaced persons but excluding those in camps, 6,935,000. Population in October, 1947, of chief cities: Vienna, 1,667,438; Graz, 220,100; Linz, 173,330; Salzburg, 106,919; Innsbruck, 95,365.

Production. Preliminary figures for yields of chief crops for 1947 in metric tons: potatoes, 1,095,018; rye, 216,467; wheat, 170,141; oats, 175,337; barley, 95,439. Livestock in the country as of Nov. 18, 1947: cattle, 2,158,000; pigs, 1,724,000; sheep, 474,000; goats, 310,000; horses, 283,000. Austrian agricultural production has been declining in recent years. The monthly average output for 1947 in thousands of metric tons of principal minerals: coal, 14.8; lignite, 236; iron ore, 73.7. In 1946 crude oil production was 846,000 tons. Austrian industrial capacity is estimated to be 60 percent larger than in 1937, thanks to the establishment in Austria of various German war industries. Much of this increased capacity, however, cannot be used because of lack of markets and raw materials. Austrian agricultural production supplied 75 percent of Austrian needs in 1937 and now supplies only 40 percent, chiefly because price levels supply no incentive for capacity production. The 60 percent deficit in Austria's foodstuffs is largely supplied by the United States.

Foreign Trade. In 1947 imports were valued at 99.3 million schillings and exports at 70.2 million schillings. Import items included fuels, vegetables, cotton, iron products, sugar, and seeds. Included in the export items were iron goods, ores, glassware, firebricks, chemicals, and magnesite. The chief trading countries were Switzerland, Czechoslovakia, Italy, United States, Hungary, and France.

Communications. Highways had a total mileage of 54,000 in 1946. There were 275,139 telephones in 1947. It is intended to electrify the entire railway system of the country; the plan will take 12 years to complete.

Finance. Note circulation, Nov., 1947, was 6,038 million schillings. Oct. 7, 1946, the National Bank of Austria showed assets and liabilities of 12,560.65 million schillings. With 1937 as 100, the cost of living index figure of July, 1948, was 454. Occupation costs were reduced during 1948 from 33 percent to 10 percent of the State budget, thanks largely to the policy of the United States which has paid its own occupation expenses since July 1, 1947.

Government. The Constitution of Dec. 27, 1927, is the legal basis of the Austrian Republic. The President is elected for a six-year term by popular vote. His important powers are limited to the appointment of the Federal Chancellor and the Cabinet Ministers, the convening and closing of sessions of the Lower Chamber and the issuance of ordinances in times of emergency. The Federal Chancellor is the responsible head of the Executive government. The Legislature comprises the Nationalrat (Lower Chamber) of 165 members elected for four-year terms by proportional representation, and the Bundesrat (Upper Chamber) of 50 members chosen by the provincial legislatures in proportion to population. President: Karl Renner (Socialist); Chancellor: Leopold Figl (People's Party); Vice-Chancellor: Dr. Adolf Schaerf (Socialist).

Events, 1948. Austria, like Germany, became more than ever during 1948 a bone of contention and a weapon of power politics in the "cold war" between East and West. Vienna, like Berlin, was a city of ruins, divided among 4 Powers. Like Berlin, it was surrounded by Soviet occupation forces—with all of its airfields, however, under Soviet control. Unlike Berlin, it was not subjected to the ordeals of "blockade" and "airlift." Quadripartite administration continued to function after a fashion, since neither of the major antagonists undertook to set up a separate "government" in its own sphere or a rump municipal regime in its own area of the capital.

American-Soviet agreement on an Austrian treaty was almost, but not quite, achieved in the spring. Thereafter the exigencies of the contest of the giants condemned Austria to continued foreign occupation, to Soviet pressure, and to the blessings of American charity. Despite these unhappy circumstances, Austria's alien rulers abstained from open conflict within her borders and Austria's people displayed a high capacity for patient endurance, political stability, and limited economic recovery. But Austrians had little more hope at the end of the year than at its beginning for surcease from frustration, since no such boon was possible so long as Moscow and Washington were everywhere else at swords' points.

Soldiers and Schillings. Late in 1947 Minister Ferdinand Graf, speaking in Salzburg to the Great Powers, voiced the ardent aspirations of all his countrymen: "Go back to the Volga, go back to the Mississippi, and leave us on the Danube. Austria is no football ground where a game between

East and West is played. So play without us. . . . You cannot force us into a golden dictatorship of the West, nor into a political dictatorship of the East. Austria will be the fortress of the middle. . . . In Communist States, it is permitted only to work, not to strike. In capitalist States, it is permitted only to strike and not to work. We want neither . . ."

Such dreams remained unfulfilled. Austria continued to subsist on American aid. The only notable achievement of the coalition Cabinet of the People's Party and Social Democrats was the avoidance of a galloping inflation. A second currency reform, promulgated on Dec. 9, 1947, with the assent of the occupying Powers, reduced money in circulation by almost 50 percent. Prices on the black market declined. Living costs increased but slightly during the year. But so long as low food prices discouraged full agricultural production, with the United States supplying the deficit, the prospect of economic self-support remained dismal. Hope of a viable democratic socialism was even more remote, with socialization postponed by the American-Soviet deadlock and democracy surviving only by virtue of the precarious equilibrium between conservatives and liberals.

Almost a Treaty. Despite the stalemate registered at the Moscow and London meetings of the Council of Foreign Ministers in 1947, the deputies of the Foreign Ministers, gathered in London (February 20 to May 6, 1948) to consider a pact for Austria, made remarkable progress toward an accord. The apparently irreconcilable positions of Britain and America on the one hand and the Soviet Union on the other regarding the vexed question of "German assets" in Austria seemed likely to be settled through French formulas of compromise put forward late in 1947. On the basis of these proposals, Moscow suggested, in lieu of all "German assets" in Eastern Austria claimed by the U.S.S.R. under the Potsdam agreement, that it be granted a 50-year claim to two-thirds of East Austrian oil production, the Balkan assets of the Danube Shipping Company plus 25 percent of its properties in Austria, and \$200,000,000 as a settlement of all other claims, to be paid within two years in freely convertible currency. After much bargaining and sundry concessions on both sides, the deputies agreed that the U.S.S.R. should receive \$150,000,000, to be paid over six years, and 60 percent of oil production for 30 years.

The Kremlin, having consolidated its position in Central Europe by the Czechoslovak coup of late February, was apparently willing to consider withdrawal from Austria through the conclusion of a treaty—the more so as the morale of its troops in Vienna left much to be desired. But the Western Powers, being alarmed by events in Prague, became increasingly reluctant to evacuate Austria. An accord might still have been reached save for Tito's insistent claim for \$150,000,000 in reparations from Austria and for annexation to Yugoslavia of part of Southern Carinthia. When the full story of these developments is told, it will almost certainly become clear that Moscow opposed Belgrade in these matters, and also in the matter of Trieste, but encountered inflexible opposition from the Yugoslav Communist regime. This in turn led to the Cominform denunciation of Tito in June and to the masking of Soviet-Yugoslav diplomatic conflicts behind a confusion of ideological and institutional quarrels having nothing to do with the actual sources of discord.

The consequence, meanwhile, was the breakdown of negotiations in London for an Austrian

treaty. This result was not due primarily to American-Soviet friction in Vienna—e.g. Soviet confiscation in mid-February of the German edition of James F. Byrnes' book *Speaking Frankly*, Kurasov's denunciation of Western "imperialism" a week later (causing Anglo-American representatives to leave the meeting), and the wounding of an American military policeman (Pfc. Jack Gaunden) by a Soviet guard on March 8 in front of Russian HQ in the Grand Hotel. The diplomatic deadlock was rather attributable to Western eagerness to avoid a settlement, complicated by the Belgrade-Moscow feud.

On May 6 Soviet Deputy Nikolai P. Koktomov felt obliged to support the Yugoslav claims. On the same day, on the initiative of the U.S. representative, Samuel Reber, discussions were temporarily suspended, after 110 meetings on an Austrian treaty. Foreign Minister Karl Gruber returned to Vienna. Chancellor Figl declared that the suspension "destroys all our hopes for an early conclusion of the independence treaty."

Austrian hopes were briefly revived by the exchange of communications in early May between Molotov and Bedell Smith. On May 24, however, Reber asserted that the parleys would be postponed indefinitely. Available evidence suggests that this decision was due less to Soviet intransigence than to extensive Soviet concessions which threatened to make an agreement unavoidable. The Government and people of Austria, along with many others throughout the world, thus remained victims of the refusal of the U.S.A. and the U.S.S.R. to come to terms, with each Super-Power justifying its obstinacy in terms of solicitude for "saving" innocent bystanders from the evil designs of the other.

Menace from Moscow. If the American-Soviet global struggle did not subsequently assume in Austria the shape exhibited in Germany, Greece, China, and Korea, this relatively fortunate state of affairs was not due to any reciprocal desire for accommodation but rather to a calculation on both sides that more was to be lost than to be gained by converting the Ostmark into another arena of battle. Washington could win no advantages by splitting the Vienna coalition of Socialists and Populists. Both groups favored extensive nationalization of industry—elsewhere opposed in principle by the U.S.A., and in Austria precluded in practise by Soviet determination to keep control of major enterprises in the Eastern zone. Moscow could win no advantages by giving open support to the Austrian Communists, since they remained an insignificant political force, with no popular following. Their only representative in the Cabinet, Karl Altmann, had been forced to resign in November, 1947.

The ensuing stalemate was nevertheless characterized by continued Soviet harassment of the Vienna Government for its "pro-Western" orientation. Early in June, while pro-Communist Socialists met in Warsaw, anti-Communist Socialists met in Vienna and condemned the Soviet brand of "people's democracy" in accordance with the views expressed by Julius Deutsch and Vice-Chancellor Adolf Schaerf. A fortnight later Gen. Kurasov accused Minister of Power Alfred Migsch (Socialist) of "war-mongering" and "slander" against the U.S.S.R. On June 17 Anton Marek, a Chief Police Inspector in the Ministry of the Interior, was arrested by Russian authorities on a charge of "espionage." Gen. Keyes declared that such Soviet arrests by "Gestapo methods" were intended to cover up "possible Communist subversive activities

or illegal armed formations"—referring to the *Werkschutz* or "black brigades" guarding Soviet-controlled factories. Kurasov rejected the allegation as "a base insinuation." Further "kidnappings" followed, to the tune of Soviet charges that the U.S.A. was hiring Austrian "spies" and was enslaving the country under the E.C.A. agreement signed in June.

Mr. W. B. Willcox, head of the E.C.A. in Austria and a former partner of Dillon, Reed and Company, expressed the hope in August that Austrian trade with the Eastern nations could be increased. Despite new commercial accords with Yugoslavia and Hungary, no substantial trade materialized. In October the Western Powers rejected Soviet proposals for recognition of the "Democratic Union" as a fourth political party in Austria. At the same time the Social Democrats expelled Edwin Scharf, a pro-Soviet leftwinger. Consideration began to be given in Washington to arming Austria for defense against the danger of a Communist putsch.

The delicately balanced relations among the occupation authorities were exemplified by a murder mystery toward the close of the year. On the last day of October the body of Irving Ross, an American E.C.A. official, was found in a wrecked jeep in the Russian sector of Vienna. Near by was a badly beaten woman, Anna Superina, who asserted that four men in Russian uniform had slain Ross and thrown her out of the jeep. Soviet authorities took over the investigation, amid dark hints of espionage—but with no solution announced by year's end. American and Austrian authorities dealt gingerly with this and other incidents, lest Vienna be converted into another Berlin. In December the Austrian cabinet proposed the resumption of negotiations for a treaty. Whether either Washington or Moscow was prepared to resume serious discussion over Austria was unclear. See GERMANY, HUNGARY, ITALY, YUGOSLAVIA, U.S.S.R., and UNITED STATES.

AUTOMOBILE RACING. The fastest and one of the safest 500-mile races in history was won by Mauri Rose on May 31. A crowd of 175,000 left the Indianapolis Speedway without having been offered a single major accident for the entire 4 hours, 10 minutes, and 23.38 seconds of the race. Rose's average speed for this 32nd annual meeting was 119.813 m.p.h., an all-time record. Second place went to Bill Holland, with an average time of 119.147 m.p.h.; third to Duke Nalon, 118.034; fourth to Ted Horn, 117.844; all four men breaking the existing speed record for the event. The winning automobile was a Blue Crown Special.

The 35th Grand Prix road race of the Automobile Club de France, 500.204 km. on the Reims-Gueux road, was won on July 18 by Jean Pierre Wimille of France, driving an Alfa Romeo at an average speed of 165.699 km.p.h. Italy's Mille Miglia, a 1,000-mile road race in a huge figure eight over most of the Italian countryside, was won on May 3 by Clemente Biondetti of France, driving a Ferrari car at an average speed of 75 m.p.h. There was only one fatality in the race this year.

On May 13 in London an American syndicate

introduced midget auto racing to Britain, attracting a crowd of 50,000. On June 6 in Milwaukee Emil Andres won the Automobile Association of America national championship 100-mile big-car race. Mack Hellings was second and Ted Horn third. On June 20 at Langhorne, Pa., Walt Brown won the AAA-sanctioned 100-mile dirt-track championship, with Mack Hellings finishing second once more and Emil Andres third. Rex Mays, who in the Milwaukee championship race drove his car into a brick wall to avoid running over a fallen driver, this day set a new world mile dirt-track record of 33.768 seconds in the time trials before the race.

In Watkins Glen, N.Y., on October 2, Frank T. Griswold, Jr., driving an Alfa Romeo car, won the first American Grand Prix, sponsored by the Sports Car Club of America. Ten thousand people watched the 52.8-mile race over a 6½-mile cross-country course. On the Langhorne Speedway on October 10 Neil Carter won the AAA national 100-mile midget car championship, with a time of 1:03:34.17.

The longest race of the year was the 6,000-mile Buenos Aires-Caracas Grand Prix, ending on November 8, in which Domingo Marimon of Argentina won the 100,000-peso (\$20,700) first prize, and which cost 7 lives. The most peculiar race of the year was the Pike's Peak (Colorado) climb, won on September 6 by Al Rogers, in the time of 15 minutes, 49.75 seconds.

AVIATION, Civil. Early in 1948, two high-level government reports regarding aviation policy were released, one by the President's Air Policy Commission, the other by the Congressional Air Policy Board. Although they differed slightly in detailed recommendations both reports recognized the urgent need for a national air policy to arrest the rapid deterioration of our air power which had set in immediately following the close of the war.

Members of the President's Air Policy Commission were Thomas K. Finletter, Chairman; George P. Baker, Vice Chairman; Palmer Hoyt, John A. McCone and Arthur D. Whiteside, Members. S. Paul Johnston, Director of the Institute of the Aeronautical Sciences, was Executive Director.

The Congressional Board consisted of Senator Owen Brewster, Chairman; Representative Carl Hinshaw, Vice Chairman; and Senators Albert W. Hawkes, Homer E. Capehart, Edwin C. Johnson and Ernest W. McFarland and Representatives Charles A. Wolverton, Karl Stefan, Alfred L. Bulwinkle, and Paul J. Kilday. Merrill C. Meigs, publishing executive in the Hearst Organization, was advisor.

The significance of air power was not fully understood until late in the war when its scope was first clearly defined by Eugene E. Wilson, then Vice Chairman of United Aircraft Corporation and President of the Aircraft Industries Association, in an important book *Air Power for Peace*. Here for the first time air power was recognized to represent far more than the combat air forces of a nation but a delicately balanced combination of air force, aviation manufacturing and commercial aviation. The latter includes not only civil air transport but fixed base and airport operation and personal flying.

In his book Mr. Wilson closed by advocating a revaluation of our air power with the purpose of developing a national policy, but it was not until two years later that alarm in high places over the state of our aviation brought the first official action from Washington. The President's Air Policy Com-

mission was hastily recruited during the summer of 1947 and conducted hearings and visits to aviation centers during the fall. Its report was released on Jan. 13, 1948.

Meanwhile the Congressional Air Policy Board was organized and its hearings were conducted early in 1948. Its report was released on March 1. Most convincing was the broad area of agreement of the two reports developed by different approaches and techniques.

The recommendations of the President's Commission concerning civil aviation and related government organization are presented herewith in summarized form.

RECOMMENDATIONS ON CIVIL AVIATION

"The airlines are now passing through one of the most serious crises of their history. This situation is significant for two reasons. If not relieved, it will contribute to the deterioration of the airline service to the public. The second reason is that as a potential military auxiliary the airlines must be kept strong and healthy.

"Although some airline problems of 1947 may differ from those of the prewar period, the over-all situation is the same: The revenue from passengers and cargo, plus a revenue for the carriage of the mail roughly equal to the passenger rate, will not support the operations of many of the companies. If they are to continue in operation and start again up the ladder toward self-sufficiency, the Government will have to increase the mail rates.

"The carriage by air of all first-class mail which can be expedited thereby and the inauguration of a parcel post by air should be given serious consideration by Congress when the airlines achieve a satisfactory regulatory status.

"We have not gone into the technical aspects of safety because the President's Board of Inquiry on Air Safety has been extensively studying the problem. We recommend, however, that new types of transport planes be operated regularly on nonpassenger schedules for a specified mileage before passengers are carried. We believe also that CAB economic control over contract carriers would tend to increase safety.

"It is especially important to increase the regularity of service. Airlines will not have mass transportation until people are reasonably certain that they can depart and arrive on schedule. For safety and regularity a basic requirement is a nationwide system of air-traffic control, navigation, and landing aids. The Federal Government must accept the financial burden of providing these aids until those who use them are in a financial position to pay their fair share of the cost. Agreement must be reached as soon as possible by the interested private groups and responsible Government agencies on a common system of landing aids for immediate installation which will adequately serve both civilian and military needs. Government expenditure for electronic aids to air-traffic control, navigation, and landing will do more than anything else to advance the airlines toward self-sufficiency.

"We recommend that the Civil Aeronautics Board defer for a short time decisions in new route certification cases. This is not to be construed as a freezing of the present route pattern, which would certainly be undesirable. There is, however, a widespread confusion as to the principles which guide the CAB in route determinations. There is need for a comprehensive survey of the present situation. If the CAB does not develop a clear-cut plan for an over-all domestic transport pattern, the Congress should give serious thought to giving the

over-all planning function of route development to the Secretary of Civil Aviation recommended in section V (Government Organization).

"Whether more common carriers of property should be certificated is for the CAB to decide. We believe that in making its decision the Board should avoid impairing the soundness of the existing air transport system by spreading the present and potential traffic among too many separate carriers. If the Board finds that the public convenience and necessity does require some additional common carrier operators, we hope that it will give weight to the records built up by any of those contract operators that have proven their ability to operate economically and efficiently and now desire common carrier status.

"We recommend that the Civil Aeronautics Board prevent the control by surface carriers of the United States air transport system or any important segment thereof. We believe that individual progressive carriers, desirous of developing air transport as a part of a coordinated service, should not be automatically prevented from such action simply on the grounds that they are surface carriers. We recommend that the Congress enact legislation clarifying these two points.

"We recommend that the CAB be given economic control of all air carriers for hire.

"There is a real need for feeder airlines in those areas whose topographical features make surface connection between cities unsatisfactory. We recommend that the present experimental period for feeder airlines remain at 3 years. If it becomes evident that this period can be extended without burdensome cost in mail pay, we recommend extensions. We also recommend that new certificates, if any, be granted for 5 years.

"We agree with the present CAB policy which favors limited competition among American operators on international routes. We do not approve the chosen-instrument policy.

"We regret the failure of the International Civil Aviation Conference in Geneva to agree on a multilateral treaty covering rights and obligations in international air operation. We feel, however, that this agreement should not be sought at the cost of abandoning the so-called Bermuda-type agreements in regard to the right to carry passengers between any two foreign countries on a route—commonly known as the Fifth Freedom.

"The CAB should be given control over international rates.

"A State-local aviation panel advisory to the Air Coordinating Committee should be established in order to give official recognition to State and local aviation organizations at the Federal level.

"We recommend Congress appropriate each year the full amount of Federal funds permissible under the Federal Airport Act of 1946.

"Where a question arises as to whether airport facilities are constructed with the aid of Government funds or through the use of private capital, an investigation should be made by the CAB. If it is found that Government funds were used, steps should be taken to make these facilities available to all United States civil aircraft at reasonable rates."

RECOMMENDATIONS ON GOVERNMENT ORGANIZATION

"We recommend that the Government executive functions relating to civil aviation remain under the direction of the Secretary of Commerce who shall have immediately under him a secretary of Civil Aviation in charge of a Department of Civil

Aviation. The position of Administrator of Civil Aeronautics should be abolished and the functions, activities, and duties of the Civil Aeronautics Administration transferred to the newly formed department. We recommend that there be set up parallel to the Secretary of Civil Aviation a Secretary of Industry and Trade who would supervise a Department of Industry and Trade within the Department of Commerce. This would parallel within the Department of Commerce the pattern recently set up in the Military Establishment.

"There should be established an Aircraft Development Corporation authorized to pay all or part of the development cost of cargo or other nonmilitary planes, components, navigational aids, and safety appliances. The Corporation should also be authorized to make loans to manufacturers for development costs when it appears that such financing cannot be obtained from civilian sources.

"There should be established an Air Safety Board within the Department of Civil Aviation to consist of three members appointed by the President subject to confirmation by the Senate. The Air Safety Board would be responsible for the investigation and analysis of air accidents and submit reports to the Secretary of Civil Aviation to be made public by him.

"The promulgation of safety regulations should be transferred from the Civil Aeronautics Board to the Department of Civil Aviation, thereby combining in that Department the responsibility for the issuance and enforcement of safety regulations. This move would permit the Board to concentrate on its main function of economic regulation.

"The Civil Aeronautics Board should continue to be an independent agency, located within the Department of Civil Aviation for housekeeping purposes only. The membership of the Civil Aeronautics Board should be increased from five to seven in order that the practice of the Interstate Commerce Commission of operating by divisions may be adopted. The salary of Board members should be increased to \$15,000 a year. The staff of the Civil Aeronautics Board should be increased.

"Sometime within the future, all executive transportation functions of the Government should be centered in the Department of Commerce under a Secretary of Transportation, at which time the Secretary of Civil Aviation would be succeeded by a Secretary of Transportation. The independent semi-judicial bodies in the transportation field should however remain independent, and be brought into the Department of Transportation for administrative housekeeping purposes only.

"The Secretary of Commerce should be a member of the National Security Council.

"The Secretary of Civil Aviation should be chairman of the Air Coordinating Committee."

The minor differences in recommendation of the Presidential and Congressional reports were such matters as the number and salary of the members of the Civil Aeronautics Board and its relationship to the Department of Commerce. The Congressional Board advocated that the CAB continue to have five members, that their salaries should be increased to \$12,000 per annum, and that the CAB be freed of its administrative ties to the Department of Commerce.

Partly because of a Congressional calendar crowded by legislative projects resulting from a state of world unrest and partly because of the political problems of a pre-presidential election period, legislation implementing the air policy reports was slow in evolving during the 80th Congress. First attention was given to the urgently needed

upbuilding of our air forces and related matters. Many of the recommendations relating to civil aviation must await action by the 81st Congress.

Amid the political uncertainties inevitable when presidential appointments are made in a pre-presidential election year and friction between the White House and Capitol Hill, the key vacancies in the Civil Aeronautics Administration and Civil Aeronautics Board were finally filled. The post of Civil Aeronautics Administrator, vacated by the resignation of Dr. Theodore Paul Wright, was conferred upon Delos W. Rentzel. The Chairmanship of the CAB, left open by the resignation of Dean James M. Landis, was filled by Joseph J. O'Connell, Jr.

Airline Traffic and Profits. In spite of vigorous efforts to curtail costs, the 16 domestic airlines showed a cumulative deficit of \$11,469,487 for the first eight months of 1948 as compared with \$13,838,976 for the same period of 1947. Traffic for the same periods was off more than 3 percent in 1948, the aggregate revenue passenger miles being 3,857,885,000 as compared with 3,986,014,000 for the first eight months of 1947.

Outstanding exception among the big four has been Eastern Air Lines which not only increased its traffic in revenue passenger miles from 579,210,000 to 675,228,000 for the periods under discussion but enhanced its already comfortable profit picture by an increase from \$2,858,681 for the first eight months of 1947 to \$3,491,256 for the same period of 1948. On September 1, five of the other domestic airlines were in the black: Chicago & Southern (\$414,853); Colonial (\$1,630); Delta (\$895,174); Continental (\$131,981) and Inland (\$57,362).

Heaviest loser was American which more than doubled its first eight-month deficit for 1947 during the same period of 1948. The latter figure was \$4,369,231, the former, \$2,186,865. Next in size of deficit for the first eight months of the year was Northwest (\$2,720,691); followed by United (\$2,602,824); TWA (approximately \$2,097,000); Western (\$1,037,076); National (\$1,388,732); Capital (\$989,330); Northeast (\$746,479); Braniff (\$495,330); and Mid-Continent (\$15,050).

Third quarter earnings, however, improved the picture slightly. In the case of American, for example, they reduced the year's deficit to \$3,998,593.

The airline fiscal situation resolved itself into a charge voiced by W. A. Patterson, President of United Air Lines, that CAB "is principally responsible for airline difficulties today." He advocated an investigation of the stewardship of CAB by outstanding transportation economists. In reply, Chairman O'Connell indicated that the carriers were not blameless for their predicament.

The financial condition of the U.S. overseas airlines became more encouraging during the summer. Northwest's Orient route showed a net operating profit of \$318,315 during the first half of 1948 and profits of \$140,758 in July and \$223,394 in August. United's route to Hawaii wiped out a first-half deficit of \$119,506 by profits of \$73,621 in July and \$92,630 in August. American Overseas Airlines lost \$795,596 during the first six months but made \$655,960 in July and \$628,358 in August. Pan American failed to profit sufficiently during the summer months to wipe out the first-half deficit. TWA's overseas divisions showed losses for both the first half and for July and August.

The domestic airlines have reduced fares through family plans, where wives and children of a paying passenger travel at half fare, as well as reductions for other traveling groups. A second-

class sky coach service has been established experimentally between New York and Chicago at a fare of \$29.60 which compares with \$27.30 for rail.

Air Parcel Post. Air parcel post made its debut in 1948, and, in September, first month of operation, it increased air mail volume 7 percent or approximately 516,500 lb. Post Office and Air transport representatives were somewhat disappointed by the initial showing but expressed hope that the ultimate objective of 50,000,000 lb. per month would eventually be reached. This figure represents 10 percent of the surface parcel post volume, which loses money for the Post Office Department. The air parcel post service is expected to reduce this surface volume.

Airline Equipment Pool. Promise of an airline equipment pool came with the announcement of the formation of the Convair Equipment Corp., a subsidiary of Consolidated Vultee Aircraft Corp. Partial purpose of the idea, created by financier Floyd B. Odum, is to recover losses to the manufacturing company on its Convair Liner which went into service on several of the airlines during the year.

The equipment corporation planned as a first step to purchase 100 Convair Liners from the manufacturing corporation and lease them to airlines with options to buy. Later the equipment corporation would buy planes from other manufacturers for lease to airlines, maintaining spare parts required and doing major overhauls on the planes. The corporation would also finance sales of new planes either through equipment trusts or by other means of financing.

National Case. An unprecedented move by CAB was an investigation to determine whether or not it was in the public interest for several airlines to acquire certain routes of strike-crippled National Airlines. Pilots on this line had been on strike since February 3, with no settlement in sight. The possibility of dismemberment of the line as a result of CAB action brought widespread discussion since it could establish a precedent for similar action with respect to other airlines having economic difficulties.

In its Caribbean area decision the CAB made it clear that it possessed legal power to withdraw previously granted operating authority.

Although National has been operating all of its routes with non-union pilots, traffic has fallen off seriously. During July and August the load factors for the system fell to 31.9 and 32.1 percent respectively as compared with 43.3 and 47.7 percent in the same months of 1947. Passengers carried dropped from 165,605 for the first half of 1947 to 66,556 for the first half of 1948.

Major airline crashes. As a result of the crash of a Northwest Airlines Martin 2-0-2 transport plane at Winona, Minn., August 29, the airline's fleet of 24 of these planes was grounded, seriously impairing the income of this carrier. The accident was later attributed to structural failure of the left wing. Modifications were made in the aircraft and by Fall the planes were being returned to service.

Earlier in the year United Air Lines lost a Douglas DC-6 in Pennsylvania due to the effects of fire extinguishing gases upon the pilots. Studies made of the effects of such gases upon human beings within pressurized structures made it possible to apply preventive measures against this unique type of accident.

Late in October a Lockheed L49 Constellation operated by KLM Royal Dutch Airlines crashed while landing by GCA (Ground Control Approach radar) at Prestwick, Scotland. Thirty-nine of the

forty persons aboard died. Among them were three of the most able aviation executives in Europe; Hendrich Veenendaal, vice president and technical managing director of KLM; Austen E. F. MacInerny, European sales representative for Lockheed; and the famous pilot, Captain K. D. Parmentier, chief pilot of KLM. The plane made a normal GCA approach to the runway under an 800 ft. overcast. Pilot Parmentier encountered a 20 mile per hour cross wind and decided to use another runway. In pulling up the plane he hit a high tension wire about 1200 ft. off the end of the runway. A fuel tank was torn open and fire resulted. Since the power line supplied current for the field all lights were extinguished and the plane crash-landed two miles away.

Feeder lines. As some of the three-year experimental certificates issued by the CAB to feeder lines approached expiration, concern was felt by some operators whose economic position had failed to improve during the experimental period. In the case of Florida Airways there was a denial of extension of the certificate but Florida requested reconsideration of this decision.

It appeared, however, that stockholders would not have to sustain the losses incurred during the experimental period. A tentative decision by CAB would provide Florida Airways with mail pay amounting to \$859,960 (83.35 cents per plane mile) for the period from Jan. 10, 1947, when operation started, to May 31, 1948. This amount would be \$348,000 above the amount received by Florida Airways under its temporary rate and would yield a 7 percent profit on the investment during the 17-month period. In addition, the feeder line would receive mail pay of \$528,000 (79.35 cents per plane mile) for the period from June 1, 1948, to the expiration of the certificate, Mar. 28, 1949. This would represent about 8 percent profit.

It is significant that the Board stated that the decision not to prolong the life of the feeder line "does not affect our statutory duty to fix fair mail rates for the duration of the certificate."

Cargo lines. During all of 1948 the old battle raged between the scheduled airlines and their cargo-carrying competitors. The CAB decision to determine whether or not it is in the public interest to certificate all-cargo carriers will be deferred until 1949.

The current phase of the conflict is concerned with the financial fitness of the cargo operators who actually demonstrated to the scheduled airlines that there was a substantial potential volume of air freight untapped. During the spring of 1948 the certificated carriers alleged that the all-cargo operators were no longer "fit and able" to perform their proposed services even if they were certificated. They were also accused by the older airlines of lacking financial stability and of making optimistic traffic predictions which had not been realized.

Operating reports of both certificated and non-certificated carriers will be placed in the reopened record for examination.

In spite of several mortalities among the all-cargo group, two of them carried large volumes of cargo during the first half of 1948. During this period Slick Airways transported 13,539,714 ton miles, a 38 percent gain over the same period in 1947. The Flying Tigers flew more than 6,000,000 ton-miles, a 400 percent gain, during the same periods of comparison. These two carriers and California Eastern, Willis Air Service and U.S. Airlines were recommended for certification in a report by CAB examiners issued in March, 1948.

Despite their hostility toward the newcomers, the older airlines have gained traffic by this competitive race. During the first half of 1948 the 16 certificated domestic carriers flew 29,888,742 freight ton-miles compared with 12,286,966 ton miles during the same period in 1947. American and United reached record peaks in freight carried in September, 1948.

In general the all-cargo operators are showing financial losses but they contend that the certificated lines have also lost substantially on their freight business but have not broken down their operational reports sufficiently to show that part of their losses attributable to freight.

Personal Flying. The report of the President's Air Policy Commission blasted the hopes of those who sought new forms of subsidy for personal aviation. The following quotation is significant.

"This Commission, trying to judge personal aviation impartially, believes that a healthy personal plane industry is of value to the Nation. We believe that it should be encouraged by the continuation of funds for airports, for navigation and landing facilities, and for basic improvement in personal plane design (by N.A.C.A.). We believe that the appropriations to personal aviation for these purposes, plus the very substantial financial assistance provided for veterans' flight training, are sufficient."

Although vast sums of federal monies have been spent for flight training under the G.I. Bill of Rights, there are many aviation people who accuse the Veterans Administration of attempting to scuttle the flight training program by discouraging large numbers of applicants by long deferments in the approval of their applications. In support of this view the contenders quote the following figures from a VA report on the subject during the summer of 1948:

In July, 617 applications approved; 52 rejected; 1,551 referred to guidance and advisement division. In August, 2,427 applications approved; 144 rejected; 3,772 referred to guidance and advisement.

Regardless of the underlying reasons, there has been a steady reduction in the number of veterans receiving flight training under the G.I. Bill. Many observers question the value of flight training for veterans from the standpoint of building up a further reserve of pilots for future military purpose. They believe that the funds would be more effectively spent on the training of younger men through a plan like the Civilian Pilot Training Program.

In any case there appears to be no widespread federal program for civilian flying training of the younger generation in this country, while most other nations provide partial subsidy for this training through some degree of government sponsorship of flying clubs.

Personal aircraft production during 1948 fell back to an estimated 8-9,000 units for the year or about one-half of the figure for the previous year and a level approximating that of the last prewar year. During the first 7 months of 1948, 4,817 units valued at \$20,043,953 were reported produced. In the same period 141 transport planes valued at \$52,057,160 were manufactured. Civil engine production for that period was 7,246 units at \$37,408,179.

During the month of August, when 700 personal planes valued at \$2,849,000 were reported, Cessna led the field with a production of 179 units valued at \$798,000. Piper was second in units produced (120) and Beech in dollar volume (\$442,000).

At mid year the number of civil aircraft in the

U.S. had increased to 96,330 from 83,000 on July 1, 1947. Approved certificates for student and private pilots, however, appeared to be lower in the spring than on that date of the previous year.

CAA Reorganization. With personal aircraft sales down to prewar volume, the slump has been reflected in the reorganization of the Civil Aeronautics Administration which followed the advent of the new Administrator. Apart from the reshuffling of several individuals who had spent long careers fostering personal flying, the most serious change is the subordination of the Nonscheduled Flying Advisory Committee to the cognizance of an assistant rather than to the Administrator. This committee was created by Former Administrator T. P. Wright and afforded an opportunity for responsible representatives of personal flying activities to have direct advisory contact with the Administrator. It filled a serious gap in the relations of the industry, operators and owners of personal planes with the Administrator. It ironed out many misunderstandings inevitable in this relationship. Whether or not the progress of personal flying will be as well served under the new arrangement will depend largely upon the personalities on both sides of the conference table.

School Regulations. Possibility of more rigid requirements for aviation training facilities were seen in a revised draft of CAA Manual 50 which was circulated to those interested for comment during the fall of 1948. The new regulations specify the required classroom, hangar and field facilities in great detail and include requirements for helicopter and glider schools as well as basic and advanced ground schools and flight schools giving primary commercial, instrument and flight instructor courses.

Opposition to the new regulations may be expected because conformance would require expenditures by school operators whose business in many cases could not withstand the additional costs. Adoption of the new regulations at this time could result in a situation where some schools would elect to suspend operations and others would continue as sub-standard institutions without CAA approval.

Airport Program. During the period June 15-July 15, 58 local sponsors under the Federal Air Airport Program received \$9,016,861 in federal funds, bringing the total number of grants to 389 airports and \$45,229,007. Of the 389 airport grants, 108 were for construction or improvement of Class I airports; 95 for Class II; 110 for Class III; and 76 for the construction or development of Class IV, the large air terminals.

Largest grant during that period was \$817,549 to Baltimore, Md., for construction work on Friendship Airport. Other large sums went to Rochester, N.Y., Airport (\$780,000); Lovell Field, Chattanooga, Tenn. (\$714,580); Atlanta, Ga., Municipal Airport (\$706,994).

Over-all progress in the program, reported by C.A.A. at that time, was 29 projects 100 percent completed, 50 projects 66-99 percent completed.

International Records. The unofficial world speed record made by Major Richard L. Johnson, U.S.A.F., during the National Air Races, was exceeded officially on Sept. 15, 1948, by the same pilot flying the same plane, a North American F-86A, for four runs over a speed course at Muroc Air Force Base, at an average speed of 670.981 mph, more than 20 mph faster than the previous record of 650.796 mph held by Major Marion E. Carl, U.S.M.C., flying a Douglas D-558-1 research airplane.

Two official speed records were established in North American Mustang planes during the year. In the 1,000 km. (621.369 mi.) class, Miss Jacqueline Cochran flew from Palm Springs, Calif., to Flagstaff, Arizona, and return, at a maximum speed of 431.094 mph on May 24. In the 2,000 km. (1,242.739 mi.) class the same pilot flew from Palm Springs to Santa Fe, N.M., and return, at a maximum speed of 447.470 mph on May 22.

On March 23, Pilot John Cunningham established an altitude record of 59,492 ft. in a Vampire Jet fighter.

A British Helicopter, the Fairey Gyrodyne reached a record speed of 124.3 mph on June 28. The pilot was Squadron Leader Basil Arkell.

Soaring and Sailplanes. Bird flight and the ultimate performance of sailplanes were among the subjects discussed at the first postwar joint meeting of the Institute of the Aeronautical Sciences and the Soaring Society of America held at Elmira, N.Y., July 1, 1948. Structural and production problems were also considered in a symposium in which leading aeronautical engineers participated.

The symposium clearly indicated the desirability of the analytic approach to sailplane design and revealed that a substantial gap exists between advanced theory and present designs. The usefulness of gliders for large-scale tests in the field of low-speed aerodynamics was also apparent from the discussions.

The technical meetings were a part of the program of the Fifteenth National Soaring Contest of the Soaring Society of America. During the period of the meet, held June 30 to July 11, good soaring weather prevailed. The prize fund of \$12,500 was the largest in history. Winner of the Fifteenth National Soaring Championship was Paul B. MacCready, of Connecticut and California, who accumulated 1,042 points flying his Orlik sailplane. A close second was Johnny Robinson of California who scored 943 points with his Zanon machine. Third place went to Don Pollard flying the Air-100.

Rocketry and Jet Propulsion. Rapid progress in improvement of gas turbine engine design was made during 1948. Present engines of this type reached a general efficiency approximately 30 percent higher than those built only a few years ago. It is reasonable to expect another increase of 20 percent in efficiency of the simple-cycle turbojet in the near future. Afterburning and water injection contributed substantially to this progress.

The period between overhauls, which was quite short in early designs, also has increased greatly. One example is the General Electric J-33 engine. Within three years its time between overhauls has increased from 10 to 300 hours.

Rocket research has gone forward at a steady pace. The flight tests of the Bell XS-1 Supersonic airplane have proved the value of rocket power plants for supersonic aircraft. Next step is the combination of rockets with turbojets to enable supersonic aircraft to take off under their own jet power and use their rockets to furnish the excess power required for passage through the transonic speed range. Rockets also are being used for take-off boost of aircraft powered by either reciprocating or turbine engines. In the fields of guided missiles and upper-air research, rocket power plants have become increasingly useful.

The ram-jet type of power plant has found several valuable applications. Among the most interesting is its use in the tips of helicopter rotors. The difficult design problems of such installations have been partially solved. The full solution is well worth additional research because helicopters

of this type would have many fundamental advantages over those utilizing complex and expensive drive systems to transmit power from engine to rotor.

Compound engines. Two new compound engines were announced during 1948, the 28 cylinder Pratt & Whitney R-4360-VDT and the Wright Turbo Cyclone 18. These engines embody the addition of turbines to existing reciprocating engines in the higher output category. The advantages of the hybrid combinations are increases in power output of 20 percent or more and reduced fuel consumption.

In the R-4360-VDT, a single turbine is added with a variable-discharge nozzle at the turbo outlet. The basic reciprocating engine design is the R-4360 Wasp Major engine. The Turbo Cyclone 18 is a compound development of the R-3350. Three turbines are added and their output geared back to the crankshaft.

TG-190. During the Annual Convention of the Aviation Writers Association some of the details of the General Electric TG-190 (Air Force J-47A) were revealed by the Air Forces. In appearance the later model resembles the earlier TG-180 (J-35) which has been installed in several high-speed military planes. Frame size and weight of both engines are nearly the same but the Air Force states that the new engine develops 25 percent more power. It may therefore be assumed that the TG-190 would have a dry thrust of 5,000 lb. With afterburning it should be possible to obtain 6,000 lb. thrust or more.

Installed in the North American F-86A the TG-190 should furnish the thrust equivalent of 8,650 hp at the 650 mph top speed of this fighter.

Nene. Rigorous tests were conducted over a period of several months on the American version of the British Rolls-Royce Nene. As built by Pratt & Whitney under license the Nene is designated Pratt & Whitney J42-P-8. Under the thorough test program for this engine, its major components were tested individually in addition to the tests of completed units. Production facilities at the East Hartford plant have been modified to provide for the new turbojet and deliveries for installation in the Grumman Panther (XF9F-2) were scheduled for fall.

With water-alcohol injection the Rolls Royce Nene's take-off thrust is approximately 6,000 lb. Addition of afterburning to the Pratt & Whitney version is expected to increase this output to 6,500 lb. Installations in transport aircraft are under study.

British Engines. Further British progress in turbine engine development was made in the official approval by the Air Regulation Board of the de Havilland Ghost, a development of the wartime Goblin. The Ghost has been licensed for 3,600 lb. thrust but in its final version is expected to deliver 8,000 lb. It is the power plant selected for the new de Havilland Comet, 500 mph transatlantic transport airliner. Four Ghosts will power the Comet, which is scheduled to make its first flight from London to New York non-stop in 5½ hours, sometime in 1950.

The 1,200 hp Armstrong-Siddeley Mamba turbo-prop with its 10 stage axial flow compressor and two turbines also passed its type test early in 1948. It is soon to be installed in four aircraft, the twin-engined Avro Athena and Boulton Paul Balliol trainers and Miles Marathon II Transport and in the four-engined Armstrong-Whitworth Apollo transport.

Two other turboprops, the Bristol Theseus (2,-

400 hp) and Rolls-Royce Clyde (3,600 hp), were among those power plants which passed their tests.

The British program for installation and test of many different turbine power plants in various types of aircraft has made steady progress during 1948.

First Jet Transport. Scheduled for flight tests early in 1949 was the first aircraft designed from scratch as a jet-propelled transport. It is the Avro XC-102, designed and built by Avro Canada of Toronto in collaboration with engineers of Trans-Canada Airlines. Costs of this project are shared by the Canadian government and the manufacturer.

The XC-102 is a low-wing, all metal monoplane with pressurized cabin and tricycle landing gear. It is designed to accommodate 40 passengers and a crew of three and is expected to cruise at 430 mph at 35,000 ft. Gross weight is 52,500 lb.

Power plant consists of four Rolls-Royce Derwent II turbojets providing 14,000 lb. static thrust output. The engines are grouped in pairs on either wing panel.

—LESLIE E. NEVILLE

AVIATION, Military. The vote of confidence accorded the United States Air Force by the 80th U.S. Congress provided military aviation with an energetic boost at the start of 1948. The questionable peace existing during the year served only to augment the growing interest throughout the world in matters aeronautical. Decided improvements were evinced in many phases of aviation's development, but official opinion was unanimous in declaring that it would require several years and a great expenditure of energy to convert into a reality the futuristic eversions pre-viewed or presaged during the war years. Discussions of jet-propelled supersonic aircraft, guided missiles which attained astounding rates of speed, and the possibilities of atomic-powered planes and rockets gave evidence of intensive research programs. Scattered reports from foreign countries showed that, while many were hampered in the development of military aviation by pressing economic and political internal problems, several were able to equal the achievements announced by the United States.

United States. Progress in the United States was marked by continual competition among the three services, Army, Navy and Air Force, and among their supporters in the government. The Navy, reluctant to relinquish its proud position as the first line of defense, argued that the new Air Force had its place as a supporting arm but that it could never match the Navy with its carriers and carrier-based aircraft as the best offensive and defensive weapon of the United States. The Air Force, feeling its greatly increased importance as an independent unit, was pressing its demands for the 70-group Air Force which had been approved by the 80th Congress.

The Congressional Air Policy Board which officially expired on Mar. 1, 1948, presented its final report to Congress. This report condemned the Joint Chiefs of Staff for being unable to propose an over-all strategic plan for the defense of the United States. The rivalry between the USAF and the Navy was, moreover, held responsible for preventing the development of a basic program for the formation of a postwar air force.

This report also proposed, without specific approval, two 5-year programs for air power to be supported by the combined strength of the USAF and the Navy. The first of these was an offensive plan which would permit the United States "to mount promptly an effective, continuing and suc-

cessful air offensive against a major enemy." This plan would require a 70-group Air Force with 20,541 aircraft and a Navy with 14,500 aircraft. The defensive plan would provide a force of essentially the same strength as that required for the offensive plan with the exception of provisions for reserve aircraft. This defensive force would provide for sufficient strength to withstand a potentially crippling attack, form the groundwork for a strong defense, and furnish effective retaliation. Since the Federal budget would be increased to a total of over \$45,000 million annually by institution of the offensive plan and to over \$41,000 million for the defensive plan, it was evident that this country's economy would not be able to withstand such a burden and that something would have to be sacrificed.

The report of the Congressional Air Policy Board, along with the Finletter Report and the report of the Aircraft Industries Association (see *YEAR BOOK, Events of 1947*, p. 307-308), provided the Congressional supporters with strong ammunition in their bitter fight with the Administration to obtain sufficient funds for the support of a 70-group Air Force. The greatest opposition to these Air Force supporters came from President Truman, Secretary of State George C. Marshall, and Secretary of Defense James Forrestal. Secretary of State Marshall, an ex-infantry officer, said, in a statement before the Senate Armed Forces Committee, "I think however much any future war starts in the air, as in the past, it will end in the mud on the ground. I think one of the great difficulties in regard to air power and the American people's attitude toward life is that application of air power involves so much loss of life of non-military civilians and children as well as grown people." Secretary of Defense Forrestal opposed an increase from the existing 55 groups with the contention that a 70-group Air Force would necessitate a dollar-for-dollar expenditure for the Army and the Navy. In fact, Secretary Forrestal felt obliged to substantiate this point of view with a 10-page explanation contained in his report to Congress in the Spring of the year. President Truman expressed his opposition by pointedly avoiding any reference to air power in his special message to Congress in March and by repeatedly opposing additional appropriations for the maintenance of an augmented Air Force.

An admirable and practical demonstration of the value and necessity of military aviation was provided by the Air Force in its "Operation Vittles" which started on July 26, 1948, and which was carried on with the cooperation of the Navy and the RAF. This airlift of food and supplies was necessitated by Russia's land blockade of Berlin. In 5 months of operation, 409,256 tons of food, fuel, and other vital supplies had been delivered to Berlin by 50,898 flights, averaging 8 tons per trip. This provided an insight into the prospective problems which the United States might face in the event of another war; and the difficulties experienced, shortages of personnel and planes involved, and the inadequacy of maintenance facilities had a sobering effect on the thoughts of men responsible for our military future.

Prospects of increasing air power were not bright as the year 1948 drew to a close. With the election of a Democratic Congress in November to support a Democratic President it appeared likely that President Truman's policy of moderation in military expenditures would find greater support than it received from the 80th Congress. The fact that President Truman declared, in a speech on Dec. 27, 1948, that there were certain Russian leaders

"who are exceedingly anxious to have an understanding with us" and that peace could be achieved within the four years of his administration gave further evidence that the Air Force and Naval aviation would experience strong opposition to their attempts at expansion. Those Democrats who found courage to oppose the recommendations of the President while the Republicans were in the majority are expected to adhere more closely to party lines and uphold the Presidential proposals which are more in accord with the contention that the Army and Navy should share equally in military appropriations.

Budget and Appropriations. The recommendations of the various advisory boards on aviation brought about substantial increases in appropriations for the fiscal year 1949. Whereas the budget for the fiscal year 1948 provided a total of \$1,686 million for the combined Air Force and Navy Bureau of Aeronautics, Congress approved expenditures of \$3,200 million for the fiscal year 1949. The greatest increase was in the amount provided for the purchase of aircraft by the Air Force. This figure was raised from \$588 million for the purchase of 1,157 planes in the fiscal year 1948 to \$2,295 million for the purchase of 2,727 planes in 1949. Navy funds were also augmented by \$570 million, with an appropriation of \$333 million for 921 planes in 1948 being raised to \$903 million for the purchase of 1,535 planes in fiscal 1949. A total of \$75 million was added to the appropriations for research and development by both services, with the Air Force receiving \$149 million in the fiscal year 1949 and the Navy \$110 million. An item of \$1,178 million was also included for the support of the various services of the Navy and Air Force which perform the miscellaneous duties connected with aircraft production and use.

With the funds received for aircraft procurement, the Air Force planned to buy 1,575 jet fighters, 243 bombers and 909 miscellaneous types, including trainers, transport and cargo, photo-reconnaissance, rescue, and liaison planes. The Navy's plans included the purchase of 807 fighters, 80 helicopters, and 20 transports, with the remaining 628 to consist of experimental and miscellaneous types. The 1949 budget also provided \$517 million for the purchase of aircraft engines for both services. More than two-thirds of the planes to be bought out of fiscal year 1949 funds were to be jet-propelled. This, compared with the fact that approximately 55 percent of the Air Force procurement in the fiscal year 1948 was for jet-propelled aircraft and only five percent of Navy production was jet equipped, shows the definite trend away from standard reciprocating engines except for heavy bombers and transports.

Estimates for fiscal 1950 require a total procurement appropriation of approximately \$4,500 million, two-thirds of which would go to the Air Force. These figures are based upon the needs for implementation of the 70-group Air Force and the Navy's proposed 14,500-plane program. The so-called 70-group plan of the Air Force is, in actuality, a 131-group Air Force. This is due to the fact that the Air Reserve and the Air National Guard are integral parts of the air-power expansion program. The goal under this over-all plan is to have an Air Force with 70 groups and 6,689 planes, an Air Reserve with 34 groups and 2,360 planes, and the Air National Guard with 27 groups and 3,212 planes. A total of 8,100 planes would be required for a reserve force.

The Air Force, during 1948, was able to expand from the 55 groups existing on Jan. 1, 1948, to 66

groups on Jan. 1, 1949. This, however, was accomplished mainly by the use of World War II planes which had been in storage, leaving only about 2,000 planes of the required 8,100 in storage. The Navy requires an additional 3,500 planes to reach its proposed strength of 14,500 by July 1, 1949. Some of these will have to come from storage, with the remainder being new planes from production. Secretary of the Navy John L. Sullivan has estimated that an annual production rate of 3,300 planes will be required to maintain that level after it has been reached. This full complement of Naval aircraft will be sufficient to equip 24 carrier groups, one active and one reserve group for each of the 12 carriers in operation plus one reserve group on each coast. The fact that President Truman set a \$15,000 million ceiling on the 1950 defense budget makes it unlikely that either the Air Force or the Navy will be able to maintain its schedule of expansion. The funds necessary to carry out the program for expanded defense forces through the fiscal year 1950 at the levels authorized by Congress would require an additional \$1,000 million.

The National Advisory Committee for Aeronautics was allotted \$41 million for the continuation of its scientific research through the fiscal year 1949. This was an increase of almost \$17 million over its appropriation for the fiscal year 1948. The NACA operates three research laboratories; the Langley Memorial Aeronautical Laboratory at Langley Field, Virginia, the Ames Aeronautical Laboratory at Moffett Field in California, and a third located at the Cleveland Airport in Ohio. These laboratories conduct research in basic and high-speed aerodynamics and in flight propulsion.

Procurement and Production. Procurement for the fiscal year 1949 will be 4,262 military aircraft as compared with 2,078 for 1948. Air Force procurement was concentrated on fighter types, including the F-80, F-82, F-84 and F-86, with only one bomber, the B-50, being produced in quantity. The Navy also placed its procurement emphasis on fighter aircraft, mainly the F4U-5 Corsair, the F8F-1 Bearcat, the F9F-2 Panther, the AD-1 Skyraider and the AM-1 Mauler. Aircraft procurement for 1949 showed a definite trend toward jet propulsion. This was especially true of the fighter planes, the transports and heavy bombers retaining the conventional reciprocating engines.

Among current production aircraft for the Air Force were the North American F-82 with a top speed of over 475 m.p.h. and range of 2,500 miles, the Republic F-84B Thunderjet with a top speed of 590 m.p.h., service ceiling of 40,000 feet and range of 1,000 miles, the North American F-86A which has exceeded the speed of sound, and the F-93A, a modified F-86 using a turbojet engine rated at a 6,000-pound static thrust. Bomber production included the Convair B-36A and B-36B, the eight-jet B-49, the Boeing B-50 with a top speed rated at over 400 m.p.h., and the North American B-54A, a four-jet type. Prominent among troop and cargo carriers were the C-119A, an improved C-82 Packet designed to carry nine tons of cargo over a range of 2,000 miles, and the Douglas C-124A, a strategic transport, two and one-half times the size of a C-54, capable of carrying a 50,000-pound payload over a 2,400-mile range. Several miscellaneous types were also included in the procurement program, such as photo-reconnaissance, liaison, trainers, and helicopters.

Navy procurement also emphasized fighter aircraft with the Douglas F3D Skynight, a twin-jet night fighter rated at over 500 m.p.h., the Grumman F9F-2 and F9F-3, the former using a Nene

power plant and the latter a J-33 engine, the North American FJ-1 with an axial-flow turbojet, and the McDonnell FH-1 Phantom and F2H-1 Banshee being the most prominent. Other important types with production contracts were the Martin PBM-5A Mariner, supposedly the world's largest amphibian patrol bomber, the P5Y, giant turboprop-powered flying boat with both bomber and transport versions, and the Martin JRM-2 Mars, which is capable of carrying twice the payload of the original Mars. A contract was also let by the Navy to the Goodyear Aircraft Corporation for the design of the largest non-rigid, lighter-than-air craft ever planned. The new type "N" blimp was to be nearly twice the size of the Navy blimps used for anti-submarine patrol in World War II and would be capable of long-range patrol over open ocean areas.

Of major concern to aircraft manufacturers and to military aviation procurement was the "master plan" of the Western Union Military Committee, showing the size and organization of the future combined land, sea, and air forces which are the goal of that European alliance. It was felt that a front-line air force of 1,500 jet fighters with 3,000 in reserve and a fewer number of jet bombers would be the minimum air power necessary for protection against possible aggression. This plan was submitted to Washington and it is believed that a major proportion of the required aircraft would be procured in the United States.

Congress passed several acts during the year 1948 affecting the procurement of aircraft by the services. One of these was the Armed Services Procurement Act, which made the requirements for competitive-bid contracting less stringent and opened the way for negotiating aircraft contracts. New rules were also provided for the protection of manufacturers' investments by permitting the services to pay tooling costs for a contract as soon as approval is given for the machinery required. In return for this concession the services required stricter cost accounting, more careful scrutiny of costs by inspectors, periodic price negotiation, and elimination of all charges not specifically involved in the production of military equipment. An amendment to the 1948 Supplemental National Defense Act passed by Congress on May 21, 1948, provided for the renegotiation of all aircraft procurement contracts made under the 1949 fiscal program. This power of renegotiation was delegated to two 5-man boards, one for the Navy and one for the Air Force. Any contract or subcontract for more than \$1,000 became subject to renegotiation if the contracting firm had a gross business of over \$100,000 under such contracts.

Research and Development. The year 1948 saw admirable progress in practically all fields of aviation development. Not only did the Navy and the Air Force produce radically-designed fighters and bombers of astounding speed capabilities, but in guided missiles, pilotless aircraft, very high-powered conventional and jet engines, and in the innumerable contributing sciences they made great strides forward. Statements by several high United States officials gave the impression that the United States was on the threshold of a "Buck Rogers" civilization.

Toward the close of the year, Lieut. Gen. George E. Stratemeyer stated that "human flight at 1,000 miles per hour is no longer a hangar day-dream"; and Secretary of Defense James Forrestal, in his first annual report since assuming direction of the National Military Establishment, announced the existence of an "earth satellite program." However,

there was little evidence of these fantastic projects in ordinary life. The only public display of aviation's great advancement was the sight of an occasional plane which seemed to be flying faster than did the older models. How close the military experts had come to those dreams which they had intuited could only be conjectured on the part of the layman.

The Navy, having experienced considerable success in the launching and landing of jet-propelled aircraft on carriers, devoted more of its energies and finances to their development in 1948 than in 1947. Several new aircraft were evidence of the progress in this direction. Among these were the North American XFJ-1 and Grumman XF10F, both jet fighters, the XF7U-1 "flying wing" fighter, and the XAJ-1 search plane for anti-submarine work. The Chance Vought swept-wing XF7U-1 was a tailless jet fighter designed for shipboard operation and rated at well over 600 m.p.h. The "flying wing" characteristics gave it certain advantages over conventional types of aircraft, particularly in the high speed range. The XF7U-1 power plant consists of two J-34 turbojet engines and, for combat performance, high bursts of speed are obtainable through the use of after-burners which are able to produce large increases in thrust for short periods.

The North American XAJ-1 is powered by two Wasp Major reciprocating engines located under the wings, with one GE-Allison turbojet engine in the tail of the fuselage. The plane will use its conventional engines for normal operation while the pilot will be able to "cut in" the jet for added speed under combat or emergency conditions. The XAJ-1 will be able to carry a heavier bomb load and will be considerably faster than the present carrier types. The Douglas D-558-1 Skystreak which set a world speed record of 650.7 m.p.h., has been clocked in test flights at 702 m.p.h. at sea level. With a temperature of 90 degrees this would be the equivalent of a Mach rating of 0.896. The Douglas D-558-2 Skyrocket, which is still undergoing tests, was designed for a Mach rating of 2.5. The Lockheed XP3V-1, designed for use aboard the new 65,000-ton carrier, is powered by both turbojet and conventional propeller power. This aircraft is also equipped with advanced electronic equipment for use in anti-submarine warfare. The Navy also carried on research for the development of a supersonic target plane with which they could train gunners for defense against supersonic aircraft.

The Air Force completed much research and development of high-speed fighters and long-range bombers during 1948. The XF-87, XF-88, XF-89, XF-90, and XF-92 were all developed as high subsonic or supersonic fighters. The XF-87, a four-jet night fighter, was tested at over 600 m.p.h. The XF-88, a swept-wing penetration fighter, is powered by two J-34 jet engines and is said to be capable of speeds over 720 m.p.h. The XF-89 is a twin-jet all-weather fighter with straight wings and powered by two J-35 engines. The XF-90 is also a straight-wing all-weather fighter. The XF-92 is under development and is being designed as a supersonic fighter.

The XB-47 and XB-48 were among the latest bombers to be developed. Both are six-jet aircraft, and the XB-47, which has dived at 720 m.p.h. and approached level flight of 650 m.p.h., has also surpassed the F-80 fighter in some of its tests. It was reported that the Air Force was in the process of developing a new four-turboprop bomber which would be heavier and have a longer range than

the XB-47, although no information had been published at the close of the year.

The Air Force was also continuing its line of research planes which had started in 1947 with the X-1, the first plane admitted to have exceeded the speed of sound in level flight. The X-2, second of this series, was supposed to have a rocket engine for power and, unlike its predecessor, swept wings. The X-3 research plane was designed for a supersonic speed of Mach 3.0 and altitudes from 200,000 to 300,000 feet. The latest of this line, the X-4, was designed primarily for the study of flying-wing characteristics at high subsonic speeds.

In the development of trainers the Air Force outdid itself. The TF-80-C, which was designed for training jet pilots, gave better performance than did the original F-80.

One offshoot of the development of supersonic fighters was research to produce strong plastic materials to be used in wing structure for the purpose of containing radar and communications equipment, since it is not feasible to use antennas at supersonic speeds. Another achievement was the development of a honeycombed metal sandwich material for the construction of wings to eliminate internal structures and allow more space for fuel storage.

Both the Navy and the Air Force showed increased interest in helicopter research and development. The Navy went so far as to discard its observation and scouting plane program in favor of the helicopter. Most notable of the Navy's new helicopters was the XHJS-1, designed for utility, rescue, and observation work aboard aircraft carriers, battleships, and cruisers. Normally it carries a crew of three and has a top speed of 110 m.p.h. The Air Force had several types which were being considered for future production. Prominent among these were the XH-10, XH-15, XH-16, and XH-17. The Bell XH-15, a two-place liaison helicopter, was the smallest of the four, the others having been considered for their load-carrying capabilities. The XH-10 was designed to carry 12 passengers and was powered by two engines. The Piasecki XH-16 was approximately the size of a C-54 cargo plane. The Kellett-GE XH-17 was a radically designed, jet-propelled "flying crane" helicopter, capable of carrying a load of 24,700 pounds a distance of 65 miles. In order to overcome the handicap of short range possessed by the helicopter, experiments were conducted to study the practicability of towing them to the scene of action.

Rockets and guided missiles also found their place in the research and development programs of both services. The Navy's Aerobee research rocket, which reached a speed of 3,000 m.p.h. and an altitude of 78 miles in its first firing at White Sands Proving Grounds, New Mexico, was equipped with a sequence camera and used to photograph a 1,400-mile area of the United States. The scientific purpose of this project was threefold: to obtain meteorological information; to obtain missile orientation required for the interpretation of cosmic ray data; and to investigate the use of rockets in aerial photographic reconnaissance.

The longest sustained flights ever made by pilotless aircraft powered by ramjet engines were accomplished by almost wingless missiles tested by the Navy at Point Mugu, Cal. These missiles, PTV-N-2a (Propulsion Test Vehicle), made several sustained controlled flights of more than 10 minutes. They were piloted by remote control and tracked by radar. Free-flight information was obtained by launching from a mother airplane, and flight information was telemetered back to a ground

receiving station by an electronic "brain." This missile, designated the Gorgon IV, was powered by an engine which had been designed purposely to fly at subsonic velocities.

The first Navy ship to be equipped specifically for the primary function of firing large rockets, the USS *Norton Sound*, had her initial voyage as a seagoing platform for upper atmosphere research through rocket-firing experiments far out at sea. This floating laboratory was also intended for use by the Army and Air Force. The Air Force announced a radically new rocket engine using a secret oxygen-based fuel. Experiments were made with this engine mounted in a "WAC Sergeant" test rocket. Another Air Force rocket, the REX (Rocket, Escape, Experimental), was designed to go beyond the gravitational pull of the earth and was probably part of the research involved in the satellite program mentioned by Forrestal. It had a five-step construction, each step consisting of a rocket motor which drops from the rocket when its fuel is exhausted. When one rocket engine drops off the next starts to run and augments the speed already attained. By the time the fifth step is reached it is believed that the desired escape velocity will have been reached. The Air Force and the Navy combined their efforts in the development of a jet target missile, the XQ-2, which was half the size of a normal fighter plane with a top speed of approximately 600 m.p.h.

In their quest for greater speed and greater load-carrying capabilities, both the Air Force and the Navy spent large amounts of their appropriations on the development of new and improved engine types for use in aircraft. An extensive program was undertaken for the development of turboprop engines. It was felt that these engines were ideal for medium speed, long-range aircraft, and provided high power with low installation weight. An improved version of the R-4360 Wasp Major was the R-4360-VDT (Variable Discharge Turbine) which provided a 3,200-pound thrust. The R-2180 Twin Wasp was a new development in piston engines and was designed for installation in a modified C-54. This 14-cylinder engine was capable of providing 1,800 horsepower with water injection. The Navy announced the Turbo-Cyclone 18 engine, a conventional reciprocating type with an added compounding system. When installed in Navy aircraft it is expected to increase substantially the power and speed, as well as the range, of these planes.

Another development which was expected to increase the speed of aircraft already in production was the Navy's after-burner. This after-burner is an auxiliary jet unit which steps up the power of a jet turbine engine for short periods. Fuel is injected into the gas flows of the turbojet engine tail pipe and burned in the excess oxygen at extremely high temperatures. The added heat energy thus created provides the extra thrust which increases proportionately with the speed of the aircraft and is currently limited only by available materials. For use at supersonic speeds it was felt that the ramjet engine offered the greatest possibilities since it provides increasing power with increasing speed. The greatest power potentialities of any type of engine were possessed by the Northrop Turbodyne II. This turboprop engine, capable of producing 10,000 horsepower, could not be installed in any existing airframe because of the excessive power generated.

Activities in supersonic research involved much more than a study of aircraft configurations and engine design. Aeronautical engineers were enter-

ing upon a field for which there was little or no basic knowledge. Many strange facts exist beyond the borders of sonic speed. One of the minor problems, showing the wide range of activities entered into, was the testing of the adhesive qualities of paint at high speeds. To determine this, the Navy utilized an "ultra-centrifuge" which spins a small steel ball at a speed of approximately 1,800 miles per hour. A dot of paint is placed on the steel ball and speed is increased until the centrifugal force is great enough to cause the paint to fly off. The speed of the ball and the weight of the paint, along with its area, are used to compute the adhesive qualities of the paint. The problem of paint for high-speed aircraft is very important in research at supersonic speeds. When spread over an entire airplane, paint adds considerable weight, so its thickness has to be limited to about 0.001 of an inch. At high speeds this thin coating tends to come off, causing a dangerous disruption of the airflow. One major problem encountered in supersonic flight is the dissipation of the excessive heat generated by air friction. This involved research on the development of various cooling methods to avoid the use of such materials as titanium and cobalt which are strategically critical and in danger of severe curtailment.

Much discussion was caused in the early part of 1948 by the fact that the X-1, which had exceeded the speed of sound, was a straight-wing aircraft, while most of the research had, up to that time, been concentrated on the development of swept-wing types for supersonic speeds. Tests conducted at the Ames Memorial Laboratory of the National Advisory Committee for Aeronautics revealed that, while swept-wing versions were most practical in the transonic range from Mach 0.8 to Mach 1.8, the straight wing was best for ultrasonic speeds.

Several supersonic wind tunnels were either put into operation or were being built during 1948. The NACA Langley Memorial Laboratory had a supersonic tunnel which was capable of attaining a speed of Mach 2.2 under continuous operating conditions and reputed to be the fastest in operation. The largest of these wind tunnels was located at the NACA Ames Laboratory. This tunnel was capable of speeds up to Mach 1.6. Another at the same location, which was not yet in operation, was larger and would attain speeds up to Mach 2. A wind tunnel captured at Kochel, Bavaria, and operated by the Naval Ordnance Laboratory at White Oak, Maryland, was said to have reached speeds of Mach 5.8 in tests. This tunnel had been used by German scientists in their preliminary research on the V-2 rockets.

Operations. With the advent of the new year 1948, the Air Force was still in the infancy of its independence. It soon became evident, however, that this was not an independence to be retained without a struggle. The claim that the Air Force had become our first line of defense was not accepted unanimously by all government officials. Advocates of powerful sea and land forces were quick to come to the defense of the Army and the Navy in the battle for appropriations. Although in theory the 80th Congress had given the Air Force its approval by supporting the 70-group program, in reality it was a weak indorsement since there was included no authorization for the funds necessary to maintain such a force. Secretary of Defense Forrestal further handicapped the attainment of the 70-group goal by the Air Force with his announcement of a program of "balanced" expenditures, with equal amounts being spent for all three services. Satisfying all three services under this

program would necessitate appropriation of such excessive amounts of money that it would soon bankrupt the country.

The supporters of the Navy, while they were willing to agree that air power was a necessity, felt that it should supplement, rather than replace, the existing facilities on land and sea. Moreover, with the Navy's newly developed strategy of using submarines as refueling bases for its flying boats, they felt that the Navy was in a much better position to carry out long-range missions than was the Air Force with its land-based aircraft. Throughout the year, Secretary of the Navy John L. Sullivan waged a vigorous fight for new aircraft carriers and increased Naval air power. It was only natural, in the face of all this discussion of air power, that adherents of the Army should come to the fore with the affirmation that manpower would be the deciding factor in any war which might be waged. It was their contention that numerical superiority of troops was the basic factor in deterring other countries from an attack upon our shores.

This competition between the services made it clear that the 81st Congress, when it convened in January of 1949, would be faced with the problem of determining the best course to follow, the one which would afford the United States the greatest amount of protection in an emergency, and concentrating their efforts on an attempt to achieve that goal. Secretary of Defense Forrestal, in his first annual report on the National Military Establishment made on Dec. 29, 1948, expressed the following sentiment on unification: "True unification of the armed might of the United States cannot spring from legislation alone. The spark generated by the unification act must be fanned into flame by the thoughts and actions of generals and admirals, ensigns and lieutenants, soldiers and airmen and civilians. We must all learn that we are working together for a common cause—the security of the country—and that the good of all transcends that of the few."

In January, 1948, the Air Force had a total strength of 55 groups with 22,800 planes, more than half of which were in storage, and the Navy had 14 carrier groups with approximately 10,000 planes in service. By the end of 1948 the Air Force had increased its over-all strength to 66 groups, while the Navy felt confident of achieving its 14,500-plane goal by July 1, 1949. These facts gave evidence of the increasing interest which was displayed in military aviation during 1948 and showed a healthy improvement in the defensive power of the United States. However, indications were that neither service would attain its full growth, including reserve strength, within the next 5 years unless an emergency bordering on a virtual state of war should arise, calling for all-out effort in behalf of the country's defense. Faced by the more intensely personal problems of housing and rising prices, the Congress will not be likely to increase military expenditures by too great a margin in 1949.

Better than all speeches in favor of air power was the achievement of the Berlin airlift mentioned above. The sustained supply of the essentials of life to the people of Berlin despite all obstacles of weather and politics gave proof of the efficacy and importance of air power under present-day conditions. It must be noted that the Navy, too, is to be credited with much praise for the splendid work which it accomplished in supplying the tremendous amounts of fuel required for the successful completion of those many missions.

Another step in the direction of unification was the consolidation of the Air Transport Command

of the Air Force with the Naval Air Transport Service. This group, designated as the Military Air Transport Service, was established on Mar. 1, 1948, and began its operations on June 1. Administration of MATS came under the Air Force and Maj. Gen. Laurence S. Kuter was appointed to direct its activities. MATS was charged with the responsibility for operating all scheduled air transport service for the Air Force, Army, and Navy as well as for other government agencies, for providing weather information, communications, and air-sea rescue and for maintaining all primary facilities required in furnishing these services. Administratively, MATS was appointed to act as liaison with all civil transport facilities to prepare for their utilization in time of war.

In the early part of 1948 the Munitions Board established a committee on aircraft and appointed Rear Adm. A. M. Pride, Chief of the Navy Bureau of Aeronautics, as chairman. Admiral Pride, along with several USAF representatives, was to coordinate and standardize the services and equipment of the Air Force and the Navy, insofar as practicable. Besides an attempt at coordinating the material aspects of the services, a method was proposed for eliminating or reducing the wide divergences of opinion existing between the services. Maj. Gen. Wilton Persons of the Army was appointed to fill a position as mediator in the National Military Establishment. It was felt that relationships between the services would be improved if all problems which arose were routed through such a mediator for compromise before they reached Congress and became matters of public discussion.

The only major change in personnel within the Air Force was the appointment of Gen. Hoyt S. Vandenberg to succeed Gen. Carl Spaatz as Chief of Staff, effective July 1, 1948. On that same date the Air Defense Command reduced the number of its Air Forces from six to four. The 11th Air Force was consolidated with the 1st and the 2nd was absorbed by the 10th. As a result of this retrenchment for economy's sake, the spheres of defense were rearranged as follows: the northeast coast was placed under the 1st Air Force, the southeast, south and southwest under the 14th, the middle states under the 10th and the Pacific coast under the 4th. The Air Proving Ground was also consolidated with the Air Materiel Command during early 1948 as a part of this over-all economy move.

Type designations of aircraft were changed by the Air Force. A comparison of the new and old systems is as follows: fighter changed from "P" to "F;" reconnaissance from "F" to "R;" trainers from "AT," "BT" or "PT" to "T;" research from "XS" to "X;" amphibian from "OA" to "A;" helicopter from "R" to "H;" and search and rescue planes which had no designation were assigned the letter "S." Description of all other types remained the same.

The Air Navigation Development Board (ANDB) was established for the purpose of coordinating the military and civil all-weather airways and giving the final recommendations for all types of equipment to be used. The all-weather program was divided into two distinct phases. The first of these was an interim program aimed at the utilization of equipment already available or likely to become available in the immediate future. Completion of this program was expected within the following 6 years and would require expenditures of approximately \$5,700,000 for research and development and \$369,500,000 for production.

Foreign Developments. Due to the ever-present threat of war in an unsettled world, no country published detailed accounts of its activities in the field of military aviation. Most information had to be gathered from scattered sources, pieced together and conclusions drawn from the material obtained. Great Britain appears to have attained approximately the same developmental status as exists in the United States. Russia shows evidence of having planes which rival the performance of those in America, and the possibility exists that her research has surpassed that of the Western powers. However, aviation authorities believe that Russia does not yet have the facilities for producing jet-powered aircraft in the same quantity or of the same quality as those being manufactured in the United States.

Great Britain. Despite the fact that Britain has shown a great deal of progress in the development of jet engines and aircraft, her actual strength, insofar as military aircraft are concerned, is at a dangerously low ebb. Vampires, Meteors, Fireflies and Seafires are the only jet planes which would be available in sufficient numbers to form a fighting force for emergency use. The British have not yet recovered from the effects of World War II. Production, retooling, and manpower shortages are the chief problems which they face and to which they must devote the major part of their energies. The budget of £140 million for the fiscal year 1946-47 was sharply reduced in 1947-48. A total of approximately £60 million was allotted for the year ending March 31, 1948, to be used for the purchase of aircraft engines and spares. Most of the money appropriated for military aviation is being used in research and development, according to statements made by the Minister of Defense and Sir Henry Tizard, Chairman of the Defense Research Policy Committee.

Britain is counting on at least 5 years of peace, during which time new and improved aircraft can be developed and readied for production with the least amount of effort and money, and the country's major attention devoted to domestic problems. After this period, if an emergency should arise, the British feel that sufficient preparations will have been made to permit the rapid quantity production of modern aircraft, comparable to those in use by any prospective enemy. Of those planes which are in production, many are being sold to various countries in Western Europe and in the British Empire.

The greatest activity in Britain was found in the development and manufacture of jet fighters. Among the latest types are the Saro SR/45 and SRA.1 flying boats (the latter being powered by a turbojet engine and having a rated speed of over 500 m.p.h.), the Supermarine Attacker, the Hawker N.7/46 Navy fighter and its RAF counterpart P.1040 (both powered by the Rolls-Royce Nene turbojet engine and having a speed rating estimated at over 650 m.p.h.), the E.38/46, a new swept-wing version of the N.7/46 and reported to have a top speed of over 600 m.p.h., the deHavilland Sea Hornet XXI, an all-weather fighter with a special nose structure to accommodate radar search equipment, and, finally, the DH-108 Swallow, powered by a modified Goblin turbojet engine and reported to have exceeded the speed of sound in a dive at a Mach number of 1.0. Gloster was designing a swept-wing replacement for its twin-jet Meteor which is, at present, one of the mainstays of the RAF.

Although no new bombers were introduced, it was believed that the British are developing two

new types, one an eight-jet flying wing and the other a four-jet, swept-wing tailless bomber. The trainers in use had already been introduced in 1947, with the fastest being the Gloster Meteor VII which has a top speed of 585 m.p.h. Among the latest engines to be developed were the Napier Naiad, the Bristol Theseus, the Bristol Proteus, and the high-rated Armstrong-Siddeley Python which produces 3,670 horsepower. Rolls-Royce introduced a new axial-flow turbojet engine with a record 7,500-pound static thrust.

U.S.S.R. No details concerning Russian air power were available, other than those which that government chose to supply. Scanty as those reports were, however, certain conclusions may be drawn. Secretary of the Air Force Symington made note of a report that Russian aircraft production was approximately 12 times that of the United States. This report, if true, would mean that Russia is capable of putting into the air a formidable fighting weapon. While a great deal of Russia's output appears to be almost direct copy of certain American plane types, it is evident that a great deal of original research is under way. The Russians gained much knowledge and saved years of research by the capture of Nazi laboratories and by the assistance of German scientists.

The Russians have three jet fighters and two bombers which have been observed in flight. The fighters are the 600 m.p.h. "Mig" (powered by a single turbojet engine), a swept-wing supersonic version of the German DFS 346, and the "Yak," which is believed to have a Rolls-Royce Nene engine and a speed of between 630 and 660 m.p.h. It is reported that these fighters are already in service with several tactical fighting units. The two bombers are jet-powered, one being a twin-jet type and the other having four jet engines. Consensus of estimates places the Russian front-line aircraft strength at approximately 15,000 planes.

Russia is also active in guided missile research, as evidenced by reports from Scandinavia of objects passing over those countries at supersonic speeds. One report has it that the Russians have solved the problem of causing their missiles to follow the curvature of the earth rather than following a straight course and attaining great heights with limited range. This was one of the major difficulties experienced by the Germans in their research on the V-2 rockets.

France. Unable to carry on normal development and production during the war, France has not yet established an air force of any magnitude. It is reported that the French Air Force has approximately 3,500 front-line planes, practically all of which are war-time British and American models. Research and development of jet models are only in their preliminary stages. The few jet-powered aircraft which are now in use were bought from the United States or Britain. Proposed plans for production which will carry through 1951 call for a total of 1,467 military aircraft to include the following types: the SE-2400, SO-6020, and SO-8000 jet fighters; the SO-4000 or NC-270, medium jet bombers; the NC-211, N-2500 or BR-890, and BR-761 freight carriers; the MO-315 overseas liaison; the SO-30R and N-30 transports; the N-1400 exploration hydroplane; and the SO-6000 jet trainer.

In 1947 the French produced a total of 1,445 planes, which included both civilian and military types. Among the latest planes developed and produced in France were the Dassault 450, a combat fighter powered by a Rolls-Royce Nene engine and rated at a top speed of 578 m.p.h., which resem-

PRIZE MONEY of \$41,500 made the Pepsi-Cola competition the nation's richest until it was abruptly closed after the exhibition in 1948, a year which also saw repeal of the excess-profits tax. Mitchell Jamieson's painting *Landscape* (below) won first prize (\$2,500). The artist conceived his picture "as a statement in mood . . . The intent was to retain realism of atmosphere . . . while using somewhat abstract, space-filling forms." The picture was selected as the November subject for the company's 1949 calendar. *The Assemblage* (left), by Margaret Tomkins, won third prize, and a \$1,500 award. The artist here was concerned with "the static moment of being in the life cycle—a phenomenon of man and nature assembled as one."

Acme Photos

BLUE TABLE STILL LIFE is the title of the Pepsi-Cola contest's second prize winner, painted by Nan Lurie of Greenwich Village in New York City. The prize Miss Lurie received amounted to \$2,000. ▼

PERILOUS NIGHT, painted by John Heliker, is shown at the left. It was awarded the O brig Prize by the National Academy in its 122nd annual exhibition, held in New York City. The National Academy's competition, in which the first prize went to a safely academic work and other prizes to works of the nature of Mr. Heliker's, was characteristic of most public competitions during the year, in that it essayed to present, bravely, all sides of the modern-art controversy, recurrent in 1948 with no less vigor than in previous years.

MEDIEVAL SHADOWS, is the title of this painting (below) by Raphael Gleitsmann, winner of the \$1,500 first prize in the Carnegie Institute exhibition, "Painting in the United States, 1948." The annual awards, formerly international, were given this year to a selection of 300 artists on a 100% American basis. The paintings ranged from abstraction to illustration. ▼

APTEKA. A street scene painted by Jack Levine—this picture won a medal in the Pennsylvania Academy's competition. Earlier in the year *Look* magazine published a list of the ten foremost living American artists: Mr. Levine was the only one of these to win an Academy medal. He came in tenth on *Look's* list, however.

CLAIRE LUCE AS CAMILLE, characteristically wistful, was painted by John Carroll. The picture won first prize of \$1,200 in the National Academy's annual exhibition, in which prizes went also to Raphael Soyer for *Seamstress*, Zsissy for *Yakuima Boy*, Martin Johnson for his metropolitan scene *Tintype*, Jacob Arkush for a solidly executed figure study called *Leona*, and Ruth Ray for *Navajo Land*, a western still life in the manner of Georgia O'Keeffe.

REST ON THE FLIGHT INTO EGYPT (left), carved directly in black diorite by the American Donald Hord. Completed in 1941, this work was delivered to the San Diego Fine Arts Gallery on Pearl Harbor day, and immediately returned to the sculptor for the duration, the gallery being converted to a naval hospital. The piece was brought back in the year 1948 for the gallery's reopening.

TEAKWOOD SCULPTURE entitled *Woman with Birds*, carved by Milton Hebard and now in the collection of the Whitney Museum of American Art, in New York City, is shown at the lower left. In 1948, plans for the fusion of the Whitney and Metropolitan museums were abandoned, the Whitney Museum fearing for the safety of its liberal tradition.

THORN-BLOSSOM (below), done in steel and brazed nickel by the Sculptor Theodore J. Roszak, was exhibited in the collection of the Whitney Museum. It is one example of the emancipated attitude of that museum on the matter of contemporary art trends, an attitude which contrasted incompatibly with that of the Metropolitan, and occasioned the formal split in October 1948.

bles the Douglas D-558 in appearance, and the Arsenal VG-70-01, a jet research plane which is powered by a German Junkers Jumo 004B-2 turbo-jet engine and has a top speed of 550 m.p.h. Orders have been placed with Britain for the delivery of a number of deHaviland Vampires and Vickers-Armstrong Attackers. The United States approved the sale of 15 P-51 Mustangs to France for a total of \$157,467.

Norway and Sweden. Concentration on the development of jet-propelled fighters marked the character of military aviation in Scandinavia. With the realization that they are in a difficult position to wage an offensive war, these countries are devoting their energies to building up a fast, hard-hitting force of fighters with which they could ward off a powerful attacker. Their hope is that they will be able to carry on a delaying action long enough to permit a more powerful ally to arrive with reinforcements. Both Norway and Sweden are placing orders with Britain for delivery of deHaviland Vampires, especially the Mark III version which has a greater fuel capacity and wing rocket launchers. Sweden is producing its own jet fighter, the J.29, reportedly capable of sonic speeds.

Canada. The Canadian government was scheduled to spend \$6 million for jet engine research and experimental construction and \$3 million for the purchase of military aircraft from the United States and Great Britain. Vampires which were purchased from Britain were delivered unassembled for construction in Canada. Canada itself was producing the XC-100, an all-weather fighter powered by two Rolls-Royce Avon engines and capable of attaining speeds over 675 m.p.h.

—MATTHIAS HOLLANDER

AZORES. A Portuguese archipelago in the Atlantic Ocean about 800 miles west of Portugal and 2,100 miles east of New York. Area: 889 square miles; population (1940 census), 286,885. The eastern group comprises Santa Maria and São Miguel (297 sq. mi.) islands; the central group the islands of Terceira, Graciosa, São Jorge, Pico, and Fayal; and the western group the islands of Flores and Corvo. Capitals of the three districts, each of which sends representatives to the Chamber in Lisbon, are: Ponta Delgada on São Miguel (pop. 21,048); Horta on Fayal (pop. 8,407); and Angra do Heroísmo on Terceira (pop. 11,706).

Production, etc. Agriculture, dairying, fishing, and needlework are the chief occupations. The principal crops are corn, hothouse pineapples, fruits, sugar beets, wheat, and tobacco. Imports come mainly from Portugal. The Azores is an important center of world communication and has 15 Atlantic cables. Air bases in the islands are strategically important to transatlantic aviation. An inter-island air service was opened in June 1947.

BADMINTON. Dr. David Freeman of Pasadena, Calif., won the American Badminton Association championship for the sixth time by defeating Martin Mendez of Pasadena in the final of the national tournament at Waco, Tex., in April. Freeman also retained a share in the doubles title when he teamed with Wynn Rogers of Arcadia, Calif., to triumph.

Ethel Marshall, defending champion from Buffalo, N.Y., repeated in the women's singles by conquering Mrs. Thelma Scovil of Pasadena. Mrs. Scovil later paired with Janet Wright to capture the doubles laurels, while Mr. and Mrs. Clinton Stephens of Baltimore, Md., took the mixed doubles trophy.

—THOMAS V. HANEY

BAHA'I FAITH. Religion founded by Baha'u'llah (1817-1892), now spread to 91 countries of the East and West. It teaches that divine revelation is progressive and that each revealed Faith is one stage in the evolution of one universal religion. It stresses also the principle of the oneness of mankind as the basis for a new world order. In the United States there are 179 organized local communities, four summer schools, a House of Worship (Wilmette, Ill.) and an extensive publications activity. Nine National Assemblies exist, in the United States, Canada, Great Britain, Germany, Egypt, Iran, Iraq, India (with Burma and Pakistan), and Australia (with New Zealand). World headquarters: Haifa, Israel; American headquarters: Wilmette, Ill.

BAHAMAS. A British West Indian colony comprising 20 inhabited and many uninhabited islands and rocks. The chief islands are New Providence, Abaco, Harbour, Grand Bahama, Cat, Long, Mayaguana, Eleuthera, Exuma, San Salvador (or Watling's Island), Acklin's, Crooked, Great Inagua, Andros. Total land area: 4,404 square miles. Population (1944 est.): 69,991 (85 percent colored). Capital: Nassau (on New Providence). Finance (1948 est.): revenue £967,170; expenditure £1,270,870; public debt (Dec. 31, 1945) £245,000. Foreign trade (1946): imports £2,840,576; exports £399,319. Sisal, sponges, fruits, and tomatoes are the chief products. A site for a naval base on the island of Mayaguana was leased to the United States in 1940. See **BRITISH WEST INDIES**.

The Governor (Sir William L. Murphy, Apr. 30, 1945) is assisted by an executive council. A legislature consisting of a legislative council and a representative assembly is elected by voters, who must meet a small property qualification.

BAHREIN (Bahrain). The important islands of this Arab state in the Persian Gulf are Bahrein, Muharraq, Nabi Saleh, and Sitra. Total area: 213 square miles. Population: 100,000, of whom about one half belong to the Shia sect and one half to the Sunnis. Capital: Manama (30,000 inhabitants) on the island of Bahrein; Muharraq is the other important town.

Production and Trade. Bahrein is the center of important pearl fisheries in the Persian Gulf. Oil was discovered in 1932 and is being exploited by the Standard Oil Company of California and the Texas Corporation through the Bahrein Petroleum Company. Other products are sailcloth, boats, reed mats, and dates. White donkeys are raised.

In 1946-47, the chief exports were pearls (Rs676,290); sugar (Rs931,020); tea (Rs1,310,890); rice (Rs374,440); wheat (Rs2,276,390); cotton piece goods (Rs910,970). Chief sources of revenue are oil royalties and customs duties. The 1946 revenue totaled Rs7,040,010 (Rupee = \$U.S.O.3016; average for year). Ruler: Sheik Sir Salman bin Hamad al Khalifa (in treaty relations with the United Kingdom).

BAKER ISLAND. An island in the Pacific (just north of the equator; 176° 31' W.); discovered by Michael Baker, of New Bedford, Mass. in 1832. A possession of the United States, it was colonized by American citizens in 1935. The island is less than a mile in diameter. By an Executive Order issued May 13, 1936, the island was placed under the jurisdiction of the U.S. Department of the Interior. Its strategic importance lies in its position between Hawaii and Pago Pago, American Samoa, and in

its use as a refueling station for air and water traffic on the route between Hawaii and New Zealand.

BALEARIC ISLANDS. A group of four islands—Mallorca (Majorca), Menorca (Minorca), Ibiza (Iviza), and Formentera—and 11 islets (Cabrera is the largest), in the western Mediterranean. They constitute a province of Spain. Area: 1,936 square miles. Population (1947 est.): 437,339. Capital: Palma (on Mallorca), 135,419 inhabitants.

BALKAN STATES. The countries of the peninsula south of the Danube, and bounded by the Adriatic, Aegean, and Black seas. See ALBANIA, BULGARIA, GREECE, RUMANIA, TURKEY, YUGOSLAVIA.

BANKS AND BANKING. Banking operations in 1948 continued to be greatly influenced by the strong inflationary pressures prevailing in the economy, and in turn they played an important part in contributing to the forces of inflation. Business outlays for plant and equipment, and consumer ex-

and the rising price level. After a slight seasonal decline in business loans during the first half of 1948, they resumed their increase in the second half, although at a slower tempo than in 1947. Farmers continued to borrow large amounts from the banks to finance increased operations and purchases of farm equipment and other supplies. In the 15 months ending September, 1948, short-term agricultural credit increased by more than 25 percent. Similarly, commercial banks continued to expand consumer loans made largely for the purpose of buying automobiles, household appliances, and other durable goods. They accounted for about a half of the total increase in short-term consumer credit during the year, totaling 3,000 million dollars. With the reimposition of consumer credit controls in September, the growth of consumer instalment credit began to slow down.

Increased expenditures for housing construction, stimulated by liberalized insurance of mortgages by the Federal government, as well as higher turnover on existing homes, resulted in a large expansion of real estate loans by commercial banks.

INVESTMENTS, LOANS AND DEPOSITS OF WEEKLY REPORTING BANKS IN 94 LEADING CITIES
(Monthly data are averages of weekly figures. In millions of dollars.)

Months of 1948	U.S. government obligations	Other securities	Commercial, industrial and agricultural loans	Loans to brokers and dealers in securities	Other loans for purchasing or carrying securities	All other loans	Demand deposits adjusted	Time deposits (except interbank)

penditures for housing and durable goods, brought about a considerable expansion of loans. In addition, the increasingly large expenditures of the Federal Government for armaments and foreign aid and the expanded public works expenditures of State and local governments generated strong business activity making necessary increased use of bank accommodations.

The policy of restraining expansion of bank credit by using Treasury surplus funds to retire government obligations held by the Federal Reserve Banks was continued. Supplementing this means of credit control, interest rates were increased on short-term government securities, while further restriction on bank credit was achieved by increasing the reserve requirements of member banks, thus curtailing their power to lend and invest funds.

Commercial Banking. In the twelve months ending June 30, 1948, total loans by all commercial banks increased by more than \$6,000 million, while bank investments in other than U.S. Government securities were expanded by an additional \$700 million. With the exception of the preceding year, this was the largest expansion of bank credit ever recorded in a similar period. The increase was noted throughout the country, but was particularly large in rural areas and small cities. In the second half of 1948, bank credit continued to show a marked upward trend. Investments, loans, and deposits of reporting member banks in 94 leading cities are shown in the accompanying table.

The principal factor in the expansion of loans was the big demand for bank credit by business enterprises, due to the high rate of operations

Savings and loan associations, savings banks, and insurance companies also substantially increased their investment in real estate mortgages. Of the principal classes of bank loans, only those for purchasing or carrying securities failed to show a significant increase.

An outstanding feature of the year was the slowing up in the rate of increase of bank loans as compared with 1947. Thus, in the first eleven

LOANS AT MEMBER BANKS IN LEADING CITIES
(Excludes loans to banks; Wednesday figures. * Revised series July 2, 1946)

months of 1948 the expansion in the total loans of weekly reporting member banks, which constitute about 60 percent of loans of all commercial banks, was only \$1,800 million as against a rise of \$3,800 million in the same period of 1947. This

trend was due to the more cautious lending policy of commercial banks, in line with the policy urged by the monetary authorities, to the ability of businesses to finance a large part of their capital expansion programs out of their record profits, and to increased lending by insurance companies and other financial institutions.

In the year ending October, 1948, loans extended to private borrowers by life insurance companies, mutual savings banks, and savings and loan associations increased by about \$9,000 million. Almost half of these funds were obtained by the sale of long-term government securities largely acquired during the war. Through liquidation of these securities the insurance companies were enabled to supply more than half the funds loaned

MEMBER BANK RESERVES AND RELATED ITEMS
(Wednesday figures; latest shown are for November 17)

to commercial firms and real estate buyers during the year.

Commercial banks also absorbed a large volume of new securities issued by State and local governments to finance public works and to provide funds for State bonus payments to veterans. Of the total increase in the debt of State and local governments, amounting to about \$1,500 million from June, 1947, to September, 1948, the commercial banks took about half. In the year ending October, 1948, the banks reduced their holdings of government securities by about \$7,000 million, mainly in order to replenish the reserve funds lost as a result of the Treasury's use of its cash surplus to retire government debt held by the Reserve Banks.

Deposits and Money Supply. In 1948, the expansion in privately owned deposits and currency was considerably smaller than during the preceding year. Total time and demand deposits, excluding government and interbank deposits, increased by \$2,300 million in the twelve months ending June, 1948, as compared with \$6,500 million in the preceding year. After declining in the first half of 1948, deposits again began to rise during the second half of the year. To a considerable extent this increase was due to support of the government bond market by the Federal Reserve Banks, which purchased large amounts of long-term government securities sold by insurance companies and other non-bank owners.

In part the increase in deposits was due to the expansion of bank loans. Another factor was the continued inflow of gold from abroad, at the rate of about \$1,500 million a year. These factors, however, were counteracted by the use of the Treasury excess of receipts over expenditures to retire government securities held by the Reserve Banks and

the commercial banks and to increase Treasury deposits. As a result, the private money supply, that is, demand deposits plus currency outside banks, was contracted by almost \$3,000 million during the first 10 months of the year.

The contraction in the money supply was offset by the more rapid turnover of demand deposits, which contributed to the inflationary pressures. In banks in leading cities outside New York, the turnover of demand deposits, which was on a low level from 1943 to 1947, increased to about the average of the few years before the war.

Strong Liquid Position. The year found the commercial banks in a strong liquid position, assuring them of the ability to meet any prospective demand for bank credit. While excess reserves of banks were only moderate, the banks held (as of June 30) \$65,000 million of U.S. government securities, more than 40 percent of their total assets. Of these obligations, about \$20,000 million matured or were callable in less than one year and over \$50,000 million in less than five years. Since the maturing securities may be turned in for cash while the others may be sold in the open market or to the Federal Reserve Banks, the banks were in a position to obtain ample funds with which to make further large increases in loans. In fact, the purchases made by the Federal Reserve System to maintain an orderly market for government securities provided the basis for expansion of bank credit by several times the amount of such purchases.

The policy of supporting the government bond market, while at the same time attempting to curb credit expansion, continued to present specially difficult problems to the monetary authorities. To keep up the price of government securities the Federal Reserve System made large purchases of obligations offered both by banks and non-bank holders. These purchases, in turn, resulted in a continuation of low interest rates and in the creation of abundant reserves to support credit expansion by banks.

Particularly important in easing the reserve position of banks were the large sales of long-term U.S. government bonds by insurance companies, mutual savings banks, and savings and loan associations in order to put the proceeds into private loans and investments yielding a higher return. Most of these securities were purchased by the Federal Reserve System, thereby supplying a corresponding amount of reserves to the commercial banks as the funds were deposited.

Credit Policies. The credit policies of the Federal Reserve System and the debt management and fiscal program of the Treasury continued to be directed to the curbing of monetary and credit expansion, insofar as this could be accomplished while maintaining a stable market for government securities. To this end, bank reserves were reduced by using the surplus funds of the Treasury primarily for retiring government debt held by the Reserve Banks. Cash receipts by the Treasury in the first three-quarters of 1948 exceeded expenditures by about \$9,000 million. This surplus was supplemented by net sales of nonmarketable and investment bonds to the amount of \$1,300 million. The bulk of these surplus funds were used to retire securities held by the Federal Reserve or to build up Treasury deposits at the Reserve Banks, and these operations resulted in a contraction of bank reserves of almost \$6,000 million in the period from January to September. Most of this reduction took place in the first quarter.

Other measures adopted to restrict credit ex-

pansion included a moderate increase in the interest rates on short-term government securities and in the Federal Reserve discount rate; lowering of the support prices for medium and long-term government bonds; increase in reserve requirements of member banks, and reimposition of controls over consumer instalment credit.

The increases in rates on short-term securities were started in the middle of 1947 to raise the cost to banks of selling these securities to obtain additional reserves and also to increase their attractiveness to banks and non-bank investors. The yield on Treasury bills went from $\frac{3}{8}$ percent to one percent early in 1948, while 12-month certificates rose from $\frac{7}{8}$ percent to $1\frac{1}{8}$ percent. In January, 1948, the discount rates charged by the Federal Reserve Banks were increased from 1 to $1\frac{1}{4}$ percent. The yields on other short-term paper in the market went up along with the Treasury issues, and this trend was also reflected in higher yields and declining prices for longer term bonds.

Large-scale selling of medium and long-term government securities, principally by non-bank investors, started in the fall of 1947, and to cushion the drop the Federal Reserve System entered the market. In order that these sales should not be made at the premium prices that had previously prevailed, however, the support prices were lowered, on Dec. 24, 1947, to a level permitting a $2\frac{1}{2}$ percent yield on the longest term issues.

In August, 1948, the Treasury announced the offering of $1\frac{1}{4}$ percent one-year certificates in exchange for those maturing on October 1, and of $1\frac{3}{8}$ percent 18-month notes for those maturing on September 15. Shortly afterwards, the Federal Reserve Bank rediscount rates were increased from $1\frac{1}{4}$ to $1\frac{1}{2}$ percent. By the end of November, rates on 90-day Treasury bills had increased to 1.15 percent, while other short-term rates, as well as the yields on medium-term government bonds, also advanced somewhat. Yields on long-term government securities remained at the support level established at the end of 1947.

As other money rates went up the banks increased the interest rates charged on their loans to customers. The average rate on business loans at banks in 19 selected financial centers increased from about 2.1 percent in December, 1947, to 2.6 percent in September, 1948. Rates on mortgage loans also went up about $\frac{1}{2}$ percent during the year.

In February and June the Board of Governors of the Federal Reserve System increased the reserve requirements against demand deposits of banks in New York and Chicago by 2 percentage points, thus increasing the required reserves by about \$1,000 million. Reserve requirements of the other banks were already at the maximums permitted by law. In August, however, Congress granted temporary authority to the Board to raise reserve requirements by 4 percentage points for net demand deposits and $1\frac{1}{2}$ percentage points for time deposits. As of September 16 for banks outside reserve cities and September 24 for the other banks, the requirements were raised 2 percent on demand deposits and $1\frac{1}{2}$ percent on time deposits. This moderate measure of credit restriction increased required reserves by about \$2,000 million, an amount approximately equal to the reserves supplied to banks in the preceding three months through Federal Reserve purchases of government securities from non-bank investors and the continued inflow of gold.

Other Developments. The special session of Congress in August also gave the Board temporary

authority to reinstitute the controls on consumer instalment credit that were first imposed in 1941 as an anti-inflationary measure and allowed to expire in November, 1947. The Board's restrictions on down payments and maturity terms in connection with instalment purchases of automobiles and other durable consumer goods were restored on Sept. 20, 1948, thus placing some restraint on the further expansion of consumer credit by banks, finance companies and other institutions.

In requesting Congress in August to give the Federal Reserve Board authority to increase the reserve requirements, Thomas B. McCabe, Chairman of the Board of Governors, urged that the proposed legislation be made applicable to non-member banks as well. It would be unfair, he asserted, to single out member banks to carry the additional reserves to combat the forces of inflation. This was particularly true, he stated, of those districts where there were large numbers of non-member banks which would be given a competitive advantage as against member banks. Such a situation, he contended, might result in a serious loss of membership in the Federal Reserve system and weaken the effectiveness of its policies.

Earlier in the year Governor Eccles had again referred to the possibility that the Federal Reserve Board, in order to be in a position to curb credit expansion effectively, might have to be given the power to require the banks to hold special reserves. In a statement in April before the Joint Committee on the Economic Report, he said:

"In case banks should persistently follow the practice of selling Government securities to the Federal Reserve in order to expand private credits, notwithstanding higher short-term interest rates and increased primary reserve requirements, then the System should be granted supplementary authority to impose a special reserve requirement along the lines proposed by the Board last November. This . . . could be held, at the option of the individual bank, in specified cash assets or in short-term Government securities. The maximum requirement under this plan could properly be limited to 25 percent of aggregate demand deposits and 10 percent of time deposits. To be effective and equitable, it should apply to all commercial banks."

Net profits of member banks in the first half of 1948, amounting to \$292 million, were about on a level with those of the preceding six months but somewhat below those for the first half of 1947. This decline was accounted for principally by the fact that a recent ruling of the Bureau of Internal Revenue permitted banks to set aside from current earnings substantial amounts as reserves for bad debts.

—SAMUEL S. SHIPMAN

BAPTIST CHURCHES. Congregational in character, without a general authoritative head, the 23 Baptist groups in the United States have a total membership of 15,093,530, of which the four major conventions account for 14,369,588 members.

Northern Baptist Convention. Organized in 1907, it represents the cooperative interests of 7,243 churches with 1,541,991 members in the North and West. Its home and foreign missions, social, relief, and hospital activities are carried on by 7 national boards and societies, 33 state conventions and 14 city missions. Headquarters: 152 Madison Ave., New York 16, N.Y.

Southern Baptist Convention. Formed in 1845 upon the withdrawal from the General Missionary Convention over the issue of slavery. The largest Bap-

tist group in the world it has 26,401 churches, 24,791 ordained ministers and 6,270,819 members in the United States, and 565 foreign missionaries. In 1947 the Convention maintained 59 schools and colleges with nearly 50,000 students enrolled. Total contributions for the same period was \$115,226,949; church property was valued at \$313,053,779. Headquarters, 127 Ninth Ave. North, Nashville, Tenn.

National Baptist Convention of America. Organized in 1880, the so-called "unincorporated" Convention held its 68th Annual Session in the Municipal Auditorium at Oakland, Cal., Sept. 8-12, 1948. The representation was 22,820 churches, the ordained ministers were 19,850, the numerical strength reported by the Statistician was 3,721,850 in the United States with 380,000 members from Canada, West Indies, Republic of Panama, Canal Zone, Liberia, and West Coast of Africa. These are regarded as in the Foreign Mission Field and are supervised by 161 Missionaries. The Convention maintains 8 colleges and Theological Seminaries. The total income for this past Convention Year was \$686,925. Officers: Rev. G. L. Prince, Galveston, Tex., President; Rev. G. Goings Daniels, Georgetown, S.C., Secretary; Rev. A. A. Lucas, Houston, Tex., Treasurer. Headquarters: 523 Second Ave. North, Nashville, Tenn.

Other Baptist Conventions. Generally considered the older and parent body of Negro Baptists, the National Baptist Convention, U.S.A., Inc., has a total of 25,000 churches and 4,122,315 members in the United States. This "incorporated" Convention was separated from the above Convention in 1916.

Centering in North Carolina where it was organized in 1727, the Free Will Baptists have 3,768 churches, 3,559 ministers, and 255,127 members in the United States. There were 11,228 baptisms in 1947 and 90,627 attendants in Sunday and Bible schools. Income from contributions totaled \$860,264 and church property was valued at \$3,825,637.

BAPTIST FEDERATION OF CANADA, The. This federation comprises the Maritime and the Ontario and Quebec Conventions and the Baptist Union of Western Canada. It has a total of 1,224 churches, 732 ministers, and 140,787 members in Canada. There were 4,260 baptisms in 1948, and 70,537 students attended Sunday and Bible schools. Foreign missionaries totaled 103 and served 35,000 members of mission churches. Income from contributions \$3,472,864. Headquarters, 8 Market Square, Saint John, New Brunswick.

BARBADOS. An island colony of the British West Indies. Area: 166 square miles. Population (Dec. 31, 1946): 195,398. Capital, Bridgetown. Sugar is the most important agricultural product; the 1947 yield was 111,232 tons from 40,486 acres. A total of 1,821,853 gallons of rum were produced in 1946. Other products are molasses, tamarinds, cotton, and margarine. Trade (1946): imports £4,992,492; exports £3,142,164. Finance (1948-49 est.): revenue £1,728,355; expenditure £2,109,068. The deficit will be met from the surplus balance of £1,213,901 (on Apr. 1, 1948).

The governor, Sir H. R. R. Blood (appointed February, 1947), is assisted by an executive council, an executive committee, and a legislative council of 9 members. There is also an elective House of Assembly of 24 members.

BARLEY. The world production of barley for 1948, according to the *Foreign Agriculture Circular* (Dec.

13, 1948) of the Office of Foreign Agricultural Relations, U.S. Dept. of Agriculture, was estimated at 2,425 million bushels. Yields of the chief producing countries during 1948 (in bushels) were: China 353,565,000, United States 317,240,000, U.S.S.R. 310,000,000 (in 1947), Canada 154,643,000, India (including Pakistan) 102,000,000 (1948-49 forecast), Great Britain 93,987,000, Turkey 90,000,000, Spain 80,000,000, Denmark 62,004,000, French Morocco 58,500,000, France 57,500,000, Algeria 41,000,000, Iran 40,000,000, Argentina 30,000,000 (1948-49 forecast), Lebanon 23,000,000, Australia 16,000,000 (1948-49 forecast).

United States. Barley production in the United States totaled 317,037,000 bushels in 1948 (*Crop Report*, December, 1948; U.S. Dept. of Agriculture). The crops of the major producing States (in bushels) were: North Dakota 55,440,000, California 49,471,000, South Dakota 34,914,000, Minnesota 34,132,000, Montana 24,304,000, Colorado 15,275,000, Oregon 13,420,000, Idaho 12,276,000, Nebraska 9,204,000, and Wisconsin 7,752,000. The season average price (preliminary for the United States) received by farmers was \$1.21 per bushel.

BASEBALL. America's national pastime put on two of its best shows of all time in 1948, with spirited pennant races in both major leagues, and the result was that attendance soared to a record high of more than 20 million.

Boston's Braves, the St. Louis Cardinals, and Brooklyn's Dodgers battled most of the season for the top spot in the National League, the Cards and Dodgers wiling in the stretch. Led by a great pitching duo of Johnny Sain and Warren Spahn, Billy Southworth's Braves held together to give Boston its first National League flag since 1914.

While Boston was wrapping up its championship, strange things were taking place in the American League, where perhaps the tightest race in the annals of the sport was being waged.

As late as August, Cleveland's Indians, Boston's Red Sox, New York's Yankees, and Philadelphia's Athletics were virtually locked in a first-place tie, only a few percentage points separating them. The Athletics cracked first, less than two weeks before the regular campaign ended, but the other three teams fought on. The day before the schedule closed the Yankees were eliminated, but the sun set on the final day of the season with the Indians and Red Sox still deadlocked for first place. This brought about the first play-off in American League history the next day. Playing in Boston, the Indians gained an 8-3 victory over the Red Sox to give Cleveland its first pennant since 1920. Rookie Gene Bearden was the winning pitcher.

Cleveland's playing-manager, Lou Boudreau, then guided his men through a stirring World Series to triumph by four games to two. Bob Feller, fulfilling his ambition to pitch in a World Series, lost a heart-breaking two-hitter in the first game, which the Braves won by 1-0. Cleveland then came back to capture three games, 4-1, 2-0, and 2-1, but Boston kept its hopes alive by routing Feller and winning the fifth battle, 11-5. The Indians pinned down the world championship in their next start, triumphing 4-3, as rookie Bearden checked a Boston rally in the eighth inning.

The series victory capped a great year for American Leaguers, for the same circuit had won the All-Star game from the National Leaguers, 5-2, in midseason. Cleveland also smashed two attendance records, one in the fifth game of the series when 86,288, largest crowd to ever see a ball game, jammed Municipal Stadium on the shores of Lake

Erie. The Indians also set a new season high of 2,620,627 for attendance. The over-all total of 11,150,099 for the American League was a record. National League crowds fell off slightly, the total being 9,770,743.

Boudreau's great play afield, managerial ability, and a batting average second only to that of Ted Williams, the league's leader, earned for him the American League's most valuable player award. Stan Musial, brilliant outfielder of the Cardinals, not only paced the National League in batting, but was voted that circuit's most valuable man. Alvin Dark, young shortstop of the Braves, was named the majors' best rookie.

The season saw more than the usual number of managerial changes, the most startling of which involved the New York clubs. Leo Durocher, under suspension in 1947, took over the reins of the Dodgers from Burt Shotton, who had guided Brooklyn to the pennant in 1947. But in July, Durocher was dropped by Brooklyn at the same time the Giants announced the retirement of Mel Ott, and Durocher wound up as the new pilot of the Giants while Shotton returned to manage the Dodgers. Bucky Harris, who in his first year with the Yankees in 1947 had led them to the world championship, was ousted in a surprise move after the season ended. Casey Stengel, one-time manager of the Dodgers and Braves, was signed for the job. Red Rolfe, former Yankee star, returned to baseball to replace Steve O'Neill, deposed manager of the Detroit Tigers, and Jack Onslow replaced Ted Lyons as skipper of the Chicago White Sox.

Montreal won the International League pennant, the Governors' Cup playoffs, and the Little World Series. Other champions were Indianapolis, American Association; Oakland, Pacific Coast League; Birmingham, Dixie Series; Nashville, Southern Association; Fort Worth, Texas League; Scranton, Eastern League; Homestead Grays, Washington, Negro World Series and Negro National League; Birmingham Black Barons, Negro American League, and Fort Wayne General Electric, national semi-pro.

Southern California carried off the championship of the National Collegiate Athletic Association, while Dartmouth's nine captured the Eastern Intercollegiate League laurels. Metropolitan Conference honors were won by New York University.

—THOMAS V. HANEY

BASKETBALL. The 1947-48 court season was marked by the fine caliber of competition within intercollegiate ranks and the continued upswing of crowds attending both amateur and professional contests. New York's Madison Square Garden, with the Olympic trials added to its calendar, enjoyed a banner campaign, the double-headers in that arena averaging crowds of more than 17,000.

Generally considered the top college five in the nation was that from the University of Kentucky, the Wildcats winning the Southeastern Conference crown again and adding the National Collegiate Athletic Association title to its long list of conquests. Kentucky took the N.C.A.A. diadem by routing Baylor, the Southwest Conference king, 58-42, on the Garden court. Alex Groza led the attack with 14 points, with Ralph Beard, another sharpshooter, accounting for 12. Kentucky gained the title round by eliminating Holy Cross, defending champion, in the Eastern regional final while Baylor reached the last round by upsetting Kansas State in the Western play-offs.

Kentucky met a stumbling block in the final of the Olympic trials at the Garden, bowing to the

Phillips 66 Oilers of Bartlesville, Okla., Amateur Athletic Union rulers, 53-49, in a thriller. Only their tremendous height advantage enabled the Oilers to win, for the Wildcats matched point for point most of the way, Beard alone accounting for 23 tallies. Bob Kurland, 7-foot star, scored 20 for the victors, contributing three field goals in the last six minutes and gaining control of the rebounds at crucial times throughout the game.

Among other outstanding quintets was St. Louis University, the Billikens turning in their best performances of the year in the Garden to annex the annual invitation tournament. A crowd of 18,491 saw the Missouri five conquer New York University, 65-52, in the final round. The victory gave St. Louis a bid to the Olympic tryouts, but the invitation was rejected when officials of the university said the team had missed too much classwork to permit additional tournament competition.

The Olympic team, coached by Omar Brownning of the Oilers, included the following players: Bob Kurland, Jesse Renick, Gordon Carpenter, R. C. Pitts and Lew Beck of the Oilers; Alex Groza, Wallace Jones, Cliff Barker, Ken Rollins and Ralph Beard of Kentucky; Vince Boryla of the Denver Nuggets, Don Barksdale of the Oakland Bittners, Jack Robinson of Baylor and Ray Lump of N.Y.U. The squad compiled a brilliant record in England to win the unofficial Olympic title. See OLYMPIC GAMES.

One of the biggest surprises of the year came in March at Madison Square Garden, New York, when Notre Dame halted N.Y.U., 64-59, to snap a Violet winning streak of 19 games. The Irish, sparked by the brilliant Kevin O'Shea, fought back from a 32-23 deficit at the half to win.

Columbia retained its Eastern Intercollegiate League crown, its big center, Walter Budko scoring 206 points to break his own league record of 191 set during the previous campaign.

Other major collegiate champions were Michigan, Big Nine; Kansas State, Big Seven; Baylor, Southwest; Oklahoma A. & M., Missouri Valley; Arizona, Border Conference; Kentucky, Southeastern; Washington, Pacific Coast; Beloit, Midwest; Brigham Young, Mountain States, and Louisville, National Association of Intercollegiate Basketball.

The Phillips 66 Oilers captured A.A.U. laurels for the sixth consecutive time when they defeated the Denver Nuggets, 62-48, in the national tourney final. The Nashville Goldblumes of Tennessee regained the A.A.U. women's title.

In Canada, The Dominion championship fell to the Vancouver Clover Leafs, while the Cardston Shooting Stars took the Western Canadian women's crown.

The debut of a number of strong quintets marked professional competition, and one of the newcomers, the Baltimore Bullets, carried off honors in the long season of the Basketball Association of America. Baltimore annexed the title by taking the final play-offs from Philadelphia's Warriors, defending champions. The Minneapolis Lakers won laurels in the National League.

—THOMAS V. HANEY

BASUTOLAND. A British native territory in southern Africa. Area, 11,716 square miles. Population (1936 census), 562,411, including 559,377 natives. Capital, Maseru. In 1946 there were 86,509 pupils enrolled in 1,451 elementary and secondary schools of all kinds. Expenditure for education for 1946-47 was £143,525. Principal crops are wheat (350,000 bags in 1947); maize (715,000 bags); and sorghum (490,000 bags). Barley, oats, vegetables also

are grown. Sheep-raising is highly developed. Imports, consisting largely of agricultural and domestic supplies, were valued at £1,033,328 in 1942 and exports at £459,509. In 1946-47 revenue totaled £827,100; expenditure £861,351. On Mar. 31, 1947, there was an excess of assets over liabilities of £492,422. The territory is governed by a resident commissioner under the direction of the High Commissioner for the British High Commission Territories in South Africa.

BATTELLE MEMORIAL INSTITUTE. An Institute founded in 1929 to promote research and education in the industrial sciences, to conduct research on a non-profit basis for industry and government, maintain a program of fundamental scientific investigation, and to offer fellowships and training in research methods to selected post-graduate students in physical sciences. The fields of investigation include metallurgy, chemistry, fuels, ceramics, physics, electrochemistry, welding technology, graphic arts, corrosion technology, mining and mineral beneficiation, production engineering, agricultural science, and many specialized technologies. Sponsored research in 1948 totaled \$5,500,000. The Institute has been a source of numerous recent contributions to industrial technology, particularly those affecting basic products and processes. Its staff comprises 1,800 scientists, technologists, administrative, and service personnel. Director: Clyde Williams. Offices: 505 King Ave., Columbus 1, Ohio.

BATTLE MONUMENTS COMMISSION, American. A Commission created by Congress in 1923 to erect memorials to commemorate the services of the American armed forces in World War I. It administers and maintains World War I American military cemeteries and memorials in Europe. The Commission is charged by Public Law 456, 79th Congress, with the planning and erection of memorials to commemorate the services of the American armed forces in World War II, with control of the erection by American citizens, States, municipalities or associations of such memorials in foreign countries or upon federally owned or controlled property, except national cemeteries, and it is responsible for all permanent construction in permanent American military cemeteries located outside of the United States and its Territories and possessions. Acting Chairman: Brig. Gen. Robert G. Woodside.

BECHUANALAND. A British protectorate in southern Africa. Area: 275,000 square miles. Population (1946 census): 252,869, including 2,325 Europeans. Cattle-raising and dairying are the chief industries. Livestock (1946): 699,835 cattle, 153,318 sheep, and 304,462 goats. Gold and silver mined in 1945 was valued at £95,202. Trade (1946): Imports £93,072; exports £619,835. Finance (1946-47): revenue £469,075; expenditure £405,071.

The territory is administered by a resident commissioner, acting under the High Commissioner for the British High Commission Territories in South Africa. The headquarters of the administration is Mafeking, Cape Province. The native tribes are ruled by their chiefs as before the territory was incorporated in the British sphere, but now under the protection of the King. Resident Commissioner: A. Sillery.

BELGIAN CONGO. Belgium's only colony, located in central Africa and embracing a large part of the

basin of the Congo River. Area: approximately 912,000 square miles. Capital, Léopoldville (pop. 117,524).

Population. The native population on Jan. 1, 1948, was estimated at 10,805,000. Whites numbered 35,772, of which 67 percent were Belgians. Most of the natives are Bantu and Sudan Negroes, with a few Nilotic tribes in the northeast and some Pygmies scattered in the interior.

Education. Most of the schools are provided by Christian missions, though many are subsidized by the government. In 1946 there were 5,903 subsidized primary schools (311,388 pupils) and 56 subsidized secondary schools (3,872 pupils). Not subsidized were 199 primary schools (46,827 pupils), 8,994 rural schools (246,424 pupils), and 24 professional schools (1,343 pupils).

Religion. The great mass of the natives is still pagan. The work of the Christian missions is carried on by 4,150 (Jan. 1, 1947) missionaries (three-fourths of whom are Roman Catholics).

Production. The country's economy is based on agriculture and mining. Agriculture is widespread, while mining is concentrated in the eastern and southeastern regions. Industrially speaking the Belgian Congo is one of the most advanced colonies in Africa. The natives have shown themselves readily adaptable to work in mines, factories, and offices.

Cotton is the principal agricultural and money crop; a total of 306,500 hectares yielded 122,743 metric tons in 1946. Two types of coffee are produced—Arabian and Robusta—the total 1947 production was estimated at 33,000 metric tons. Palm oil, the chief forest product, yielded 134,774 metric tons in 1945. Rubber production was greatly stimulated by World War II but has since declined; a total of 4,080 metric tons being produced in 1947 against 11,287 metric tons exported in 1944. Other agricultural products include cacao, fibers, cinchona bark, peanuts, corn, manioc, rice, sugarcane, and pyrethrum.

The Congo is one of the world's richest mineral regions, copper being the chief mineral product. Industrial diamonds, cobalt, tantalite, and tin also are important. Production in 1947 (metric tons): copper 150,800; tin 15,120; cobalt 2,140 (6 months). During the first 6 months of 1947 some 2,399,073 carats of industrial diamonds and 254,175 carats of gems were produced. Gold output has declined steadily, amounting to 10,895 kg. of crude gold in 1946. Silver, zinc, wolframite, lead, platinum, and tungsten are other minerals.

Foreign Trade (1947): imports 6,452.4 million francs; exports 7,602 million francs.

Finance. In 1947 government revenue totaled 2,210,810,000 francs; expenditure 2,349,850,000 francs. Public debt (Jan. 1, 1947) 5,035,718,161 francs.

Transportation. The Congo River and its larger tributaries are navigable for varying distances. The Congo itself is broken at several points by cataracts, around which railroads have been built. Navigable rivers total more than 7,500 miles, railways 3,106 miles, and roads 56,000 miles. Before the war the Congo was served by several international airways and possessed an extensive internal network operated by the Sabena Company.

Government. The administration is under the general supervision of the Belgian Minister of Colonies, normally an appointee of the King, and is assisted by a colonial council. At the head of the actual administration is a governor general, assisted by a vice governor, state inspectors, and six provincial governors. The provinces are in turn divided

into districts and these are subdivided into administrative territories. Governor General: Eugène Jungers.

Ruanda-Urundi, Territory of. This Territory, formerly a League of Nations mandate, became a Trust Territory of the United Nations on Dec. 13, 1946. The Territory has an area of 20,500 square miles and a population (Jan. 1, 1946) of 3.5 million. The white population numbered 2,232; the Asiatic 1,885. Capital: Usumbura. In 1925 the Territory was joined administratively with the Belgian Congo and placed under the direction of a governor. In 1945 there were 3,609 schools with 224,314 pupils. Cattle-raising is important. The chief exports are cotton, coffee, tobacco, and kapok. Minerals include tin and gold. In 1945 imports were valued at 222,164,567 francs and exports at 322,232,484 francs. Revenue and expenditure for 1948 were estimated at 200,458,000 francs and 230,454,000 francs, respectively. Governor: Maurice Simon.

BELGIUM. A kingdom of western Europe. Capital, Brussels. (See below under *Government and Events.*)

Area and Population. The area of Belgium, including the districts of Eupen and Malmédy, is 11,775 square miles. On July 1, 1947, the estimated population was 8,421,000. The people are of two distinct races, the Flemings and the Walloons. French and Flemish are the languages spoken. Vital statistics in 1947 (rate per 1,000): births 17.8, deaths 13.3; marriages 9.9. Chief cities (1947 populations): Greater Brussels, 1,290,534; Antwerp, 259,622; Ghent, 162,488; Liège, 150,103.

Education and Religion. On Jan. 1, 1946, there were 13,065 elementary schools and 1,063,980 pupils; 271 secondary schools and 83,856 pupils. In 1945-46 the 88 normal schools had 9,306 students. In addition there were many free or private schools, mostly under ecclesiastical care. The four universities (Brussels, Ghent, Liège, and Louvain) had a total of 16,017 students in 1946-47. There were also several state agricultural institutes. In addition to the Royal Academy of Fine Arts, there were 4 Royal conservatoires, 117 schools of music, and 57 schools of design. The motion-picture houses had a total seating capacity of 526,770 in 1947. There is full religious liberty. Roman Catholicism is the predominant religion.

Production. Belgium's manufacturing, mining, intensive agriculture, and extensive foreign commerce enable it to support one of the densest populations of Europe. (712 per sq. mi.). Leading crops are wheat, rye, oats, potatoes, and sugar beets. The grain harvest, in 1948, was 350,000 tons, somewhat less than normal. Meat production, in 1947, averaged 13,500 tons monthly; butter production, 2,100 tons monthly. Livestock (Jan. 1, 1947) included 304,446 horses, 1,651,576 cattle, 217,312 sheep and goats, and 839,493 pigs.

Belgium possesses large mineral resources, especially coal, iron, and zinc ores. The output of coal has been rising steadily since the end of the war, reaching 90 percent of the prewar level in September, 1948. In August, 2,180,000 tons of coal were mined, against 1,827,000 in August, 1947. Belgium is also an important producer of glass, paper, cardboard, cement, cotton, yarn, rayon, metal products, alcoholic beverages, etc. The index of industrial production stood at 121 in April, 1948 (1938=100).

Foreign Trade. For the year 1948 (last four months estimated), exports amounted to 70,758 million francs (61,656 million in 1947) and im-

ports to 86,710.5 million francs (85,560 million). (The foregoing figures include Luxembourg, a member of the Belgo-Luxembourg Economic Union.) The United States, Great Britain, France, the Netherlands, Argentina, Switzerland, and the Belgian Congo were the most important trading countries.

Transportation. Belgium has approximately 10,200 kilometers of state highways and provincial roads. In January, 1947, there were 4,956 kilometers of standard-gage railway and 4,811 kilometers of narrow-gage railway, of which 1,454 were electrified. There are 1,614 kilometers of navigable rivers and canals. The number of motor vehicles in 1946 was 221,788. On Jan. 31, 1947, the Belgian merchant marine comprised 63 vessels aggregating 183,121 tons net.

Finance. For 1946 revenue was estimated to total 1,328 million francs; expenditure, 1,603 million francs. The public debt on Dec. 31, 1947, amounted to 246,844 million francs. Net total money supply, June, 1948: 155,700 million francs. Exchange rate, 1948: 43.96 Belgian francs per U.S. dollar.

The 1949 budget, presented in October, 1948, estimated total expenditure at 71,600 million francs against revenue of 66,800 million francs. The 1949 deficit was estimated at 4,800 million francs; the 1948 deficit: 13,500 million francs.

Government. Belgium is "a constitutional, representative and hereditary monarchy." Legislative power is vested in the King, the Senate, and the Chamber of Representatives. All elections for the Senate and the Chamber are held on the principle of universal suffrage. The Senate comprises 167 elected members. In the Chamber of Representatives there are 202 members. Senators and Representatives serve for four years unless both, or one, of the houses are dissolved by the King, upon which event new elections must take place within 40 days. Ruler: King Leopold III (ascended the throne Feb. 23, 1934). In view of the detention of King Leopold in Germany during World War II, the Belgian Parliament in compliance with the Constitution on Sept. 20, 1944, elected Prince Charles, brother of the King, to be Regent of the Kingdom. The Regency was extended indefinitely by the law of July 17, 1945, which also barred the King's return to the throne without consent of Parliament. Premier: Paul-Henri Spaak (Socialist).

Events, 1948. Comparative political stability and economic prosperity, American style (abundance at high prices), relegated the anxious memories of the war to the remote past for most Belgians last year. More than ever the little country appeared as a show window for Europe; only there were not too many people who could afford the luxuries inside.

The Royal Question: More of the Same. The nationwide controversy about King Leopold III continued in its fourth year, unabated and with the end nowhere in sight. Leopold's prospects for an eventual return to the throne did not brighten during the year, in spite of his own strenuous efforts and the unflinching support of his faithful. New details concerning the King's attitude during the war came to light at the Nuremberg trial of the Nazi diplomats (see GERMANY). In a dispatch from Nuremberg, dated Feb. 6, 1948, the *New York Times* quoted evidence decidedly unfavorable to the King, which had been submitted at the trial of former Under Secretary of State Otto Meissner.

The evidence in question was contained in confidential reports sent to Herr Meissner in June,

1940, by a German officer, Lt. Col. Kiewitz, who had been assigned to supervise the King's movements while a prisoner of war.

It appears from one of Kiewitz' reports that Leopold, "asking for the strictest secrecy," revealed to his captors the hiding place, near Bordeaux, France, of the Belgian State treasure and of sealed boxes containing Belgian State documents. The King also took the initiative in bringing about the interview with Hitler, which, by his own admission, took place at Berchtesgaden on Nov. 13, 1944.

While the monarchical institution as such was not seriously challenged by anybody, except perhaps the insignificant Communist minority, the question of who should be King of the Belgians continued to divide the nation and became even more complicated during the year.

For, whereas in previous years public opinion had been split between the partisans of Leopold, on the Right, and the supporters of Prince Charles' regency, on the Left, a third potential occupant of the throne now emerged to the forefront of public interest: Prince Baudouin, heir apparent to the crown.

On Sept. 7, 1948, the Prince was 18 years old and thus became eligible to ascend the throne. In anticipation of this event, the executive council of the powerful Socialist Party voted on January 26 to demand the immediate abdication of Leopold, a move that automatically would have entailed the elevation to the throne of Prince Baudouin in September. However, Premier Paul-Henri Spaak, though a Socialist himself, did not approve the resolution which, he predicted, would result in harm to the young Prince, the dynasty, and the country. He accepted, however, a mandate to resume direct negotiations with the exiled King with a view to finding a way out of the perennial crisis.

Meanwhile, on January 20, Leopold had left his Swiss residence for a two months' vacation in Cuba. A reported plan to visit the United States did not materialize. Instead, the Regent, Prince Charles, and Premier Spaak paid an official visit to Washington, which lasted from April 4 to April 9. After a trip to Canada, the two statesmen returned to Belgium on April 18. The official explanation of this State visit was that it aimed at enlisting American support for the West European alliance formed at Brussels on March 17 (see below). No request for military assistance was put forward, according to a statement by Acting Secretary of State Robert A. Lovett on April 7.

Following the return to Europe of all parties concerned, Premier Spaak on May 29 visited Leopold at the latter's villa near Geneva, Switzerland. Two interviews took place, during which, according to Belgian press reports, the question of Baudouin's return to Belgium was the principal topic of conversation. Spaak was said to have urged the exiled monarch to permit his son to return to Belgium, regardless of the question of abdication, since the Prince was required by tradition to serve in the Army and to take his seat in the Senate after his 18th birthday.

Apparently the meeting was fruitless, for Prince Baudouin remained with his father and the latter made a new overt bid for the throne. In a letter to Spaak, dated June 22, and made public three days later, Leopold demanded a popular referendum to settle the royal question. The letter read in part: "I am in favor of a general consultation of all Belgians. If this consultation does not bring an indisputable majority in favor of my return to the

throne, I shall then abdicate. If a favorable majority is shown by the referendum, I would expect Parliament to put an end to the present Regency and vote a law bringing me back to the throne."

The King's formal demand for a referendum met with the same response as his earlier moves. The Socialists were flatly opposed to it, holding that a referendum would be unconstitutional as well as politically unwise. The Christian Social Party was in favor, while the Liberals appeared wavering.

After months of bickering, the drive for a referendum was stopped decisively on October 20, when a bill calling for such a "popular consultation" failed to gain the required majority in the Senate. The vote was even, 83 to 83, with the Socialists, Liberals, and Communists casting "No," and the Christian Socialists "Yes" votes. In view of the certainty of even more resolute rejection, no attempt was made by the pro-Leopold faction to introduce a similar bill in the Chamber of Deputies.

Spaak In and Out. In spite of the internal rift produced by the rankling dynastic question, the Coalition Government headed by Premier Paul-Henri Spaak held together through most of the year. At least three major attempts to unseat it were foiled and when it finally fell in November, it was, as so often happens in Belgian affairs, over a side issue.

The first crisis occurred toward the end of the preceding year. On Dec. 10, 1947, Socialists and members of the Christian Social party clashed bitterly, and even came to blows, in the Chamber of Deputies. A debate over woman suffrage, along with the royal question, provoked the fracas. The Christian Social ministers threatened to withdraw from the Cabinet, but when Spaak bluntly asked the House for a vote of confidence, "with no strings attached," he received it.

Next, in mid-February 1948, a wave of Communist-inspired strikes hit the coal industry and a number of public services. They were generally viewed as an attempt to wreck the Marshall Plan in Belgium and were dealt with firmly by the Government. Workers in public utilities received orders of "civil mobilization," and several hundred postmen were discharged from the service.

The General Federation of Labor sided with the Government in condemning the strikes which collapsed after a brief flurry of excitement. On February 18, the Government's handling of the strike situation was approved by the Chamber by an overwhelming vote of 146 to 18. Minor wage increases were granted to coal miners and utility workers. In June, another major outbreak of strike occurred, as some 200,000 workers in the metal industries walked off their jobs.

Another crisis, in May, almost spelt the end of the Spaak Cabinet. It was caused by a split in the Socialist Party ranks on the old question of state subsidies for Roman Catholic schools. The Premier anxious to placate his Catholic partners in the Government coalition, had accepted a proposed substantial increase in the subsidies previously paid by the state to the Catholic institutions. When the matter was brought up in the Chamber, however, he found himself disavowed by a majority of his own party comrades. After ten days of bitter wrangling in Parliament, Spaak tendered the resignation of his Cabinet to the Regent on May 5.

No sooner had the Premier's decision to quail become known, than the leaders of both major parties realized they could not do without him. A compromise formula was thrashed out and on May 10 the executive committees of the Socialist and

Christian Social parties called on Spaak to continue. Having refused at first ("I am so tired"), he yielded on May 14 to the insistence of the Regent. The Coalition Government continued in office unchanged.

A new storm blew up unexpectedly in November. When the Minister of Justice Paul Struye, a member of the Christian Social Party, commuted the death sentences of two Nazi collaborators, the Socialists attacked him fiercely in the Chamber. On November 18 the Minister resigned and the next day the entire Cabinet followed suit. After weeks of wrangling, Spaak once again proved his indispensability. On November 26 he formed a new Coalition Cabinet which was substantially the same as before, except for a new Minister of Justice.

Belgium and the "Western Union." When Britain, France, Belgium, the Netherlands, and Luxembourg decided early in 1948 to pool their resources and means of defense in a close political, economic, and military alliance, their first conference was held at Brussels and the 50-year treaty was signed there on March 17.

By joining the five-power alliance, Belgium evidently abandoned the ill-fated policy of neutrality to which the little country had clung stubbornly for more than a hundred years and which twice had been violated by German aggression.

Although the wording of the treaty mentioned only Germany as a potential aggressor, the circumstances surrounding the Brussels Conference unmistakably pointed to Soviet Russia as the only possible threat to the five nations' security in the near future. Needless to say, the Kremlin did not bestow its blessing on any of the signatories to the pact, yet Belgian-Russian relations do not appear to have suffered much from its signing. At any rate it did not affect a new trade agreement between the two countries which had been negotiated a few weeks earlier.

Meanwhile the economic union of the Low Countries ("Benelux") made further progress during the year. A two-day conference of twenty Cabinet Ministers of Belgium, the Netherlands, and Luxembourg, which was held at Namur, on June 7-8, resulted in agreement to make the economic unification of the three countries fully effective as of Jan. 1, 1950.

Economic Conditions. Belgium, in 1948, was riding a crest of economic prosperity, but this happy state of affairs was not without its worries. While shop windows and counters were loaded to overflow with all sorts of commodities, including luxuries scarcely available elsewhere in Europe, prices remained at such high levels that they made a buyers' strike inevitable. As in America, the so-called law of supply and demand appeared to have lost its validity, at least temporarily. The cost of living was about four times as high as before the war, forcing a large sector of the population to do without everything but the necessities of life.

As a result, and on account of continued currency restrictions in many European countries, Belgium's once flourishing tourist trade was in the doldrums. Except for some Americans, the foreign clientele of Belgium's famous seaside resorts and mediaeval curiosities was conspicuously absent. From Germany and Great Britain, practically no tourists were counted. Visitors from France and the Netherlands were few and far between.

Belgium's export industry was very active but much of its output went to countries unable to make reciprocal deliveries or pay in cash. As a result, Belgium's credit balance was reported to have reached 18,000 million francs in late summer,

causing the Government and business to look with disfavor upon a further unilateral expansion of the export trade.

The problem of Rhine shipping was the object of much controversy during the year. Belgian ship-owners complained that Antwerp's harbor facilities were made idle by the refusal of the Joint Export-Import Agency in Frankfurt am Main to release Rhine traffic for the Low Country ports. Charges were even made of an attempt to play off Rotterdam against Antwerp, contrary to the "Benelux" understanding. In mid-September it was reported that about one-half of Antwerp's waterfront labor force was out of work.

With the end of bread rationing, in October, only sugar was left on the rationing list in Belgium.

—JOACHIM JOESTEN

BERMUDA. A British colony in the Atlantic, 677 miles southeast of New York. About 20 of the 360 islands are inhabited. Area: 21 square miles. Population (1946 est.): 34,965 (excluding military personnel). Negroes outnumber whites almost two to one. Capital, Hamilton (pop. 3,000).

Tourists are an important source of income in Bermuda. Chief agricultural products are bananas, potatoes, lily bulbs, and vegetables. Imports include food, clothing, agricultural supplies, and building materials. Trade (1946): imports, £3,612,128; exports, £261,445. Finance: budget estimates for 1948 provide for revenue of £967,170; expenditure of £1,270,870. The 1947 budget showed revenue of approximately £1,454,000; expenditure of £1,358,000.

The colony is administered by a governor, assisted by an executive council and a legislative council, both composed of appointed members, and an elected House of Assembly of 36 members. Governor: Adm. Sir Ralph Leatham (assumed office May 6, 1946).

BHUTAN. A semi-independent state bounded by Tibet on the north and the Dominions of India and Pakistan on the south. Area: 18,000 square miles. Estimated population: 300,000. The people are nominally Buddhists. Rice, maize, millet, lac, wax, different kinds of cloth, and musk are the main products. The ruler of the state is in treaty relations with Great Britain.

BILLIARDS. Willie Hoppe, who began collecting titles in 1906, retained his world's three-cushion crown by defeating Ezequiel Navarra, youthful Argentine champion, 450-376, in a challenge match at Chicago in March. Navarra earned the right to bid for Hoppe's laurels by winning the national tournament in which Irving Crane of Binghamton, N.Y., was runner-up. Willie Mosconi of Kansas City, Mo., easily defended his world's pocket billiard championship, taking all nine games from Andrew Ponzi of Philadelphia for a point score of 1,350-643. Victory in the national tourney enabled Ponzi to challenge for Mosconi's title.

Ed Lee of the New York A.C. triumphed in the amateur three-cushion competition and Rene Vingerhoed of Belgium won world amateur laurels. John Romano of Brooklyn and Anthony Venuto of Philadelphia took senior and junior honors, respectively, in the United States boys' pocket billiards event. National intercollegiate champions were Gordon Howe, Wisconsin, straight-rail; Sol Ashkenage, Wisconsin, three-cushion; Jack Brown, Utah, pocket, and Jeanne Lynch, Rhode Island State, women's pocket billiards.

—THOMAS V. HANEY

BOBSLEDDING. The Majestic Bobsled Club of Lake Placid, N.Y., won both the North American and national A.A.U. four-man championships on the fast Mount Hoevenberg run at Lake Placid. The team was composed of Stanley Benham, Bill Casey, Jim Atkinson, and William Trombley. A pair of daring riders, Dick Surphlis and Henry Stern from Saranac Lake, took three major amateur titles during the frigid campaign, annexing both the senior and junior two-man laurels in the national competition and the North American two-man award.

American bobsled stars finished first in points in the Olympic Games at St. Moritz, Switzerland. See OLYMPIC GAMES. —THOMAS V. HANEY

BOLIVIA. A republic of South America. About three-fifths of the area is composed of tropical lowlands and the remainder of mountains and plateaus.

Area and Population. Area: 416,040 square miles. Population (1947 est.): 3,854,000, of whom 54 percent were Indians, 32 percent mestizos, and 13 percent of European descent. Chief cities: (1946 pop.): La Paz (seat of government), 302,000; Cochabamba, 76,500; Oruro, 50,000; and Sucre (legal capital), 30,000.

Education and Religion. The Constitution guarantees freedom of worship, but the state recognizes and supports the Roman Catholic Church. Spanish is the official language but large numbers of Indians speak Quechua or Aymara. Measures are being taken to reduce the country's high illiteracy (about 80 percent). There were 3,253 elementary and rural schools with 254,056 pupils in 1944; 55 secondary schools with 17,496 students; and 326 Indian schools with an unknown number of pupils. Five universities, normal schools, and professional schools are also found.

Production. Mining is the chief industry and agriculture the most important occupation. Tin alone accounts for about 80 percent of total exports. In 1946 tin exports amounted to 38,221 metric tons, valued at \$52,001,468. Other mineral exports in 1947 (metric tons) were: lead, 11,280; zinc, 14,640; copper, 6,240; antimony (1946), 6,964; wolfram (1946), 1,273.

Industrial production is centered on consumer goods such as blankets, cement, cigarettes, cotton, wheat, etc. Chief agricultural products include maize, sugar, tobacco, cocoa, cotton, rubber, and quinine. Rubber exports in 1947 amounted to 4,320 metric tons; quinine and cocoa leaves are also exported in small quantities.

Foreign Trade. Latest available foreign trade figures (1946) show exports valued at \$74,000,000; imports, \$51,000,000. Principal buyers, in order of importance, were the United States, Great Britain, Argentina, Brazil, Chile, and Peru. Chief suppliers were the United States, Argentina, Peru, Brazil, and Chile.

Transportation. The country had 1,454 miles of railway and a total of 6,280 miles (all types) of roads in 1947. About 12,000 miles of rivers are open to small-craft navigation. There are 54 commercial and six government operated broadcasting stations.

Finance. In the 1948 budget, revenue and expenditure were balanced at 1,496,911,040 bolivianos (the controlled boliviano equaled U.S. \$0.0236, 1946-48), an increase of 24 million bolivianos from 1947. The public debt (Jan. 1, 1947) totaled 6,054,707,055. At the end of June, 1948, the currency in circulation was 1,782 million bolivianos; bank deposits totaled 1,000 million bolivianos. Gold reserves totaled \$23 million on Aug.

30, 1948. The cost of living index in December, 1947, was 696 (1937 = 100).

Government. Under the Constitution of Oct. 30, 1938 (rev. 1945), Bolivia is a centralized republic of nine departments. Legislative power is vested in a Congress composed of a Senate of 27 members (elected for 6 years) and a Chamber of Deputies composed of 110 representatives (elected for 4 years). The President serves a six-year term and is assisted by a Cabinet of 9 members. On Jan. 15, 1947, Dr. Enrique Hertzog was elected President and assumed office on March 10, for a four-year term.

Events, 1948. Bolivia, which in past years had been torn by internal strife, revolts, and coups d'état, spent a relatively uneventful 1948. The Government of Dr. Enrique Hertzog managed to steer clear of serious political trouble, although the country was affected by the inflation, shortage of foreign exchange and, in general, by the financial difficulties prevalent in the majority of Latin American republics during the postwar period.

Signs of Unrest. A plot to overthrow the Government was discovered toward the end of January, when it was found that ex-Major Raul Tovar and other functionaries connected with the regime of President Gualberto Villarroel (ousted and assassinated during 1946) and members of the M.N.R. party (Movimiento Nacional Revolucionario) were planning an uprising. Documents were found showing plans for the revolt, which was to take place on January 25, a holiday when the troops would be off duty. A provisional government had been planned to take over, with Tovar as Minister of Defense. President Hertzog's Government acted rapidly, declared a state of siege, and made numerous arrests.

Political Confusion. Toward the middle of the year, although no serious disturbances had taken place, the political atmosphere was clouded. Although Hertzog's administration was backed by his Socialist Republican Union Party, it was affected by division among party leaders. This caused a change in the Cabinet, and the appointment of Javier Paz Campero as Minister of Foreign Affairs. The situation was further confused by the return to the country of José Antonio Arce, leader of the P.I.R. (Partido de Izquierda Revolucionaria), a leftist group that has been in the opposition for a number of years.

On their part, the members of the M.N.R. continued their strong propaganda against the government. This group is popular among the peasants and workers of the mining regions, and is backed by Juan Lechin, the most powerful labor leader in the country. Later, President Hertzog tried to form a coalition government and offered three Ministries to the Liberal Party, but the offer was declined.

The President also offered a Cabinet post to the Partido Social Democrático, which was declined, their leader demanding that the Government accept a number of political measures before any coalition was accepted, especially state control over all foreign exchange derived from the exploitation of minerals; reestablishment of the National Education Board; regimentation of the right to strike, and implementation of agrarian reform.

Education and the Congress. An important congressional investigation made on the conditions of public education attracted wide attention. The investigating committee reached the conclusion that (1) national education is in complete decadence; that (2) there is no scientific education program; that (3) the teachers function as a state bureaucracy, and that their promotions are made not on the basis

of academic merit, but subject to political pressure.

The overall picture of conditions showed more than 80 percent of illiteracy; schoolhouses owned by private individuals who usually collect excessively high rent from the Government, and 72 percent of the teachers not having the necessary qualifications. This investigation was interpreted as a blow to President Hertzog's administration which had always claimed that it was deeply interested in an improvement of the educational system.

International Front. The signing of the economic agreement with Argentina (see ARGENTINA, *Events*, 1948) was counterbalanced by an important meeting between President Hertzog and President Dutra of Brazil. During the past two years, one of the noticeable trends in South America has been the inclusion of Bolivia within the Argentine sphere of influence.

The Hertzog-Dutra meeting was interpreted as a Bolivian effort toward the reestablishment of balance of power in the La Plata region. They met on August 22 in the Bolivian city of Robore, for the inauguration of a railroad linking Bolivia with the Brazilian port of Santos, which will allow the landlocked country an outlet to the Atlantic.

Bolivia took part in the Ninth Inter-American Conference of American States at Bogotá, Columbia, and became signatory of the Charter of American States (see PAN AMERICAN ACTIVITIES).

—MIGUEL JORRÍN

BONIN ISLANDS. An archipelago of 15 islands in the western Pacific, about 550 miles south of Tokyo, Japan. The chief islands are Chichi (10 sq. mi.), Haha, Ani, Ototo, Mei, Yome, Muko, and Nakadachi. Total area: 40 square miles. Population: 6,000 in 1940. Capital: Omura (on Chichi). The principal agricultural crops are sugarcane, pineapples, and bananas. The Bonins passed to the control of United States forces following the surrender of Japan to the Allied nations in 1945.

BOTANY. In the centenary program of the American Association for the Advancement of Science, in Washington, several botanists discussed various aspects of forest and crop resources in relation to world needs. This topic, recently popularized in such books as Osborne's *Plundered Planet* and Vogt's *Road to Survival*, also forms the subject of the latest issue of *Chronica Botanica*, entitled "Freedom from Want," in which several authorities survey crop and animal production, resources of fertilizers, and growth of population.

Even in this year of high costs several new botanical periodicals appeared. *Physiologia Plantarum*, published in Lund, is the organ of the Scandinavian Society for Plant Physiology. Three numbers have appeared, containing articles from Copenhagen, Stockholm, Uppsala, Lund, and Helsinki—all written in English. *Vegetatio*, subtitled *Acta Geobotanica*, published in The Hague, is devoted to plant sociology, ecology and geography. The first issue contains papers by Swiss, Dutch, and Spanish botanists and one from Palestine. The subject of *Hydrobiologia*, also published in The Hague, is evident from the title. Its first issue included papers on aquatic organisms from the United States, South Africa, Spain, Holland, and central Europe. Such publications manifest a growing internationality in plant science.

Dr. William Crocker is the author of a book entitled *Growth of Plants*, presenting the results of "twenty years' research at the Boyce Thompson Institute," of which he has been director since its

foundation. This is an interesting record of contributions to many fields of applied botany—virus diseases, longevity and dormancy of seeds, effects of ethylene and other gases, plant hormones, fungicides and insecticides, and others.

Harvard University has published, under the title *Orchids in Retrospect*, a collection of the writings of Oakes Ames, in honor of the golden anniversary of this distinguished student and teacher.

Taxonomy and Floristics. A conference was held in Utrecht to consider proposals for changes in the International Rules of Botanical Nomenclature, which will be acted upon at the International Botanical Congress in 1950. Representatives attended from Holland, Great Britain, the United States, Sweden, Belgium, France, Switzerland, Australia, and India.

In a study of certain Liliales, sporogenesis and other morphological features were used to test relationship, emphasizing anew the growing cooperation of taxonomy with other disciplines. Chromosomes were widely used in taxonomic studies. One on grasses reported 115 species in 19 genera and revealed two more species of the increasing number which have chromosomal variation not manifested by external characters. In another study it was shown that two species of *Achillea*, tetra- and hexaploid, cannot be separated by external features, but the former is transcontinental, the latter Pacific in range. Chromosome studies in Loganiaceae reinforce the taxonomic conclusion that the group is artificial. Chromosome numbers were correlated with growth habit in weeds, and it was shown that polyploidy is unimportant in determining the weed habit, the annual habit making for their success. A Swedish study showed that annual species are mostly diploid, apomictic perennials mostly polyploid. The variable species *Valeriana officinalis* was studied in England. It was found that, aside from considerable variability which can be ascribed to the environment, much of the variation in this species is to be traced to genetic differences which are propagated, in numerous combinations, through interbreeding; and formal systematic attempts to classify such variation in a small number of subspecific groups must fail. To this must be added polyploidy, the different polyploid groups not being always distinguishable morphologically, but occupying different ranges and being intersterile.

A study of freshwater red algae showed their distribution to be related to soil types. The periodicity of their forms renders it difficult to know the entire life cycle of any species. Two Brazilian seaweeds have proven promising as a source of agar, hitherto obtained chiefly from Japanese algae. A guide was published to marine algae of the Pacific Coast.

The genus *Crepis* has been extensively studied for many years, cytology and genetics being used to clarify systematics in a striking way. The results have been summarized in a University of California publication; Part 1 appeared in 1947, Part 2 recently; the latter deals with systematic aspects.

The results were published of an exploratory trip to the Kaieteur Plateau and Table Mountain (British Guiana and Surinam). Works appeared on Louisiana trees and shrubs, on grasses of Pennsylvania, on grasses of Pacific Islands, on Umbelliferae in Argentina, on *Cinchona* (quinine) in Ecuador, on the vegetation of Angola; and a second part (Geraniaceae—Compositae) appeared of Pittier's catalogue of the Venezuelan flora.

Ecology. Very varied surveys were made of different types of vegetation; e.g., the bogs and

swamps of White Russia, a soil reconnaissance through Tanganyika. A sublittoral seaweed survey was made in Scottish waters. The yield was estimated at 45,000 tons from 3,050 acres; the density of population is not directly proportional to depth. It was shown that colonization by marine algae at Monterey, California, depends on the mode of reproduction. The yield of natural herbage was studied under controlled grazing in Wales. Grazed plots yielded twice as much crude protein as plots in hay. Lime was found efficient in increasing not only minerals but also starch and protein yield.

Cytology and Genetics. Investigation continued of polyploid conditions resulting from treatment with colchicine. In Belgium tetraploid beets were obtained, "not of immediate agricultural interest" because of lowered fertility and increased susceptibility to parasites with little gain in sugar content. In Sweden tetraploid and diploid plants of *Sinapis alba* (a mustard) were grown side by side, which reduced the yield of the tetraploid plants by the production of abortive triploid embryos though open pollination. Doubling the chromosome number in *Hieracium hoppeanum* resulted in the occurrence of reduction divisions in the somatic tissues of the ovule—a process often postulated but rarely demonstrated. A fern hybrid (*Woodsia*), usually sterile, was of interest in that the terminal part of the frond became fertile. Since the growth of a fern frond continues through a long period by means of its apical cell, this suggests some doubling of chromosomes in the latter during the growth of the leaf.

Much study has been given to "biochemical mutants" of *Neurospora*—new races of this fungus recognizable only by their need for certain nutrients. Reversion of these mutants has been obtained by treatment with ultra-violet and X-rays, and nitrogen mustard gas.

Morphology. The electron microscope was introduced into morphology in a study of the chloroplast of spinach. Magnifications up to 48,000 times were used. Each chloroplast contains 40–60 "grana" embedded in a "stroma." The grana are wafer-like, dense, uniform in one chloroplast, low in protein.

Further study of shoot apices in dicotyledons resulted in an attempt to define the meristematic zones "dynamically." It was made clear that "tunica" and "corpus" are not histogens, since they may fluctuate in one species during the season and during the cycle of development. In an English study it was shown that vegetative and reproductive apices do not differ essentially in organization.

The old question of the nature of flower parts—whether leaves or stem—was attacked by a study of perianth formation in *Vinca*. The corolla tube was shown to be of two parts, the upper composed of separate parts ("appendicular") which fuse at the margins during development. In a study of flowers of Passifloraceae, it was concluded that sepals and petals are leaves; stamens also derived from a foliar ancestor, in contrast to their origin from branches as suggested by other recent workers. A similar conclusion was reached by a Czech botanist working on *Cyclamen*.

An English botanist reported on marine diatoms in cultivation. They lost their shells ("frustules") and gradually also their shape and power of motion. In such a condition they survived 9 months, the normal condition being regained by immersion in seawater.

Fertilization of species-crosses in *Datura* sometimes failed even when shortness of style was not a factor. In such crosses fertilization actually oc-

curred and the zygote might divide but often did not. The endosperm divided, but ultimately disintegrated. The evidence suggests a breakdown of chemical regulatory mechanism or of nutrition.

Mycology and Plant Pathology. A method first used in bacteriology has been adapted to mycology with considerable success; this is the maintenance of cultures under a layer of mineral oil. The oil prevents dehydration, excludes mites, and slows metabolism. A wide range of fungi have been tested for periods up to 24 months. *Blakeslea trispora*, which must usually be transferred every few weeks, survived under oil for 10 months.

A number of fungi were successfully grown on asphalt-treated paper, showing that such materials, when used for wrapping, cannot be assumed to have a preservative effect.

Several papers appeared on the use of antibiotics as a "cure" for plant diseases, particularly of crown gall. One of these substances was derived from a species of *Streptomyces*, from a species of which we obtain the well-known streptomycin.

Cytological study was made of the bird's-nest fungus *Cyathus stercoreus*. Haploid mycelia were grown from single spores and diploid mycelia which formed fruit-bodies were obtained by pairing these mycelia. In some pairings the doubling of nuclei proceeded in only one direction—one mycelium becoming diploid, the other remaining haploid. Fruit-bodies of several different types were obtained, some scarcely recognizable as belonging to the species. These findings are important in the general problem of classification of fungi, in which data on hybridization and variation have been lacking.

In the meetings of the A.A.A.S. in Chicago a group of papers was presented on breeding in relation to disease resistance; various diseases were discussed in tomatoes, barley, rice, potatoes, cabbage, and peas.

Continued work on virus with the electron microscope disclosed an increase of "short particles" of tobacco mosaic virus during virus multiplication. Squash mosaic virus contained spherical particles with a tendency to aggregate.

Plant Physiology. In the meeting of the A.A.A.S. in the last days of 1947 photosynthesis was discussed in several programs by a combination of chemists and botanists. Topics included photochemical studies of chlorophyll and quantum efficiencies in photosynthesis. Another symposium echoed the modern interest in atomic physics, being concerned with the uses of radioactive isotopes in research.

Many studies were devoted to vitamins. It was shown that the concentration of niacin, thiamine, and riboflavin decreases during the development of the fruit of certain cucurbits. Different varieties differ in vitamin content, and there are local differences within one fruit. In walnuts likewise, the maximum vitamin concentration is found in the immature nut; very little is present in the mature fruit. In tomatoes the highest concentration is found in immature leaves and stem; mature leaves have more than the ripe fruit. Synthesis of riboflavin and thiamine evidently occurs in the leaves.

In peas there are significant differences in vitamin content of different varieties, and this varies with the size of the pea. Synthesis of thiamine and riboflavin has been shown to be correlated with light intensity (as was already known to be true of ascorbic acid). It was shown that some of the elements necessary in minute amounts for plant growth affect the amount of vitamins in turnips and tomatoes.

Work was continued on various phases of tissue culture. When sunflower tumor tissue is grafted to normal stem, induced tumors are formed at the point of union; the hypothesis was developed that these consist of both normal and tumor tissue, the invasion of the latter being likened to that of animal cancer. It was shown that a growth-promoting substance diffuses from the tumor tissue into the stem, but not into agar; it has not been identified. The initiation of roots was studied in excised asparagus tips grown in vitro. A material other than auxin is involved; it is formed in the light and stored in the seed. Excised oat coleoptiles were used in a study of growth. The rate of growth diminished with the age of the culture; also the sensitivity to inhibiting agents. It was concluded that an enzyme is involved which decreases in concentration with the age of the culture. Oat coleoptiles were used also in a study of water intake. This function was inhibited and stimulated by substances which affect carbohydrate metabolism in the same way; it was concluded that water intake depends on an internal source of energy, and is not to be explained entirely by physical processes.

A substance which inhibits growth of tomato plants and may cause their death was discovered in the desert plant *Encelia farinosa*. The search for antibiotics continued, including a search among soil fungi for inhibitors of viruses, which it is hoped may be of importance in the control of human diseases. —HAROLD WILLIAM RICKETT

BOWLING. Although the American Bowling Congress tourney, blue-ribbon classic of the alleys, drew a record entry of more than 27,000 contestants during its 80-day run in Detroit, Mich., the championships failed to produce a new mark, the general run of scores being the lowest in history.

The all-events prize of \$1,000 went to New Day of West Allis, Wis., with a total of 1,979, and the 721 turned in by Lincoln Protich of Akron, Ohio, was good enough for the singles award. James Towns and William Sweeney of Chicago, Ill., rolled 1,361 for the doubles title, while the Washington Shirts of Chicago bowled 3,007—lowest winning score in the last 26 years—to capture five-man team honors.

Virgie Hupfer of Burlington, Iowa, carried off all-events laurels at the Women's International Bowling Congress championships, the singles title being annexed by Shirlee Wernecke of Chicago. Margaret Cass of Alhambra, Calif., and Merle Mathews of Long Beach, Calif., took the doubles award and the Kathryn Creme Pact kegglers of Chicago were tops in the team competition.

—THOMAS V. HANEY

BOXING. Despite the production of 13 title bouts, boxing suffered a definite recession, with fewer licensed fighters and a general falling-off in attendance, a factor some promoters attributed to television. Four of the eight world championships changed hands and 1948 closed with three titles held by men from outside the United States for the first time in the modern history of the sport of boxing.

Big battle of the year was the return meeting between Joe Louis and Jersey Joe Walcott in the Yankee Stadium in June. Only the power of Joe Louis' punches, coming in the eleventh round to knock out the challenger, saved this bout from turning into the fiasco of their initial meeting. Following this twenty-fifth defense of his heavyweight crown, Louis announced that he would retire, but

later stated he would make "one more" defense if a suitable challenger could be found.

New champions were crowned in the light heavyweight, middleweight, featherweight, and flyweight divisions. Among the 175-pounders, Freddie Mills, considered only a mediocre English boxer, scored one of 1948's surprises by dethroning Gus Lesnevich, New Jerseyite, on a referee's decision in London in July. Earlier in the year, Lesnevich had registered a one-round knockout of Billy Fox, challenger.

The middleweight honors fell to a competent invader, one Marcel Cerdan from Casablanca. The Frenchman took the title from Tony Zale at Jersey City with a methodical attack that tired the champion so badly Zale was unable to go beyond the eleventh round. Zale previously had regained the title with a knockout of Rocky Graziano at Newark.

Sandy Saddler of New York figured in one of the major upsets by ending the six-year featherweight reign of Willie Pep with a stunning knockout in four rounds at Madison Square Garden in October. Among the flyweights, Rinty Monaghan of Belfast dethroned Jackie Paterson of Scotland in seven rounds at Belfast. Ike Williams of Trenton, N.J., was the busiest of all the champions, defending his lightweight crown three times, outpointing Enrique Bolanos and stopping Beau Jack and Jesse Flores. Williams was voted the Eddie Neil Memorial Award as the boxer of the year.

Sugar Robinson of New York, welterweight king, outpointed Bernard Docusen in Chicago in ten rounds, and Manuel Ortiz of California knocked out Memo Valero in the only defense of his bantamweight crown.

National Amateur Athletic Union champions were Frank Sodano, Philadelphia, 112; Bill Morgan, Newark, N.J., 118; Teddy Fittipaldo, Warren, Ohio, 126; Johnny Gonsalves, Oakland, Cal., 135; Eugene Linscott, Grand Rapids, Mich., 147; Ray Bryan, New York City, 160; Grant Butcher, San Francisco, 175; Coley Wallace, New York City, heavyweight; New York City, team.

National Collegiate Athletic Association title winners were Ernie Charboneau, Michigan State, flyweight; Steven Gremban, Wisconsin, bantamweight; Doug Ellwood, Louisiana State, featherweight; Charles Davey, Michigan State, lightweight; Don Dickinson, Wisconsin, welterweight; Herb Carlson, Idaho, middleweight; Carl Vernon, Wisconsin, light heavyweight; Vito Parisi, Wisconsin, heavyweight; Wisconsin, team. See OLYMPIC GAMES.

—THOMAS V. HANEY

BRAZIL. A federal republic in South America, and the largest of the Latin American countries. More than one-half of the vast surfaces is a plateau. The Amazon lowlands and a small part of the La Plata lowlands occupy more than two-fifths of the surface. Wet tropical climate prevails throughout the Amazon lowlands. Tropical and subtropical climates extend over most of the plateau region, while the southeast is temperate.

Area and Population. Area: 3,286,170 square miles. Population (1947 est.): 47,550,000, of whom about 60 percent is of European origin, 30 mixed, 8 Negro, and 2 Indian. The population is largely concentrated in the coastal regions. Chief cities: Rio de Janeiro (capital), 2,070,662 inhabitants in 1945; São Paulo, 1,750,000; Recife, 500,000; Salvador, and Porto Alegre.

Education and Religion. The Constitution of 1946 guarantees freedom of worship and prohibits the support of any religion. The predominant religion is Roman Catholicism. An intensive adult literacy

campaign is reducing the high illiteracy of the population (50 percent at last census). Latest statistics report 43,975 elementary schools with 3,340,952 pupils; 6,032 secondary schools with 494,563 students. Higher education is provided by four universities, seven polytechnic schools, and a number of professional schools.

Production. Brazil is a predominantly agricultural country, although it is gradually becoming industrialized. The total cultivated area covers about 17,387,000 acres, of which 4,133,000 are devoted to coffee. Estimates place the 1947-48 crop at 16,687,000 bags (of 60 kilos). Under the Marshall Plan Brazil plans to ship some 4 million bags of coffee to Europe. Other important crops (in metric tons) in 1947 were: rice, 2,771,000; wheat, 287,018 (1948 est., 500,000); sugar, 20,370,471 bags; cacao, 1,150,000 bags; tobacco, 101,771; cotton, 287,000. Brazil also produces beans, maize, mandiocca, tea, fruits, and oranges (30 million boxes in 1947).

Brazil ranks fourth among the cattle raising nations of the world with about 44 million head of cattle. Vegetable production is important to the country's economy and includes nuts, babasu, carnauba wax, caroa fiber, rubber (32,936 metric tons in 1947).

Mineral resources of the country include gold, gems, industrial diamonds, quartz crystals, ores, and coal of a poor quality. Production of pig iron in 1946 (metric tons) was: 369,254; steel, 343,650; sheet iron, 231,848; oil, 66,697 barrels; coal, 1,944,000 (1947). Manganese, mica, lead, zinc, nickel, chromium, and copper are also mined.

Foreign Trade. Total exports were valued at 21,179,413,000 cruzeiros in 1947; imports at 22,789,291,000 cruzeiros. The United States took 42 percent of the exports and supplied 61 percent of all imports. Trade figures for the first six months of 1948 place imports at 12,058,000,000 cruzeiros; exports at 6,141,000,000. Chief export items in 1947 were: coffee, 14,830,064 bags (of 60 kilos) of which 9,755,000 bags went to the United States; cacao, 130,460 metric tons valued at 651 million cruzeiros (1946); hides and skins, 75,228 metric tons valued at 1,002,697,000 cruzeiros. The most favorable foreign trade was with Spain, followed by Holland and Argentina; least favorable was with the United States and the Netherlands East Indies.

Transportation. Brazil had 21,866 miles of single track railway in operation in 1946; 160,500 miles of roads; 40 miles of navigable inland waterways. The merchant marine is one of the most important in Latin America, with a tonnage of over 500,000. There is an important system of national airlines and the country is connected with Europe, Africa, and the rest of America by the principal international companies.

Finance. Budget estimates (1949) place revenue at 17,451,150,000 cruzeiros; expenditures at 17,440,130,500 cruzeiros. The 1948 approved budget placed revenue at 14,597,320,000 cruzeiros; expenditure at 14,596,041,000. The outstanding balance of the consolidated internal debt of the Federal Government was 10,133,845,000 cruzeiros on Dec. 31, 1947. The external debt on Jan. 1, 1947, was as follows: £74,104,000; \$111,733,000; paper francs, 520,000,000 and gold francs, 229,186,000. Currency in circulation in December 1947 amounted to 17,240,000,000 cruzeiros and bank deposits to 26,980,000,000. Gold exchange holdings show a decline of 7 percent in comparison with the previous year. Brazil has established control over imports and exchange. The cost of living

index at the end of 1947 was at 284 (1937-100).

Government. Brazil is a federal union, divided into states, territories and a Federal District. Legislative power is vested in the Federal Senate and the Chamber of Deputies. Executive power is vested in a President, elected for a five-year term, and a Cabinet of Ministers that must report to the Congress on request. On Dec. 2, 1945, General Eurico Gaspar Dutra was elected President and took office Jan. 31, 1946.

Events, 1948. Brazilian politics during the year, as in Chile, were mostly concerned with legislative measures aimed at the control of Communist Party activities. Economic life of the country was seriously affected by the unfavorable balance of trade, and the purpose of the government was the development of industry and the increase of production.

Anti-Communist Legislation. President Dutra's campaign against the Communist Party came to a head on January 7, when the Chamber passed a law canceling the credentials of all Communists who had been elected to public office. The session of Congress at which this took place was a violent one, with sixty deputies besides the fourteen Communists voting against the measure. The non-Communists claimed that the law was unconstitutional and a violation of the democratic system.

The government maintained that Communists received instructions from a foreign power, while the Communists replied that Dutra's administration was following instructions from the United States. During the sessions, pistols were flourished, though none were actually fired. Following the enactment of the law, the government ordered *Tribuna*, the Communist paper, to be shut down. When the police carried out the order, they used submachine guns and tear gas, resulting in some being seriously injured. Many arrests were made.

Senator Luis Carlos Prestes, head of the Communist Party, strongly opposed these steps, and since he could not appear in Congress himself, had a manifesto read by Deputy Pedro Pomar, who in spite of being a Communist, had been elected by the Socialist-Progressive Party, and his credentials not canceled. Further criticism of the government policy was made by Senator Vilasboas and Deputy Mangabeira. In a speech, the Senator attacked the censorship of the press and the violation of freedom of assembly. Mangabeira stated that the labor unions had been deprived of their liberty and had become dependencies of the Department of Labor.

Economic Measures. In February, President Dutra signed a decree establishing strict control over imports and exports. This was followed by the presentation of a bill to Congress, by which foreign investments in oil companies may be increased. This bill allows foreigners and naturalized citizens to own 40 percent of the stock in companies organized by native Brazilians, for exploitation of oil and its derivatives. The government stressed the importance of safeguarding oil reserves in the country, and giving priority to the home market. The members of the Petroleum Board were of the opinion that the new legislation would represent an important step forward in the development of the petroleum industry, and that North American firms would understand the need for the change.

Financial Crisis and Planning. In May, the President sent a message to Congress asking for a five-year plan for national development concentrated in the fields of health, food, transport, and power. This plan, called the "Salte" from the initials of its four main fields (*saúde, alimentos, transporte* and

energia) is aimed at modernization of Brazil's economy. Finances for the plan were to come from normal government income, subscriptions and perhaps foreign loans. Approximate estimates of the cost were over \$860,000,000.

The administration was seriously concerned over the unfavorable balance of trade. In the middle of the year, trade figures for the first five months showed that the country was losing an average of nearly \$10,000,000 a month, and that the total unfavorable balance of trade for the period was \$48,700,000. The government took energetic steps to stop this condition by enacting a law on May 7, designed to prevent excessive Brazilian buying in foreign countries, especially the United States.

International Front. A significant event in the international relations of Brazil was the visit of Uruguay's President Luis Batlle Berres to President Dutra. The result of the visit was the signature of important agreements to foster commercial and cultural relations between the two countries. This was additional evidence that the states of La Plata are trying to counterbalance Argentina's influence with Brazilian support, just as Bolivia has done.

Brazil continued her traditional policy of friendship with the Holy See, and had the opportunity to prove it in connection with the religious schism caused by the foundation of an independent Catholic Church by Bishop Carlos Duarte. Dutra's administration prohibited the ceremonies of the new church, and Bishop Duarte appealed to the Supreme Court on the grounds of constitutional violation, as the Brazilian Constitution guarantees freedom of worship.

Brazil took active part in the Inter-American Conference of Commerce and Production at Chicago in September, and adopted the role of mediator and harmonizer of opposing inter-American views. The resolution approved concerning the economic role to be played by Latin America in connection with the Marshall Plan and ECA was essentially what had been offered by Brazilian delegates. The nation took an active part in the Ninth Inter-American Conference of American States held at Bogotá in April (see PAN AMERICAN ACTIVITIES), and became signatory of the Charter of the Americas.

—MIGUEL JORRIN

BRETHREN, Church of the. German pietists who under the leadership of Peter Becker settled in Germantown, Pa., in 1719. This, the oldest and largest of the four denominations of Dunkers, has 1,018 churches, 775 pastors, 2,410 ministers, and 184,584 members in the United States. The church maintains 7 educational institutions with 2,452 students and its Sunday and Bible schools were attended by 120,224 persons. Foreign missionaries serve 11,822 members of mission churches; there are also 68 relief workers in the field. Income from contributions for the fiscal year 1947 was \$3,171,443. Headquarters, 22 South State St., Elgin, Ill.

BRIDGES. No record-setting bridge has been constructed for about five years. The Sando bridge, which has the world record concrete arch span of 866 ft., was completed in Sweden in 1943. A record-breaking continuous truss span of 845 ft. was completed over the Mississippi River at Dubuque in 1943. Bridge construction is still impeded by shortages of material and skilled labor.

In the United States many State highway departments were forced to curtail their bridge construction programs due to a shortage of qualified engineers. Construction costs are almost twice those of the prewar years, resulting in the postponement of

many projects. The Ohio River bridge at Cairo, Illinois, was made toll free in November. The Kentucky State Highway Department now has only one toll bridge on its system.

A number of underpass and overpass structures have been built in connection with the construction of express highways in several of the larger cities—Houston and Fort Worth, Texas, for instance. The American Institute of Steel Construction awarded stainless steel plaques to the nine steel bridges selected as the most beautiful built in their respective classes during the years 1942 to 1947. This annual event had been interrupted by the war.

Structures now in the planning stage include a \$14 million suspension bridge across the Hudson River at Kingston Point with a main span of 1,700 ft. This is the same span as that of the famous Firth of Forth bridge in Scotland, which is the present longest span outside of North America. The Virginia State Highway Department is planning a \$20 million bridge across the Rappahannock River near Gregs Point and a double swing span over the York River between Yorktown and Gloucester Point.

In the city of Toledo, Ohio, there is being planned a \$5.2 million deck cantilever truss over the Maumee River. Washington and Oregon State Highway officials have authorized a survey to determine the feasibility of a toll bridge across the Columbia River at The Dalles. The North Carolina State Highway Department has awarded a contract for the construction of a 1,360 ft. bridge across the French Broad River at Asheville.

In Pennsylvania the Pennsylvania Turnpike Commission is planning a \$4 million bridge to carry the new eastern extension of the turnpike across the Susquehanna River. Preliminary studies are being made by the Indiana Toll Bridge Commission for a \$3 million structure across the Wabash River at Mt. Vernon. The Delaware River Joint Commission is studying the possibilities of the construction of a new bridge linking South Philadelphia with New Jersey. Construction of a floating bridge across Fletcher Bay west of Seattle was under consideration by the Washington State Toll Bridge Authority.

It is planned to strengthen and increase the traffic capacity of the Brooklyn suspension bridge. This famous structure had its 65th anniversary in May, 1948. The number of traffic lanes will be increased from 2 to 6, which will increase the traffic carrying capacity from 20,000 cars per day to 6,000 cars per hour.

It is also proposed to widen the suspension bridge across the Delaware River between Philadelphia and Camden, which will increase its traffic carrying capacity 37 percent. The estimate of cost, which also includes a mercury-vapor lighting system, is \$3 million. Further studies have been made throughout the year on the proposed \$155 million structure across the San Francisco Bay paralleling the existing bridge. The U.S. Navy has opposed the twin bridge idea and the final outcome cannot be determined at present. A public hearing will be held in January, 1949, concerning a bridge across the Narrows between Staten Island and Brooklyn, where a main suspension span of 4,621 ft. is proposed.

Progress has been made toward the completion of the new highway bridge over the Mississippi River at Memphis. The substructure is complete and about 25 percent of the steel in the main spans has been erected; contract price is \$4,605,885. The approach work is nearing completion. The sub-

structure for the new crossing of the Mississippi River in St. Louis, just above the Eads bridge, is under construction; the superstructure steel is now being fabricated. The Tennessee Valley Authority completed a 1,092 ft. three-span continuous deck truss across the Watauga River in Eastern Tennessee, with one pier almost 215 ft. high. The Mississippi State Highway Department has under construction a \$1,587,000 bridge over the Yazoo River above Vicksburg. Contracts have been awarded by the Delaware State Highway Commission for the construction of a \$40 million Delaware Memorial Bridge near Wilmington. The Harvard Street Bridge in Peoria, Illinois, is almost complete. Bids have been received for a \$2,500,000 bridge across the Kennebec River at Augusta, Maine. The State Street bascule bridge over the Chicago River in Chicago will be completed early in 1949.

The Charles W. Cullen Bridge over Indian River Inlet at Bethany Beach, Delaware, collapsed Feb. 10, 1948, causing the death of 3 persons. This structure was built in 1938 and the portion which collapsed failed under an unusual combination of ice, wind, and tide. Statistics maintained by the Ohio State Highway Department indicates that bridges are failing on their system at the rate of 2 a month due to various causes. This condition is also true in most all States. The bridges which fail are usually old structures of inadequate design.

Most State Highway Departments are faced with the dilemma of modernizing their bridges in the face of rising construction costs and a shortage of qualified engineers. Many of the structures on the State highway systems are substandard both in strength and roadway width.

Foreign Bridges. The Germans are building a record breaking girder span of 605 ft. at Cologne. The world's first aluminum-alloy double leaf bascule bridge was put in operation over the River Wear at Sunderland, England, in November. In Canada the first highway arch bridge in the world of aluminum-alloys was under construction over the Saguenay River at Arvida, Quebec. In England plans for the longest span bridge in Europe were approved. It will be over the mouth of the Severn River near Bristol with a 3,300 ft. main span, exceeded only by the 4,200 ft. Golden Gate Bridge and the 3,500 ft. George Washington Bridge.

In Iraq, the first railway bridge over the Tigris River is planned near Bagdad to give direct access from Basra to Kirkuk. Australia is catching up on bridge construction deferred due to the war. Three major structures will span tidal waters in New South Wales, one is planned over the Clyde River at Bateman's Bay, a double leaf bascule over Lake Macquaire, and one at Iron Cove in Sydney Harbor. A contract in the amount of \$1,777,500 was awarded for the construction of a suspension bridge across the Lempa River in San Salvador.

In Canada, a \$750,000 suspension bridge is proposed at Trail, B.C., over the Columbia River. A board of engineers has been appointed to study the feasibility of a crossing at the Strait of Canso between the Nova Scotia mainland and Cape Breton Island.

—JOHN M. HAYES

BRITISH COLUMBIA. The third largest and most westerly province of Canada. Area, 366,255 square miles (including 6,976 sq. mi. of fresh water). Population (1941 census): 817,861; (1948 estimate) 1,082,000. Leading religious denominations (1941) were: Anglican, 245,531; United Church, 200,817; Roman Catholic, 113,282; and Presbyterian, 94,300. In 1946 there were 22,609 live

births, 10,137 deaths, and 11,762 marriages. Education (1945-46): 197,141 students were enrolled in schools and colleges. Chief cities (with 1941 census figures): Victoria (the capital) 44,068 inhabitants, Vancouver 273,353, New Westminster 21,967, Trail 9,392, North Vancouver 8,914, Prince Rupert 6,714, Nanaimo 6,635.

Production. The gross value of agricultural production for 1947 was \$99,550,000, of which the value of field crops (from 627,000 acres) in 1947 was \$30,488,000. Chief field crops (1947): wheat 2,966,000 bu. (\$4,241,000), oats 3,915,000 bu. (\$2,936,000), potatoes 2,138,000 cwt. (\$5,944,000). Livestock (June 1, 1947): 358,700 cattle (\$27,935,000), 53,300 horses (\$5,237,000), 76,600 swine (\$1,893,000), 105,900 sheep (\$1,309,000), 4,910,400 poultry (\$5,753,000). There were 313 fur farms in 1946 with fur animals estimated at \$1,184,776. Value of fur pelt production (1946-47) was \$2,047,135. The marketed value of fisheries amounted to \$43,817,147, of which the salmon pack, which totaled 1,348,347 cases of 48 lb., accounted for \$17,532,462 or 40 percent of the total.

There were 4,436,000 lb. of creamery butter produced in 1947 valued at \$2,387,000. The estimated total farm value of poultry meat and eggs was \$16,640,000 in 1947. Fruit production for 1947 was valued at \$23,790,000. British Columbia, which had 858 sawmills in operation, ranked first in the total Canadian production of sawn lumber and contributed 42 percent of the total for 1946; Douglas fir, which is sawn almost entirely in British Columbia, was valued at \$48,637,005. Mineral production (1947) included gold valued at \$8,715,385; coal, \$8,630,285; others, \$99,426,951.

In 1946 there were 2,731 manufacturing establishments with a combined output of \$644,527,898; employment was furnished to 75,484 persons who were paid \$137,506,645 in salaries and wages; the cost of materials used amounted to \$335,708,533. The sawmilling industry occupied first place in 1946, followed by fish curing and packing, pulp and paper, shipbuilding, slaughtering and meat-packing.

Finance. Budget estimates for 1947-48 placed revenue at \$58,888,930; expenditure, \$58,781,335. Preliminary budget estimates for 1948-49 placed revenue at \$77,616,310 and expenditure at \$77,442,369.

Government. The executive power is vested in a lieutenant governor who is advised by a ministry of the Legislative Assembly, the latter consisting of 48 members elected for a five-year term by adult suffrage. Six senators (appointed for life) and 16 elected commoners represent British Columbia in the Dominion Parliament at Ottawa. Lieutenant Governor, Col. Charles A. Banks (app. Oct. 1, 1946); Premier, Byron Ingemar Johnson (Liberal; app. Dec. 29, 1947). See CANADA.

BRITISH COMMONWEALTH AND EMPIRE. The component parts of the British Commonwealth and Empire, as of Dec. 31, 1948, are listed in the accompanying table (see EIRE under *Events*, 1948):

I SOVEREIGN STATES AND THEIR DEPENDENCIES

Country	Land area sq. miles	Population estimates
United Kingdom of Great Britain and Northern Ireland.....	94,291	50,015,000
(Dependencies listed in Parts II, III, and IV)		
Canada.....	3,466,882	12,582,000
Australia (Commonwealth of)....	2,977,600	7,580,800
Australian Antarctic Territory...		
Norfolk Island—Colony.....	14	800

I SOVEREIGN STATES AND THEIR DEPENDENCIES

Country	Land area sq. miles	Population estimates
Papua—Colony.....	90,540	300,000
New Guinea—Trusteeship.....	91,000	688,400
Nauru—Trusteeship with New Zealand and the United Kingdom.....	8	2,700
New Zealand.....	103,935	1,802,640
Ross Dependency.....		
Tokelau (Union) Island—U.K. Colony administered by N.Z.....	4	1,380
Western Samoa—Trusteeship.....	1,150	66,450
South Africa (Union of).....	472,550	11,391,950
South-West Africa—Mandate.....	317,725	341,000
Eire.....	26,959	2,953,450
India..... (Approx)	628,808	231,400,000*
Pakistan..... (Approx)	236,638	69,000,000
Ceylon.....	25,000	6,660,000
Southern Rhodesia—A self-governing Colony whose external affairs are controlled by the U.K.....	150,333	1,764,000

* Excluding Indian States.

II TERRITORIES ADMINISTERED THROUGH THE COMMONWEALTH RELATIONS OFFICE

Country	Form of government	Land area sq. miles	Population estimates
Newfoundland.....		42,000	315,570
Labrador.....	Dependency of Newfoundland	112,000	5,530
High Commission Territories			
Basutoland.....	Colony	11,716	556,390
Bethuanaland.....	Protectorate	275,000	265,760
Swaziland.....	Protectorate	6,704	185,210

^b Newfoundland formerly had "Dominion Status," which was suspended at her own request in 1933. Government thereafter was by a Commission. By referendum in July, 1948, Newfoundland (with Labrador) voted to become a Province of Canada.

III BRITISH DEPENDENT TERRITORIES ADMINISTERED THROUGH THE COLONIAL OFFICE

Region and Territory	Form of government	Land area sq. miles	Population estimates
East Africa			
Kenya.....	Colony ^c and Protectorate	219,730	4,053,280
Tanganyika.....	Trusteeship	342,706	5,499,680
Uganda.....	Protectorate	80,292	3,997,690
Somaliland (British)	Protectorate	68,000	700,000
Zanzibar and Pemba	Protectorate	1,020	250,000

British Solomon Islands.....	Protectorate	11,500	94,970
Fiji.....	Colony	7,083	259,640
Gilbert and Ellice Islands.....	Colony	333	35,300
Tonga.....	Protectorate	250	40,670
Pitcairn Island.....	Colony	2	126

* Adjoining areas administered by the same Government.

IV CONDOMINIUMS

Territory	Joint administrators	Land area sq. miles	Population estimates
Anglo-Egyptian Sudan ^a ..	Britain and Egypt	967,500	6,590,000
New Hebrides.....	Britain and France	5,700	48,900
Canton and Enderbury..	Britain and U.S.A.		

^a Administered through the British Foreign Office.

BRITISH GUIANA. A British colony on the northeast coast of South America. Area: 83,000 square miles. Population (1946 census): 375,819, including 168,453 East Indians. Chief towns: Georgetown (capital) 77,585 inhabitants (1946), New Amsterdam, Springlands, Morawhanna, and Bartica. Education (1946): 63,046 students enrolled in 248 government-aided schools.

Production. Agriculture, mining, and forestry are the chief industries. With 204,382 acres under cultivation in 1946, sugar yielded 171,051 tons from 60,313 acres; rice 64,472 tons from 85,623 acres. Other important products are coconuts, coffee, cacao, rubber, balata, and citrus fruits. A total of 2,857,568 gallons of rum were produced in 1946. British Guiana is rich in gold; 24,741 oz., valued at £206,175, were produced in 1946. Diamonds are also mined, as is manganese ore, mica, and large quantities of bauxite. Livestock (1946 est.): 189,437 cattle, 2,518 horses, 48,044 sheep, 17,408 goats, and 34,601 swine.

Foreign Trade. Imports (1947): \$40,817,023; exports \$34,442,161. Chief imports were machinery, cotton manufactures, flour, oils, and foodstuffs. Chief suppliers were the United Kingdom, Canada, and the United States. Chief exports were sugar (185,109 tons valued at \$19,075,646); bauxite (1,290,367 tons valued at \$6,729,112); rice (19,625 tons valued at \$2,295,220); rum (\$1,978,641); and timber (\$1,017,457).

Government. A balanced budget estimate for 1948 provides for an expenditure of \$16,510,647. The 1947 estimates placed revenue at £2,976,192; ex-

penditure at £2,965,273. The public debt on Dec. 31, 1946, amounted to £869,898. Executive and administrative functions are exercised by the governor and executive council. A legislative council is composed of the governor and 3 other official members, 7 nominated unofficial, and 14 elected members. Governor: Sir Charles Campbell Woolley (since 1947).

BRITISH HONDURAS. A British crown colony in Central America. Area: 8,867 square miles, including Albion (26 sq. mi.) and other islands. Chief towns: Belize (capital) 21,837 inhabitants (1946), Corozal, Benque Viejo, Stann Creek, and Orange Walk. Education: Both elementary and secondary schools are denominational and government-aided. In 1946 the 115 schools had a total of 12,153 students.

Production and Trade. Forestry, the main industry, accounts for about 80 percent of the exports by value. A total of 488,384 acres of crown lands are forest reserves. Principal export crops, in 1946, were: grapefruit juice, 4,085,711 lb.; coconuts, 2,632,239 nuts; bananas, 84,798 bunches. Foreign Trade (1946): Imports were valued at \$6,782,516, and exports at \$5,222,028; of this amount mahogany accounted for \$1,201,056, and chicle \$1,014,161. The United States supplied 51.7 percent of the imports and took 45.7 percent of all exports.

Government. Budget (1947): revenue, \$3,163,248; expenditure, \$2,909,985. Public debt (Jan. 1, 1947) totaled \$2,105,781. Administration of the colony rests with the governor, assisted by an Executive Council of 3 official and 4 unofficial nominated members. A Legislative Council has 2 official and 10 unofficial members, 4 nominated and 6 elected. On Jan. 31, 1948, the governor appointed a Constitutional Committee. Governor: Sir Edward G. Hawkesworth (resigned June, 1948). Governor designate: R. H. Garvey (to assume office early in 1949).

BRITISH NORTH BORNEO. A British crown colony in northern Borneo. Area: 29,540 square miles. Population (1946): 312,374. Chief town: Sandakan (pop. 13,723). In 1946 the island of Labuan (35 sq. mi.; pop. 9,253; capital, Victoria) was reunited with British North Borneo. Education (1947): 60 government and 35 missionary schools with about 7,000 pupils.

The principal products are rubber, timber, copra, coconuts, dried and salt fish, tobacco, hemp, and cereals. Valuable minerals exist, but have not been commercially exploited. Trade (July 15-Dec. 31, 1946): imports \$8,155,886; exports \$4,009,356. Finance (1947 est.): revenue \$5,055,762; expenditure \$4,893,455. (Straits dollar [\$] = U.S.\$0.475, 1946-48.) The colony is administered by a governor assisted by an Advisory Council of 20 members and an Executive Committee of 10 members. Governor: E. F. Twining.

BRITISH SOLOMON ISLANDS. The British Solomon Islands Protectorate consists of four groups of islands in the Pacific, eastward of New Guinea. The largest is Guadalcanal (2,500 sq. mi.); the most populous Malaita (est. pop. 40,000). Total land area is estimated at 12,400 square miles, and the area within the bounds of the protectorate at 375,000 nautical miles. Population (1947 est.): 94,965, of whom 94,738 were natives (Polynesians and Melanesians). Capital, Tulagi.

The chief products are copra, timber, rubber, gold, and fruits. Finance (1945-46): revenue and expenditure balanced at £A505,292 (£A equals U.S.\$3.20). A resident commissioner responsible to

the High Commissioner for the Western Pacific administers the islands with the assistance of an Advisory Council. Resident Commissioner, O. C. Noel, with headquarters on Guadalcanal.

BRITISH SOMALILAND. A British protectorate on the Gulf of Aden, near the eastern tip of the African continent. Area: 68,000 square miles. The nomadic population is estimated at 700,000 and consists of Somali tribes who are Moslems. Capital, Berbera (pop. 30,000). Education is provided by 5 government and several Koran schools. The economy is pastoral, with camels, sheep, and goats as sources of income. Agriculture is limited; there is millet growing in the western part. Trade (1946): imports £611,134 (excluding millet); exports £354,977. Meat, hides, and ghee are chief exports; cotton goods and foodstuffs are the chief imports. Finance (1946-47): revenue £451,081; expenditure £576,630. The protectorate, under military administration since 1941, reverted to Colonial Office control on Nov. 15, 1948. Civil Governor: Gerald Reece (formerly Military Governor).

BRITISH WEST AFRICA. A region comprising the following British territories: GAMBIA, GOLD COAST, NIGERIA and SIERRA LEONE, each of which is a colony and protectorate.

BRITISH WEST INDIES. The colonial possessions of Great Britain in the West Indies, comprising three main groups of islands: (1) Bahamas; (2) Jamaica and adjacent islands; and (3) other islands scattered throughout the Lesser Antilles (Leeward Islands, Windward Islands, Barbados, Trinidad, and Tobago). Bermuda, British Guiana, and British Honduras are excluded. Total area: 12,747 square miles. Population (1946 est.): 2,504,911. There is no unified governmental system; the island groups listed above constitute separate colonies, each with a governor appointed by the Crown and with varying degrees of popular representation in their legislative bodies.

The establishment of a West Indies Customs Union Commission has been announced. The Commission will assist the respective governments in the preparation of a common tariff, coordination of administration, and the training of staff.

On Nov. 3, 1948, a migration plan for the Caribbean was made public. The proposed plan, contained in the report of an investigating commission, calls for the transfer of 100,000 surplus population to British Guiana and British Honduras within the next ten years. (See CARIBBEAN COMMISSION and the articles on the various colonies listed in the first paragraph of this article.)

BROOKINGS INSTITUTION. A non-profit corporation devoted to research and training in economics and government. The income of the Institution is derived from grants from foundations, its own endowment, and the sale of publications. The publications resulting from its 1948 research program included: *The United States and Foreign Investment Problems*, by Cleona Lewis; *The Issue of Compulsory Health Insurance*, by Lewis Meriam and George W. Bachman; *Governmental Costs and Tax Levels*, by Lewis H. Kimmel and Mildred Maroney; *Union-Management Cooperation*, by Kurt Braun; and *Major Problems of United States Foreign Policy* (annual edition), by Leo Pasvolksy and others.

Officers for 1948 to 1949: Chairman, Robert P. Bass; Vice Chairman, Dean G. Acheson; President, Harold G. Moulton; Vice President, Lewis

Meriam; Treasurer, Mildred Maroney; Secretary, Elizabeth H. Wilson. Headquarters: 722 Jackson Place, Washington 6, D.C.

BROOKLYN INSTITUTE OF ARTS AND SCIENCES. One of America's oldest and largest institutions for informal education, located in Brooklyn 17, New York. Its public activities are conducted at four centers: The Department of Education at the Academy of Music, the Central Museum, the Children's Museum, and the Botanic Garden. Founded in 1824, the Institute was incorporated in its present form in 1890. Total membership is about 5,700 and is open to everyone.

The Department of Education at the Academy of Music presents an adult education program annually of concerts, lectures, forums in every major field of the arts and sciences. Attendance at these events for the season 1947-48 was about 210,000.

The Institute's museums possess collections in arts, ethnology, and natural science. During 1941, the art and photography classes formerly conducted at the Department of Education at the Academy of Music were transferred to the Brooklyn Museum to form the new Art School of the Brooklyn Museum. Attendance at Central Museum was 430,000, at Children's Museum 170,000 for the fiscal year 1947-48.

The Institute's Botanic Garden comprises more than 50 acres and plant houses containing tropical and sub-tropical species. Botanic Garden attendance for the fiscal year 1947-48 totaled 1,280,000.

Officers: President, Brooklyn Institute, Adrian Van Sinderen; Director, Department of Education, Julius Bloom; Director, Brooklyn Museum, Charles Nagel, Jr.; Director, Botanic Garden, Dr. George S. Avery, Jr.

BRUNEI. A state on the northwest coast of Borneo, under the protection of Great Britain. Area, 2,226 square miles. Population (1947 est.), 48,034. Capital, Brunei (12,000). Important products include crude oil, cutch, rubber, jelutong, and sago. Trade (July-December, 1946): imports £375,000; exports £104,000. Finance (1947 est.): revenue £363,214; expenditure £255,046. The general administration of the state is in the hands of a British Resident, and the supreme authority is vested in the Sultan in Council, which includes the Resident, with the Sultan as President. Sultan: Ahmed Tajudin Akhazul Khairi Wad-din.

BRUSSELS, Treaty of. A treaty signed in Brussels on Mar. 17, 1948—by Great Britain, France, Netherlands, Belgium, and Luxembourg—to form a Western Union. Under the terms of this treaty the five Powers pledged themselves to the closest cooperation in economic matters and promised to give immediate military assistance if any one of them "should be the object of an armed attack in Europe." The five Powers also agreed to set up a permanent consultative council to meet in London.

During June 1948, the Senate adopted, by 64 votes to 4, a resolution presented by Senator Vandenberg urging the association of the United States with regional defense agreements. The Vandenberg resolution made it possible for the United States State Department to begin conversations in July with Canada and The Brussels Powers for an eventual North Atlantic Pact linking western Europe and North America and to send military representatives as "observers" to the meetings of the Defense Committee of the Brussels Powers.

BUCKWHEAT. The 1948 buckwheat crop of the United States was estimated by the Crop Reporting

Board of the U.S. Dept. of Agriculture to total 6,324,000 bushels. This was harvested from a total of 337,000 acres. Yields (in bushels) of the principal producing States were: Pennsylvania 2,332,000, New York 1,767,000, Minnesota 435,000, Michigan 351,000, Ohio 304,000.

BUDDHIST CHURCHES OF AMERICA. Organized in 1914, this body was incorporated under this name in 1942, and represents Buddhism in the United States. The Buddhist faith is based on the anatman doctrine, the idea of karma and nirvana, and the blissful mental state of absolute freedom from evil. Total membership about 70,000. Headquarters, 1881 Pine Street, San Francisco 9, Calif.

BUDGET, Bureau of the. A division of the Executive Office of the President of the United States, transferred from the Department of the Treasury in 1939, which assists the President in the preparation of the Budget and the fiscal program of the Government. Its chief branches pertain to Legislative Reference, Estimates, Administrative Management, Statistical Standards, and Fiscal Analysis. The Bureau has the authority to assemble, correlate, reduce, or increase the estimates of the Government. Under the Government Control Act of Dec. 6, 1945, similar authority was given the Bureau with respect to the preparation and review of budgets of wholly-owned Government corporations. Director: Frank Pace, Jr.

BUHL FOUNDATION. A foundation established in 1928 by Henry Buhl, Jr. Capital assets were \$12,495,664 in 1948, and expenditures for the year totaled \$276,872. The Foundation's programs center in the Pittsburgh area, where it has sought to provide more adequate factual bases for social work and regional economic effort, to promote research in public health and the natural sciences, and to develop the community's resources in higher education. Another objective is the advancement of housing standards for American cities, as exemplified in large-scale, planned communities administered on a long-term investment basis. In demonstration of this last-named objective, the Foundation operates Chatham Village in Pittsburgh, built in 1932 at a cost of \$1,700,000. The Buhl Planetarium and Institute of Popular Science was built at a cost of \$1,100,000 in 1939 as a gift to the people of Western Pennsylvania. Director: Charles F. Lewis. Offices: Farmers Bank Building, Pittsburgh 22, Pa.

BULGARIA. A Balkan republic in southeastern Europe. Area: 42,808 square miles (including southern Dobruja). Population (Dec. 31, 1946 est.): 7,022,206. Of these 680,000 were Turks, 140,000 Gypsies, 50,000 Jews, and 24,000 Armenians. Chief cities (1946 pop.): Sofia (capital) 436,936; Plovdiv 122,875; Varna 77,636; Rousse, 50,754; Burgas 43,075; Pleven 37,092. Vital statistics: crude rate per 1,000 (1st quarter, 1947): living births 27.9; deaths 17.7; infant mortality 124 (deaths under one year); marriages 12.5 (1936).

Education and Religion. In September, 1947, there were 544 kindergartens, 5,775 grade schools, and 258 gymnasiums, 33 evening gymnasiums, and 133 similar high schools for adults; Sofia State University has been expanded, and three provincial universities have been opened, raising the enrollment in higher education from 13,789 in 1944 to 50,000 in 1947. The predominant religion is that of the Greek Orthodox Church.

Production. Agriculture is the principal occupation, nearly 6 million of the population being peasants. Of the total arable area (4,522,000 hectares), some 2,563,000 hectares (hectare—2.47 acres) were sown with cereals (wheat, maize, barley, rye, oats, and rice). In 1947, Bulgaria's continuous economic recovery, even though hampered by a third consecutive drought, can be gauged from the following production figures:

	1947	1946	1945
General index (1939 = 100) . . .	133.2	115.2	112.0
Capital goods "	131.9	115.4	88.1
Consumer goods "	143.7	118.2	118.5
Food stuffs "	80.7	99.8	95.5
Cotton (tons)	1,061	1,013	707
Iron and steel "	1,843	1,665	673
Metals "	217	84	103
Coal "	83,305	83,603	78,428
Electric energy (1000 kw)	14,579	13,641	11,901

Industrial crops grown include tobacco (37,965 metric tons in 1946), sugar beet, sunflower, aniseed, peanuts, and peppermint. Fruit grows in abundance. Livestock (1945): 7,054,348 sheep, 1,367,928 cattle, 714,567 goats, 471,576 horses, 838,000 pigs, and 6,615,000 poultry. Mineral output is small except for coal (lignite), the output of which amounted to 3,924,000 metric tons (1947).

In December, 1947, industry and mines were nationalized. Under the Five-Year Plan, Bulgaria's agriculture is to be collectivized; 150 new machine-tractor stations are to be set up, and cooperative farms developed. At present only 4 percent of the arable land is owned by cooperative farms; by 1953 about 30 percent of the land will be so owned. In 1947 Bulgaria had 675 cooperative villages, with 65,000 members and 210,000 hectares of land.

Foreign Trade. In 1947 Bulgaria sizably increased its trade, both in volume (701,397 tons as against 617,584 in 1946) and in value (45,948 million leva as against 32,456). Total imports rose by 22.3 percent (21.4 as against 17,514 million leva), while exports rose by 64.2 percent (24.5 as against 14,942 million leva). Commercial relations with the U.S.S.R., Czechoslovakia, Poland, and Yugoslavia were strengthened; they supplied Bulgaria with the bulk of imports (84.6 percent) and exports (83.8 percent). Trade with other Central European states also picked up as well as with Holland, Sweden, and Italy; Egypt became an important export market. The main import categories—metals, machines, and textiles—showed increases; cereal imports, due to the third consecutive drought, were relatively heavy. Tobacco alone covered more than four-fifths of exports; other exports items were: lamb hides, lead ore concentrates, coal, and tomato pulp.

Finance. The principal sources of revenue are direct and indirect taxes. The 1946 budget placed revenue at 77,007.9 million leva; expenditure at 80,883.6 million leva. The public debt on Mar. 31, 1946 totaled 112,235,683,310 leva.

Transportation. In 1941 there were 15,000 miles of highways, 4,500 passenger automobiles, 1,000 buses, and 3,000 trucks. Government-owned railroad lines extended 2,350 miles. In 1939 there were 49 miles of electric railways. All railways connect Sofia with the general European system.

Government. As a result of a referendum of Sept. 8, 1946, the monarchy was abolished. The Bulgarian People's Republic was proclaimed by the National Assembly on Sept. 15, 1946. A new Constitution was adopted by the National Assembly on Dec. 4, 1947. The Assembly is empowered to elect a Presidium of a President, two deputy Presi-

dents, and 15 members. President, Vasil Kolorov (Communist); Premier, Georgi Dimitrov (Communist). On Jan. 23, 1948, new insignia for the People's Republic were approved: a circle, in its centre a lion supported on each side by ears of corn, surrounded by a six-pointed star, with the inscription "9th of September 1944" below.

Events, 1948. Under Premier Dimitrov, Bulgaria remained a faithful executor and proponent of Pan-Soviet and Pan-Slavic policies of the U.S.S.R. On Dec. 9, 1947, the new Constitution, modelled after that of Soviet Russia, came into force. On Feb. 4, 1948, the Fatherland Front, headed by Dimitrov and the Communists but including representatives of four other parties, became the sole party organization in the state.

An illuminating illustration of the workings of Bulgaria's "People's Democracy" was furnished on January 12, when Dimitrov presented his budget to the National Assembly; when Social Democratic deputies had the temerity to criticize it the Premier gave them the alternative of voting for it, or being hanged—backing his threat by reminding his critics of the fate of the executed Nikola Petkov.

In February, the National Assembly passed a bill for the expropriation of all urban real estate holdings; the owners to be left one house, or apartment per family, and professional premises if any; all hotels, warehouses, and villas were to be expropriated. On June 7, the decree for the nationalization of mines and natural resources was promulgated; all concessions for prospecting and ore exploitation were annulled without compensation.

During the summer holidays all Bulgarian teachers had to attend special courses on Marxist-Leninist political education, a diploma from one of these schools being required for their continued work as teachers. In September all foreign and congregational schools were closed and their teachers received orders to leave Bulgaria immediately.

The U.S.S.R. left no stone unturned to safeguard Bulgaria's adherence to her fold, especially since the defection of Tito from the Cominform left the Balkan flank exposed. Nevertheless, Dimitrov's original ambition to head a Balkan Slav bloc was halted by the Kremlin in February, when it flatly refused to endorse "Dimitrov's attitude" and stated that the Balkan's sole need was the organization of "domestic popular democratic forces" a foreseen by the nine communist parties of the Cominform. Dimitrov, an old-line Communist accustomed to twists and turns of Soviet policy hastily scrambled back into line and reemphasized that the idea was "premature."

After officially withdrawing the Red Army from Bulgaria, Moscow left some 50,000 troops behind as civilians, to form cadres for an expansion of the Bulgarian army. On Mar. 18, 1948 Moscow concluded a 20-year Treaty of Friendship, Cooperation, and Mutual Military Defense with Sofia (complementing Moscow's pacts with Rumania and Hungary); the network of the "Pan-Slav alliances was strengthened by the Bulgaro-Czechoslovak Alliance of April 23.

After Tito's defection from the Cominform Dimitrov started attacking Tito's attitude and the old Macedonian problem reappeared, Sofia claiming that Bulgarian nationals in Yugoslav Macedonia were being "persecuted." But in April, Bulgaria allowed an observation group from the UN Special Commission on the Balkans to enter the country—the first time a Commission had been allowed to cross a border of any of Greece's northern neighbors.

In September the Commission again reported that Bulgaria (as well as Albania and Yugoslavia) were helping the guerrillas fighting in Greece. Several protests by the United States were fruitless; thus on November 22, the State Department accused the regime of having smashed its last parliamentary opposition by jailing nine Independent Socialist deputies after secret trials on trumped-up charges: "In thus terminating the final pretense of Bulgarian democracy by eliminating these remaining elected representatives of the opposition, the Bulgarian regime has again violated its covenanted obligation under Article 2 of the Treaty of Peace to assure its citizens basic fundamental freedoms." —JOSEPH S. ROUCEK

BURMA, Union of. A country in southeastern Asia, formerly a British possession, but from Jan. 4, 1948, an independent state outside the British Commonwealth. The Union consists of the territories formerly governed by Great Britain and the Shan, Kachin, and Karenni states.

Area and Population. Area: 261,757 square miles, of which Burma proper covers 196,161 square miles. Population in 1941: 16,823,798, of whom the majority were Burmans. Chief indigenous non-Burmese, 1941: Karens, 1,200,000; Shans, 1,000,000; Chins, 300,000; Kachins, 150,000. Chief non-indigenous groups: Indians, 887,000; Chinese, 150,000. Chief cities in 1931: Rangoon (capital), 400,415; Mandalay, 147,932.

Education and Religion. After the reoccupation of the country in 1945 a state-controlled system of education was introduced. The system includes primary and secondary schools (628,092 students in 1946) with the University of Rangoon at the apex (2,000 enrollment in 1947). Buddhist monasteries in the villages give elementary instruction. About 84 percent of the people are Buddhists, and nearly all of the rest belong to Animist, Mohammedan, Hindu or Christian sects.

Production and Trade. The economy, which is chiefly agricultural, has long been dominated by rice, both in production and export. Before World War II Burma grew about 6,000,000 tons of rice annually, exporting it chiefly to India and Ceylon. In 1946-1947 rice production was restored to 5,500,000 tons, but 1947-1948 estimates were lower. Other important crops (1945-1946) were: sesamum (32,059 tons), groundnuts (76,385 tons), maize (12,454 tons), and cotton (3,659 tons). Exports of teak, of which Burma is the world's largest producer, were 68,179 cubic tons in the 20 months from July, 1946, through February, 1948. Livestock (1946): cattle, 3,025,643; buffaloes, 602,782; goats, 144,089; pigs, 258,154.

Imports of cotton were 112,710,000 yards in 1947. The United Kingdom and India were the principal suppliers. Burma's merchandise imports have ordinarily been less than half the value of exports, with invisible imports, largely capital equipment for non-Burmans, making up the balance. It is expected that the new government will try to increase imports and production of manufactured goods for the indigenous population. Plans for the establishment of government-controlled chemical, cotton, and sugar-refining plants have been made.

Transportation. Burma had 1,449 miles of railway in 1947. Before invasion there were 3,760 miles of hard-surfaced roads, but by 1948 only the road from Rangoon to Mandalay had been fully restored. The Irrawaddy River is navigable for 900 miles from the sea, and its tributary, the Chindwin, is navigable for 300 miles.

Finance. The link between Indian and Burmese currency was broken on Apr. 1, 1947, and the Burmese Currency Board took over the management of Burmese currency. By agreement with the British Government Burma was permitted to draw on the central reserve of the sterling area for £2,000,000 to meet its needs of hard currencies in the second half of 1948.

Government. According to the Constitution passed on Sept. 24, 1947, and in full effect on Jan. 4, 1948, legislative power is vested in a Parliament consisting of the Chamber of Deputies of about 250 members and the Chamber of Nationalities of 125 members, 53 of whom represent the Union proper and the remainder the states and tribal areas. The President of the Union is elected for a five-year term by both chambers in joint session. He has no right of veto. The Constitution regulates the position of the Shan, Kachin, Karenni and Karen states and the Chin people, by providing that each shall be represented in the Cabinet by a minister chosen from its own members. President on Jan. 4, 1948, the Sawbwa of Yawngghwe; Prime Minister, Thakin Nu; Foreign Minister, U Tin Tut. U Kyaw Nyein, Minister for Home Affairs, became Foreign Minister in September, 1948. See under *Events*, 1948.

Events, 1948. The year which began auspiciously with the inauguration of the Republic of Burma on Jan. 4, 1948, soon developed into a period of revolt and wide-spread distress among the Burmese people. As the last British Governor, Sir Hubert Rance, gave up his tokens of power to the Sawbwa of Yawngghwe, the new President, the future seemed bright. The Cabinet of Thakin Nu was working hard to restore order, to bring back the rice crop to its former volume and improve the standard of living. The Government appeared to enjoy the support of the majority of the people.

In April the promotion of strikes by Communists under the leadership of Than Tun was an omen of worse to come. The Government, itself committed to government ownership and the expropriation of the foreigner, resorted to mass arrests when political strikes were promoted by more extreme factions. On May 26 Prime Minister Thakin Nu announced that he would resign on July 20, because of a religious vow. The Prime Minister ascribed the increasing dissension in his party, the Anti-Fascist People's Freedom League, to three aspects of the struggle for material and political power, and later issued a statement describing a United Party of the Left which he wished to found.

The Government's chief antagonists were the large number of Communists, the "White Band" People's Volunteer Organization which joined the Communists when the Government refused to come to terms with the latter, and the Karen anti-leftist minority who thought this the time to work towards independence. The conspicuous Communist groups were the Trotskyist "Red Flags" and the Stalinist "White Flags."

As Thakin Nu's campaign progressed he emphasized the intention of the United Left Party to throw off the yoke of capitalism and to follow Russian ideology. It was at this time that a considerable number of the People's Volunteer Organization withdrew from the Anti-Fascist People's Freedom League. Unfortunately for the League, its cooperating Socialist Party was under a cloud because its chairman, U Ko Ko Gyi, as Minister of Commerce was nominally responsible for questionable customs activities at Rangoon.

U Ko Ko Gyi and the Minister of Defense, Bo Let Ya, sent in their resignations. On July 15 the

Cabinet resigned as a whole. Thakin Nu then accepted the President's invitation to form a caretaker government until Parliament could meet to hold elections. There were indications that the Government now planned to act more vigorously in putting down the Communist insurrection, which did not then appear to have reached dangerous dimensions, although it was already interfering with rice production.

Spread of the Revolts. By the middle of August a large area of central Burma was under the domination of Than Tun's Communists, apparently with the support of a considerable section of the People's Volunteer Party. Units of the regular army had mutinied and brigandage was spreading. Rangoon itself was under attack and the rice port of Bassein was closed. The power of the central government was breaking down.

The Karens, who differ from the Burmans in language, traditions and temperament, seized this opportunity to effect an anti-leftist revolt. The Karens had long resented the favors granted by the British authorities to the Anti-Fascist People's Freedom League representatives, many of whom had collaborated with the Japanese while the Karens were resisting them.

Early in September, a small Karen force occupied two towns in the area envisaged by the Karen National Union as that destined to be a separate Karen state and set up a provisional Karen administration which for a time issued its orders from Moulmein, Burma's third city. This was done without fighting and without molesting the non-Karen population.

Thakin Nu was reelected Prime Minister of Burma on September 14. At the same time the Cabinet was enlarged and all existing ministers were reelected. On September 17 U Tin Tut, who had resigned as Foreign Minister to become Inspector General of the Burmese Auxiliary Force and was shortly to become Burmese Ambassador to Britain, was fatally injured by a bomb placed in his car. He died the next day. This assassination recalled the killing of *de facto* premier U Aung San and 6 other ministers July, 1947.

A state of emergency was declared, and the Government's position continued to deteriorate. By the end of September the Communists had cut the railway line between Rangoon and Mandalay. The Foreign Minister who succeeded U Tin Tut, former Minister for Home Affairs U Kyaw Nyein, arrived in London late in October, ostensibly for the purpose of seeking arms and planes to aid the Government in its campaign. It was recognized in London that the sending of troops to Burma, now an independent country outside the British Commonwealth, would be an impossibility.

—ALZADA COMSTOCK

BUSINESS REVIEW. In 1948 business activity on the whole surpassed even the record peacetime level reached in the previous year. While some of the consumer goods industries began to feel the effects of somewhat reduced demand, a number of the principal heavy industries reached new postwar peaks. The leveling off in soft goods fields was counteracted by large government expenditures for rearmament and foreign aid and by unprecedentedly high outlays by business for plant and equipment. As a result, the Federal Reserve Board's index of industrial production reached 195 towards the end of the year, output for the year showing an increase of 3 percent. The volume of crops was the largest ever harvested, exceeding the 1947 record total by about 9 percent.

Despite a substantial decline in prices of agricultural products, due to the record crops, wholesale commodity prices as a whole showed virtually no decline, while the cost of living continued to rise and inflationary pressures in the economy again caused general concern. In mid-summer, however, the price trend turned moderately downward, leading to a widespread belief that the inflationary forces had reached their peak.

Total employment reached a postwar high of 61,600,000 in July, but there were evidences toward the end of the year of increasing unemployment due to lower production levels in a number of industries that had caught up with the demand. Idleness from strikes represented 0.4 percent of available working time in the first 10 months of the year, continuing the relatively low level of the previous year. Construction activity, led by the housing boom, showed a considerable increase, while retail sales registered a moderate gain over the preceding year.

National Product and National Income. The gross national product in 1948, representing the total value of all of the goods and services produced, was estimated at \$250,000 million, on the basis of preliminary calculations. This was approximately 8 percent more than the total of the previous year, but part of the rise was due to higher prices. National income, which measures the earnings from current production received by individuals, was estimated at \$225,000 million, registering a gain of about a tenth over 1947. Income payments to individuals amounted to about \$212,000 million as compared with \$195,000 million in the previous year. After deductions for personal taxes and related items, disposable personal income was estimated at \$190,000 million, representing an increase of 9 percent over the preceding twelve months. Of this total, \$177,000 million was expended for purposes of personal consumption, 7 percent more than in 1947. This left personal savings of \$13,000 million, as against \$8,800 million the year before. In 1948 about 7 percent of disposable personal income was saved as against 5 percent in 1947.

Of the total personal expenditures, approximately one-eighth went for durable consumer goods, almost three-fifths for non-durable goods, and about three-tenths for purchase of services. Private domestic investment, constituting more than a seventh of the gross national product, rose by about a fourth over 1947. Government purchases of goods and services absorbed over one-eighth of the gross national product and increased by more than a fifth over 1947. Of such purchases, the Federal government accounted for about 55 percent and state and local governments for the remainder.

Construction. Building activity showed a substantial increase in 1948, the volume of construction, totaling approximately \$18,000 million, surpassing that of the previous year by about 26 percent. While in dollar value this represented a new record, the physical volume of construction was considerably below the previous peacetime peaks set in the 1920's. Despite a slackening off in the second half of the year, the total amount of housing construction was considerably above that of 1947. The number of new permanent non-farm dwelling units started during the year was approximately 925,000, as against 849,000 in the preceding 12 months. It also closely approached the previous peak of 937,000 established in 1925.

The real estate market was greatly stimulated by the acute housing shortage and the liberal mortgage terms permitted under the Veterans' and Fed-

eral Housing Administration programs. High building costs and some tightening of mortgage financing, as well as the large amount of new housing built in the previous two years, brought about a decline in activity towards the end of the year. The cost of building residences increased by about 10 percent during the year. As a result of the post-war housing boom, in 1948 about a half of all non-farm families owned their own homes, the largest proportion on record. On the other hand, the proportion of mortgaged homes was larger than ever before.

The total estimated value of private non-farm residential construction in 1948 was \$7,000 million, constituting two-fifths of the total dollar volume of building and increasing by about a third. The high level of business activity also resulted in a large amount of commercial and industrial construction, private non-residential building being estimated at about \$3,500 million. New public construction, for highways, public buildings and other projects, totaled approximately \$4,000 million.

Durable Goods Industries. The continued high demand for steel, automobiles, and industrial and transportation equipment featured the high level of activity maintained by the heavy industries during the year. Although held back by inadequate supplies of steel, the automobile industry, produced 5,274,000 motor vehicles, a record exceeded only in 1929. The year's output of 3,900,000 passenger cars was 10 percent above the 1947 figure, while truck production of nearly 1,374,000 surpassed the former all-time record set in 1947. A new peak was reached in production of replacement parts with a wholesale value of \$2,600 million, 10 percent above the 1947 figure, while employment and payrolls in the industry also reached new highs.

INDUSTRIAL PRODUCTION

Physical Volume Seasonally Adjusted, 1935-39=100

The steel industry likewise operated at near all-time records levels. Steel output in 1948, totaling 88 million tons, was $3\frac{1}{2}$ percent above that of 1947. It was higher than in any peacetime year and within one percent of the peak outputs attained during the war years 1943-44. Production in October established an all-time monthly record. Operations of the industry in the last few months of the year ranged between 96 and 100 percent of capacity. The total payroll of iron and steel companies was 12 percent above that of 1947 and 28 percent above the wartime peak. Nevertheless, the continued strong demand by many heavy goods industries caused a shortage of steel in a number of lines.

A major factor in the heavy demand for steel was the record total of expenditures by industry on new plant and equipment, which were estimated at \$19,000 million, a gain of approximately one-sixth over the preceding year. Most of this gain was accounted for by higher prices. More than two-fifths of the expenditures for new plants and equipment were made by manufacturing enterprises and about one-seventh by electric and gas utilities. Commercial concerns, railroads and other transport companies and mining corporations also made heavy outlays.

Among the other durable goods industries that showed gains over the preceding year were railway passenger and freight cars, building materials, non-ferrous metals and products, and such durable consumer goods as electric refrigerators and ranges and washing machines. A substantial decline in output of radios was counteracted by the phenomenal increase in production of television sets. Output of wooden household furniture reached a record dollar value but unit production declined somewhat, as did that of vacuum cleaners.

Mineral production in 1948 reached new high levels both in dollar value and tonnage. Production and consumption of petroleum products were at all-time highs, output of crude oil increasing by 8 percent over 1947. Domestic output of bauxite, the raw material for aluminum, was at a peacetime high, although about one-third below the record war year of 1944. There were slight declines in tonnage production of copper, zinc, and lead but price increases brought dollar volume to above the 1947 total. Gold mine output went down about 10 percent while silver production increased by 5 percent.

The changes in the output of the principal durable goods industries are shown in Table 1.

Consumer Non-durable Goods. In the non-durable goods fields, particularly textiles and apparel, the latter part of 1948 was characterized by leveling off in demand and accumulation of inventories. This situation was reflected in a reduction in the price of cotton textiles and in some slow-down in production and employment during the fourth quarter. During the year, for the first time since the war more firms went out of business in the manufacture of apparel than the number of new businesses started. The cotton textile industry was one of the few major industries to show a substantial decline from the postwar peak. Contributing to the contraction in demand for cotton fabrics was the decline in exports.

Because of the high profit margins of the previous year, however, the industry was in a good position to withstand the impact of falling prices without much reduction in operations. In addition, the cost of the raw cotton used in the manufacture of staple fabrics declined about 15 percent.

In contrast to cottons, demand for woolen and

worsteds goods continued strong and prices rose by about 12 percent in the year ending October. In the last few months of 1948, however, there was evidence of an easing of demand in the men's wear field, new and unfilled orders falling below the totals for the corresponding period of 1947.

Orders for women's apparel continued to maintain about the same high level as in the preceding year. Because of the brisk demand for women's clothing, the increased supply of materials, and the continued growth of consumer income, output of apparel as a whole kept up to the peak peacetime levels. A substantial part of the production of fabrics and clothing, however, went into inventories; since sales increased less than the accumulation of stocks. On the whole, the leveling off in demand for apparel was not yet reflected in price declines, although towards the end of the year, manufacturers of various types of cotton apparel announced lower prices for spring deliveries.

Other non-durable industries recording increases in 1948 included rayon products, paper and newsprint. While cigarettes showed no appreciable change, the output of shoes and alcoholic beverages declined. The index of production of the principal non-durable goods fields is shown in Table 2.

Retail Trade. For 1948 as a whole, the Federal Reserve Board's index of department store sales showed an increase of about 5 percent over the previous 12 months. During the last months of the year, however, sales leveled off somewhat, with consumer resistance apparently increasing. There were indications, moreover, that dollar volume was kept at a high level by increased prices, since unit sales for a number of soft goods items, notably men's clothing, were considerably less towards the end of the year than in 1947.

Retail sales, as a whole, were fairly well stabilized, with expanded sales in the automotive group, as supplies increased, and reductions or little change in hardware and house furnishings. In soft goods stores sales were above those of 1947, but remained about on a level during the second half of the year. An important factor in the increase in retail trade was the large expansion in instalment

debt, which on November 30 reached the record total of \$7,900 million, showing a rise of 20 percent in a year. Total consumer credit, including charge accounts and loans as well as instalment credit, also reached a new high of \$15,300 million. Inventories in retail stores showed a substantial in-

DEPARTMENT STORE SALES AND STOCKS
Dollar Volume Seasonally Adjusted, 1935-39=100

crease over 1947. (See Table 3.) Particularly noticeable was the accumulation of inventories in the men's clothing field, where sales leveled off while stocks continued to mount.

Business Inventories. Because of the lessened demand in some industries, the smaller impact of price increases on inventories, and the filling of "pipe lines" in the previous two years, business inventories in 1948 expanded less rapidly than in 1947. At the end of October, inventories of all business establishments totaled \$54,400 million, representing a gain of 14 percent in a year as against a rise of 20 percent in the preceding twelve months. Manufacturers' inventories increased to \$31,100 million during November, a gain of \$3,500 million over the previous year—also considerably less than the increase in 1947. The slowing up in the rate of expansion of inventories reflected a more cautious attitude on the part of business with regard to the future outlook for prices and production.

Commodity Prices. After reaching the all-time high point on August 15, the consumers' price index, measuring the cost of goods and services bought by moderate-income families in large cities, remained for a time at that level and then began to decline slowly. By mid-November the index stood at 172.2 (compared with the 1935-39 base of 100), a decline of 1.3 percent from the peak reached in the summer. This index, however, was 4.4 percent higher than a year before. The principal factor in the decline in the last months of the

year was the drop in food prices, which in four months decreased by more than 4 percent from the record high level reached in July. As of November 15 food prices were 2.4 percent above those on the same date in 1947.

Wholesale prices also began to turn downward in mid-summer, the decline being due entirely to the drop in prices of farm products caused by the record crops. During the year the reduction in prices of farm products, which reached their peak in January, amounted to almost 11 percent, although government price support operations for the principal crops tended to keep prices up. Wholesale food prices declined by about 3 percent. On the other hand, prices of all commodities other than farm and food products went up 4 per-

TABLE 4—WHOLESALE COMMODITY PRICES

cent. As a result, the wholesale price index for all commodities, which was 163.5 on Dec. 28, 1948 (with 1926 = 100), was only 0.6 percent below that of the index of the year before. This made 1948 the first year since 1938 in which wholesale prices failed to show a rise. While textile products showed a slight decline, fuels, building materials and metals went up. The increase for metals and metal products amounted to more than 14 percent, due to the excess of demand over supply.

The changes in the indexes of wholesale com-

modity prices are shown in Table 4.

The range of commodity prices in 1948 in the New York market (unless otherwise noted) is given in Table 5.

Corporation Profits. Profits of business corporations showed a substantial increase in 1948 over the previous record total registered in 1947. Profits after taxes were estimated at about \$21,000 million as against \$18,000 million the year before. In the first nine months of 1948 corporate profits after taxes represented 16.6 percent of income originating in corporate business, which measures the net contribution of private corporations to the total national output. This ratio was somewhat higher than in 1947 and a larger percentage than in any year except 1929. The ratio of profits to sales was around 5 percent. Compensation of employees amounted to 74.5 percent of income originating in corporate business as against 76.5 percent in the previous year.

According to a compilation of the National City Bank, net income of 400 large corporations, with an aggregate net worth of \$20,000 million, showed a gain in the first three quarters of 1948 of 31 percent over the same period of 1947. Return on net worth of these companies amounted to 18.7 percent as against 16.0 percent the previous year.

TABLE 6—NET INCOME OF 400 LEADING CORPORATIONS FOR THE FIRST NINE MONTHS (in millions of dollars)

Industrial groups	Net income nine months		% Annual return on net worth	
	1947	1948	1947	1948

Other metal products...	131.1	149.4	16.9	17.4
Miscellaneous mfg.....	88.6	95.3	17.7	17.0
Total manufacturing...	1,993.1	2,609.7	16.1	18.7
Mining and quarrying...	87.0	124.8	17.0	21.7
Trade (retail and whol.)	29.0	31.9	13.5	13.7
Service industries.....	12.7	13.7	11.2	11.7
Total.....	\$2,121.8	\$2,780.1	16.0	18.7

Especially large increases were recorded in the petroleum, chemical, textile, building materials, steel, automobile and electrical equipment industries. The profits and return on net worth of the

enterprises included in the calculation are shown in Table 6 below.

Foreign Trade. An outstanding feature of United States foreign trade in 1948 was the narrowing gap between exports and imports due to the decline of the former and the substantial increase in the latter. During the calendar year of 1948, shipments of American goods, totaling \$12,614 million, were 18 percent smaller than the record volume of 1947, while imports, reaching a record high of \$7,070 million, were 23 percent above the 1947 level. The deficit of foreign nations in their trade with the United States was reduced to less than \$5,600 million for the year as compared with \$9,600 million the year before. This trend was due, on the one hand, to partial recovery abroad, which made possible an expansion of exports, and, on the other, to numerous exchange and import restrictions imposed by foreign countries in order to reduce the large deficit in their balance of payments with the United States.

The gap between imports from and exports to this country was made up in part by gold shipments to the United States, which totaled approximately \$1,500 million during the year, but mainly through American loans and grants under the European Recovery Program (ERP) and special arrangements. The largest declines in foreign purchases here were in consumer goods, while special efforts were made to maintain the high level of imports of industrial and agricultural machinery, fuel and raw materials.

Shipments to virtually all the major trading areas declined substantially from the 1947 level, with the steepest drop recorded in the case of Eastern European countries due largely to the tightening of export controls after Mar. 1, 1948. Agreements were concluded with a number of nations providing for mutual tariff reductions under the Trade Agreements Program, which was extended for one year by the 80th Congress of the United States.

—SAMUEL S. SHIPMAN

CALIFORNIA. A Pacific State. Area: 158,693 sq. mi. Population: (July 1, 1948) 10,031,000, compared with (1940 census) 6,907,387. Chief cities: Sacramento (capital), 105,958 inhabitants in 1940; Los Angeles, 1,504,277. See AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS, etc.

Legislation. The California Legislature convened in its first annual budget session March 1 and adjourned March 27 after considering a record budget for the ensuing year of \$919,943,000. Included in appropriations was \$50,000,000 from the general fund for additional school buildings in needy school districts. The automobile tax of 1¾ percent of value was raised to 2 percent, the proceeds to be distributed among cities and counties of the State.

Other enactments included establishment of daylight saving time for one year to save power and water; a law to protect the public from financially irresponsible motorists; and provision for additional child care and migratory farm labor facilities. In the November election, the people adopted a proposal designating the lieutenant governor-elect as successor to the governor-elect in case of death or disability.

Finance. For the fiscal year ended June 30, 1947, total revenue amounted to \$860,576,000; total expenditure, \$691,699,000.

Elections. Truman carried the State and won the 25 electoral votes in a close contest with Dewey. Running behind his expected strength, Wallace received less than five percent of the popular vote.

There were no Statewide races for Senatorial or State office. In contests for House seats, Democrats won 10 and Republicans 13, a gain of one for the Democrats. The California first and tenth Congressional districts were the only ones in the country in 1948 in which incumbent Democrats were replaced by Republicans.

Officers, 1948. Governor, Earl Warren; Lieut. Governor, Goodwin J. Knight; Secretary of State, Frank M. Jordan; Attorney General, Fred N. Howser; State Treasurer, Charles G. Johnson; State Controller, Thomas H. Kuchel; Director of Finance, James S. Dean.

CAMEROONS, British. A United Nations Trust Territory in British West Africa, administered by Great Britain. Area: 34,081 square miles. Population (1944 est.) 925,800. On lowland plantations, palm kernels, cacao, rubber, fruits, and nuts are grown. Uplands produce mahogany and other timber. Foreign Trade (1946): imports £112,729; exports 317,321. Principal exports were 4,583 tons of bananas, 1,597 tons of cocoa, and 601 tons of palm kernels. Finance (1945-46 est.): revenue £35,551; expenditure £201,230. The Trust Territory is administered as a part of Nigeria.

CAMEROONS, French. A Trust Territory of the United Nations in western Africa, administered by France. Area: 166,489 square miles. Native population (1946): 2,816,000; European 3,981, of whom 2,848 were French. Capital: Yaoundé (1946 pop. 50,000). Education (1945): 313 schools with 43,023 pupils. Livestock (Jan. 1, 1946): 1 million oxen and 25,000 asses. Trade (1946): imports 1,005 million francs; exports 1,005 million francs. The principal exports were: cocoa (33,196 tons); palm kernels (26,199 tons); timber (42,831 tons); coffee (5,898 tons); bananas (4,378 tons); and rubber (3,987 tons).

Government. General budget estimates (1944): revenue 349,942,000 francs; expenditure 288,677,000 francs (franc averaged U.S.\$0.0084 in 1946-47). A High Commissioner assisted by an elected representative Assembly heads the administration. The Territory is represented by 2 deputies in the National Assembly, 3 councilors in the Council of the Republic, and 5 delegates in the French Union. High Commissioner: René Hoffherr.

CANADA. A Dominion of the British Commonwealth of Nations, comprising nine provinces and two territories. (See separate articles on the provinces and territories.) Capital: Ottawa.

Area and Population. The total land area of Canada amounts to 3,462,103 square miles. In the

(without suburbs), 903,007; Toronto, 667,457; Vancouver, 275,353; Winnipeg, 221,960; Hamilton, 166,367; Ottawa (capital), 154,951; Quebec, 150,757; Windsor, 105,311. Immigration, June 1, 1947, to June 1, 1948, 90,000. Of the white population in 1941, 5,715,904 were of British origin (English 2,968,402, Scottish 1,403,974, Irish 1,267,702, other 75,826) and 3,483,038 of French origin.

Education and Religion. Elementary and secondary education is almost entirely state-controlled in all provinces except Quebec, where most schools are sectarian. Canada has 6 state universities and 12 independent universities. School enrollment in 1945: provincially-controlled schools, 2,130,175; privately-controlled schools, 130,594; universities and colleges, 110,892; Dominion Indian schools (1946), 18,805.

The principal religious groups in Canada at the 1941 census were: Roman Catholics, 4,800,895; United Church, 2,204,875; Anglicans, 1,751,188; Presbyterians, 829,147; Baptists, 483,592, and Lutherans, 401,153.

Production. Manufacturing had the major place in the economy of Canada, with a gross value of products of more than \$8,000 million. Iron and its products led the list, with vegetable products second, and wood and paper products third. Index of industrial activity in August (1937 = 100) was 152. Index of industrial employment in October (1926 = 100), 202.6.

Final estimates (Nov. 1948) for grain production: wheat, 393,300,000 bu.; oats, 357,703,000 bu.; barley, 154,603,000 bu. Index of farm purchasing power, June 1, 1947—June 1, 1948 (1935-39 = 100), 205. Leading minerals: gold, copper, nickel, lead, zinc, asbestos.

Foreign Trade. The 1947 figures for foreign trade were as follows: total, \$5,385,700,000 (highest on record); imports \$2,580,000,000; exports, \$2,808,000,000. Favorable balance, all countries, \$237,000,000; debit balance with the United States, \$918,100,000; favorable balance with the United Kingdom, \$564,000,000; principal export, wheat and flour. In September, 1948, trade was running above the 1947 figure and the deficit with the United States was diminishing.

Transportation. Total single-track mileage (1946), 42,335; air passengers carried, 508,907. Seagoing vessels entering Canadian ports in 1946, 30,367,000 tons; coastal vessels, 745,559,014 tons.

Finance. The fiscal year ending Mar. 31, 1948 showed a surplus of \$670,000,000. Total revenues for 1948-49 were estimated at \$2,644,000,000, with a surplus of \$489,000,000 over estimated expenditures. The gross unmatured funded debt on Mar. 31, 1948, was \$15,957,381,000.

Government. Executive power is exercised in the King's name by the Governor General of Canada, acting through a responsible ministry. Legislative power rests in a Parliament of two houses; a Senate of 96 members appointed for life by the Governor General on advice of the Cabinet, and a House of Commons of 245 members elected for five years (unless the Government is dissolved earlier) by popular universal suffrage. The nine Provinces have a large measure of local autonomy, with a separate parliament and administration for each. Governor General in 1948, Viscount Alexander (installed Apr. 12, 1946). Party in power, Liberal. Prime Minister (to Nov. 15, 1948), William L. MacKenzie King; (after Nov. 15), Louis St. Laurent. Secretary of State for External Affairs (to Sept. 10), Louis St. Laurent; (after Sept. 10), Lester B. Pearson.

Provinces and Territories	Land area sq. miles	Population 1941	1948 est.
Prince Edward Island . . .	2,184	95,047	93,000
Nova Scotia	20,743	577,962	635,000
New Brunswick	27,473	457,401	503,000
Quebec	523,860	3,331,882	3,792,000
Ontario	363,282	3,787,655	4,297,000
Manitoba	219,723	729,744	757,000
Saskatchewan	237,975	895,992	854,000
Alberta	248,800	796,169	846,000
British Columbia	359,279	817,861	1,082,000
Yukon Territory	205,346	4,914	8,000
Northwest Territories . . .	1,253,438	12,028	16,000
Canada	3,462,103	11,506,655	12,883,000

accompanying table are shown the land areas and the populations (1941 census and 1948 estimate), by provinces and territories, together with the totals for Canada.

Chief cities (pop., 1941 census): Montreal

Events, 1948. William Lyon MacKenzie King, Liberal Prime Minister of Canada 1921-26; 1926-30; 1935-1948, who had served his country under Queen Victoria and four kings, gave up his post to Liberal Leader Louis St. Laurent on November 15. King announced in the spring that his office was soon to be surrendered. It was obvious that the 73-year-old Prime Minister felt the effects of the strenuous years, but he was in good health when he reached Paris on September 20 for the General Assembly of the United Nations.

When King went to London for the meeting of Dominion Prime Ministers on October 11-22, he became too ill to attend, and St. Laurent, Acting Prime Minister, left Ottawa for London at once to serve as King's deputy. King received the various Prime Ministers in his hotel suite while the conference was in session, and on October 25 the Earl of Athlone, Chancellor of the University of London, went to his suite to award him the University's degree of Doctor of Laws. King returned to Ottawa on November 7 with St. Laurent, improved in health and ready for the surrender of the premiership to his Liberal colleague and deputy a few days later.

Canada Abroad. Canada was active in the conference of Dominion Prime Ministers, although the MacKenzie King tradition was one of extremely loose Commonwealth bonds. St. Laurent was one of the three heads of the old Dominions (Canada, Australia, and New Zealand) who invited representatives of the Irish Government to come to Chequers on October 17 to discuss the details of Eire's contemplated severance of Commonwealth ties.

Canadian Transport Minister Chevrier, leader of the Canadian delegation to the UN General Assembly in the autumn, was one of the more outspoken critics of Soviet policy with respect to the Berlin crisis. On November 11 he spoke of the Soviet Government as "deliberately twisting facts" and "adding fuel to the flame." Canada itself, eager to be enrolled on the side of peace, on November 15 offered the Security Council, through General A. G. L. McNaughton, a plan for an armistice and negotiated peace in Palestine.

John Erskine Read was elected one of the judges on the International Court of Justice by the Security Council and the General Assembly in October. Ambassador Dana Wilgress was elected chairman at the meeting of the countries participating in the Geneva Agreement on Tariffs and Trade in the session of August 17 at Geneva, Switzerland.

Relations with Britain. Canadian-British conversations in 1948 were largely concerned with the trade problem. At the beginning of the year the Anglo-Canadian trade agreement of 1947 went into effect, with the wheat agreement continued and Britain paying higher prices for Canadian bacon, beef, cheese, and eggs. The resulting deficit was met partly by drawing on the Canadian credit to Britain and partly by paying Canada in American dollars, of which there was at the opening of the year an acute shortage.

Although Britain agreed to take all Canada's surplus of the four agricultural commodities for 1949, the terms of payment were arranged only for three months ahead. By the middle of March Canada heard with some dismay British Minister of Food Strachey's statement that Britain could not continue the existing rate of spending on Canadian food. The second year of sales of Canadian wheat to Britain under the Anglo-Canadian wheat agreement passed satisfactorily, however, and British

Food Minister Strachey told the press that Canada would remain the chief wheat supplier in 1948 and 1949.

There was no doubt that financial and economic relations between the two countries were deteriorating as the summer passed. Sir Stafford Cripps, British Chancellor of the Exchequer, left London on September 19 with a party of experts from the Treasury and the Board of Trade on a mission to Ottawa. Two days later the talks were opened with a Cabinet committee consisting of Acting Prime Minister St. Laurent, Minister of Trade and Commerce Howe, Minister of Agriculture Gardiner, Secretary of State for External Affairs Pearson, and Minister of National Revenue McCann.

By September 24 the talks were over. The official statement said that a continuing committee of representatives of the two countries would be set up to meet regularly in Ottawa and London for the full exchange of information. Canadians hoped that the further statement that both governments would do everything possible to avoid any sudden change in the pattern of trade meant that there would be no further sudden cancellations of contracts such as the British found necessary when their dollar position grew worse. Sir Stafford said repeatedly that food contracts between Canada and Britain would not be affected immediately, but he admitted that ultimately a reduction in the amount of food bought by Britain from Canada would be unavoidable.

Relations with the United States. Canadian discussions with the United States centered on the dollar shortage and on defense. Canada entered the year with the most acute shortage of American dollars in its history and fresh limitations on the importation of American goods except for industrial necessities. On January 6 Finance Minister Douglas Abbott left Ottawa for Washington to discuss financial matters with the United States and to complete arrangements for an Export-Import Bank credit of \$300,000,000 which had been promised by the United States in the autumn.

The loan agreement was signed in Washington on January 8. It was stipulated in the agreement that half of the funds were to go for the purchase of United States machinery and equipment and the other half for essential industrial raw materials. By October the situation was improved, and Abbott announced that Canada would not need to draw further on the Export-Import Bank credit, of which only \$140,000,000 had been used. By this time Canadian foreign exchange reserves had reached \$742,000,000, as compared with the low point of \$461,000,000 touched in December, 1947.

Canada's efforts to sell more in the United States had a good measure of success in 1948, but the barriers of American tariffs and subsidies still operated against Canada. Finance Minister Abbott told the New England Council in Boston in November that unless Canada's annual sales of about \$1,000 million to the United States could be brought closer to Canada's annual purchases of about \$2,000 million Canada would have to take further restrictive measures. Nevertheless American pressure forced Canada to stop sales of potatoes in the United States after the end of November.

Canadian-American Defense. Common defense plans were pushed in the last part of the year. American Secretary of Defense James Forrestal was in Ottawa on August 16 for a meeting with the Defense Committee of the Canadian Cabinet, at which Gen. A. G. L. McNaughton, head of the Canadian-United States Joint Defense Committee, was present. Forrestal and Canadian Defense Min-

ister Brooke Claxton went together to Ogdensburg on August 17 to commemorate the 8-year-old Roosevelt-King Ogdensburg declaration which brought their governments into a permanent joint defense agreement.

In the middle of November Canadian Minister of Trade and Commerce C. D. Howe went to Washington, ostensibly to discuss standardization in arms, a "common pattern" in aircraft, and American orders for military equipment in Canada. It was at this time that Canada, the United States, and Britain signed in Washington an agreement to standardize the threads in nuts, bolts, and screws.

Prime Minister St. Laurent was known to be sympathetic with a North Atlantic Defense pact. A Canadian representative was present when agreement on such a pact was reached in London on November 19 by delegates of the five Western Union powers and the United States. On November 25 Gen. McNaughton, Canada's permanent delegate to the UN Security Council as well as head of the Canadian-United States Joint Defense Committee, issued a 29-page statement in which he said that Canada gave its full support to the idea of a North Atlantic Alliance.

The Department of National Defense took an unprecedented step on November 25 in announcing that a Canadian naval force had been severely mauled by United States submarines of the newest type, during a two-day test at sea. There was no secrecy about the holding of the tests, which were announced earlier as occurring off the Nova Scotia coast on November 17 and 18. The Defense Department announced that similar tests had been held earlier off Newfoundland, with like results. Canada's existing fleet was designed almost wholly for escort purposes.

Canada and ECA. In June Canada became the second-largest supplier of goods authorized for purchase under the Marshall Plan. Two representatives of the Bank of Canada and an official of the Department of External Affairs went to Washington in April to get first-hand information about the arrangements then in progress. Canadian authorizations included wheat, flour, bacon, cheese, beef, lead, copper, aluminum, zinc, and wood pulp. Canadian authorizations to October 15 were \$327,900,000.

Newfoundland's Status. In the autumn steps were taken in Ottawa to arrange the terms of Newfoundland's entry into the Dominion of Canada as the tenth province. In a referendum held on July 22 a majority of Newfoundland's voters preferred entry into the Canadian Confederation to the alternative constitutional choices. On October 6 the Newfoundland delegates sent to Ottawa to perfect the terms of union, which must then be submitted to the Canadian Parliament, held their first meeting with the Canadian delegates, to which they were welcomed by Acting Prime Minister St. Laurent.

At this time Premier Duplessis of Quebec protested, as he had done earlier, against the inclusion of Newfoundland without the consent of the Province of Quebec. Duplessis criticized the financial burdens to be accepted by the Dominion Government, and emphasized particularly Quebec's dispute with Newfoundland over the boundaries of Labrador, about which he believed that Quebec could sue.

In the course of the prolonged discussions at Ottawa the Newfoundland representatives appear to have asked for expenditures for services which would add materially to the Ottawa Treasury's estimate of \$15 million as the net cost to Canada. The negotiations were secret, however, and the

public was told little about the "many subjects" discussed.

Party Conventions. After the end in midsummer of one of the less eventful sessions of Parliament, two of the political parties, the Liberals and the Co-operative Commonwealth Federation, held their respective national conventions. Louis St. Laurent, at that time Minister for External Affairs, won the leadership of the Liberal Party by a large majority after only one vote. His election had the emphatic approval of the outgoing leader, Prime Minister King, who had held the position exactly 29 years. The platform adopted by the Liberal Party was in the main consistent with existing Government policy.

Later in August the CCF (Co-operative Commonwealth Federation) held its biennial convention in Winnipeg. The delegates had sharp differences of opinion over public ownership, particularly the nationalizing of the chartered (commercial) banks, but in the end banks, railways, coal, primary steel, meat-packing, farm implement, fertilizer, and fuel and power industries were included in the nationalization program. Former leader and Party President M. J. Colwell was given a further two-year term.

The Progressive Conservative convention was opened in Ottawa on September 30. John Bracken, retiring leader, was succeeded by Premier George Drew of Ontario, whose immediate task was now to resign his premiership and seek a seat in the House of Commons. The party opposed further centralization in Ottawa and supported a tolerant attitude towards responsible business enterprise. All parties were actively preparing for the general election due within a few months.

Cabinet changes in 1948 included the appointment in September of Lester B. Pearson, Ambassador in Washington from 1945 to 1946, as Secretary of State for External Affairs in place of St. Laurent, who served as Acting Prime Minister and Minister of Justice for two months before he replaced King as Prime Minister in November; Stuart Carson, former premier of Manitoba, as Justice Minister, and Robert Winters of Nova Scotia as Minister of Reconstruction and Supply. In provincial elections the National Union Party won in Quebec, the Liberal Party in New Brunswick, Social Credit in Alberta, and Progressive Conservatives in the province of Ontario.

Internal Economy. Price ceilings were reimposed on meat and butter in January, after the public learned the news of the higher prices to be paid by Britain for Canadian agricultural products and began to push up prices accordingly. Price ceilings were reimposed on bread and hard wheat flour on August 19 at the levels in effect July 31, when domestic wheat was raised from \$1.55 to \$2 a bushel and a Government subsidy of 45 cents a bushel was announced for wheat flour in order to prevent an advance in the price of bread. On October 22 rent ceilings were raised but the controls were extended.

Improvement in the supply of American-produced consumer goods became possible in the latter part of the year. At the beginning of August the 25 percent excise tax announced late in 1947 for electric refrigerators, vacuum cleaners, automobiles, radios, and other mechanical products was removed. On October 18 Finance Minister Abbott announced a seasonal lifting of restrictions on the importation of fruits and vegetables, because of the steady improvement of the situation with respect to supplies of American dollars. By November 1 the fruit terminals offered a welcome sight

to Canadians, and fruit and vegetable prices were falling.

Ontario's power shortage became critical in November, and morning and afternoon blackouts were ordered in order to save electricity. As inconveniences increased, controversy over the cause of shortage became acrimonious. Some of it centered around the conspicuous political figure of George Drew, former premier of Ontario and new leader of the Progressive Conservatives. Inactivity with respect to power was alleged by his opponents. The September, 1948, number of the *Canadian Statistical Review*, published by the Dominion Bureau of Statistics, attributed the shortage to increased use of power and low rainfall in 1948.

Immigration. Canada's immigration plan, which included provision for displaced persons, was continued in 1948. Resources Minister James Glen announced in March that the plans made in 1948 would result in 100,000 immigrants for Canada. British immigrants to the number of 12,000 were expected to cross on the austerity liner *Aquitania*, which was to make 11 trips for that purpose. Netherlands lines planned to bring 10,000 Dutch farmers. One thousand displaced persons from temporary camps in Germany sailed in April. In September Humphrey Mitchell, Minister of Labor, informed the General Council of the International Refugee Organization at Geneva that 30,000 refugees and displaced persons had been assimilated in Canada since the end of the war.

As the year progressed the plans broadened. In September Canada placed French citizens on the same footing as those of the United States and the favored Empire countries. An employment service was opened in London to advise intending immigrants on the work available in Canada in the occupations for which they were fitted.

—ALZADA COMSTOCK

CANADIAN LITERATURE. The quantity of output of Canadian publishing houses in 1948 was well up to recent levels but it was a thin year for both fiction and poetry written in English, though several noteworthy works in biography and history appeared. By comparison the novels published by French-language writers of Quebec province stood out more prominently than usual. *Les Plouffes*, a second novel by Roger Lemelin, brought new laurels to the young French-Canadian whose earlier work, *Au pied de la pente douce* (1944), now translated into English as *The Town Below* was awarded a prize by the Académie Française and earned him a Guggenheim Fellowship. *Les Plouffes* has already been tentatively hailed by literary critics of Quebec as the greatest novel in French-Canadian literature.

Hugh MacLennan, one of Canada's few full-time professional novelists, chose for the theme of his third novel, *The Precipice*, the sharp contrast between the tempo and mores of New York City and those of a tranquil Canadian town on the border of Lake Ontario. This novel was favorably reviewed by several American critics. Mazo de la Roche, another professional, who startled the Canadian writing world in 1927 by winning the Atlantic Monthly prize with *Jalna*, continued the long saga of the Whiteoaks family with *Mary Wakefield*. Morley Callaghan, a Canadian who owes something to the Hemingway tradition, broke a long silence with *The Varsity Story*, a fictional study of the University of Toronto.

Philip Child's *The Village of Souls* is a tale of New France, while Olive Knox in *Red River Shadows* again exemplifies the preference of Canadian

novelists for historic settings—her romance goes back to the early days of the Selkirk Settlement. *The Aging Nymph* is a light-hearted war story of the Canadians in Italy: the author, A. J. Elliott served there during the Second Great War as a member of the Air Force. *The Rich Man* by Henry Kreisel is another first novel and has its setting in Vienna. Kreisel is a refugee from the Nazis now on the staff of a Canadian prairie university.

In poetry there were several collections by well-known writers, notably *The Strait of Anian* by Earle Birney, *The Rocking Chair and Other Poems* by A. M. Klein, who here turns aside from his self-avowed Jewishness to picture the French-Canadian scene, and *All Fools' Day and Other Poems* by Audrey Alexandra Brown. A new voice is that of Douglas Le Pan, a graduate of Oxford, whose work is sometimes in the vein of T. S. Eliot, and whose treatment of the Canadian scene in *The Wounded Prince* has won encomiums on both sides of the Atlantic.

The best biographies were of non-Canadian subjects, *A Study of Goethe* by Barker Fairley, *Matthew Arnold* by E. K. Brown, and a life of Rupert Brooke, entitled *Red Wine of Youth* by the novelist and poet Arthur Stringer. A lively memoir of the great Canadian editor, J. W. Daffoe was written by George V. Ferguson, editor of the *Montreal Star*. Another book of keen interest to journalists was (CP) *The Story of The Canadian Press* by M. E. Nichols, for many years head of the *Vancouver Province*.

Vincent Massey, one-time Canadian Minister to Washington and long Canada's High Commissioner at London, explored national concepts in *On Being Canadian*. *The Owl Pen* by Kenneth Wells is a sort of Canadian *The Egg and I*. Paul Hiebert won the Stephen Leacock award for humor with *Sarah Binks*, a rich satire on a rural songstress. In the first volume of a trilogy to be known as *Canada and the Second Great War* Col. C. P. Stacey provided an authentic chronicle of Canada's Army, 1939-45. Thomas H. Raddall, Canada's leading historical novelist, turned to straight history to write *Halifax, Warden of the North* in anticipation of the bicentenary of the founding of the Nova Scotia seaport in 1749.

French-Canadian works of note, in addition to *Les Plouffes*, included *Au delà des Visages*, by André Giroux, a philosophical inquiry into murder; *La Minuit* by Felix-Antoine Savard, a poetic idyll of the Tadoussac country; *Circuit 29* by René Chicoine, one of the rare French-Canadian incursions into detective fiction; *Les Desirs et les Jours* by Robert Charbonneau, a book of poems; and *Rivages de l'Homme* by Alain Grandbois. Belles-lettres and criticism were strongly represented by works written by Roger Duhamel and Jean Bruchési.

Canadian letters suffered a severe loss on October 7th in the death of Pelham Edgar (see *NECROLOGY*), dean of Canadian literary critics.

—WILFRID EGGLESTON

CANARY ISLANDS. An archipelago off the coast of Rio de Oro in northwest Africa, comprising two provinces of Spain: (1) Las Palmas (the islands of Gran Canaria, Lanzarote, Fuerteventura, and the islets of Alegranza, Roque del Este, Roque del Oeste, Graciosa, Montaña Clara, and Lobos), area, 1,565 square miles; population (July 1, 1947), 375,744; capital, Las Palmas (157,548 inhabitants) on Gran Canaria. (2) Santa Cruz de Tenerife (the islands of Tenerife, Palma, Gomera, and Hierro), area, 1,329 square miles; population (July 1, 1947), 401,283; capital, Santa Cruz de Tenerife (79,928

inhabitants). Las Palmas is an important shipping and tourist center. Coffee, corn, millet, sugar cane, manioc, fruits, vegetables, tobacco, cotton, indigo, and castor oil are produced.

CANTON ISLAND. An atoll of the Phoenix group (3° to 5°S. and 170° to 175°W.) in the central Pacific, which with Enderbury Island of the same group, is under the joint control of Great Britain and the United States (Anglo-U.S.A. Pact of Aug. 10, 1938, and Notes of Apr. 6, 1939). Canton is 29 miles in circumference and has a land mass of from 50 to 600 yards wide which encloses a lagoon 9 miles in diameter. Enderbury is 2.5 miles long and 1 mile wide. Canton is an important port of call for the transpacific air service between Honolulu and Auckland, New Zealand.

CAPE VERDE ISLANDS. A dependency of Portugal, 320 miles west of Cape Verde, French West Africa. The islands comprise the Barlavento (windward) group (São Vicente, Santo Antão, São Nicolau, Santa Luzia, Sal, Boavista, Branco, and Raso) and the Sotavento (leeward) group (Santiago, Maio, Fogo, Brava, Rei, and Rombo). Total area, 1,557 square miles; population (Dec. 1, 1940), 181,286. Capital, Praia (on Santiago), 6,188 inhabitants. Porte Grande, in São Vicente, is an important fueling station for ships. The chief products are castor oil, mustard, coffee, oranges, salt, brandy, and hides. Trade (1945): imports 149,546,000 escudos; exports 149,266,000 escudos. Finance (1946 est.): revenue 24,687,000 escudos; expenditure 22,249,000 escudos. Public debt in 1946 totaled 5,220,000 escudos (25.065 escudos equals U.S.\$).

CARIBBEAN COMMISSION. The President on Mar. 4, 1948, accepted on behalf of the United States Government the Agreement for the Establishment of the Caribbean Commission pursuant to Public Law 431, 80th Congress. Ratification by the four member governments (France, the Netherlands, the United Kingdom, and the United States) was completed Aug. 6, 1948. Thus, the Caribbean Commission was formally established as an advisory and consultative body on common social and economic matters to the four member governments and the 15 non-self-governing territories of the Caribbean under their administration. Approximately 5.5 million people live in the region covered by the Commission's activities: Martinique, Guadeloupe, French Guiana (France); Curaçao, Aruba, Surinam (Netherlands); Bahamas, Barbados, British Guiana, British Honduras, Jamaica, Leeward Islands, Trinidad, Windward Islands (United Kingdom); Puerto Rico, Virgin Islands (United States).

The 16-member Commission is assisted by two auxiliary bodies: the Caribbean Research Council and the West Indian Conference. The Central Secretariat, located at Port-of-Spain, Trinidad, continued to service the Commission and its auxiliary bodies. The Commission held two meetings during the year—the Sixth at San Juan, Puerto Rico and the Seventh at Guadeloupe.

Its major undertaking in 1948 was the completion of the first comprehensive survey of existing and potential industries which has been made on a region-wide basis. A panel of four experts (one from each National Section) collected basic factual data on industries, including such items as production records; kind and source of raw materials; financial procedures; availability of fuel, power, labor, transportation, markets; and communications. "Industrial Development and Economic Produc-

tivity" formed the central theme of the Third Session of the West Indian Conference held in Guadeloupe, Dec. 1-14, 1948, with the survey as the basis of discussion.

The Commission inaugurated two devices designed to keep Caribbean peoples currently informed of advancements in scientific, technical, and social fields, to make them aware of the similarity of their problems, and the solutions to be found by coordinated effort. The first was the establishment, during 1948, of a *Monthly Bulletin* published in the four languages of the area. It is a systematic and continuing means of furnishing information on scientific, educational, social, and economic developments in, or relating to, the area. The second was the initiation of a weekly radio program in the four languages of the area to supply news on current social and economic events. The territorial governments furnish time on the air and commentators, free of charge; the Commission is responsible for collecting the material, and for the writing and editing of script.

The pressure of rapidly growing population on limited agricultural resources is one of the basic economic problems of the Caribbean area. The Commission completed a preliminary study of the movement of population in the Caribbean, including population growth, pressure, and major migratory movements. The survey will enable the Commission to ascertain the most fruitful line of further inquiry and coordinated governmental action through the agency of the Commission.

Realizing that the basis for regional action in achieving economic development depends upon a thorough knowledge of what research and research facilities exist, the Commission launched upon a survey of existing research institutions, projects, and personnel in the area. The results of this survey will form the nucleus of a permanent and active Research Information Service to be maintained by the Central Secretariat.

The Commission established a statistical unit in the Secretariat to collect, collate, analyze, and distribute data on such matters as trade, population trends, and other topics of general utility to governments and business enterprises.

Principal publications of the Commission in 1948 were: *Report of the Caribbean Commission to the Governments of the French Republic, the Kingdom of the Netherlands, the United Kingdom, the United States of America, for the year 1947*; and *Industrial Development of Puerto Rico and the Virgin Islands (Report of the United States Section)*.

The Co-Chairmen of the Commission in 1948 were as follows: France—Pierre Pelieu; Netherlands—Dr. J. C. Kielstra; United Kingdom—Sir Hubert Rance (succeeded S. A. Hammond who had been Acting Co-Chairman); and United States—Ward M. Canaday (appointed to fill vacancy created by death of Charles W. Taussig.)

CARNEGIE ENDOWMENTS. Established by Andrew Carnegie between 1896-1911, the organizations listed below are devoted to the furtherance of peace, education, knowledge and research.

Carnegie Corporation of New York. Established by Andrew Carnegie in 1911 for the advancement and diffusion of knowledge and understanding among the people of the United States and the British Dominions and Colonies, this Corporation has a basic endowment of more than \$135,000,000, of which \$12,000,000 is applicable in the British Dominions and Colonies. Its income only is subject to appropriation by the Trustees.

MARTIN 2-0-2 twin-engined airliner, built by the Glenn L. Martin Company, shown on one of its test flights.

CONSTITUTION, the new 92-ton, 180 passenger, airliner in flight. It was built by Lockheed for the U.S. Navy.

SWEPT-WING JET PLANE, a U.S. Navy twin-jet fighter designed for carrier operation, capable of over 600 m.p.h.

SKYROCKET, the U.S. Navy's lance-like Douglas built aircraft designed to explore high speeds and altitudes.

During the year ended Sept. 30, 1948, the Corporation appropriated \$8,850,000 for other Carnegie agencies, colleges and universities, education in international affairs, the social sciences, the advancement of teaching, and for various other purposes.

The Trustees of the Corporation are: Thomas S. Arbutnot, W. Randolph Burgess, Vannevar Bush, Oliver C. Carmichael, Charles Dollard, Morris Hadley, Devereux C. Josephs, Nicholas Kelley, Russell Leffingwell, George C. Marshall, Margaret Carnegie Miller, Frederick Osborn, Arthur W. Page, Elihu Root, Jr., and Leroy A. Wilson.

The officers of administration are: President, Charles Dollard; Secretary, Robert M. Lester; Treasurer, C. Herbert Lee. Office: 522 Fifth Ave., New York 18, N.Y.

Carnegie Endowment for International Peace. Founded by Andrew Carnegie in 1910, the Endowment consists of a trust fund of \$10,000,000, the revenue of which is to be administered to hasten the abolition of international war.

A special library containing 75,000 volumes on all aspects of public international relations is maintained in Washington. During the fiscal year ended June 30, 1948, the Endowment's income amounted to \$795,328, which included grants of \$61,362 from the Carnegie Corporation of New York and \$3,850 from the Rockefeller Foundation. During this period the Endowment expended \$508,543 which included expenditures from balances brought forward from previous years.

Chairman of the Board of Trustees, John Foster Dulles; Vice-Chairman, John W. Davis; President, Alger Hiss (on leave); Acting President, James T. Shotwell. President's office: 522 Fifth Ave., New York 18, N.Y. Administrative office: 405 West 117th St., New York 27, N.Y. Washington Branch: 700 Jackson Place NW, Washington 6, D.C. Paris Branch: 173 Blvd. Saint-Germain, Paris VI. The 28 Trustees will hold their annual meeting in New York City, May 5, 1949, and their semi-annual meeting, Dec. 12, 1949, in New York City.

Carnegie Foundation for the Advancement of Teaching, The. A foundation established in 1905 by Andrew Carnegie, who gave an endowment of \$10,000,000 for paying retiring allowances and widows' pensions in the United States, Canada, and Newfoundland, and for various other purposes in the field of higher education. Incorporated by Act of Congress in 1906, the Foundation received a further gift of \$5,000,000 from Mr. Carnegie and appropriations totaling \$13,250,000 for endowment and reserves from Carnegie Corporation of New York. On June 30, 1948, its resources amounted to \$14,871,380. In 1947-48, it disbursed \$1,869,843 for allowances and pensions. It awards no scholarships or aid of any kind. The Foundation's Annual Reports and Bulletins deal with many phases of higher education. In 1947 its principal activities concerned the educational appraisal of individuals through new-type tests and testing, particularly at the graduate level, and assisting in improvement of college teaching in the southern area through locally administered programs of grants-in-aid. Chairman of the Board of Trustees, Dr. Frank P. Graham; Vice Chairman, Dr. Robert G. Sproul; Secretary, Dr. James B. Conant. President of the Foundation, Oliver C. Carmichael; Secretary and Treasurer, Howard J. Savage. Offices: 522 Fifth Ave., New York 18, N.Y. The 25 Trustees will hold their 44th annual meeting on Nov. 16, 1949.

Carnegie Hero Fund. A Fund established in 1904 by Andrew Carnegie to help those who have risked their lives to an extraordinary degree to save hu-

man life, or to aid dependents of rescuers who have lost their lives in the performance of their deeds. The original endowment was \$5,000,000; the amount expended to Sept. 30, 1948, \$7,075,458. Dr. Thomas S. Arbutnot, President; C. B. Eberzol, Assistant Secretary and Manager. Offices: 2307 Oliver Building, Pittsburgh 22, Pa.

Carnegie Institute. This institute, founded and endowed by Andrew Carnegie in 1896, houses under one roof the central branch of the Carnegie Library of Pittsburgh, with special departments covering technology, art, and music; the Department of Fine Arts, with a representative and growing collection of modern painting and sculpture, and with the distinction of having had the only annual international exhibition of paintings in the world, until this was necessarily suspended by World War II; the Carnegie Museum, covering the natural sciences and applied arts; and the Carnegie Music Hall, where from October to July free organ recitals are given twice a week. The Carnegie Institute building, a modification of the Italian Renaissance style, covers about four acres, and stands among the world's great works of architecture. Officers: President, James M. Bovard; Vice President, Roy A. Hunt; Secretary, Augustus K. Oliver; Treasurer, Thomas L. Orr. Headquarters: 4400 Forbes St., Pittsburgh 13, Pa.

Carnegie Institution of Washington. An organization founded in 1902 by Andrew Carnegie "to encourage in the broadest and most liberal manner investigation, research, and discovery, and the application of knowledge to the improvement of mankind." Income on investments for the year 1948 amounted approximately to \$1,500,000.

The Institution is now fully engaged in the conduct of programs in the physical sciences, the biological sciences, and historical research. Reassessment of objectives in the several divisions and departments was made at the end of the war period, during which the entire resources of the Institution including laboratory facilities and personnel had been made available to the United States Government. From this reassessment a carefully integrated program of investigation has resulted and is being vigorously pursued.

Walter S. Gifford is Chairman of the Board of Trustees. Other Trustees are: James F. Bell, Robert Woods Bliss, Lindsay Bradford, Frederic A. Delano, Homer L. Ferguson, W. Cameron Forbes, James Forrestal, Herbert Hoover, Frank B. Jewett, Ernest O. Lawrence, Alfred L. Loomis, Robert A. Lovett, Roswell Miller, Henry S. Morgan, Seeley G. Mudd, William I. Myers, Henning W. Prentis, Jr., Elihu Root, Jr., Henry R. Shepley, Charles P. Taft, Juan T. Trippe, James W. Wadsworth, and Lewis H. Weed. President: Vannevar Bush. Headquarters: 1530 P St. NW, Washington 5, D.C.

CATHOLIC CHURCH IN THE UNITED STATES, The. The Catholic population of the United States, Alaska, and the Hawaiian Islands numbered 26,075,697 in 1948. This represented an increase of 807,524 over last year. Comparisons indicate an increase of 1,277 in the number of clergy, bringing the total of priests to an all-time high in the United States of 41,747. Professed religious include 7,335 Brothers, an increase of 397, and 141,083 Sisters, an increase of 520. The full-time teaching staffs of all educational institutions under Catholic auspices number 101,944 which includes 6,779 priests, 3,445 Brothers, 372 scholastics, 79,952 nuns and 11,396 lay teachers, an increase of 4,168 full-time Catholic teachers in a year. There are 61,131 nuns engaged in work other than teaching.

A record total of 14,905 Catholic parishes are operating in the United States, Alaska, and Hawaii. This includes 14,015 parishes with resident pastors, a decrease of 33. In addition, there are listed 5,617 chapels, 4,942 missions, and 1,705 stations where Mass is offered more or less regularly.

Meeting of the American Hierarchy. November 17 to 19 were the dates of the Annual General Meeting of the Cardinals, Archbishops, and Bishops held at Catholic University and attended by 146 members of the hierarchy. At the close of the Meeting, the Bishops issued a statement entitled "The Christian in Action" which was signed in their names by the Administrative Board of the National Catholic Welfare Conference. The statement warning against the "corrosive influence" of secularism in every phase of life may well become one of the best known messages issued by the members of the hierarchy in this country.

During the meeting, the Bishops elected the Archbishops and Bishops to serve on the Administrative Board of the National Catholic Welfare Conference for the year 1948-49. Officers subsequently elected are as follows: Most Rev. John T. McNicholas, O.P., Archbishop of Cincinnati, Chairman of the Administrative Board and episcopal chairman of the Executive Department; Most Rev. Francis P. Keough, Archbishop of Baltimore, Vice Chairman of the Administrative Board and episcopal chairman of the Department of Education; Most Rev. John Mark Gannon, Bishop of Erie, Treasurer of the Administrative Board; and Most Rev. John F. Noll, Bishop of Fort Wayne, Secretary of the Administrative Board.

Schools. Despite postwar conditions, 11,239 separate educational institutions (an increase of 100) were in operation, according to *Catholic Directory* reports. The total includes 60 diocesan seminaries, 278 universities and colleges for men and women, 1,637 diocesan and parish high schools, 795 private high schools, 7,724 elementary parish schools, and 524 private elementary schools. There are also 129 protective institutions with 14,580 children under instruction.

An aggregate of 4,138,695 American youth in all grades are under Catholic instruction, an increase of 306,468 over 1947 statistics. An increase of 114 percent in two years in enrollments in Catholic universities and colleges was reported. The enrollment jumped from 175,120 in 1947 to 220,226 in 1948—a numerical increase of 45,106. This shows that Catholic universities and colleges have more than doubled their student bodies in the last two years—from 102,655 to 220,226.

War Relief. During the 12-month period between Oct. 1, 1947, and Sept. 30, 1948, War Relief Services-National Catholic Welfare Conference, the foreign relief agency established by the Administrative Board of Bishops in the early months of 1943, forwarded to countries still suffering as a result of the war a total of 110,487,319 lb. of food, clothing, and medicine which had an approximate value of \$15,793,000.

The shipments completed during this period brought the total amount of relief extended through War Relief Services-N.C.W.C. since the inauguration of its program (through Church authorities in the war-stricken countries) to approximately 252,728,000 lb. with a total value of more than \$123,143,000. This vast relief program was made possible by the success of the Bishops' Relief Campaign which was held in all the dioceses in the United States during 1948, beginning on Laetare Sunday, March 7, as well as from various gifts-in-kind campaigns conducted during the year.

Austria, Germany, Hungary, Italy, Poland, and Rumania proved to be the areas of most critical need in Europe, while in the Far East the greatest hardship was found in China and Japan.

Displaced Persons. The passage of the Federal Displaced Persons Act by the 80th Congress of the United States during the past year offered further hope toward the final solution of the displaced persons problem. Under this law, 205,000 of the nearly 1 million displaced persons who are still living in and outside the camps in Germany, Austria, and Italy will have an opportunity to emigrate to the United States. A vast program centering around Diocesan Resettlement Committees has been set up in the dioceses throughout the country. The first of the immigrants coming to this country under this law have already been assimilated.

War Relief Services-N.C.W.C., in cooperation with the Vatican Migration Bureau of the Holy See, is continuing to assist in finding resettlement opportunities for thousands of other displaced persons in Canada, Australia, and the South American countries. It has been necessary also to maintain supplementary feeding programs in the displaced persons camps to assist the children and the aged.

Military Personnel and Veterans Services. Successful development of its peacetime program for military personnel, patients in Veterans Administration hospitals, and their families, has placed the National Catholic Community Service in an excellent position for whatever expansion of services may be required. An outstanding development in the past year has been the expansion of NCCS program for VA hospital patients on a national scale. The NCCS-VA Hospital Service is now available in 45 cities where NCCS representatives have been appointed. Plans call for the organization of an NCCS-VA hospital committee in every VA hospital area with the approval of the Bishop of the local diocese.

The Catholic Press. The Catholic publications in the United States increased by 29 to a total of 396 over a two-year period, while their combined circulations climbed to a total of 13,495,580. The N.C.W.C. *News Service*, serving primarily the Catholic newspapers and magazines in the United States, gained the largest increase in subscribers in its history last year. The *News Service* today is serving the entire Catholic newspaper press of Germany, China, Japan, the Philippines, and Switzerland and virtually all of the Catholic newspaper press of France and Italy. In the course of the year the *News Service* inaugurated a Portuguese-language edition which is presently serving the Catholic press of Brazil. The *News Services'* dispatches now go to subscribers in 43 countries.

Social Action. National Catholic activity in the field of social action is indicated in the following partial report from the N.C.W.C. Social Action Department which heads up this work for the Church in the United States. Besides holding conferences, writing, arranging for pamphlets, sending a news letter to priests, attending meetings, keeping personal and organizational contacts, staying abreast of facts and movements, etc., the N.C.W.C. Social Action Department opposed the Taft-Hartley law; favored the Housing and Labor Education bills and an improvement of the wages-hours law; advocated better State laws and business-labor-farmer-government cooperation for social justice; held institutes for priests, working women, leaders of women's groups, etc.; worked closely with diocesan groups of priests and labor schools. Other activities carried on were interracial work, international peace, inter-American organization work, etc.

Activities of Lay Organizations. During the year the administration of the National Council of Catholic Men was reorganized and emphasis placed on diocesan organizational development. James S. Mitchell, formerly Executive Director of the National Catholic Community Service, was made Executive Secretary in February, 1948. Emmet A. Blaes, Wichita, Kans., on June 1 succeeded John W. Babcock, Detroit, Mich., as National President.

The three nation-wide radio network programs produced by N.C.C.M. were continued without interruption. In addition arrangements were made for a monthly television program in New York inaugurated in July, 1948.

The continued growth of the National Council of Catholic Women is evidenced in the 80 percent increase of new affiliations over the year before, bringing the federation which now includes 76 diocesan councils and 19 national organizations to a total of 5,324 local affiliated groups representing more than 5 million Catholic women in the United States.

Channeling information and services to affiliates through its National Committee system, the N.C.C.W. found its chief activity this year in the fields of social action, international and inter-American relations, family and parent education, and war relief. It had a continuing representation at meetings of 3 international and 18 national agencies, governmental and other, of which 3 are Catholic and 18 secular, and in its function as representative of United States Catholic women on matters of national and international concern, especially in above-named fields.

—HENRY P. LEFEBURE

CENSUS, Bureau of the. A branch of the U.S. Department of Commerce which serves as the major fact-finding and statistical service agency for the Government. It conducts the Decennial Census and other censuses, and also collects and publishes current information on the characteristics and activities of the people of the United States in the fields of population, housing, agriculture, manufactures, business, mineral industries, State and local governments, and other subjects. Director: J. C. Capt.

CENTRAL AMERICA. A geographical region in the Americas, bounded on the north by Mexico and on the south by Colombia. It comprises BRITISH HONDURAS, COSTA RICA, EL SALVADOR, GUATEMALA, HONDURAS, NICARAGUA, PANAMA, and the PANAMA CANAL ZONE.

CENTRAL INTELLIGENCE AGENCY. The National Security Act of 1947, (Public Law 253, 80th Congress, 1st session), became effective in September, 1947. Section 101 of this Act established the National Security Council, with the function of advising the President with respect to the integration of domestic, foreign, and military policies relating to the national security.

The National Security Act provided further (Section 102), for the establishment of the Central Intelligence Agency, under the direction of the National Security Council. The Agency recommends to the National Security Council various measures for the coordination of intelligence activities of the Government relating to the national security. This coordination is particularly important in determining primary fields of intelligence responsibility of the various Departments and agencies.

The Agency works to prevent overlapping functions in the collection and dissemination of intelligence;

to eliminate duplicate roles and missions; and to eliminate duplicate services in carrying out these functions. It makes continual surveys of all Government agencies to ascertain their requirements in foreign intelligence and to make certain that these requirements are fulfilled.

The Agency is charged by law with performing, for the benefit of Departmental intelligence agencies, additional functions of common concern which can be more efficiently performed centrally—for example, the exploitation of foreign documents captured during World War II in all theaters. It translates and exploits current magazines and technical works, from all foreign sources. It monitors foreign radio broadcasts of news and propaganda, and public statements of leading figures abroad.

One of the greatest contributions that the Central Intelligence Agency makes is in the preparation of national intelligence estimates which will not be slanted in the interest of any one Department. Rather, it seeks to present an over-all picture—a balanced national intelligence estimate, including all pertinent data. From this, the President and appropriate authorities can draw a well-rounded picture in formulating their policies.

—R. H. HILLENKOTTER

CERAMICS. The ceramic industry continued its general upswing in 1948, with the manufacture and sale of virtually all ceramic products reaching new postwar peaks and, in many instances, exceeding levels achieved in prewar production. Increased demand for ceramic products of all types and greater availability of raw and processed materials used in their manufacture were the major contributing factors to this upswing. China, earthenware, glass and glassware, sanitary ware, tile, brick, enamel, porcelain, artware, stoneware, miscellaneous white-ware, terra cotta and abrasives were all included in 1948 production gains.

Increased industrial, residential and farm construction in the United States required vast amounts of ceramic construction products. Production of ceramic floor and wall tile during the first six months of 1948 reached 50,421,000 square feet, a gain of 24 percent over the corresponding period of the previous year. The 494 million bricks produced in July, always a strong month for construction materials, represented an increase of 12 percent over that of July, 1947. Though production of structural clay tile, used primarily in industrial construction, was down slightly, shipments of that product maintained 1947 levels as a result of large stocks accumulated earlier. Production of architectural porcelain, enamel, sanitary ware and similar products was also favorably affected by the building boom. Outside of the United States, construction was begun on two ceramic manufacturing plants in countries where none of major output had previously existed: Puerto Rico and India.

Foreign production of dinnerware and artware, at a low ebb since the war, came back strongly in 1948. Though hampered by labor and decal shortages, British pottery exports during 1948 equalled 223 percent of prewar figures. German dinnerware production also faced a shortage of skilled labor but production showed a steady improvement. French products, prices of which were increased more than once during the year, were still behind on delivery as a result of fuel and power shortages. Italian pottery production made great strides toward regaining prewar quality and quantity. Japan, formerly one of the world leaders in dinnerware production, also showed large gains in 1948, and by the end of the year Japanese ware was once

again being seen in considerable quantities on the world market.

In the United States, sales of dinnerware and decorative accessories were at peak levels in spite of a general 10 percent price increase announced by most major American potteries toward the end of the year. American styling, at one time almost exclusively imitative of European ware, achieved singular success during 1948 with bold colors and patterns and functional, though esthetically appealing, design. California emerged as a major center of this new style trend. (See GLASS AND GLASSWARE.)

—DONALD DOCTOROW

CEYLON. A British self-governing Dominion situated in the Indian Ocean south of India. The island achieved full dominion status on Feb. 4, 1948.

Area and Population. The area of Ceylon is 25,322 square miles. Population (1946 census): 6,658,999, of whom about two-thirds were Singhalese and 10 percent Tamils from southern India. Fifteen percent of the population was urban. Chief cities (1946): Colombo (capital), 361,000; Jaffna, 63,000; Dehiwala-Mt. Lavinia, 56,000; Kandy, 52,000.

Education and Religion. In 1945 a free educational system extending from the kindergarten to the university came into operation. Schools are Singhalese, Tamil, English, and bilingual, with a total enrollment in 1946-47 of 870,000. Higher education is given at the University of Ceylon and Ceylon Technical College. The majority of the inhabitants are Buddhists.

Production and Trade. Production is specialized, with tea the first and rubber the second outstanding product. Although rice is raised extensively, large imports are necessary each year. Coconuts, livestock, and a variety of minerals including gems are produced. The Dominion Government plans the erection of diversified industrial plants.

Although Ceylon has usually had an export surplus, the trend was reversed in 1947 when exports amounted to \$270 million and imports to \$290 million. In that year Ceylon-United States trade was \$36 million Ceylonese exports and \$33 million Ceylonese imports. In prewar years more than 75 percent of Ceylon's cotton textile imports came from India, Japan, and the United Kingdom, but in 1947 India was the chief supplier with 43 percent and the United States next with 29 percent.

Finance. In 1946-47 Ceylon had an estimated excess of revenue (\$93,900,000) over expenditure (\$93,300,000). The principal source of revenue is customs. The Government of Ceylon has planned the establishment of a Reserve Bank. A monetary agreement from 1948 signed with Great Britain and effective June 1, 1948, covered Ceylon's net sterling debt to the United Kingdom. Ceylon's dollar earnings in 1948 were estimated at \$54 million and dollar expenditures at \$30 million thus permitting Ceylon to be a net contributor to the dollar pool. In 1948 Ceylon tightened its exchange control regulations.

Transportation. Railway mileage in 1946 was 913. The merchant fleet is composed largely of sailing vessels.

Government. Executive power is vested in a Governor General appointed by the Crown. Legislative power (as from Independence Day, Feb. 4, 1948) rests with a Parliament of two chambers: a Senate and a House of Representatives. There is a Cabinet and Prime Minister responsible to Parliament. Since the elections of 1947 the United National Party has been in power. Governor General, Sir Henry Monck-Mason Moore; Prime Minister, Minister of

Defense, Minister for External Affairs, D. S. Senanayake; Minister for Home Affairs, E. A. P. Wijeyaratne.

Events, 1948. Impressive ceremonies were held in Colombo on February 4 in celebration of the emergence of Ceylon as an independent dominion. On February 10 the Duke of Gloucester opened the first Parliament of the Dominion of Ceylon in a setting of even greater splendor. In the presence of the accredited representatives of 25 nations, including Soviet Russia, the Duke of Gloucester read the King's Speech from the Throne, in which the King expressed his regrets that he was not able to open Parliament in person and said: "That Ceylon has been able to achieve her freedom by constitutional and peaceful methods in collaboration with my Government of the United Kingdom is a matter of profound satisfaction."

Ceylon's first year of independence was far less disturbed than that of her new sister Dominions in the East, India and Pakistan, or of nearby Burma whose secession from the British Commonwealth became effective exactly one month before Ceylon's Independence Day. While the others were erupting with domestic revolts, undeclared wars and the loss of leaders by violence or sudden death, Ceylon was quietly extending her political connections and developing her economic program.

The establishment of diplomatic representation was accomplished as early as possible. In July Sir Oliver Goonetilleke gave up his post as Home Minister to go to London as High Commissioner, replacing G. S. Corea, who was ordered to Washington as the first Ceylonese Ambassador to the United States. E. A. P. Wijeyaratne, a member of the State Council from 1931 to 1936, accepted the portfolio of Home Affairs.

The Commonwealth Conference. Prime Minister Senanayake represented his country at the Conference of British Commonwealth Prime Ministers which met in London, October 11-22. His country was given special and emphatic mention in the final statement of the Conference, whose members appeared to resent Ceylon's exclusion from the United Nations by virtue of a Russian veto. The Conference members placed on record their recognition of Ceylon's independence and affirmed that Ceylon enjoyed the same sovereign independent status as the other self-governing countries of the Commonwealth which were members of the United Nations.

After the Conference was over Prime Minister Senanayake said that he believed Ceylon, India, and Pakistan had much to gain as members of the Commonwealth. He himself advocated the holding of further meetings at the ministerial level, and hoped that within a year a meeting on foreign affairs would take place in the Ceylonese capital.

On June 29 the Government of Ceylon ratified the General Agreement on Tariffs and Trade entered into at Geneva on Oct. 30, 1947. This put into effect the concessions granted to the United States under the agreement, including those on machinery, radios, refrigerators, typewriters, and other products amounting, in terms of 1939 trade, to \$844,000. The United States concessions to Ceylon included those on rubber, tea, and coconut products. In the autumn there was a persistent report that Russia was in the market for Ceylon's entire rubber output for 1949.

—ALZADA COMSTOCK

CHEMISTRY AND CHEMICAL TECHNOLOGY. The rising tide of chemical activity has continued undiminished during 1948.

Analytical Chemistry. The resurgence of analytical chemistry as an important and fundamental field has continued. More than a dozen specially organized symposia were held and an International Conference on Analytical Chemistry took place at Utrecht, Holland, in June.

1. *Instrumental Methods.* The published papers and symposia discussion indicate that the major trend in analytical chemistry continues to be toward the development and perfection of instruments.

2. *Mechanization.* The tendency to mechanize and speed up analytical procedures is important. Devices have been described and are commercially available for completely automatic titration. A "quantometer" combines photoelectric intensity measurements with emission spectrography and enables a quantitative analysis for up to 16 elements to be made on metallic specimens within one or two minutes.

3. *New Balance.* The Swiss-manufactured *Grammatic* balance became available. The instrument has a single pan, operates with a constant load, and has a constant sensitivity. Weighing consists of removing weights, which are read directly on dials, and the final beam deflection is read directly in milligrams. A complete weighing can be done in 20 seconds.

4. *New Techniques.* Fundamental research in neutron diffraction, microwave spectroscopy, and ultrasonics will lead to new analytical instruments. The use of X-ray absorption as an analytical tool has been enhanced by the development of photomultiplier detectors. Analysts are also making greater use of statistics.

5. *Fluorometric Analysis.* The greatest development has been with respect to apparatus. The use of the photomultiplier tube to collect the fluorescent light from solutions has appeared on the new fluorometer. It is now possible to measure the fluorescence of 0.1 millimicrograms of riboflavin in 0.5 ml. of solution.

The new interference filter consists of two thin semitransparent metallic layers parallel to each other and separated by a distance of a few wave lengths. A dielectric layer is used to separate the metallic films.

The fluorescence of antimalarial drugs has been studied. A new simple test for tryptophan and other amino acids, where perchloric acid converts the compound at room temperature to a highly fluorescent substance, was developed. The fluorometric determination of rutin and penicillin has been accomplished. Boron forms a fluorescing complex with benzoin.

6. *Organic Microanalysis.* Emphasis has been on making old processes automatic and decreasing the time involved and, in general, putting procedures in such form that they can be handled by relatively untrained technicians.

The Unterzaucher method has been evaluated and results are far superior to those obtained by the classical hydrogenation method. The method is also applicable to inorganic materials which can be reduced by elemental carbon at high temperatures.

Progress was made in methods for converting organically bound fluorine to inorganic fluoride and the determination of fluoride by colorimetric, gravimetric, and volumetric procedures.

Microgram processes have been developed for biochemistry and nuclear research where minute traces are important and the sample size limited.

7. *Periodical.* In January the American Chemical Society publication in the field was officially named

Analytical Chemistry and many new features were added. An "Analyst's Calendar" was published and abstracts of the various symposia have been printed. Reviews which evaluate developments of the last few years will be published.

Chemurgy. The position of agriculture as a supplier of raw materials is definitely threatened by the synthesis of organic acids, alcohols, fibers, glycerol, and other products from coal, natural gas, and petroleum. Despite these advances, it is estimated that the farm value of major agricultural products and by-products used by the chemical industry in 1947 is over 1,000 million dollars.

The wet-milling industry, in 1947, consumed about 139 million bushels of corn and produced products valued at \$420 million. This compares with the 1942 and 1937 grinds of 130 and 68 million bushels, valued at \$218 and \$135 millions, respectively. Other developments are: (1) production of inositol from steep liquor; (2) use of steep liquor in the production of penicillin; (3) production of wool-like fibers from the corn protein; and (4) production of allyl ethers for protective coatings.

Soybean production has been increased fourfold since 1938. Glues derived from refined soybean proteins have displaced casein in many fields. Research on the production of adhesives and fibers from soybean, peanut, corn, and cottonseed proteins has made marked progress and some developments have been translated into industrial operations. Wheat gluten and casein are used for the production of amino acids.

Tall oil—a mixture of rosin and fatty acids—is being produced in ever-increasing quantities. The annual production, now exceeding 250 million pounds, is consumed by a wide variety of industries.

The synthesis of hexamethylenediamine, nylon intermediate, from furfural is an outstanding chemurgic development. The waste liquors from sulfite pulp are used in two plants for the production of industrial alcohol. The investment in these war-born plants has largely been amortized, while prices for blackstrap and ethylene used in competitive alcohol processes have risen.

Drugs. Annual appraisal of advances is complicated by the fact that the pace of discovery of new agents has accelerated more than has the pace of final evaluation of usefulness.

1. *Anesthesia.* The demonstration of the activity of Methadone (Amidone, Dolophine), 6-dimethyl-amino-4,4-diphenyl-3-heptanone, is one of great significance, since the synthesis of a substance simpler than morphine and of equal or greater analgesic action relieves our dependence on the opium poppy.

While curare does not cause loss of consciousness, it has been found widely useful during surgical anesthesia because of the muscular relaxation it produces.

Myanesin, 3-*o*-toloxyl-1,2-propanediol, was described first as a substitute for curare, and is useful in anesthesia and certain spastic muscular disorders.

2. *Antibiotics.* Aureomycin and Chloromycetin have been obtained from soil organisms, *Streptomyces aureofaciens* and *Streptomyces venezuelae*. Both have a wide spectrum of activity against both Gram-positive and Gram-negative bacteria. These agents are of unusual value against infections with Rickettsia. Chloromycetin also affords the first satisfactory chemotherapeutic treatment of typhoid fever. A virus-caused disease, lymphogranuloma venereum, responds to both drugs. These are exam-

ples of successful extension of antibiotic therapy into the field of non-bacterial, non-protozoal, infectious diseases.

A demonstration of practical value is that the use of aqueous or oil suspensions of the procaine salt of penicillin makes possible the painless, once-daily injection of this antibiotic.

3. *Antihistamines*. The discovery that bodily responses to histamine can be successfully combated has resulted in relief of symptoms and in emphasizing the role of histamine.

4. *Antimalarials*. War-accelerated research established that true prophylaxis of malignant (*falciparum*) malaria, but not benign, or relapsing (*vivax*) malaria, may be achieved by use of Quinacrine (Atabrine), Chloroquine, or Camoquin. The latter two are preferred, in that less frequent administration is required and staining of the skin does not occur.

Previously, Pamaquin, from 8-amino-quinoline, was of value in the therapy of relapsing malaria. Now Pentaquine has been found useful as a prophylactic and cure. Paludrine has properties like those of Chloroquine.

5. *General*. The filarial worm causing elephantiasis is responsive to treatment with Hetrazan, 1-diethylcarbamyl-4-methylpiperazine. Hexachlorocyclohexane, active against many forms of ticks, fleas, and lice, is now most helpful in scabies.

6. *Sympatholytics*. Control of the activity of the sympathetic nervous system has not been practical. Considerable action has been shown for Dibenzamine (dibenzyl- β -chloroethylamine), Priscol (2-benzylimidazoline), Etamon (tetraethylammonium chloride), and certain alkaloids of ergot, but therapeutic appraisal is still in progress.

7. *Tumor Chemotherapy* has been hopeful but equivocal. The nitrogen mustard, N-methyl-bis- β -chloroethylamine, may cause remission in up to 90 percent, but no cures.

8. *Vitamins*. The value of the nutritional requirements of bacteria in exploring this field is evident in the discoveries of folic acid and vitamin B-12. The former is active in promoting formation of red blood cells in cases of pernicious anemia, but does not relieve other difficulties. Vitamin B-12 gives relief in daily doses of one-millionth of a gram, and appears to be the long sought anti-pernicious anemia factor in liver.

Fertilizer. The consumption of commercial fertilizers by the American farmer in 1947 was over 15 million tons; 1948 will be even higher. Not only has the tonnage been increased, but the actual plant nutrient content of the fertilizer was increased.

1. *Fluorides*. The results of an extensive survey indicate that in the Pittsburgh area, unexpectedly large amounts (200 parts per million) of combined fluorine are to be found in the undamaged foliage of trees, alfalfa, grass, and other vegetation. The plants may absorb fluorine from the soil and from coal smoke in the atmosphere.

2. *Liquid and Gas*. The use of liquid and anhydrous ammonia in direct application to the soil is becoming widespread, especially for cotton and grain. Special equipment has been designed to make application directly into the soil. (See *nitrogation* and *nitrojection* under GLOSSARY.)

3. *Movement*. A simple technique for studying the movement of soluble fertilizer in the soil has resulted in more practical methods of fertilizing sandy soils.

4. *Radioactive Isotopes*. The use of radioactive compounds in fertilizer mixtures has proved some of the old theories about the absorption of various

nutrients. The differentiation between the amount of plant food absorbed from the fertilizer and soil nutrients in soils of various fertility levels has revealed that the amount of phosphorus absorbed from fertilizer added to the soil is much less where it is less fertile.

5. *Secondary Elemental Deficiency*. The detection and use of such deficiencies as magnesium, boron, manganese, copper, and zinc have resulted in improvement of quality and crop yields.

Molybdenum is a normal constituent of plant material. Under alkaline conditions, enhanced by over liming in humid regions, the movement of molybdenum into the plant has been found to be sufficient to cause sickness in cattle when the plant material carries more than 20 parts per million.

Cobalt deficiency in animals has indicated areas which require supplemental treatment.

6. *Soil Aeration*. The use of rubber-mounted heavy machinery and growth-regulating substances which lessen the necessity of cultivation has resulted in soil compaction and poor aeration. The use of gypsum, lime, superphosphate, and deep tillage has resulted in phenomenal increases in yield.

The use of high-phosphate fertilizer in the row in the heavy soils of Canada has resulted in hastening maturity and improving yields of tomatoes and other vegetable crops.

Fuel. Highlights of 1948 were: continued unprecedented expansion in the use of and demand for all types of fuel; extensive research and development work on methods for producing synthetic gas and liquid fuels; marked expansion of the low temperature carbonization industry; and development of peak-load processes for the production of high-Btu gas.

1. *Gaseous*. Effort has been directed toward the conversion of coal into carbon monoxide-hydrogen mixtures, from which synthetic chemicals, liquid fuels, and fuel gas may be manufactured. Emphasis has been on modifications of the "fluid-bed" process. Several pilot-size gasification units have been in operation during the year. Development work on pilot equipment has also been conducted on modifications of the Lurgi gasification process.

The consumption of natural gas amounted to nearly 6 trillion (6×10^{12}) cubic feet. Proved reserves are currently estimated at 165 trillion (165×10^{12}) cubic feet. Shortages during the winter months stimulate large-scale use of peak-load processes.

2. *Liquid*. The petroleum industry has increased refinery capacity as rapidly as is physically possible and has operated existing facilities at or near peak capacity, but has been unable to meet the increased demand.

Crude oil production approached 2,000 million barrels, from an estimated proved reserve in the U.S. of between 21,000 million and 22,000 million barrels. Major wells were brought into production on the continental shelf off the Gulf Coast, in the Cuyama Valley district of California, and near Edmonton, Alberta.

Although America's potential production capacity for liquefied petroleum gases is estimated at 17,000 million gallons per year, 1948 production amounted to only about 2,000 million gallons.

Petroleum companies showed marked activity in research and development work on synthetic liquid fuels and many associated themselves with coal companies having similar interests. Several of the major companies are currently investigating the recovery and refining of shale oil.

3. *Solid*. The direct conversion of coal into liquid fuels and chemicals by hydrogenation at pressures

up to 10,000 pounds per square inch and at temperatures up to 500° C. continues to receive considerable attention. A heavy fuel oil, meeting Bunker C oil specifications, is in the offing at a cost of 12 cents per gallon or less.

America's coal reserves are generally quoted at about 3,000,000 million tons. Recent estimates suggest that the actual reserves of recoverable coal may be only 5 to 10 percent of the foregoing estimates. American coal production now approaches 700 million tons per year.

By-product coke production exceeded 67 million tons. Coal charged to coke ovens exceeded 95 million tons. Production of coal chemicals from carbonization plants approached an all-time high. Values of all carbonization products have shown a steady increase since 1944. Total value of by-products produced last year amounted to \$3.71 per ton of coke produced.

Public pressure for the elimination of atmospheric pollution resulted in the adoption of additional or more stringent smoke ordinances and added impetus to research.

4. *Oxygen.* Previous to 1948, oxygen was produced principally for cutting and welding purposes in 2- to 10-ton-per-day plants. This oxygen was a 99.5 percent purity product, but too expensive for tonnage use. During the year, tonnage oxygen has become a reality, with 9 plants ranging in capacity from 135 to 2,000 tons per day, under construction or completed. Operating costs, including fixed charges, may be as low as \$3.50 to \$4 per ton.

All of the tonnage oxygen plants will produce oxygen of 90 to 95 percent purity and will permit a side stream take-off of 99.5 percent oxygen for special purposes.

Different operating cycles, employing various types of heat exchangers and regenerators, have been developed. All employ relatively low pressure (about 85 pounds per square inch as compared to the 400 to 3,000 psi of the older methods) and turbo compressors and expanders.

Fuel Utilization. It is only recently that newer refining procedures have produced a sufficient quantity of high-octane automotive fuel to justify a study of high compression engines in a semi-practical way.

The results of these studies are having a profound effect upon the evolution of the transportation industry. High-octane quality fuels permit large practical gains in fuel economy without sacrificing customer acceptance of the product. A 10-to-1 compression engine operating on a fuel of 98 research octane number is 40 to 45 percent more economical than a corresponding 1947 car requiring a fuel of 85.

The chemical structure of the constituents of gasoline affects the cleanliness of the combustion process in the engine as well as the antiknock quality of the fuel. Gasolines differ markedly in the degree to which they form films of deposits on the pistons, cylinders, and other engine parts. The effects of sulfur on the antiknock action of tetraethyl lead have been studied.

Metallurgy. Waning natural resources and an increasing demand for metals have caused the metallurgists to direct their efforts principally to process metallurgy. Although shortages of many metals prevail, the most critical is the shortage of iron. We are now faced with the exhaustion of our high-grade iron ores within 30 or 40 years. The concentration of low-grade iron ore is being attacked from such angles as gravity concentration, heavy-media separation, and magnetic roasting. Within a year experimental plants totaling \$30 million in

cost will be in operation, aimed at the solution of this problem.

Manufacturers, politicians, and labor leaders, clamoring for an expansion of our productive capacity, apparently do not realize that such an expansion would, in itself, consume hundreds of thousands of tons of steel, and really make the immediate situation worse instead of better. A much more intelligent approach is to increase the capacity of our present steel plants by operation at a higher gauge pressure. An increase to only 25 pounds gauge results in 15 percent greater tonnage of iron, a 10 percent reduction in coke consumption, and a 20 percent reduction in flue dust lost.

The use of oxygen in the open hearth furnace to reduce the time consumed in melting the scrap, and later to accelerate the elimination of carbon, has increased materially the capacity of existing open hearth furnaces and made the production of low-carbon alloys cheaper and easier. It will unquestionably be used on a still larger scale in the operation of Bessemer converters and iron blast-furnaces. It is not at all unlikely that as a result of these developments our existing steel capacity will be sufficient to supply our needs for several years to come.

Another problem of the metallurgist has been the costly and laborious process of reducing a steel ingot to a usable form such as an angle iron, a plate, sheet, or bar. Continuous casting of steel has been carried out on a pilot plant scale. Close control of time, temperature, pressure, and use of new water-cooled mold has resulted in the continuous and efficient production of billets of moderate cross section.

A new process has been developed for making synthetic cryolite, which is suitable for use as electrolyte in the production of metallic aluminum. Other noteworthy developments are reducing the ash and sulfur in coking coals; greater utilization of the process for producing electrolytic tin plate; utilization of the fluidization principle of suspension in speeding up roasting, carbonization of coal, and controlled roasting of ores; efforts to produce very pure metals for special uses; and processes for the reduction and working of such refractory metals as molybdenum, tantalum, and tungsten for use in jet engines and gas turbines, and the utilization of nuclear energy.

Nuclear Chemistry. Advances have been made in the nuclear chemical aspects of the chain reactors, power piles and breeders. The general nuclear reactor development program has been centralized and a strong chemical and chemical engineering group has been built up.

1. *Isolation of New Elements.* A number of elements have recently been isolated in macroscopic quantities. Curium (96) was isolated in weighable amount following its production by the transmutation of americium (95) with pile neutrons. Use of the long-lives technetium-99, isolated from uranium fission products, has resulted in the isolation of the element technetium (43) in macroscopic quantity. The element with atomic number 61 has also been isolated in substantial weighable quantities.

2. *Molecular Structure by Neutron Diffraction.* Slow neutron beams from the nuclear chain reactors have been used in diffraction experiments to give information on molecular structure. The structures of a number of hydrides have been determined and some new metallurgical information has been obtained.

3. *New Radioactive Isotopes.* Over 100 new radioactive isotopes have been reported within the last year or so, covering the entire range of the periodic

table. Among these have been numerous interesting new cases of nuclear isomerism. Several instances of triple isomerism have been discovered. Rhenium (isotope Re^{187}), as it occurs in nature, was found to be radioactive.

4. *Separation of Rare-Earth Elements.* Initiated by use of tracers on the Plutonium Project, an excellent method has been developed for separating the rare-earth elements from each other in macroscopic quantities. Using ion-exchange resins, methods have been worked out for obtaining all of the rare-earth elements in pure form.

5. *Ultra-High Energy Reactions.* The operation of the giant 184-inch synchrocyclotron at the Radiation Laboratory of the University of California has led to a number of interesting new results. The bombardment of elements throughout the entire range of the periodic table with the 200 Mev deuterons and 400 Mev helium ions with this machine has led to the observation of the so-called spallation reactions in which products differing from the target nucleus by as much as 30 to 40 mass units and 10 to 15 atomic number units have been observed. A number of elements below the uranium region undergo the fission reaction when irradiated with such high energy particles. Mesons, both heavy and light varieties, have been produced for the first time by artificial means. A number of new collateral radioactive series has been produced and identified in the region of atomic numbers of about 82 to 92 as a result of bombardment of heavy natural radioactive elements with these high energy projectiles.

6. *Use of Tracers.* About 2,000 shipments of radioactive tracer isotopes were made to some 200 institutions in the United States, whereas about 200 shipments were made to 15 other countries.

Carbon-14, for example, has been used to study the photosynthetic mechanism; radioactive P-32, to elucidate metabolism in normal animals and those bearing malignant tumors; radioactive S-35, for elucidation of the biosynthesis of penicillin.

Separated stable isotopes (more than 100 varieties of 29 elements) also have been made available and these together with deuterium, enriched nitrogen-15, and carbon-13 have been used both as tracers and as an aid in the conduction of research in nuclear chemistry. Among the applications of stable isotopes as tracers in biochemistry may be mentioned the use of deuterium to elucidate the synthesis of fats by micro-organisms.

Organic Free Radicals. Of considerable interest is a series of papers on the decomposition of t-alkyl peroxides and on the hydrogen bromide catalyzed oxidation of t-alkanes.

Petroleum. 1. Alcohols. By the *oxo* synthesis, the octyl form of alcohol is now in production. This alcohol is utilized primarily for the manufacture of phthalate and other esters for use as plasticizers. The production of synthetic ethyl alcohol, *sec*-butyl alcohol, ethylene glycol, glycerol, and isopropyl alcohol, from petroleum or petroleum by-products, has expanded.

2. *Butadiene.* During the early part of the synthetic rubber program in the United States most of the butadiene was derived from ethyl alcohol because less steel was required. In 1948 all butadiene in the U.S. was manufactured from petroleum sources. Progress was made in preventing the formation of insoluble polybutadiene, popcorn polymer.

Butadiene oxide and vinylcyclohexene (butadiene dimer) are marketed on a small scale. Isoprene is used in the manufacture of Butyl rubber.

3. *Chemicals for Agriculture.* Synthetic chemicals

from petroleum used in agriculture include: blossom thinning agents as well as fungicides, growth regulators, insecticides, repellents, soil fumigants, vine killing agents, weed killers, and the like.

4. *Hydrocarbons.* Synthesis from petroleum sources gives toluene and xylenes. The *o*-xylene is oxidized to phthalic anhydride. The fluid catalytic technique is in use for the oxidation of naphthalene to phthalic anhydride.

Cyclohexane of 85 percent minimum purity is available for the manufacture of nylon. Ethylene has been utilized in increased volume in the manufacture of acrylonitrile, ethyl alcohol, ethylene glycol, styrene, and tetraethyl lead.

5. *Synthetic Detergents.* The sale for 1947 amounted to 600 million pounds (240 million pounds of active ingredients). The alkylaryl-sulfonates, which are prepared by alkylating aromatics by appropriate olefins, account for the greatest volume.

6. *Synthetic Fuels.* Interest in the production of liquid fuels from natural gas and coal continues to expand, and is taking a long term viewpoint.

Petroleum Refining. Present petroleum refining processes are characterized by extreme flexibility. The relative amounts of Diesel fuel, gasoline, heating oil, residual fuel oil, and other products made from crude oil are constantly adjusted to meet changing seasonal and market demands. The use of crystallization, precise fractional distillation, selective solvent extraction, and solid absorbents enable sharp hydrocarbon separations according to boiling points, freezing points, and chemical characteristics. Chemical conversions involving both decomposition and synthetic reactions add greatly to the number of petroleum products.

Cracking to produce gasoline is vastly improved by use of refractory clay-type catalysts to give higher-octane motor fuel. Catalytic cracking not only produces higher-octane gasoline, but more Diesel fuel and heating oil and less residual fuel, tars, and coke. In catalytic cracking, moreover, there is less mercaptan and more hydrogen sulfide formation, and the sulfur in the carbonaceous deposits on the catalyst is eliminated as sulfur dioxide when the spent catalyst is regenerated.

Catalytic cracking processes employ (1) pellets in stationary beds; (2) beads in moving beds; and (3) powders in fluidized dense phase. The latter is dominant at present. Another improved feature is the use of microspherical catalyst powders in the fluid process, which undergo less wear and cause less erosion.

Since the gases from cracking contain substantial quantities of polymerizable propylene and butylenes, plants for converting these olefins to polymer gasoline are now standard equipment. Using a kieselguhr-phosphoric acid catalyst, liquid polymers of over 80 octane are produced.

The alkylation of isobutane with gaseous olefins, using H_2SO_4 or HF, gives isoparaffinic alkylates which have octane ratings over 90 and high susceptibility to tetraethyl lead.

Isomerization of *n*-butane to isobutane using an AlCl_3 catalyst gives increased supplies of the key hydrocarbons for alkylation plants. The conversion of *n*-pentane and hexane to branched isomers, using a liquid aluminum chloride-hydrocarbon catalyst, gives hydrocarbons of markedly improved antiknock properties.

In finishing gasolines, the use of chemical reagents such as sulfuric acid to remove gum-formers and reduced sulfur is being superseded by more selective and less wasteful methods. Solvents such as solutions of methanol in sodium hydroxide are used for removing odorous mercaptans. Phe-

nol- and amine-type inhibitors in small amounts retard gum formation. Tetraethyl lead is added for increasing octane rating.

Demand for Diesel fuel is increasing. The fuels of best ignition and combustion characteristics are primary uncracked petroleum distillates. The combustion quality of Diesel fuel from cracking is improved by small amounts of organic nitrates or peroxides.

Lubricating oils are available for every service. Additives are now in use for improving oiliness, reducing freezing point, and increasing oxidation resistance. Others are used for reducing viscosity loss accompanying temperature rise. Special detergents are added which keep bearing surfaces washed free from deposits. Other additives reduce foaming tendencies and rust formation.

The silicones have exceptional lubricating quality, and frequently show approximately the same viscosity at zero and 400° F., which makes them valuable in airplane engines operating between extremes of desert heat and stratosphere cold.

Production of chemicals from petroleum base hydrocarbons is growing rapidly. Phthalic anhydride is made at the rate of 8 million pounds a year by the oxidation of *o*-xylene from California petroleum. Glycerin is manufactured from propylene by high-temperature substitutive chlorination, followed successively by hydroxychlorination and alkaline hydrolysis. Acrolein is a product of cracking diallyl ether, a by-product of glycerin manufacture. While the production of chemicals utilizes less than one percent of petroleum production, its future growth seems assured.

The Bureau of Standards has furnished ultraviolet, X-ray, and infrared spectra for identification of hydrocarbons. The mass spectrometer is also in extensive use for rapid analysis of hydrocarbon mixtures.

Pharmacology. Many achievements have been translated into therapy and new drugs have made their appearance in the physician's armamentarium.

The number of drugs which will combat the action of histamine and are useful in the treatment of hay fever and urticaria is increasing at a tremendous rate. Compounds are now available of the Neotergeran type which will successfully antagonize 100 fatal doses of histamine in the guinea pig. Besides, the use of the newer antihistaminics is accompanied with less untoward side-reactions than some of the early drugs of this class.

The recent release of dihydrostreptomycin, which has less vertigo-producing action on the semicircular canals, means that this form of streptomycin may be employed in the treatment of tuberculosis without affecting seriously the equilibrium sense of the patient.

The isolation of vitamin B₁₂ represents a major advance. This compound in extraordinarily small quantities appears to be the agent responsible for the maturation of the red cell in pernicious anemia. If in later experimentation this compound shows the degree of usefulness that it has exhibited to date, it will end the 20-year search for the active antipernicious anemia principle from liver.

Plasticizers are liquid or solid agents that are compounded with resins to produce the useful composite products known as plastics. The plasticizer confers pliability, distensibility, and workability to the resin. The kind and amount of plasticizer used with a given base resin determines the degree of flexibility imparted to the composition.

1. Evaluation. The American Society for Testing Materials through its Committee D-20 has been very active and helpful in making some degree of

standardization possible. Current methods of evaluation are based for the most part on stress-strain relations of plasticized specimens in tension, torsion, bending, and shear. Permanence in air, oil, and water is measured and a few miscellaneous tests are applied.

Other approaches to the characterization of plasticizers include studies on the second-order transition phenomena of plastics, dielectric loss of plasticized specimens at various temperatures, the technology of plasticizers by studying the time dependence of deformation of plasticized specimens by means of creep measurements, and the determination of heat softening points of cellulose acetate plastics. These investigations permitted the correlation of the logarithm of the heat softening temperature with the molar proportion of plasticizer present. The slope of this line proves to be a measure of plasticizer effectiveness.

2. New Uses. New applications are the introduction of the plastisols and organosols, which are suspensions respectively of finely-divided resin particles in plasticizer or in plasticizer and volatile diluent. By the use of these resin-plasticizer pastes, very economical application of plastics to use in coatings, films, and certain molded goods may be made.

3. Rapid Expansion. The production of plasticizers in this country has expanded very rapidly during and since World War II. During the war, the Services required material that would withstand severe wear and extremes of temperature and climate. The vinyl resins, properly plasticized, offered this combination of properties, and paced by the military needs, their production expanded rapidly.

Approximately one pound of plasticizer is required for each two pounds of vinyl resin used, so that the quantity of plasticizer necessary to supply the vinyl plastics industry alone is equal to half of the weight of the vinyl resin production. When the uses of plasticizers in coatings and in other applications is added to this, the total annual volume (1948) amounts to almost 200 million pounds. Di-butyl phthalate, dioctyl phthalate, and tricresyl phosphate are in considerable demand as well as castor oil and certain of its derivatives. In recent years, plasticizers of higher molecular weight are becoming somewhat more important, such as linear polycondensation products and polymerization products. Such plasticizers have the advantage of being very permanent, but leave considerable to be desired in the way of low-temperature pliability and in workability during compounding.

Plastics. Production has increased considerably during 1948, since increased facilities have become available. This is particularly true of polystyrene, the production in 1948 exceeding 100 million pounds for the first time, and polyvinyl chloride, which is expected to exceed 200 million pounds. It is increasingly apparent that the supplies of coal-tar crudes are not sufficiently great to supply the demand. The petroleum chemicals are, therefore, being used to supply raw materials for increased production in plastics.

Resinography has been proposed as the name for the graphic study of structures in resins and plastics.

1. Miscellaneous. New families of plastics with high impact strength made from copolymers of butadiene and styrene or acrylonitrile, and blends of polymers, appeared under the names Versalite and Tuf-lite. These materials are related to the synthetic rubbers. Large-area signs formed from Lucite or Plexiglas were developed for novel and effective advertising displays.

2. *Phenolic Resins*. These are among the first materials used as plastics, but their applications and production expand annually. In recent years, their use with natural and synthetic rubbers has been expanding, and mixtures of improved toughness and impact strength have been produced. The range of phenolic content varies considerably.

3. *'Plaskon' 420*, a new alkyd molding compound, a hot molding thermosetting material particularly notable for its very fast cure and good arc resistance, was announced.

4. *Polychlorotrifluoroethylene*, an unusually stable, high temperature thermoplastic, was placed on the market under the trade name Kel-F. This transparent material is resistant to attack by chemicals and solvents, is a good electrical and heat insulator, is normally rigid and strong, and is tough at very low temperatures.

5. *Polystyrene*. The production of this plastic material has been greatly increased and it is finding wide application in all types of thermoplastic molding. Some of these will yield molded products which do not deform in boiling water. Styrene is also used in the low-pressure laminating resins. These resins are now offered with varying degrees of stiffness, and improved promoters effect a cure without heating. The polystyrene copolymers containing butadiene have found a wide range of applications. They can be used with natural and synthetic rubbers to reinforce and harden these compositions. Another use of polystyrene has been as a starting material for ion-exchange resins.

6. *Protective Coatings*. Styrenated oils are formed by adding styrene or α -methylstyrene to the drying oils. The introduction of these hydrocarbons improves water resistance and many of the other properties of the resulting oil. Styrenated alkyds have also been announced and are finding widespread acceptance in the coatings field. By heat bodying mixtures of soya and tung oils under controlled conditions, a combination is effected which is widely used to replace linseed oil.

7. *Silicones*. These plastic derivatives are finding many new applications where their unique properties dictate their use. Materials have been made which are flexible at -150°F . and will withstand continued service at 500°F . The direct process of forming silicones from silicon and methyl chloride is meeting with success.

8. *Synthetic Rubbers*. The quality of rubber in tire treads has been greatly improved by polymerization at considerably lower temperatures, through the use of oxidation-reduction systems to promote the polymerization, which have resulted in shortening the polymerization to a reasonable time. The resulting rubber is more uniform in its structure and shows greatly improved resistance to abrasion and resistance to cut growth. Improvements have also been effected by the use of structural blacks.

9. *Vinyl Chloride Resins*. The vinyl chloride resins are meeting expanding markets, and the paste resins have made new techniques in formulation possible. One new type of vinyl chloride resin contains a small content of hydroxyl groups along the chain. The use of this resin with the oils helps reinforce the dried film. There is considerable interest in polyacrylonitrile and its copolymers, particularly in synthetic fibers.

Polymerization. In the study of polymerization kinetics in homogeneous media, data on the relative reactivity of monomers in copolymerization were published. These provide information on the effect of structure on reactivity in free radical reactions. Studies of regulators in the chain transfer reaction have been published. Absolute rates of

chain growth and chain termination reactions have been reported and indicate that rapid polymerization occurs at radical concentrations of the order of 10^{-8} molar.

In emulsion polymerization, further evidence that the locus of the reaction begins in the soap micelles and continues in the emulsion particles has been obtained; while a detailed theory of the kinetics of the reaction, which indicates that rate depends primarily upon the concentration of polymer particles, has been developed. Attention has been given to redox systems which permit emulsion polymerization at low temperatures.

The greatest advance is the development of Cold GR-S, a butadiene-styrene copolymer prepared near 0°C . by use of redox systems as catalysts. Cold GR-S, used in conjunction with certain carbon blacks in tires, gives a tread-wear apparently superior to natural rubber.

Protein. Electron microscope photographs of virus protein crystals, of antigen-antibody complexes, and of other protein structures, have revealed much about the molecular architecture of these compounds.

The crystallization of serum albumin, both human and bovine, from water-ethanol mixtures at low temperature and low ionic strength has been effected. The addition of decanol (0.1 percent) was found to be of essential importance in the crystallization of human albumin. A new technic was reported for crystallization of serum albumin with mercuric chloride.

The binding affinity of albumin is extraordinarily great for a variety of inorganic and organic anions, and such reactions quite probably play an important role in the biological function of serum albumin.

A β -globulin (M.W. 90,000) from blood plasma, which binds iron, copper, and zinc, was crystallized. It binds two iron atoms per mole, and appears to function as the essential agent for carrying iron in blood plasma. The affinity for copper and zinc is much weaker than for iron.

Accurate amino acid analyses were made by chromatographic separation of protein hydrolysates on a starch column, using colorimetric analysis.

1. *Blood Clotting*. A new factor (Ac-globulin) in the blood clotting process accelerates the conversion of prothrombin to thrombin in the presence of calcium ions and thromboplastin. Highly purified bovine fibrinogen and highly purified human fibrinogen have been prepared. A very extensive study was made of the structure of the fibrin clot as a function of pH, ionic strength, and other factors. The structure of the clot can be varied between two extremes: (1) an opaque, rubbery type at relatively low pH (near 6.3) and low ionic strength; and (2) a translucent, friable clot at higher pH and ionic strength. The former is formed by extensive aggregation of the initially formed fibrin network into parallel bundles; the latter is formed under conditions which inhibit this aggregation. This interpretation has been demonstrated by electron microscope studies.

2. *Diffusion*. The new interference technic permits the determination of diffusion constants of small molecules, and also of large molecules like proteins, with an accuracy of the order of 0.1 percent.

3. *Enzymes*. The formation of an intermediate compound between catalase and hydrogen peroxide now seems certain. The enzymes aldolase and glyceraldehyde phosphate dehydrogenase were crystallized and the prosthetic group of the latter enzyme is believed to be diphosphopyridine nucleotide.

4. *Heme*. Employing N-15 as a labelling compound, it has been shown that the nitrogen of heme is derived from glycine; and studies with C-14 have indicated that the α -carbon of glycine is in the α -position of the pyrrole nucleus, while the carboxyl carbon is the methine carbon of the porphyrin nucleus.

5. *Reversible Binding*. Cobaltodihistidine, which reversibly binds and gives off oxygen, has been prepared. A number of organic chelate compounds behave similarly.

6. *Size*. Estimates were made of the sizes and shapes of a number of blood plasma proteins from sedimentation, diffusion, double refraction of flow, viscosity, and osmotic pressure data. Most elongated of these is fibrinogen (about 700 Å long and 38 Å in cross-section). The β -lipoprotein of human plasma is nearly spherical and highly hydrated, with a molecular weight of 1,300,000. Serum albumin, with a molecular weight of 69,000, is approximately 150 Å long and 38 Å in cross-section.

7. *Synthetic Polypeptides*. Large polymers have been obtained of lysine as well as copolymers of leucine and phenylalanine.

Sewage and Industrial Wastes. Research has been directed toward a better understanding of the biochemical oxygen demand (B.O.D.) test and a study of analytical methods, largely through grants-in-aid by the National Institute of Health.

The most important advances on the B.O.D. determination were the application of manometric measurements and a re-evaluation of the velocity constant. It was shown that the 24-hour, 25° C. demand by the Warburg manometric measurement is approximately 75 percent of the standard 5-day value. The B.O.D. reaction velocity constant K is not 0.1 but varies from 0.04 to 0.29 for sewages, but if nitrification is taken into consideration the variation is from 0.07 to 0.25. More than 0.01 part per million of copper or of 0.3 part per million of chromates will give inaccurate B.O.D. values; copper above 0.01 suppresses the B.O.D. and more than 0.3 parts per million of chromates inhibits nitrification.

Many analytical papers dealt with new or improved procedures for phenol, copper, zinc, cyanides, chromium, nickel, grease, oxygen consumed, and an amperometric titration method for residual chlorine.

Radioisotopes in Research. Isotopes produced at Oak Ridge are now used in more than 300 laboratories and hospitals in this country and abroad. Their potential uses are unlimited, and already there are approximately 1,000 individual research projects utilizing isotopes.

1. *Agricultural Research*. Radioisotopes are aiding in advancing the efficient production of meat, milk, and eggs. Eighteen tracer studies on the process of photosynthesis are presently under way. Radioisotopes are used also in the development of better fertilizers: how plant foods are most effectively applied; what forms of fertilizer are best; how the plants utilize them. Approximately 12 current projects are aimed at a better understanding of how plant diseases and pests develop and attack crops. Radioisotopes afford new tests for the efficacy of insecticides and fungicides.

The application of radioactivity on plant and animal growth seems to indicate that small amounts of radiation may stimulate plant growth.

2. *Chemistry and Physics*. Radioisotopes in physics are aiding in the understanding of the fundamental forces which bind the nucleus together by assisting in the measurement of magnetic moments and spins. In chemistry, isotopes are aiding in

studying a great variety of processes, such as molecular formation, diffusion in liquids and solids; interaction among gases, liquids, and solids; catalytic action, solubility of materials, complex biochemical reactions, and many other phenomena.

3. *Education*. Now that isotopes are available, a limiting factor in their widespread utilization is the shortage of scientifically trained technicians. Many universities are offering courses in radioactivity and the U.S. Atomic Energy Commission has educational programs under way at their national laboratories. Information is available from the Technical Information Division, U.S. Atomic Energy Commission.

4. *Industrial*. As tracers, radioisotopes are used widely for the improvement and study of various processes. Manufacturers of gasoline, machinery, oil, plastics, rubber, and steel are only a few of those who are applying tracer research to bring about better and more economical production of their products. Radio carbon provides investigators with a method of studying diffusion of carbon in iron. Radio iron used in friction experiments reveals the transfer of less than 1,000 millionth of an ounce of material from one moving surface to another. In the petroleum industry isotopes are employed for surveying and locating oil deposits.

In the rubber industry, vulcanization and polymerization processes are studied with the radioisotopes of sulfur. In the rayon industry, where sulfur must be added and then removed, radio sulfur is giving extremely accurate information on the quantities employed.

Radiation is used also to dissipate static electricity which collects on belts, rolls of paper, and other moving materials in factories.

5. *Medical*. Isotopes are utilized in two ways: (1) as sources of radiation, particularly in the treatment of diseases; and (2) as tracers in processes formerly difficult or impossible to observe.

Employed as tracers, radioisotopes are making their greatest contribution in the unraveling of the complex, kaleidoscopic picture of life processes in both medicine and biology. In medicine, isotopes contribute to a clearer picture of how the living body works. In hospitals physicians are using radioisotopes to diagnose various circulatory disorders, locating malignant tumors and supplying important information of hematology.

Radioiodine is used successfully in the treatment of toxic goiter, since nearly all iodine in the human body is localized in the thyroid, although treatment of thyroid cancer by radioiodine has been less successful. Similarly, radio phosphorous concentrates in the blood-producing centers—the bone marrow, the spleen and lymph glands—and is used in the treatment of certain blood abnormalities such as a polycythemia. The possibilities of employing radioisotopes in the fight against cancer is of major interest, and the Atomic Energy Commission is distributing radioisotopes free for such studies. Metallic cobalt, when irradiated in the pile, emits radiations similar to radium and there is hope that it may eventually come into general use in cancer treatment since it can be made inexpensively and fabricated into special applicators.

Essentially the problem is to find molecules which will localize in specific diseased body tissues. These molecules will then be tagged with radioisotopes which will provide effective radioactivity. Used as tracers, radioisotopes will aid in determining which molecules can be localized in malignant growths.

Starch. Progress in the chemistry of starch during the year was made in a number of areas, as in:

1. *Acid Hydrolysis.* The α -1,6-glycoside linkage is less susceptible to hydrolysis than is the α -1,4-linkage. The latter has greater stability in cyclic structures such as the Scharfinger dextrans than it does in linear structures.

2. *Amylases.* Crystalline β -amylase, bacterial α -amylase, pancreatic α -amylase, and salivary α -amylase were isolated. Through use of these enzymes, the action of amylases on starch may be ascertained.

3. *Applications.* A number of papers and patents deal with the chemical and physical structure of starch granules, colloidal properties of starch, fermentation, paper sizing, textile sizing, etc.

4. *Derivatives.* The starch aryl carbamates have been prepared and characterized. Considerable difference was found between the derivatives of amylose and amylopectin. Starch tricarbanilate was fractionated into two components by use of ethyl acetate.

5. *Enzyme Action.* One theory of enzymatic hydrolysis proposes that when β -amylase contacts an amylose molecule, the chain is degraded completely before another amylose molecule is attacked. All crystalline α -amylases appear to effect complete hydrolysis of amylose to glucose (13 percent) and maltose (87 percent).

6. *Fractionation.* Amylose may be precipitated from an alkaline starch paste (pH 8) by the use of thymol or other phenols.

7. *Iodine Reaction.* From thermodynamical considerations, it is proposed that the starch-iodine complex is dipolar. Residues of 4 to 6 glucose units give no coloration with iodine, those of 8 to 12 give red with a peak at 520 millimicrons, and those of about 30 or more give blue with a peak at 600 millimicrons.

8. *Phosphorylase Action.* Muscle phosphorylase can degrade glycogen and amylopectin beyond branched junctures. Potato phosphorylase, like β -amylase, however, is apparently unable to pass a branched juncture. Neither is capable of splitting the α -1,6-glycoside linkages. Isophosphorylase, isolated from potato juice, appears to be capable of synthesizing a branched structure and of splitting the α -1,6-glycoside linkage.

9. *Properties and Structure.* 3,5-Dinitrosalicylate has been used as an oxidizing agent for end group analysis. Corn amylose gives values ranging from 200 to 2,100 glucose residues. Periodate on amylose indicates one reducing group per 250 glucose residues. Crystalline addition compounds of amylose appear to have a repeat period of 6 glucose residues. Molecular weight of corn amylose subfractions by osmometry ranges from 200 to 675 glucose residues.

Synthetic Organic Chemistry. The recent rapid growth of the synthetic organic chemical industry stems in a large measure to 3 influences: (1) the postwar need for chemicals; (2) the availability of intelligence reports describing German practices; and (3) the postwar boom.

The production of formaldehyde, acetaldehyde, acetone, methanol, and other chemicals by the air oxidation of butane and propane (liquid petroleum gas) is an important development. This process also provides acetic acid and ketene (from acetone), which are used in synthetic fiber operations. The production is sufficiently large to warrant the establishment of a tanker service for the delivery of formaldehyde. Ethylene has displaced blackstrap as the major source of industrial alcohol.

Fatty acids suitable for the manufacture of soaps are obtained by the air oxidation of the higher (C_{15} to C_{28}) paraffins.

Advances were made in the field of protective coatings where unsaturated glycerides have been supplemented by a wide variety of synthetics such as allyl ethers and vinyl esters.

The oxo or carbonylation reaction is now used in the production of acetic acid from methanol and glycolic acid from formaldehyde, and isooctyl alcohols from heptene.

Three potential processes for the commercial synthesis of lysine were reported. Methionine and tryptophan are now available in commercial quantities and up to 100 pounds of any of the other essential amino acids can now be obtained.

The Dowanols are obtained by the addition of alcohols to propylene oxide to give products such as 1-methoxy-2-propanol.

In the nitration of propane, conversion on a laboratory scale has been stepped up to 76 percent.

The Willstätter synthesis of cyclooctatetraene was repeated, and the product obtained is identical with that from the catalytic polymerization of acetylene.

Synthetic Rubber. Details of the manufacture of GR-S were published. Investigators separated GR-S into molecular weight fractions and determined the effect of the molecular weight on strength, processability, and tire wear.

1. *Latices.* Since early in 1948, the production of American-made latices has exceeded the consumption of natural latex in U.S. Processes were further developed for incorporating carbon black, oxidized lignin, and resins into synthetic latices.

2. *Low Temperature.* The outstanding development in American-made rubber during the year was the increased manufacture and use of copolymers of butadiene and styrene prepared at temperatures ranging from 0° F. to 41° F. instead of the 122° F. temperature which is used in the manufacture of GR-S. Low-temperature rubber, which contains less low-molecular-weight polymers, has a tensile strength and elongation equivalent to natural rubber, combined with resistance to abrasion and flex-cracking superior to GR-S.

3. *Monomers.* Substituted vinyl pyridines and butadiene make a rubber superior in several respects to GR-S. Butadiene was copolymerized with 11 different nuclearly substituted α -methylstyrenes, 20 halogenated styrenes, 2-vinylfuran, 2-vinylthiophene, methacrylonitrile, and vinylidene chloride.

4. *Production.* American-made rubbers averaged 41,000 long tons production per month, of which about 80 percent was GR-S. Consumption of American-made rubbers was about 41 percent of the total new rubber consumed in the United States.

5. *Rubber-Resin Mixtures.* There is a pronounced trend toward the use of mixtures of rubbers and resins. Copolymers of butadiene and styrene containing 80–95 percent of styrene were used extensively as reinforcing agents in crude rubber to increase hardness, rigidity and strength, and have found extensive use in footwear. Phenolic resins were incorporated in GR-S and in copolymers of butadiene and acrylonitrile to make leather substitutes, gasket materials, and adhesives. Extensive use was made of nitrile rubbers in vinyl chloride resins as auxiliary plasticizers.

6. *Specialty.* Emphasis was on the production of rubbers with special properties. Several types of butadiene copolymers were produced for electric insulation. Other specialty rubbers have non-staining properties, improved processing, and improved tack. Fabrication techniques were investigated to permit effective use of silicon rubbers, which possess good thermal stability from -70° F. to +500° F.

Tumor Enzymology. An enzymatic reaction occurs in liver and kidney by which a variety of 2,4-diketo acids yield pyruvic acid and a fatty acid: $R \cdot CO \cdot CH_2 \cdot CO \cdot CO_2H + H_2O \rightarrow R \cdot CO_2H + CH_3 \cdot CO \cdot CO_2H$. This reaction is suggestive of a possible pathway for the conversion of fat to carbohydrate. It is markedly diminished in all tumors studied.

The conversion of normal tissue into a cancer is accompanied by a considerable increase in the enzymatic capacity to hydrolyze the unsaturated peptide bond, $R \cdot CO \cdot N = CR' -$. The so-called dehydropeptidase activity of all tumors studied is extremely high. The significance of this observation, however, is still unknown. The saturated peptide bond, $R \cdot CO \cdot NH \cdot CHR' -$, is also hydrolyzed with great rapidity in tumors, but only when R and R' are certain amino acid residues. Thus, glycylalanine is hydrolyzed in cancer tissues much more slowly than its isomer, alanylglycine. It is conceivable that the arrangement of amino acids in certain proteins of cancer tissues may be different from that of normal proteins.

Vitamin B₁₂ was isolated in crystalline form and early clinical investigations indicate that it is effective in doses of 0.001 milligrams per day in the treatment of pernicious anemia.

Spectrographic analysis shows the presence of cobalt. The red color of the compound appears to be associated with its cobalt-complex character. The isolation of similar red needle-like crystals was effected from liver by British workers, who confirmed the presence of cobalt. The presence of both phosphorus and nitrogen have been reported, but tests for sulfur were negative.

A growth factor requirement of *Lactobacillus lactis*, Dorner, has been reported which bears an almost linear relationship to the unit potency of the extracts used in the treatment of pernicious anemia. Clinical tests using impure concentrates were confirmed and a positive hematological response noted in two cases of Addisonian pernicious anemia to single injections of 6 and 15 micrograms of vitamin B₁₂ respectively. Favorable responses were obtained with its use in two cases of macrocytic anemia and one case of non-tropical spue.

If so indicated, potent doses of the new vitamin may be given without physical discomfort to the patient and there is preliminary evidence that by the use of a sufficiently large single dose it may be possible to produce a prolonged remission in pernicious anemia. The need for frequent administration of large doses of liver extract may be eliminated.

Tests with chicks and rats indicate the possibility that vitamin B₁₂ is the animal protein factor.

Wood, Cellulose and Paper. Marked scientific and technologic progress in the fields of cellulose, paper, and wood has continued.

Two new rosin acids, neoabietic and isodextropimaric acids, have been isolated from *Pinus palustris*. A new 3-hydroxyflavanone was isolated from Douglas Fir wood and shown to cause the wood to resist sulfite pulping in a manner similar to Erdtman's hydroxystilbene derivatives. Unusual 7-membered carbocyclic compounds, including dehydropirillic acid, were found in Western Red Cedar and are believed to be partially responsible for the resistance of the wood to decay.

There is further evidence for the existence of a long repeating period (500 glucosidic linkages) in fibrous cellulose. Extensive studies were reported on methods of determining oxidized celluloses. Investigations of the distribution of substituent groups in cellulose esters and ethers were made; preferential substitution of the primary alcoholic group was

shown. Comparisons of methods for the determination of crystalline-amorphous ratios in celluloses showed that different results are obtained by chemical and physical means. An exchange reaction of cellulose with heavy water was suggested as a new means of measuring crystalline-amorphous ratio and the chemical method has been improved.

Improved methods have been developed for the separation of the carbohydrate fraction of wood (holocellulose) from lignin and have shown the beneficial effect of hemicelluloses on some of the properties of pulps. There is definite evidence for the presence of mannans in hardwood holocelluloses and that the resulting α -celluloses contain combined mannose units. Presumptive evidence for a bond between lignin and carbohydrate or wood was provided.

Progress has been made in the recovery and utilization of sulfite waste liquor. One pulp mill constructed a plant to use magnesium bisulfite as the cooking chemical and will evaporate and recover the inorganic chemicals. Ammonia-base liquor also is used by several companies. Alcohol is being made at two plants by direct fermentation, and construction was started on a plant to utilize the fermentable pentose as well as hexose sugars for the production of torula yeasts.

A large proportion of the world supply of vanillin continues to be made from sulfite waste liquor and lignosulfonic acids. Esters of vanillic acid were shown to be excellent food preservatives. Other derivatives of vanillin (5-hydroxymercurivanillin) show promise as disinfectants. The equivalent of one-third to one-half of the total fuel requirements of an integrated pulp and paper mill are provided by the combustion of the kraft black liquor.

Use of concentrated spent sulfite liquor as a supplement to tannin has increased considerably. So has its use as an adhesive in core binding in metal casting, briquets for smelting and fuel, and road conditioning.

The recovery of over 100,000 tons per year of fatty and resin acids from black liquor in kraft paper manufacture is now a general practice. Sulfate turpentine recovery is equal to the volume of gum turpentine obtained by the naval stores industry.

Use of melamine and urea-formaldehyde resins in kraft paper and board production has resulted in strong water-resistant containers adequate for overseas shipment and exposure to the weather and other adverse conditions hitherto beyond the power of fiber containers to resist. Multiwall bags are taking over the field of shipping containers. The supplemental bonding by gums, synthetic materials, and resins, at the points of fiber contact in the web, has created the possibility of paper of greater strength and the use of shorter fibered pulps in greater proportion in the production of paper of equal strength.

The difference between consumption and production is almost entirely made up by the duty-free importation of standard newsprint from Canada, Newfoundland, and Europe. This amounted to 3,957,000 tons in 1947 and 4,135,000 in 1948. In 1947, imports of paper and paperboard were 158,578 tons, and exports were 352,462 tons.

There are 95 million tons of fibrous agricultural residues destroyed annually, which are capable of economic use for the integrated manufacture of newsprint, book, tissue and fine papers, corrugating paper and paperboard, and wallboard. Utilization of only 5 percent of this agricultural fibrous material is sufficient for the supply of 22 large modern integrated paper and board mills capable of producing annually 2,400,000 tons of newsprint,

2,280,000 tons of corrugated paper and paper-board, and 2,340 million board feet of insulating structural wallboard.

Wood pulp production in the United States was reported by the Bureau of Census to total 11,153,052 tons in 1947. Imports in 1947 were 2,012,727 tons, whereas exports were 134,855 tons.

CHESS. With a score of 14-6, Mikhail Botvinnik, 36-year-old Russian grand master, easily won the world's chess championship, vacant since the death of Alexander Alekhine in 1946. The round-robin, first tournament ever held for the title, saw each of the five players meeting every other player five times. It was held in March, April, and May, at the Hague (two rounds) and at Moscow (three rounds). Vassily Smyslov, Botvinnik's countryman, surprised by taking second place (11-9), with Samuel Reshevsky of the United States and Paul Keres of the U.S.S.R. tying for third (10½-9½). Former world's champion Max Euwe of the Netherlands was a disappointing last (4-16). Reuben Fine of the United States, though invited, did not compete.

The principal international event, aside from the championship, was the interzonal tournament at Saltsjobaden, Sweden, where six of the first seven places were captured by the Russian contingent. Szabo of Hungary finished second to Bronstein, with Boleslavsky, Kotov, and Lilienthal qualifying for the 1949 tournament which will determine the challenger for Botvinnik's title. The five will meet the unsuccessful players of the 1948 championship tournament, including Fine as well.

International chess returned to New York for the first time since 1927 with a Christmas week tournament won by Fine over Najdorf, Pilnik, and Euwe, among others. In other international events, Szabo won the 1947-48 Hastings tournament; Prins led at Beverwijk; Eliskases won the XI Mar del Plata tourney; Najdorf was first at La Plata and at Venice; Szabo again triumphed at Budapest; Foltys beat Barcza by a half-point at Carlsbad-Marienburg; Lundin took first prize at Bad Gastein; Rossolimo finished on top in the 1948-49 Hastings congress.

Herman Steiner became U.S. champion in a

round-robin at South Fallsburg, N.Y., while Weaver Adams took the U.S. Open at Baltimore in a Swiss-system tournament. Mrs. Gisella Gresser and Miss N. May Karff tied for the U.S. women's championship. Arthur Bisguier was national junior champion, Robert Byrne both speed and intercollegiate (Yale) champion. City College of New York finished ahead of Yale and Syracuse for the H. M. Phillips intercollegiate trophy.

Among the national champions were Julio Bolbochan (Argentina), C. J. S. Purdy (Australian Open), Galia (Austria), Devos (Belgium), Tsvetkov and Neikirch (Bulgaria), Richter and Zita (Czechoslovakia), Enevoldsen (Denmark), Rossolimo (France), Unzicker (Germany), Broadbent (Great Britain), Edith Price (British women's), P. Benko (Hungary), B. Moeller (Iceland—he won the Nordic championship as well, among players from Iceland, Norway, Denmark, Sweden, and Finland), Castaldi (Italy), Euwe (Netherlands), Wade (New Zealand), Barda (Norway), Makarczyk (Poland), Ekstrom (Sweden), Christoffel (Switzerland), Bronstein and Kotov (U.S.S.R.).

—JEROME FRIED

CHILDREN'S FUND OF MICHIGAN. A Fund established by James Couzens with a gift of \$10,000,000 in 1929 to promote the health, welfare, happiness, and development of children in Michigan, primarily, and elsewhere in the world. During the fiscal year ended Apr. 30, 1948, a total of \$752,910 was expended. Total assets on that date were \$4,779,162. Chief officer: Wm. J. Norton, 660 Frederick St., Detroit 2, Mich.

CHILE. A Republic of South America, divided into three geographic zones: the Andes, the central valleys, and the Coast. The North is arid, the central area temperate, and the South is wet and cold.

Area and Population. Area: 286,396 square miles. Population (1947): 5,522,000, of whom about 80 percent were of European descent; 15 percent mestizos, and 5 percent Indians. Principal cities: Santiago (capital), 639,546 inhabitants in 1940; Valparaiso, 215,614; and Concepción, 92,364.

Education and Religion. The constitution guarantees freedom of worship. Roman Catholicism is predominant. Spanish is the official language. Eighty percent of the total population is literate. In the academic year 1946-47, there were over 5,400 official primary schools with nearly 600,000 students. Chile has nearly 500 intermediate schools or institutions that could be classified as such. Higher education is provided by the National University of Chile, the University of Concepción, the Catholic University of Chile, the Catholic University of Valparaiso, and five other specialized institutions of higher learning.

Production. Chilean economy is closely associated with mining, especially copper and nitrates. Mineral production in 1947 was estimated at (metric tons): copper, 428,000; nitrate, 1,631,223; iron ore, 1,737,553; coal, 2,079,116. Other important minerals are gold, silver, manganese, mercury, molybdenite, lead, and tungsten. Important items of agricultural production in 1946-47 (metric quintals) were: wheat, 8,957,377; barley, 1,064,457; oats, 766,446; potatoes, 6,171,083; rice, 872,347; kidney beans, 824,530; sunflower seed, 291,857.

The cattle population was estimated at 2,385,641 head in 1946; meat production in 1947 amounted to 86,400 metric tons. Wine and chichas production totaled 262,861 liters in 1947. Principal lines of industrial production included cotton fabrics (22,808 metric tons in 1947). The following fig-

ures represent the production of the chief factories in 1946: wool fabrics, 5,773,195 meters; silk fabrics, 1,920,298 meters; hemp and jute fabrics, 2,734,474 meters; footwear, 3,423,936 units; paper, 16,392,601 kilograms, and cement, 579,906 metric tons.

Foreign Trade. In 1947, total exports amounted to \$280 million; imports to \$270 million. Foreign trade for the first eight months of 1948 showed imports valued at 836.5 million gold pesos; exports at 925.7 million gold pesos (U.S.\$1.00 equals 4.85 Chilean gold pesos). Chilean foreign trade is mostly with the United States, Great Britain, Argentina, France, Italy, and Brazil. Exports of agricultural products in 1948 were estimated as substantially exceeding those of recent years, because exporters of farm products were permitted some advantages in the purchase of foreign exchange.

Finance. Budget estimates placed 1948 expenditures at 10,452 million pesos (one peso equals U.S. \$0.032); revenue at 9,618 million; the deficit to be met by special taxes created by the 1947 Emergency Financing Law. The 1947 budget showed revenue of 9,978,800,000 pesos; expenditure of 9,610,500,000 pesos. Chile's direct public debt at the end of 1947 was 7,661 million pesos; indirect debt, 1,767 million pesos. Currency in circulation on the same date was 3,677 million pesos; bank deposits, 7,965 million pesos; gold reserves, \$45,000,000. The cost of living index at the end of 1947 was 403 (1937 = 100).

Transportation. The country has 5,810 miles of railroad, which in 1947 carried a monthly average of 193,000,000 net ton-kilometers of freight. There are 29,921 miles of roads (1945), of which some 25,000 are fit for motor traffic. Chile is served by important national and international airlines through 6 civilian and 2 government airports. There are over 100 vessels flying the Chilean flag.

Government. Chile is a centralized republic of 25 provinces. Under the constitution of Sept. 18, 1945, the legislative power rests in a national Congress composed of a Senate of 45 members (elected for 8 years) and a Chamber of Deputies in the proportion of one for each 30,000 inhabitants (elected for four years). The President is elected for a 6-year term and is assisted by a Cabinet. On Sept. 4, 1946, Gabriel González Videla was elected President, and was inaugurated on November 31.

Events, 1948. The political life of Chile during the year was characterized by the strong anti-Communist stand taken by President González Videla, both on the domestic and international fronts; by the ultra-nationalistic line followed by the administration; and by the sensational claims made to the Antarctic region. All of this was a sharp departure from González Videla's political pre-election platform, when he courted the co-operation of the Communists and labor groups.

Politics and Poetry. Early in the year, the most significant event pointing out the gap existing between the leftist element and the Government was provided by the inflammatory speeches made in Congress by Communist Senator Pablo Neruda. One of the most outstanding poets in Latin America, Neruda is well-known in international literary circles. When he attacked the Government various Senators started a movement to cancel his credentials on the grounds of defamation, and he was deprived of his parliamentary immunity, thus opening the door to legal action against him. Neruda appealed to the Supreme Court and later, when he was sentenced by a lower court, took asylum in the Mexican Embassy, fearing an attack on his life. This caused diplomatic tension between the Mexi-

can and Chilean governments, which was later eased when the Mexican Ambassador explained that Senator Neruda was not a political refugee but merely his guest.

The Neruda incident was followed by a series of anti-Communist measures taken by the Government. President González Videla introduced a bill in Congress asking for adequate legislation on the following points: proscription of the Communist Party and the Confederation of Chilean Workers (C.T.Ch.), a strong Communist organization; creation of a new federation of workers under the auspices of the Socialist Party; dismissal of all Communists from public offices and administrative positions in labor unions; disenfranchisement of all persons belonging to the Communist Party. The Communists, from their newspaper *El Siglo*, fought the proposed legislation and claimed that the Government had arrested more than 1,000 workers and kept them in concentration camps without due process of law. Shortly thereafter, Videla's Government was accused by various non-Communist newspapers in Mexico and the United States of being the only Latin American country maintaining concentration camps for political prisoners, among whom were many Loyalist Spanish refugees who came to Chile after the Spanish Civil War.

Cabinet Reshuffling. On June 22, there was a large popular demonstration protesting against the high cost of living. No disturbances were seen, but the Government ordered the arrest of various labor leaders, accusing them of instigating the movement. Meanwhile, the anti-Communist legislation was being discussed in Congress where it met opposition from non-Communist groups, especially from Arturo Alessandri, ex-President of the Republic and father of the present Chilean Constitution, and from Eduardo Cruz Coke, presidential candidate of the Conservative Party in 1946.

President Videla held a series of meetings with leaders of the Liberal and Conservative parties, and on July 7 reorganized his Cabinet, bringing in representatives of various parties with the purpose of strengthening his position. In so doing, he deviated from the non-partisan policy which he had been following in his Cabinet during past years. In the new Cabinet, key posts were retained by non-partisans; two seats went to the Radical Party, two to the Liberals, and two to the Conservatives.

Anti-Communist Legislation. On September 3, the Government promulgated the "Law for the Defense of Democracy" containing the restrictive measures against Communists. The law had finally been approved by the Chamber after various amendments introduced in the Senate. Although it called for the "defense of democracy," it was labelled by the opposition as a "Law for the Offense of Democracy." The act takes away all political rights of the Communist Party, but permits the 15 deputies and 5 Senators elected in 1946 to serve out their terms. However, no Communist may be a candidate in the 1949 elections. Parliamentary debates and voting on the law caused division within the political parties considered as conservatives. Some Socialists voted against the measure and, as mentioned above, a large group of Conservatives under the leadership of Senator Eduardo Cruz Coke opposed the measure. This Conservative faction, called Social Christians, is formed by Catholics who advocate social reform and by a number of university students.

The relations between Poetry and Politics which enlivened the early months of the year with the

Neruda incident continued when the national literary award for 1948 was given to the poet Angel Cruchaga, a close friend of Neruda's, and considered a Communist sympathizer. During the festivities for the bestowal of the prize, veiled reference to Neruda brought storms of applause.

International Front. Early in the year, President González Videla made a spectacular claim in the name of his country to a part of the Antarctic territory south of the 62nd parallel. This met with opposition from Great Britain, who sent the battleship *Nigeria* to patrol Antarctic waters. Chile pressed the claim at the Bogotá meeting of American States (see PAN AMERICAN ACTIVITIES).

—MIGUEL JORRÍN

CHINA. The territory of the Republic of China is bordered by Korea, Siberia, Mongolian People's Republic, Soviet Turkestan, Afghanistan, India, Burma, French Indochina and the Pacific Ocean. In May, 1947, the Ministry of Interior gave the area of China at 9,739,288 square kilometers (3,760,339 sq. mi.), divided among 35 provinces, 1 territory and 8 municipalities as shown in the accompanying table.

Division	Sq. km.	Division	Sq. km.
Kiangsu	108,315	Antung	63,422
Chekiang	102,646	Liaopei	123,315
Anhui	140,687	Kirin	87,285
Kiangsi	173,014	Sungkiang	80,789
Hupei	186,363	Hokiang	123,620
Hunan	204,771	Heilungkiang	198,295
Szechwan	303,318	Nunkiang	66,967
Sikang	451,521	Hsingan	258,352
Hopei	140,253	Jehol	179,982
Shantung	146,737	Chahar	283,675
Shansi	156,420	Suiyuan	329,397
Honan	165,141	Ningshia	253,320
Shensi	187,909	Sinkiang	1,711,931
Kansu	391,506	Tibet ^a	1,215,781
Chinghai	667,236	Nanking ^b	779
Fukien	117,977	Shanghai ^b	893
Taiwan	35,961	Peiping ^b	707
Kwangtung	218,765	Tientsin ^b	185
Kwangsi	218,924	Tsingtao ^b	749
Yunnan	420,466	Chungking ^b	300
Kweichow	170,196	Shenyang (Mukden) ^b	229
Liaoning	67,259	Harbin ^b	930

^a Territory. ^b Municipality. Note: The areas of the Independent municipalities: Dairen, Sian, Hankow and Canton are included in those of the provinces: Liaoning, Shensi, Hupei and Kwangtung respectively.

Population. China's total population for the first half of 1948 was put by the National Census Bureau of the Ministry of Interior at 463,493,418, representing a slight increase of 695,325 over that for the second half of 1947 and of 2,487,133 over the estimate made in July, 1947. The statistics made public by the Ministry of Interior in July, 1948, show that there are more males in China than females, the former totaling 242,273,893 and the latter, 221,219,525.

The population of Szechwan is the largest among the provinces, amounting to 47,437,387 inhabitants. Shantung stands next, with a population of 38,865,254 and Kiangsu takes the third place, being inhabited by 36,000,123 people. Those provinces of over 20 million people include Honan, Hopei, Kwangtung, Hunan and Hupei, while only 327,563 people live in Hsingan Province in the Northeast.

As to the 12 special municipalities, Shanghai takes the lead in claiming a population of 4,630,385. Next comes Tientsin and Peiping with 1,772,840 and 1,721,546 respectively. Nanking, China's capital, has 1,113,972 dwellers, while Canton and Mukden are populated by over one million people each.

Among the 177 cities of 50,000 or more people,

there are 7 cities having more than a million residents; 10 cities with 500,000 to 1,000,000 people; 25 cities with 200,000 to 500,000; 49 with 100,000 to 200,000; and 86 cities with 50,000 to 100,000. Thirty-three of these cities are concentrated in the North China plain. There are 31 density cities in the Northeast and 26 in the Shanghai-Nanking area. Scattered down the southeastern sea coast are 21 cities and along the Yangtze River, 18. On the average, China has a density of 47.35 per square kilometer.

Among the provinces Kiangsu has the highest population density with 332.93 persons per square kilometer. A density of 267.74 is found in Shantung, the second most-crowded; 204.84 in Hopei; 187.25 in Chekiang; 177.52 in Taiwan; 177.14 in Honan; 158.46 in Anhwei; 155.31 in Szechwan; and 2.36 in Sinkiang. Tibet is the most sparsely populated area—having a population density of 0.82 per square kilometer.

Tientsin stands out as the most thickly populated city in China having 9,103.65 people per square kilometer and Hankow with 5,608.79 ranks the second. Canton has a density of 5,581.28; Mukden, 4,894.82; Shanghai, 4,814.58; Dairen, 3,730.03; Chungking, 3,344.81; Sian, 2,844.48; Peiping, 2,268.00; Nanking, 1,392.71; Tsingtao, 1,050.43 and Harbin, 818.08.

In July, 1948, the Ministry of Interior recorded the populations of the 35 provinces, 1 territory and 12 important municipalities as follows:

Division	Population	Division	Population
Kiangsu	36,080,123	Kirin	6,465,449
Chekiang	19,958,715	Sunghiang	2,570,806
Anhui	22,462,217	Hokiang	1,841,000
Kiangsi	12,506,912	Heilungkiang	2,844,211
Hupei	20,975,559	Nunkiang	3,333,409
Hunan	25,557,926	Hsingan	327,503
Szechwan	47,437,387	Jehol	6,196,147
Sikang	1,696,600	Chahar	2,185,774
Hopei	28,719,057	Suiyuan	2,233,226
Shantung	38,865,254	Ningsia	759,002
Shansi	15,247,059	Sinkiang	4,047,452
Honan	29,654,095	Tibet ^a	1,000,000
Shensi	10,011,201	Nanking ^b	1,113,972
Kansu	7,090,517	Shanghai ^b	4,630,385
Chinghai	1,307,719	Peiping ^b	1,721,546
Fukien	11,143,083	Tientsin ^b	1,772,840
Taiwan	6,384,019	Tsingtao ^b	850,308
Kwangtung	27,209,968	Chungking ^b	985,673
Kwangsi	14,636,337	Canton ^b	1,128,065
Yunnan	9,065,921	Hankow ^b	721,598
Kweichow	10,173,750	Sian ^b	628,449
Liaoning	10,007,204	Shenyang ^b	1,021,057
Antung	2,992,305	Dairen ^b	543,690
Liaopei	4,627,841	Harbin ^b	760,000

^a Territory. ^b Municipality. ^c Also called Mukden.

Education. For the first six months of 1948, 13 percent of the national budget was allocated for educational and cultural purposes, as against only 3.2 percent in the previous year. This greatly increased appropriation is an attempt to conform with the Chinese Constitution which specifies that expenditure for educational, scientific, and cultural activities shall not be less than 15 percent of the national budget.

During the academic year from August, 1946, to July, 1947, there were 290,617 primary schools in China, with an enrollment of 23,813,705. There were 4,687,411 children who finished their elementary education in the same period. The faculty members of all primary schools totaled 880,555.

Beginning 1949, the Ministry of Education plans to launch a ten-year program of extending primary school education to more of China's children. The ten-year program provides for compulsory education for children between the ages of six and twelve. Textbooks are to be supplied free of charge to those from poor families. The Ministry

of Education during the past undertook two similar projects. The first was conducted from 1940 to 1945, with 251,596 primary schools established and with an aggregate enrollment amounting to 18,692,282.

The second five-year project was started in 1946. This postwar plan, however, has been handicapped by lack of funds. It subsequently will be shelved in favor of the new ten-year plan. At present, of China's 67,000,000 school-age children, only 23,813,705 or less than 50 percent are attending primary schools.

The Ministry of Education estimated (in April, 1948) that 78,189,887 illiterate adults were taught to read and write. There are still approximately 170,000,000 illiterates in China, who constitute about 39 percent of China's population.

Secondary schools in China numbered 5,892 in 1947, with an enrollment totaling 1,878,523. There were 399,465 students who graduated from secondary schools in 1947. Teachers and staff members of secondary schools totaled 143,502.

Universities and colleges in China numbered 74 in 1928 and 108 in 1937. In 1947 there were 194 institutions of higher learning. The total enrollment in the colleges and universities in 1947 was 129,224, twice the number before the war. According to a report to the National Assembly made in April, 1948, by Dr. Chu Chia-hua, Minister of Education, the number of universities and colleges have been increased to 207, with the total enrollment of 148,000. There were 25,657 students who graduated from universities and colleges in 1948.

In July, 1948, a total of U.S.\$3,420,000 worth of UNRRA educational rehabilitation supplies was distributed among 77 universities and colleges. The 1,300 tons of supplies represent some of the latest American engineering, medical, agricultural, and scientific laboratory apparatus and equipment.

The Ministry of Education disclosed in September, 1948, that up to the end of August, more than 36,000 refugee students from the Communist occupied areas had registered for relief in Nanking, Hankow, Tientsin, and Peiping. The Ministry's first function was to provide the youths with food, shelter and school. Six temporary middle schools were established for them in central China. The educational authorities were planning to establish a temporary college and three middle schools in Peiping. All these institutes were to be staffed by refugee teachers.

Religion. Under the laws of the Republic of China, every person has undisputed freedom of religious belief. Confucianism is still influencing the Chinese way of life. The teachings and philosophy of Confucius and his followers are embodied in the Four Books and Five Classics. On May 31, 1934, the Chinese Government designated August 27, the birthday of Confucius, as a national holiday, and later the day was also designated as Teacher's Day.

Taoism began as a philosophy, but later developed into a religion. As a philosophy it is traced to Lao Tze, born in 604 B.C. Priests of Taoism are known as Tao Shih. They have their own temples, rituals, and bible. Buddhism first came to China in A.D. 61. It is estimated that at present there are in China more than 267,000 Buddhist temples and 738,000 monks and nuns, while the number of laymen and laywomen who have taken the five vows is five times more, but it is difficult to estimate the number of believers.

Lamaism is a form of Buddhism believed in by peoples of Tibet and Mongolia and is a mixture of Buddhism and Shamanistic practices. The Dalai Lama is the spiritual head of Tibet, and next to

him is the Panchan Lama. Directly under the Dalai Lama are three great monasteries in and around Lhasa—the Dierpung Monastery with four abbots and 7,700 lamas, the Sera Monastery with three abbots and 5,500 lamas, and the Gandin Monastery with two abbots and 3,300 lamas.

Mohammedanism made its advent in China in A.D. 651, when the governments of the Muslim nations began to pay tribute to the Tang Emperor. The total number of Moslems in China was estimated at 48 million. Some authorities place the number at from 10 to 15 million.

For the Protestant Missions in China the National Christian Council is designated as the central agency. The Council has 18 constituent church bodies and a number of affiliated national organizations. There are no accurate figures of churches in China, but before the war there were approximately 10,000 organized Protestant churches with 512,000 members and 10,000 other centers of worship in China.

The Catholic Church controls mission stations in 33,354 localities in China. Catholic Missionaries, of whom there are 13,330, including priests, sisters and lay brothers, employ or receive free service from a trusted lay staff of 100,000 mission helpers, catechists, teachers, nurses, and doctors. By the end of 1944, there were in all China 123 Catholic bishops of whom 25 were Chinese, and 6,000 Catholic priests.

Production. The Ministry of Economic Affairs reported in May, 1948, that there were 14,078 factories in China. Some 7,738 of these factories are located in Shanghai. The Ministry's report indicates a greater number of light industries over the heavy industries. There are 3,773 textile factories; 1,783 clothing; 1,505 machines; and 494 metal refineries. Only 3,312 of the factories were adhering to the national factory list. There was a total of 682,399 factory workers, of whom 367,433 were in Shanghai.

In 1947, the principal industrial products were: machine tools, industrial machines, motors, soda ash, sulfuric acid, hydrochloric acid, nitric acid, bleaching powder, flour, and cotton yarn. The mineral output in 1947 was as follows: coal, 19,487,400 metric tons; petroleum: 967,662,000 gal. of crude oil, 7,880,000 gal. of gasoline, 4,002,258,000 gal. of kerosene, and 54,600,000 cu. ft. of natural gas.

In 1947, the output of steel was 63,000 metric tons and that of iron, 35,733 metric tons. The total electric power supply of China in 1947 was 1,287,620 kw. China's cotton textile industry had about 6,000,000 spindles in 1947.

The agricultural products in 1947 were: rice, 47,928,750 metric tons; wheat, 25,028,800 metric tons; millet, 7,162,000 metric tons; barley, 7,901,100 metric tons; corn, 7,606,600 metric tons; sweet potatoes, 24,164,450 metric tons. In 1947, the estimated totals of livestock in China were: buffaloes, 9,320,000; oxen, 18,998,000; horses, 2,069,000; mules, 2,007,000; donkeys, 7,667,000; goats, 18,609,000; sheep, 9,191,000; hogs, 53,758,000; chickens, 196,743,000; ducks, 44,372,000; geese, 7,244,000.

Foreign Trade. China's import trade amounted to Ch.\$10,681,326,574 and her export trade, Ch.\$6,376,504,297 in 1947, with an unfavorable balance of Ch.\$4,304,822,277. More than 60 percent of China's exports have been agricultural products. According to statistics released in July, 1948, by the Chinese Customs Administration, the nation's foreign trade deficit for the first five months of 1948 had been mounting. The unfavorable balance

for May was Ch.\$5,156,021,506,000. The month's imports totalled Ch.\$12,837,367,158,000; the exports, Ch.\$7,681,345,652,000. If converted into U.S. currency on the basis of Ch.\$1,000 to U.S.\$0.00257, the net value of imports would be U.S.\$32,992,033 and that of exports, U.S.\$19,471,058. The deficit then would be U.S.\$13,250,975. When compared with the figures of the four preceding months, it shows that the unfavorable balance is on the upgrade. The deficit for the first four months was U.S.\$28,173,963, averaging about U.S.\$7,043,490 each month.

China's principal buyer and seller is the United States. During the first five months of 1948, China bought 49 percent or Ch.\$15,339,000,000,000 worth of imports from the U.S. Her exports to the U.S. amounted to Ch.\$4,505,000,000,000 or 22.6 percent of all her exports for that period.

Finance. Finance Minister O. K. Yui reported on Jan. 3, 1948, that the 1947 Chinese Government expenditure reached 41 trillion Chinese dollars, four-and-a-half times the original estimation of 9.3 trillion. The total revenue was increased by less than twice the original 7 trillion. Mr. Yui pointed to the unchecked inflation and the Communist rebellion as reasons for the failure to adhere to the budget.

The budgetary estimates for the first six months of 1948 prepared by the Office of Comptroller-General called for a total expenditure of Ch.\$96,276,600,410,000, while the national revenue of the same period was estimated at Ch.\$58,340,896,970,000. The estimated revenue covered approximately 61 percent of the total expenditure.

By executive order, issued on Aug. 12, 1948, the Government's budgetary figure for its ordinary revenue and expenditures for the second half of the year was made public as Ch.\$323,621,500,986,000. This so-called "ordinary" budget must be distinguished from the "special" budget which covered the Government's military and other emergency funds to prosecute the war against the Communists. Information concerning the "special" budget, however, was withheld from publication.

Of the budgeted revenue, the amount of Ch.\$302,832,455,486,000 was expected to be derived from regular revenues with the remaining Ch.\$20,789,045,500,000 from extra revenues. The biggest revenue was expected from the commodity tax which was estimated at Ch.\$112,700,000 million for the six-month period. Customs revenues ran a close second with Ch.\$100,900,000 million. The next two items of revenue were profits of state-operated enterprises, approximately Ch.\$36,780,000 million; the income tax, Ch.\$19,700,000 million.

On the expenditure side, the budget for the Ministry of National Defense called for more than Ch.\$133,000,000 million. Nearly Ch.\$50,000,000 million was budgeted for the Ministry of Education, Ch.\$37,000,000 million for repayment of Government debts, and more than Ch.\$35,000,000 million for the Ministry of Food.

Open-market foreign exchange rate between Chinese and American dollars was revised on Jan. 12, 1948, as Ch.\$113,500 to U.S.\$1. At the beginning of August, 1948, the rate was further revised to Ch.\$4,600,000 to U.S.\$1.

President Chiang Kai-shek on Aug. 19, 1948, issued a mandate governing: (1) the issuance of a new currency to be called Gold Yuan; (2) the surrender by the people of all gold, silver coins, and foreign currencies; (3) the declaration by Chinese nationals of their assets in foreign countries; and (4) the tightening of economic control. Four

sets of measures for the enforcement of the emergency financial and economic reforms were promulgated in the mandate which went into immediate effect.

The Gold Yuan is a managed currency backed by U.S.\$200 million in gold, silver, and foreign exchange in the possession of the Government and U.S.\$300 million in reliable Government properties. The Gold Yuan notes are in the denominations of GY\$1, 5, 10, 50 and 100. Each Gold Yuan is valued at U.S.\$0.25.

The old national currency was to be withdrawn from circulation in November, 1948. Each Gold Yuan would exchange for \$3 million old national currency. Public reaction toward the new currency reform program was favorable. According to the *Nanking Central Daily News* of Oct. 2, 1948, over U.S.\$500 million were collected within one month after the enforcement of the new currency reform. This sum represents approximately U.S.\$130 million surrendered in exchange for Gold Yuan notes; U.S.\$300 million transferred to the Central Bank of China by other Government banks; U.S.\$10 million surrendered by commercial banks and firms, and U.S.\$18 million realized from Chinese exports between August 23 and September 30. The official rate of exchange between Gold Yuan and U.S. dollars was revised on Nov. 11, 1948, to GY\$20 to U.S.\$1. The conversion of the Gold Yuan notes into gold and silver dollars commenced on Nov. 22, 1948. As a result, commodity prices came down in seven principal cities.

Transportation. As Minister of Communications Yu Ta-wei reported to the National Assembly in April, 1948, China today has about 13,000 kilometers out of 35,000 kilometers of railways in operation. When the Chinese Government moved into the Northeast after V-J Day, it found only 200 kilometers out of 11,000 kilometers of railways in use. It repaired 3,000 kilometers and put them back into service, but Communist destruction has left only about 600 operative kilometers.

On Sept. 1, 1948, both the Chekiang-Kiangsi railway and the Nanking-Wuhu line were open to through traffic in West China. The restoration of the 1,153-kilometer Chekiang-Kiangsi line, leading from Hangchow in Chekiang, to Chuchow in Hunan, on the Canton-Hankow line is a matter of great significance. The line completes the last link of an important rail network, joining the Nanking-Shanghai area with China's south and southwest.

Starting from Nanking, a passenger today may reach Hangchow via the Nanking-Shanghai-Hangchow line. From Hangchow he boards a train of the Chekiang-Kiangsi line and eventually finds himself at Chuchow, a point on the Canton-Hankow line. He may continue on until he arrives at Kowloon, situated opposite of Hong Kong, after having travelled by rail a total distance of 2,000 kilometers.

If the traveller is westward bound, he may change trains at Henyang and ride for 538 kilometers until he goes to Liuchow, big town of Kwangsi Province. From there, he has 460 kilometers to make to finish the whole length of the Kwangsi-Hunan-Kweichow line terminating at Tuyun, which is only a short distance from Kweichow, capital of Kweichow Province.

Through traffic on the Canton-Hankow and Peiping-Hankow railways was inaugurated on Nov. 1, 1948. Trains on this through trip would make stop-overs at Hengyang, Changsha, Hankow, Yuyuan, Kwangshui and Hsingyang. At Hankow the traffic on the two rail lines would be connected by trucks.

On the 530-kilometer Chungking-Chengtu railway in Szechwan now under construction, over 30 bridges and six-tenths of the entire project have been completed. A sum of CY\$82 million was allocated by the Executive Yuan on Sept. 29, 1948, to the Chengtu-Chungking railway for its completion within three years.

According to a report made public by the Ministry of Communications in May, 1948, there are today 131,912 kilometers of highways in China, an increase of 16,210 over the prewar total of 115,702 kilometers: Of the over-all total figure, only a total 72,604 kilometers was in a usable state. The remainder was torn up by the Communists. The Government repaired 25,166 kilometers but 7,708 kilometers were again destroyed by the Communists.

During the last war, 16,298 kilometers of highways were constructed. With the restitution of Taiwan, China received 3,690 kilometers of highways on the island, but it lost 3,778 to Outer Mongolia. It was reported in September, 1948, that there were 50,000 civilian automobiles in operation in China at that time and the consumption of gasoline was 4,270,000 gal. per month, of which the Standard Vacuum Oil Company supplied nearly 1,120,000 gal.

China's merchant shipping reached the total tonnage of 1,030,000 tons by the end of 1947, according to an announcement made in May, 1948, by the Yangtze Navigation Administration. Before the war the total Chinese and foreign merchant shipping tonnage in China was 1,280,000 tons, only 250,000 tons over the present tonnage of Chinese shipping. During wartime, the tonnage of Chinese Merchant shipping was reduced to 80,000 tons.

Gen. Claire L. Chennault's former CNRRA Air Transport Squadron became a commercial airline in March, 1948. By order of the Executive Yuan, this new company, known as the Civil Air Transport, was granted permission to extend its operation in China for one year, ending December, 1948. Gen. Chennault's CNRRA Air Transport Squadron was first inaugurated in October, 1946, and capitalized at U.S.\$2,000,000 (which came from UNRRA as a grant). On July 18, 1948, China's two leading airlines, the China National Aviation Corporation and the Central Air Transport Corporation, announced the suspension of their Nanking-Shanghai run and a reduction of flights on other routes because of the exorbitant cost of gasoline. The two aviation companies are state-operated. Twenty percent of CNAC's shares are owned by Pan American World Airways. Both depend entirely on foreign oil companies for their gasoline consumption.

Government. The Republic of China was established on Jan. 1, 1912, but the present National Government was inaugurated in 1928 in Nanking by Kuomintang or the National People's Party. Since then, the Kuomintang exercised the governing powers on behalf of the Chinese people, and the National Government was responsible to the Party. The party rule was brought to an end on Dec. 25, 1947, when the Constitution of the Republic of China, adopted by the National Assembly on Dec. 25, 1946, and promulgated by the National Government on Jan. 1, 1947, became effective on the Christmas Day of 1947.

The core of the new constitutional system, following the theory of Dr. Sun Yat-sen's teachings, is the organization of the central government in five separate branches, each charged with one of the "governing powers." In addition to the usual executive, legislative, and judicial branches, there

are two other units, exercising the powers of examination and control, following the precedent of two traditional Chinese institutions, remodeled to form parts of a modern democratic government. The Examination Yuan is charged with the responsibility of holding examinations for public functionaries. The Control Yuan exercises the powers of impeachment and auditing, besides the power of consent. Under the new Constitution, the President and the Vice-President of the Republic of China are elected by the members of the National Assembly which is composed of about three thousand representatives elected by the people. The President has the power to appoint, with the consent of the Legislative Yuan, the President of the Executive Yuan; and upon the recommendation of the latter, the Vice-President, Heads of various Ministries and Commissions, and Members without portfolio, of the Executive Yuan. He also appoints, with the consent of the Control Yuan, the President, the Vice-President, and Grand Judges of the Judicial Yuan; similarly, the President, the Vice-President, and Examiners of the Examination Yuan.

Generalissimo Chiang Kai-shek was elected the first President of the Republic of China under the new Constitution by the National Assembly on Apr. 19, 1948. Gen. Li Tsung-jen was elected China's Vice-President on April 29. After being sworn in on May 20, President Chiang, appointed Dr. Wong Wen-hao, a noted geologist, as the President of the Executive Yuan, and the appointment was confirmed on May 24 by the Legislative Yuan. On May 31, Premier Wong announced the formation of a new Cabinet. The Executive Yuan was reorganized in November, 1948 with Dr. Sun Fo as Premier. The Executive Yuan is the highest administrative organ of the National Government, and has 15 ministries, 3 commissions, and a Government Information Office. There are 5 to 7 ministers without portfolio in the Executive Yuan. The Heads of the present National Government are as follows: President of the Republic of China, Chiang Kai-shek; Vice-President of the Republic of China, Li Tsung-jen; President of the Executive Yuan, Sun Fo; President of the Legislative Yuan, Tung Kwan-hsien; President of the Judicial Yuan, Wang Chung-hui; President of the Examination Yuan, Chang Po-ling.

Events, 1948. China's Election. China's popularly elected first National Assembly following the promulgation of the Constitution met in Nanking on March 29. The most important item on the Assembly's agenda was the election of the President and Vice-President of the Republic of China. According to the Constitution, the Assembly shall have a membership of 3,045. When the Assembly opened, 1,629 delegates had registered, enough to open the Assembly. It was expected that some 2,670 delegates would attend, more than enough to form a quorum.

On April 19, Generalissimo Chiang Kai-shek was elected President by the Assembly by an overwhelming majority of 2,430 votes out of the total of 2,704. Chu Cheng, President of the Judicial Yuan and the only other candidate in the Presidential race, received 269 votes. Thirty-five of the ballots were declared void. The Assembly met the announcement of President Chiang's election with applause. Meanwhile, national flags, firecrackers, and red congratulatory posters greeted the announcement in Nanking, the nation's capital. The same enthusiastic response was also reported from other Chinese cities. The election was termed by American, British and Canadian ambassadors who witnessed the proceedings as carefully planned,

efficiently supervised and openly and orderly conducted.

The election for the Vice-President, however, was a bitter fight which lasted through four ballots. There were six candidates in the race: Sun Fo, the incumbent Vice-President; Gen. Li Tsung-jen, director of the President's Headquarters in Peiping; Gen. Cheng Chien, Director of the President's Headquarters in Hankow; Yu Yu-jen, President of the Control Yuan; Mo Teh-hui, non-partisan State Council; and Hsu Fu-lin, a leader of the Democratic-Socialist Party. The final vote took place on April 29 and was a contest between Li Tsung-jen and Sun Fo. Li won with 1,438 votes against Sun's 1,295. Gen. Li Tsung-jen was thus chosen China's Vice-President.

The National Assembly also adopted four temporary provisions granting emergency powers to the President during the Communist-suppression period.

Cabinet Changes. Premier Chang Chun and his entire Cabinet resigned in May on the eve of the installation of President Chiang Kai-shek as the first constitutional President of China. Premier Chang and the Cabinet members signed their resignation document on May 11 as the last item of business of the administration.

Dr. Wong Wen-hao, 59-year-old chairman of the National Resources Commission, was nominated Premier by President Chiang Kai-shek on May 24, and his nomination was confirmed by 489 out of a total of 603 votes cast in the Legislative Yuan the same day.

On May 31, Premier Wong announced the formation of a new Cabinet which was composed of the following: Premier, Wong Wen-hao; Minister of Interior, Chang Li-sheng; Minister of Foreign Affairs, Wang Shih-chieh; Minister of National Defense, Ho Ying-chin; Minister of Finance, Wang Yun-wu; etc.

In November, the difficulties encountered in the enforcement of the Financial Reform and Economic Control measures promulgated on August 19 prompted Wong Wen-hao, President of the Executive Yuan, to resign. On November 26, Dr. Sun Fo, President of the Legislative Yuan, was nominated and voted into the post. The new Premier is the son of Dr. Sun Yat-sen, the founder of the Chinese Republic.

Economic Measures. Pursuant to a resolution reached by the Executive Yuan, President Chiang Kai-shek issued in Nanking on August 19 a mandate governing (1) the issuance of a new currency to be called Gold Yuan; (2) the surrender by the people of all gold, silver coins, and foreign currencies; (3) the declaration by Chinese nationals of their assets in foreign countries; and (4) the tightening of economic control. In a message issued on August 21, the President instructed all provincial governors and mayors to implement the economic and financial measures thoroughly.

Premier Wong Wen-hao on August 22 issued an order to all provincial governors and mayors asking them to rigidly enforce the regulations freezing commodity prices and wages at the August 19 levels.

The Executive Yuan on November 1 adopted four measures supplementing the August 19 economic program. The new measures partially eased controls on a number of essential commodities, especially food. Many price ceilings were taken off. Taxes were increased. On November 10, additional economic measures were adopted to cope with the monetary and food situation.

The National Economic Council in Nanking on

May 6 approved the circulation of silver coins in the country. The Chinese dollar was banned in 1935 when the country adopted a managed currency. Recently, the silver dollars reappeared on the money market.

China instituted a managed gold standard currency called "gold Yuan" on August 19. The new currency notes went into circulation on August 23 in all major cities where the people began surrendering gold, silver and foreign exchange for the new currency.

Civil War. In 1948, the Government troops have suffered defeat after defeat in fighting against the Communist army. Yenan, Communist headquarters captured on Mar. 17, 1947, was evacuated by Government troops on April 21. Tsinan, capital of Shantung Province and major rail and industrial center of North China, fell to the Communists on September 24 after a 9-day assault. Government forces besieged in Tsinan sector were estimated at 80,000. On October 23, the Communists claimed capture of Chengchow, Honan railway junction and Paotow, western terminus of Peiping-Suiyuan Railway. Kaifeng, capital of Honan, fell into Communist hands on October 25. The Government confirmed on October 30 the collapse of Mukden's defenses and abandonment of the city to the Communists.

By the end of the year, all the Northeastern Provinces (Manchuria) fell to the Communists. In North China, the Government troops only hold the Peiping-Tientsin area under the control of Gen. Fu Tso-yi, Taiyuan area under Gen. Yen Hsi-shan, and Tsingtao where the U.S. naval base is located. In the first part of November, Nanking and Shanghai were placed under martial law by President Chiang as Communists threatened to sweep past Hsuehchow to attack both cities. Americans were urged to leave Nanking. The National Government in Nanking announced on November 11 that 1,000,000 men were locked in battle of unprecedented scale on a 200-mile front in the Hsuehchow area. On December 1, the Government troops made a tactical move to relieve Communist pressure on Pengpu, 100 miles north of Nanking. They evacuated the city of Hsuehchow and marched southward to break up the Communist forces from the rear. The Government spokesman admitted on December 7 that Communist armies had encircled 110,000 Government combat troops southwest of Hsuehchow. They were trapped by the Communists as they marched south from Hsuehchow to rescue other encircled Government forces.

Information from neutral sources indicates that the military forces on each side in the civil war are now about equal after the Government superiority was cut by large losses in the Northeast. Both the Government and Communists have about 1,500,000 regular fighting troops. However, the Communists put the present Government armed forces at about 2,900,000 men including Army, Navy, Air Force personnel, regular Army troops, and irregulars. They claim that the strength of Communist forces had been increased from 1,200,000 in June, 1946, to 2,800,000 in June, 1948. They further claim that at present the Communist Army has grown to more than three million strong.

Tungting Flood. Eleven counties around Tungting Lake in Hunan province were flooded in June as a result of incessant rain and an unprecedented typhoon. About 30,000 acres of rice fields were damaged. The rice crop of 1948 was expected to suffer a loss of over 1,000,000 metric tons. More than 3,000,000 people suffered from the effects of the flood.

China-U.S. Relations. On Dec. 16, 1947, the board of directors of the United States Education Foundation in China met for the first time in Nanking. The foundation, established to administer the 20-million-dollar cultural exchange program between China and the United States as authorized by the Fulbright Act, has five directors and four Chinese advisors, headed by Dr. J. Leighton Stuart, American Ambassador to China. The program calls for 20 years of educational exchange to be financed by funds realized from the sale of U.S. surplus property to China.

Francis Cardinal Spellman of New York arrived in Shanghai May 31 on his tour of Catholic centers in the Far East. He was welcomed by a large gathering headed by Archbishop Paul Yüpin. He was President Chiang Kai-shek's dinner guest during his stay in Nanking.

Roger D. Lapham, Economic Cooperation Administration's China director, and Charles L. Stillman, head of the Administration's technical group, arrived in Nanking on June 8. They reached China from San Francisco with ten reconstruction survey experts.

A 2,180-ton tanker and two mine-sweepers, all donated to the Chinese Navy by the United States as gifts, arrived at Kaohsiung, Taiwan, on June 23 from the Philippines. These ships formed the first group of the 22 naval vessels anchored in Philippine waters to be transferred to China by the United States.

The Sino-American bilateral agreement covering the U.S. aid to China was concluded in Nanking on July 3. The agreement represented the final step in diplomatic negotiations which began on April 30 when Dr. V. K. Wellington Koo, Chinese Ambassador in Washington, signed a temporary pact on U.S. aid to China. Included in the agreement were principles on the utilization of the economic aid portion (U.S.\$275,000,000) of the total China aid funds of U.S.\$463,000,000. The foreign aid bill of 1948 was passed by Congress on April 2 and signed by President Truman on the following day. The bill provides \$463,000,000 for China.

Notes on the establishment of a Sino-American Rural Reconstruction Commission were exchanged between the U.S. Ambassador J. Leighton Stuart and Foreign Minister Wang Shih-chieh in Nanking on August 5. The creation of the Commission is provided for in the U.S.-China Aid Act of 1948. The commission would undertake through appropriate agencies a coordinated extension-type program in agriculture, home demonstration, health and education, etc.

Mme. Chiang Kai-shek, wife of China's President, arrived in Washington, D.C., on December 1 to appeal for more American aid to stem the Communist tide in China. Estimates from U.S. Government sources indicate that fighting equipment valued at about \$63,000,000 has been delivered to China's hard-pressed armies in the last year and a half. It was reported in Washington that the program proposed by Mme. Chiang would cost the United States about \$1,000 million a year over the next three years.

Foreign Relations. Foreign Minister Wang Shih-chieh declared on November 9 that the basis of friendly relations between China and the Soviet Union was weakened through the non-observance by the latter of terms of the Sino-Soviet Treaty of Friendship and Alliance of 1945. The Foreign Minister gave the following instances of treaty violation by the U.S.S.R.: (1) The Soviet attempt to obstruct the taking over of the Northeast; (2) the

Soviet obstruction of the taking over of the civil administration of Dairen and Port Arthur; (3) the facilities given by the Soviet authorities to the Chinese Communists in their securing of military stores surrendered by the Japanese to the Soviet troops; (4) the moral and material assistance given to the Chinese Communists; and (5) the Soviet infringement of the political independence of Outer Mongolia.

The Japanese Foreign Office figures released on September 28 revealed that an estimated 140,000 former soldiers and nurses of Japan's once powerful and veteran Kwantung Army were either serving with the Chinese Communists in Manchuria or were living independently in Red-held China.

The Chinese Government on August 12 accorded provisional recognition to the Government of Korea and appointed Dr. Liu Yu-wan as China's diplomatic representative to that Government with the rank of an Ambassador.

On Jan. 12, 1948, the Hong Kong police forcibly evicted some 2,000 Chinese from their wooden huts in Kowloon city. A number of them were injured when the Hong Kong police used tear gas and opened fire. The incident climaxed lengthy negotiations between the Chinese and Hong Kong governments over jurisdictional rights in Kowloon City, which the Chinese Government has never waived. One upshot of the Kowloon incident was the Canton incident on January 16, when a Chinese mob set fire to the British consulate in Canton and burned it to the ground. A number of British nationals were wounded in the mêlée. The incident occurred when a public demonstration was held in Canton protesting the Kowloon incident.

The agreement concerning the prevention of smuggling between Chinese ports and Hong Kong, which provides for the establishment of Chinese maritime customs inspection centers and for the maintenance of Chinese customs staff members within Hong Kong territory for the purpose of collecting or assessing in advance Chinese customs duty on dutiable commodities about to be exported to China, was reached on Jan. 12, 1948 between the Chinese and British Governments.

Peiping's once famous "Legation Quarters" was officially abolished on Dec. 26, 1947. The "Legation Quarters" was established in 1901 after the Boxer Rebellion. The original agreement stipulated that "the Quarters occupied by the Legations shall be considered as specially reserved for their use and placed under their exclusive control, in which Chinese shall not have the right to reside and which may be made defensible." It authorized each of the powers concerned to maintain a permanent guard. The powers concerned were the United States, Britain, France, Belgium, Netherlands, Austria, Germany and Japan.

China and the United Nations. Dr. P. C. Chang, Chinese representative on the United Nations Social and Economic Council, was appointed by the Government to head the delegation to the United Nations Freedom of the Press Conference, held in Geneva on Mar. 23, 1948.

Dr. Wang Shih-chieh, Minister of Foreign Affairs, headed the Chinese delegation to the third plenary session of the UN General Assembly convened in Paris in September. The Chinese delegation was composed of Dr. Chien Tai, Chinese Ambassador to France; Dr. T. F. Tsiang, China's permanent delegate to the UN Security Council; and Peng Hsueh-pei, advisor to the Executive Yuan. On November 11, the Chinese Delegate asked the UN Assembly to order 5th columns disbanded throughout the world, during the session of

the Political Committee in Paris; and also charged the U.S.S.R. with having supplied 50,000 Japanese war prisoners for service with Communist armies. See COMMUNISM. —M. H. CHANG

CHRISTIAN SCIENCE. A system of metaphysical or spiritual healing set forth by Mary Baker Eddy in her textbook of the movement, *Science and Health with Key to the Scriptures*, first published in 1875. The Church of Christ, Scientist, was established by Mrs. Eddy in 1879. In 1892 the name was changed to The First Church of Christ, Scientist, in Boston, Massachusetts. It is also known as The Mother Church. There are approximately 3,000 branches of The Mother Church located throughout the world, and 100 college and university organizations.

The affairs of The Mother Church are administered by The Christian Science Board of Directors under the Church Manual by Mary Baker Eddy. The Board of Lectureship of The Mother Church is engaged in delivering free lectures on Christian Science.

The Christian Science Publishing Society, whose affairs are administered by a Board of Trustees, also under the Church Manual, issues the international daily newspaper of the organization, *The Christian Science Monitor*. Other periodicals include: *The Christian Science Journal*; *Christian Science Sentinel*; *Christian Science Quarterly*; and five editions of *The Herald of Christian Science*, in the German, French, Dutch, Spanish, and Scandinavian languages, each with the English translation opposite; and also an edition of *The Herald of Christian Science* in Braille. President of The Mother Church for the year 1948-49: Harry C. Browne. Headquarters: 107 Falmouth St., Boston 15, Mass.

CHRISTMAS ISLAND. The name of two separate islands. (1) An island in the Indian Ocean, southwest of Java, included in the British colony of Singapore. Area, 60 square miles. Population (1941), 1,431. (2) The largest atoll in the Pacific, over 100 miles in circumference, just north of the Equator and lying south of the Hawaiian Islands. It is included in the British colony of the Gilbert and Ellice Islands.

CHROMIUM. The U.S.S.R. continued to be the principal producer of chromite ore in 1948, as indicated by imports of the United States, the principal consuming nation. Other major producers included South Africa, Turkey, the Philippines, Cuba, and Southern Rhodesia. Domestic production was insignificant, barely over 5,000 tons. Imports of chromite in the first nine months totaled 1,175,520 net tons (1947: 1,106,180 tons). Consumption during the period was only 639,967 tons, the balance being added to stocks.

As reported by the Bureau of Mines the breakdown by consuming industries was as follows: Metallurgical, 44 percent; refractory, 38 percent; chemical, 18 percent. Imports during the period were 58 percent for metallurgical uses, 30 percent for refractories and 12 percent for chemicals. United States imports during the nine month period included: U.S.S.R., 303,896 tons, principally metallurgical grade; South Africa, 206,512 tons, principally chemical grade; Turkey, 185,107 tons, principally metallurgical; the Philippines, 177,471 tons, principally for refractories; Cuba, 130,884, principally for refractories; Southern Rhodesia, 115,309, principally for metallurgical uses.

—JOHN ANTHONY

CHURCHES OF GOD. Comprising six denominations with a total membership of about 200,000. The two major groups are: (1) Church of God, a pentecostal and holiness group founded in 1886, in Tennessee. It has 135,452 members. Headquarters, Cleveland, Tenn. (2) Church of God, Anderson, Ind. (not pentecostal), originated about 1880 and stressing holiness and Christian unity. It is also referred to as the Reformation Movement. In 1948 it had 2,538 churches, 2,686 ministers, 96,736 members, and 80 missionaries. There were 166,795 students attending Sunday schools. Value of church property \$13,624,633. Headquarters: Anderson, Ind.

CIVIL AERONAUTICS ADMINISTRATION (CAA). A branch of the U.S. Department of Commerce which encourages and fosters the development of civil aeronautics and air commerce; encourages the establishment of civil airways, landing areas, and other air navigation aids and facilities; designates Federal airways and acquires, establishes, operates, and maintains air navigation facilities along such civil airways and at landing areas; makes provision for the control and protection of air traffic moving in air commerce; undertakes or supervises technical developmental work in the field of aeronautics; plans for the development of aeronautical facilities; and maintains and operates the Washington National Airport. The Administrator also enforces the civil air regulations (excepting the functions of the Civil Aeronautics Board, q.v.).

The Federal Aid Airport Program, based on matching by states and cities of Federal grants, progressed during 1948 with appropriations of \$40,000,000 during the year to bring the total appropriation in the first three of the seven year program to \$117,500,000. The sum of \$500,000,000 in Federal funds is authorized over the seven year life of the program.

Grants are being made by the CAA in accordance with its National Airports Plan which aims at construction or development of thousands of airports of all classifications.

The Federal Airways system of air navigation aids was extended and improved. Notable advances included the placing into commercial operation of additional instrument landing systems, bringing the total in operation to 77 at selected air terminals, and the operation on a test basis of 259 Very High Frequency radio ranges.

CAA airways experts were assigned to assist in the practical application of the findings of Special Committee 31 of the Radio Technical Commission for Aeronautics for the comprehensive 15 year program of air route and air traffic control.

CAA contracts for the development of cross-wind landing gear on several types of private and commercial aircraft were completed and demonstrated to pilots and the industry throughout the country.

During the year the Office of Aviation Safety continued its program of transferring responsibility for safe flying to the aviation industry wherever possible. It was proposed that the industry take over the certification of personal aircraft, a function now performed by Aviation Safety. This proposal is now under consideration. The designee system, by which qualified representatives from the industry perform inspection jobs of many types, was enlarged and at the end of the fiscal year on July 1 there were 9,965 such aides from the industry against 7,997 in the previous year.

Estimates put civil aircraft production during the year at 7,500; there were 115,000 student pilot licenses issued. Route mileage increased from 62,-

224 miles to an estimated 65,000 at year's end. It is estimated that 2,700 non-scheduled air carrier certificates would be issued by the end of the year 1948.

The number of civil aircraft reached an all-time high of 97,745. Interest in CAA's air education program was high during the year, as evidenced by the loaning of 15,526 films on various aviation subjects. These films were shown to 844,660 persons. Thirty states have established programs of aviation education and an estimated 15,000 teachers attended summer schools and workshops for courses in air education.

CIVIL AERONAUTICS AUTHORITY. A division of the U.S. Department of Commerce. Its functions are discharged by the Civil Aeronautics Administration and the Civil Aeronautics Board (q.v.).

CIVIL AERONAUTICS BOARD. The Civil Aeronautics Board, as distinguished from the Civil Aeronautics Administration of the Department of Commerce, is an independent Federal agency, headed by five members appointed by the President with the confirmation of the Senate.

An important mission of the Board is to foster and encourage the development of an air transportation system which will be adequate to the present and future needs of the foreign and domestic commerce of the United States, the postal service, and the national defense; to preserve the inherent advantages of air transportation, and to regard as in the public interest competition to the extent necessary to assure the sound development of an air transportation system adjusted to the national needs; and to regulate air commerce in such manner as to best promote its development and safety.

In general the Board performs these chief functions: (1) regulation of the economic aspects of United States air carrier operation, both domestic and international; (2) promulgation of United States safety standards in the form of Civil Air Regulations; (3) investigation and analysis of United States civil aircraft accidents. Chairman in 1948, Joseph J. O'Connell, Jr.

CIVIL SERVICE, U.S. On Oct. 1, 1948, civilian employees in the executive branch of the Federal Government, including those outside the continental United States, totaled 2,108,971. In the continental United States, the total was 1,898,561; in Washington, D.C., 208,036.

The following shows the proportion of positions in the Federal executive civil service which are subject to the competitive requirements of the Civil Service Act of 1883: In the continental United States, 92 percent; in all areas, 85 percent.

Positions subject to these requirements comprise the "competitive service." They are filled on a permanent basis by the probational appointment of persons selected from "registers of eligibles," which consist of the names of persons who have qualified in open competitive examinations announced by the U.S. Civil Service Commission; by the promotion, reassignment or transfer of persons already in the competitive service; or by the reinstatement of former employees who have a competitive status. They may be filled on a temporary basis by the appointment of qualified persons "pending the establishment of a register," or by "job appointment" if the work to be performed is of short duration.

The remaining positions in the executive civil service (8 percent in the continental United States; 15 percent in all areas) have been excepted from

the competitive service by legislation or by Executive order.

The following table shows other major characteristics of civilian employment in the executive branch of the Government (continental United States) as of Oct. 1, 1948:

Item	Number	Percent
Number of employees.....	1,898,561	100
SEX		
Men.....	1,467,016	77
Employed on full-time basis.....	1,254,075	66
Part-time and intermittent.....	212,941	11
Women.....	431,545	23
Employed on full-time basis.....	414,589	22
Part-time and intermittent.....	16,956	1
VETERAN-PREFERENCE STATUS¹		
Men:		
Veterans.....	808,737	43
Nonveterans.....	654,699	34
Women:		
Veterans ²	38,845	2
Nonveterans.....	392,700	21
TENURE OF APPOINTMENT³		
Permanent and probational.....	1,352,290	71
Indefinite ⁴	389,153	20
Temporary (1 year or less).....	153,538	8
COMPENSATION AUTHORITY		
Classification Act of 1923, as amended.....	813,235	43
Postal Pay Act.....	513,922	27
Wage boards ⁵	496,612	26
Other ⁶	74,792	4

¹ Refers to preferences granted to certain persons, on the basis of military service, by the Veterans' Preference Act of 1944. Figures exclude employees of the Maritime Commission training organization, for whom distribution is not available.

² Includes wives, widows and mothers of veterans. ³ Excludes employees of the Maritime Commission training organization, for whom distribution is not available. ⁴ Includes war-service appointments, appointments pending establishment of registers, and emergency-indefinite appointments. ⁵ Refers to manual workers and employees in trades and crafts whose compensation is fixed by wage boards in accordance with prevailing local rates of pay. ⁶ Represents employees paid at rates fixed by other statutes, by Executive orders, and by administrative determination.

Of the 2,108,971 employees in all areas, 42 percent were in the National Military Establishment, 25 percent in the Post Office Department, and 10 percent in the Veterans Administration.

The most important postwar activity of the U.S. Civil Service Commission has been a broad program of reconverting the Federal civil-service system to a peacetime basis. Under this program, which began in March, 1946, the number of employees without competitive civil-service status—employees who received war-service and temporary-indefinite appointments during and immediately after the war—is gradually reduced; at the same time, the number of employees with probational and permanent appointments is increased.

Progress of the program is constantly advanced by the announcing of open, competitive civil-service examinations, establishing registers of eligibles, and making placements from these registers to fill vacancies and to displace non-status employees.

Non-status employees who do not compete in an appropriate examination when it is announced, or who do compete but fail to attain sufficiently high ratings, are displaced by other persons who qualify in the examination.

Between January, 1947, and October, 1948, the number of employees with war-service or temporary-indefinite appointments decreased 55 percent—from 855,601 to 389,153 (continental United States); the number with probational or permanent appointments increased 41 percent—from 957,564 to 1,352,290.

During the fiscal year ending June 30, 1948, the Civil Service Commission's central office and its field offices announced examinations for establishing 34,956 registers, and 32,497 registers were established. So far as practicable, the Commission, in

determining the sequence in which examinations are to be announced, has concentrated on those involving large numbers of competitors, thus speeding the completion of the postwar reconversion program.

A check on the loyalty of employees in the executive branch of the Federal Government has been in progress since October, 1947. The purpose is to prevent the employment in Federal agencies of persons not loyal to the Government of the United States, and to protect loyal employees against unfounded accusations of disloyalty.

Under the Executive order which authorized the program, the Civil Service Commission, the Federal Bureau of Investigation, and the employing agencies have clearly defined responsibilities for carrying it out.

One phase of the program relates to "incumbent employees"—persons who entered on duty prior to Oct. 1, 1947. Forms giving identifying information regarding most of the approximately 2 million incumbent employees have been prepared by the various agencies and checked through the files of the Federal Bureau of Investigation. These forms, together with fingerprints, serve as a basis for determining whether investigation is necessary. When the checks develop a question of loyalty, the FBI conducts an investigation and sends its report to the Civil Service Commission, which transmits it to the employing agency. Such investigations have been found necessary with respect to less than $\frac{1}{2}$ of 1 percent of the 1,759,599 incumbent employees whose fingerprints had been checked by the FBI as of Oct. 16, 1948.

When an FBI report reaches an agency, an agency loyalty board considers it and, where further action is warranted, sends a letter of charges to the employee, conducts a hearing, and makes a decision as to the employee's retention in the agency. If the decision is unfavorable, the employee may appeal to the head of the agency. An unfavorable decision by the agency head may be appealed to the Loyalty Review Board, established within the Civil Service Commission.

By Oct. 31, 1948, agency boards had rendered favorable decisions in 1,373 cases and unfavorable ones in 84 cases; 260 employees resigned after FBI reports had been turned over to agency boards, but before the cases had been adjudicated; the boards had on hand 1,734 cases still to be adjudicated. Of the 84 employees against whom unfavorable decisions were rendered, 44 appealed to the head of the agency.

The other phase of the loyalty program relates to "new appointees"—persons who entered on duty in the competitive civil service on or after Oct. 1, 1947. The Civil Service Commission has established 14 regional loyalty boards to process the cases of new appointees and applicants. As of Oct. 16, 1948, reports of 920 FBI investigations had been forwarded to these boards. The boards had completed 304 cases, finding 221 of the persons eligible for Federal employment so far as loyalty is concerned, and 19 ineligible; 64 cases were closed without determination because the individuals had left the service.

New appointees and applicants, like the incumbent employees, have the right to a hearing on specific charges. They may appeal adverse decisions of the regional loyalty boards to the Loyalty Review Board, the highest appellate body.

As of Oct. 31, 1948, the Loyalty Review Board had received 18 appeals from decisions by agency heads (incumbent-employee cases) and 15 from decisions of the regional loyalty boards. The Board

had completed 8 of these 33 cases, concurring in 6 instances and dissenting in 2.

The following were among the civil-service measures enacted into law by the second session of the 80th Congress:

Public Law 396 and an amendment extended 10-point veteran preference in civil-service examinations to widowed, divorced, and separated mothers of ex-servicemen and ex-servicewomen who died in service or were totally and permanently disabled.

Public Law 900 increased the annual pay of retirement Act. It simplified the formula for computing annuities, and liberalized the provision for optional retirement with reduced annuity.

Public Law 900 increased the annual pay of employees whose positions are subject to the Classification Act of 1923 by \$330 a year, and that of employees in the Postal Service by \$450.

—HARRY B. MITCHELL

COAL. Widespread strikes in coal mines here and abroad reduced production of coal in 1948. A nationwide strike in United States bituminous mines lasted from March 15 to April 22, at an estimated cost of 53.5 million tons. Production of bituminous coal dropped to 586 million tons in 1948, from 619 million tons in 1947. Pennsylvania anthracite production was at the same rate as in 1947, 57 million tons.

The strike was touched off by a communication from John L. Lewis, United Mine Workers president, to local union officials that mine operators had dishonored a 1947 agreement on the miners welfare fund. Lewis demanded that the operator-financed \$30 million fund pay \$100 a month pension to miners over 60 with 20 years service.

Some 400,000 miners left the pits and production was down by 90 percent. The Office of Defense Transportation on April 13 ordered a 25 percent mileage cut in coal-burning passenger train service. Coal exports, except to Canada, were halted on April 30.

An injunction was issued April 3 by Associate Justice T. Alan Goldsborough of the United States District Court, Washington. On April 19, a \$1.4 million fine was levied on the union and \$20,000 on Lewis for criminal contempt. Civil contempt penalties were suspended when miners returned to work. An 80-day Taft-Hartley Act injunction superseded the one of April 3 on April 21.

The threat of another coal strike in July was ended on June 24 when Lewis and the soft coal operators agreed on a wage increase of 12.5 cents an hour, and an increase in the royalty paid by operators into the welfare fund, to 20 cents a ton. Soft coal prices were raised 46 cents a ton on July 6. Lewis and 18 steel producers signed a contract on July 13, ending a seven day captive mine strike, on the same terms.

An important question as to the accuracy of previous estimates of United States reserves of coal has been raised by Andrew B. Crichton, mining engineer, who places total domestic reserves at only 250 years and those in the East at 90 years. Crichton's findings contrast with previous estimates of reserves set variously at 1,000 years to 3,000 years at present consumption rates. These estimates were based largely on the U.S. Geological Survey of 1907 which included all coals 14 inches or more thick to a depth of 3,000 feet, the U.S. Coal Commission survey of 1923, and the Bureau of Mines statement of 1936. In a state-by-state study of resources, Crichton has found important discrepancies between these estimates and recent state geological

survey findings or the current mining conditions in the state. Crichton sets U.S. reserves at only 223,000 million tons.

Domestic and export coal demand declined toward the end of the year, making it difficult to move the poorer grades. Higher quality and lower production costs were forecast by heavy expenditures for mine mechanization, automatic mining equipment, and coal washing facilities. Operators and union officials were concerned with the competitive position of coal as an industrial and domestic fuel.

World coal production improved in 1948. The nationalized British coal industry slightly exceeded the 200 million ton objective set by the government. (1947 production, 198,300,000 tons; consumption, 182,500,000 tons). France and the Saar production was about 60.2 million metric tons. Production of Poland was about 69,750,000 metric tons. Production of western Germany was about 86,620,000 metric tons.

Total exports of bituminous coal by the United States to the end of August were 31,256,609 net tons, as compared with 44,467,617 tons in the same period of 1947. North and Central America received about 50 percent of these shipments, and 40 percent went to Europe. United States exports of anthracite to the end of August totaled 4,463,603 net tons, compared with 5,430,437 tons in the same period of 1947. North and Central America took about 76 percent of anthracite exports.

—JOHN ANTHONY

COAST AND GEODETIC SURVEY. A Bureau of the U.S. Department of Commerce responsible for surveying and charting the coastal waters of the United States and possessions, and for executing geodetic control surveys in the interior of the country and in Alaska. Its releases include nautical and aeronautical charts, Coast Pilots, geodetic control data, tide and current tables, geomagnetic publications, and earthquake reports.

Nineteen vessels were engaged during 1948 in surveying the coastal waters of the United States and Alaska, collecting basic data for the compilation and revision of the nautical charts of the Bureau. A comprehensive survey of the area north of the Alaskan peninsula was inaugurated. Surveys were extended in the Gulf of Mexico to distances of 225 nautical miles from shore, using newly developed electronic equipment.

Photogrammetric surveys were made to provide data for the construction of planimetric and topographic maps and for chart revision. Over 100 airports were photographed and surveys completed as part of a program for publishing airport charts and obstruction plans.

The basic geodetic network of horizontal and vertical control has been extended to furnish geographic position (latitudes and longitudes) and elevations above mean sea level for use in the national mapping and charting program and in the planning of extensive river basin developments.

Tide and Current Tables for 1949 were published giving information on the rise and fall of the tide and the ebb and flow of the current for world ports. Primary and secondary tidal stations were maintained at 100 seaports in the United States and possessions, and in foreign areas, for the study of the variation of mean sea level and for tide predictions.

Continuous photographic records of the changes in the earth's magnetic elements were obtained at 6 observatories. A new observatory at College, Alaska, was placed in operation for the study of

Arctic magnetic phenomena. Fifty-two strong-motion seismographs were operated in the western part of the United States and 7 in South and Central America. More than 500 earthquakes were located throughout the world. A seismic sea-wave detector was installed at several places in the Pacific as part of a general warning system to warn the Hawaiian Islands of an impending seismic sea wave.

Over a million nautical charts and nearly 13 million aeronautical charts were issued during the year. Two special charts covering the entire Atlantic coast were published for use with the Loran system of navigation and 11 of the 33 Gulf Intracoastal Waterway charts have now been completed. Publication was begun of a new series of aeronautical charts for use with high-frequency instrument landing systems at airports.

The Bureau participated for the eighth consecutive year in the U.S. State Department program for "Cooperation with the American Republics," and in the Philippine Rehabilitation Program authorized by the 79th Congress.

—LEO OTIS COLBERT

COAST GUARD, U.S. The Coast Guard effected many rescues during 1948. Typical of these, Ocracoke (N.C.) Lifeboat Station personnel removed the crew of a fishing vessel, grounded in heavy surf, by means of a breeches buoy; the cutter *Clover* rescued 6 crew members of a shipwrecked cannery tender in Alaska; the *Tampa* and *Nike* removed all 274 passengers from an army transport aground at South Pass, La.; a PBM plane from Salem Air Station picked up the pilot of an F-47 crashed at sea; a PBY aircraft landed in the open sea near a Greek freighter grounded off Newfoundland and brought 8 seriously injured seamen to Argentina; the *Bibb* transferred 40 persons by lifeboat and life raft from a sinking Portuguese schooner 250 miles off Cape Race, N.F., which had been located by PBY aircraft; the *Maple* removed 60 passengers from a ferryboat aground in Ogdensburg Harbor, Lake Ontario; 4 men were removed from two LSM's that broke loose from a tug off Absecon Inlet, N.J.; two flights of 1,400 miles from San Diego brought injured men from American fishing vessels off Lower California; Coast Guard boats rescued 7 men from a fishing vessel afire off Barnegat Inlet, N.J.; aircraft searched an area of 35,000 square miles during Mississippi flood relief operations, while other units evacuated victims of this and the Columbia River floods. Altogether 5,399 persons were rescued from peril during the year.

The Commandant of the Coast Guard headed a delegation to the International Conference on the Safety of Life at Sea at London which adopted advanced safety standards for vessels of all nations.

Breaking out 12 vessels frozen in the ice of Buffalo Harbor on Mar. 17, 1948, the Coast Guard icebreaker *Mackinaw* set a 50-year record for early opening of navigation on the Great Lakes.

The *Mendota* and the *Mocoma*, on International Ice Patrol off the Grand Banks, warned transatlantic shipping of the presence of icebergs until all danger had passed in July. Reconnaissance flights covering more than 200,000 square miles, by Coast Guard aircraft, and scientific studies of ice conditions made on board the *Evergreen* and *Ingham*, supplemented the patrol.

Congress authorized the Coast Guard to maintain floating ocean stations for search and rescue, communications, air navigation facilities, and meteorological services in ocean areas regularly traversed by U.S. aircraft. It also provided funds to

increase the number of such stations in the Atlantic from 2 to 7, with one more jointly maintained with Canada. There are 6 others maintained by European nations. Pacific U.S. ocean stations were increased from one to two; 17 additional vessels will be manned for such duty by June, 1949.

Different types of aids to navigation including light stations, lightships, radio beacons, fog signals, and lighted and unlighted buoys, numbered in all 36,284 by mid-year 1948. Thirty-six Loran stations, extending from Greenland around our coasts and into the Pacific as far as Tokyo, enabled vessels and aircraft to determine their positions accurately and quickly in all weathers.

The Bering Sea Patrol, inactive since Pearl Harbor, was reestablished in May, 1948, as the icebreaker *Northwind* proceeded to the remote Arctic regions of Alaska, transporting a floating court for law enforcement and medical and dental assistance for the native population. Protection of seal herds and other wild life was an additional duty.

Annual inspections of 7,513 vessels of the U.S. were completed during the 1948 fiscal year and 7,361 drydock examinations conducted, of which 78 were for vessels being converted or newly constructed. Reinspection of 2,667 vessels and special surveys of 141 unclassified passenger vessels were augmented by special examinations on 210 passenger vessels and ferries by travelling inspectors. 3,166 marine casualties were investigated, including 130 accidents resulting in the loss of 299 lives. Merchant Marine Details in the major domestic and in 5 European ports made 10,184 investigations of negligence, incompetence, and misconduct.

Federal laws enforced on the high seas and navigable waters of the United States included anchorage regulations, navigation laws, custom laws, the Motorboat Act, the Oil Pollution Act, the Halibut Act, the Sponge Fishing Act, and Alaskan fish and game laws.

Military personnel at the mid-year period included 1,854 commissioned officers, 668 chief warrant and warrant officers, 261 cadets and 17,080 enlisted men. In addition, 4,303 civilians comprised 1,800 salaried, 1,836 wage-board employees and 667 lamp-lighters.

The 4,299 floating units included 160 cutters, 59 patrol boats, 37 lightships, 40 harbor tugs, and 9 buoy boats; also 171 motor lifeboats, 1,466 motorboats and 2,357 non-powered small craft.

There were 778 shore units, including 9 air stations (with 79 aircraft, including 8 helicopters), 4 air facilities, 10 bases, 172 lifeboat stations, 446 light stations, 73 light-attendant stations, and 20 radio stations. The 41 depots, 2 supply depots, and the Coast Guard Yard made up the total.

—JOSEPH F. FARLEY

COCOA. A shortage of supplies of cocoa beans continued in 1948 and production was less than in 1947 due to weather conditions and in some locations to tree diseases. Prices have declined mainly because of buyer resistance to the high price of the previous year, which at one time reached 50 cents per lb., and at the end of 1948 was about 30 cents.

Cocoa is still distributed by the International Emergency Food Council although the trade in the United States strongly recommends withdrawal from the Council and return to the old system of free negotiation. Expected world production from Oct. 1, 1948, to Sept. 30, 1949, is about 600,000 long tons, of which 240,000 are allocated to the United States.

Total United States receipts for 1948 were 3,964,782 bags compared with 4,179,977 bags

in 1947 (one bag of cocoa averaged 143 lb.).

Chief producing countries (with 1949 production estimates) are: British West Africa 304,000 tons; French West Africa 75,200; Brazil 101,700; Ecuador 13,700; Venezuela 10,000; Santo Domingo 22,000.

Chief consuming countries are: United States 240,000 tons; United Kingdom 104,000; France 49,600; Netherlands 36,000; Canada 18,000; U.S.S.R. 17,600. Germany, a large user before the war, has been allotted 7,500 tons.

Good progress is reported by the American Cocoa Research Institute, Inc., which is supported by the New York Cocoa Exchange, Inc., the Cocoa Merchants' Association of America, Inc., and the Association of Cocoa and Chocolate Manufacturers of the United States, in their efforts to control disease and to induce the governments of various potential cocoa-producing countries in this hemisphere to plant cocoa trees on a larger scale. Immediate results will not be seen because trees do not begin to produce until five years after planting. Students from tropical countries are being trained in cocoa culture at Turrialba, Costa Rica, the Cacao Center of the Inter-American Institute of Agricultural Sciences.

—ROBERT CROSS

COFFEE. The year 1948 proved to be important and eventful for coffee, marking the first postwar year during which normal laws of supply and demand have set the course of prices without having elements foreign to coffee affect such a course. Events also tended to improve world consumption prospects, while at the same time the business picture of coffee was altered. It was a year which witnessed bumper harvests in most food crops, yet coffee was one of the few natural products to stand apart from such a trend.

On a worldwide basis, total production was only sufficient to cover consumption requirements, and since coffee needs more than 5 years to develop, this situation is likely to continue for some time. It is indeed a far cry from prewar days when it appeared that over-production would always affect coffee. During the war years a succession of poor crops caused by unfavorable weather conditions brought about the absorption of huge stocks held in producing countries. The existence of such stocks had naturally weighed down the market and their disappearance played a most important part in establishing today's healthy market situation.

World consumption during 1948 amounted to some 30 million bags. Of this amount the United States accounted for over 20 million bags and thus remains by far the most important single market for the product. Europe consumed around 6.5 million bags, while the remaining 3 million bags were consumed throughout the world in such countries as Argentina, Canada, French North Africa and the Union of South Africa, to name the most important.

On the producing side of the picture it can be said at this moment that at least for the next two years the total exportable production is not likely to go much above 29 million bags. Since it can safely be assumed that world consumption will at least maintain its 30 million bag level there would appear to be a deficit of some 1 million bags yearly between production and consumption. For the next two years at any rate, this deficit will be easily taken care of by stocks still existing in some producing countries. Nevertheless, it is to be hoped that with the better care that plantations are receiving today in view of the generally favorable price situation, world production will increase sufficiently to make up for the eventual absorption of

such stocks since, obviously enough, they are not inexhaustible and the next two years should see their end.

Finally, there is to be noted the experiment that the New York Coffee and Sugar Exchange is making in attempting to establish a Futures Contract with specifications such that it can be used by the importing and roasting trade as a general market in which to obtain actual delivery of coffee, instead of a purely nominal contract used only for either hedging or speculative purposes.

In common with most branches of business, the coffee industry as a whole was during 1948, and will probably be during most of 1949, still adjusting itself to the postwar era; supply and consumption are in balance today, and will remain so during the next two years; and therefore, excluding any international upheavals, the prospects for economic stability in coffee appear to be excellent.

—PAN-AMERICAN COFFEE BUREAU

COKE. The demand for coke was very heavy in 1948 in order to meet capacity steel and foundry production. Despite a 5-week strike in the bituminous coal mines, production approached the 1947 postwar record with 73.3 million tons (1947, revised: 73,445,850 tons). Oven coke production, about 80 percent of it from ovens operated by the iron and steel industry, was approximately 67 million tons (1947, revised: 66,758,549 tons). Beehive ovens, called on for heavier tonnages in view of the shortage, produced 6.3 million tons (1947, revised: 6,687,301 tons). Nearly 80 percent of total coke production was consumed by blast furnaces for pig iron production. Oven coke stocks were higher by 400,000 tons at the end of 1948 (1,475,000 tons) than the previous year. —JOHN ANTHONY

COLOMBIA. A republic of South America. In the west, the Andes cover about one-third of the land surface; the rest is composed of plains watered by the Orinoco and Amazon rivers. The climate varies from tropical to cold with the altitude.

Area and Population. Area: 439,848 square miles. Population (1947 est.): 10,000,000, of whom the majority are mestizos; 15 percent of European descent, 10 percent Indian, and 5 percent Negro. Chief cities: Bogotá (capital), 452,090 inhabitants in 1947; Medellín, 224,280; Barranquilla, 202,760; and Cali, 189,600.

Education and Religion. The Constitution guarantees freedom of religion. Roman Catholicism is predominant. Spanish is the official language. Recent statistics show that more than 45 percent of the population over 10 years of age is literate. There were, in 1946, 12,792 public and private elementary schools with a total enrollment of 1,101,910 students, 1,277 secondary schools with 86,283 students, and several schools (colleges and universities) for higher learning with a total enrollment of 7,335 students.

Production. Colombia's economy is agrarian. Coffee is the principal product and yielded 6,086,308 bags (of 60 kilos) in 1946. Exports of coffee during the twelve months ended June 30, 1948 amounted to 5,420,207 bags, of which 4,983,157 bags were exported to the United States. Petroleum is a promising industry; production for the 12 months ending October, 1947, totaled 23,615,064 barrels of which 18,102,000 barrels were exported. The output of gold in 1947 totaled 418,457 ounces; a decrease from other years. Production for internal consumption centers on corn, 620,000 tons in 1946; potatoes, rice, 96,715 tons; sugar, 166,500 tons (1947); and wheat. Rubber is produced on a small

scale. Consumer goods and the construction industry are important.

Foreign Trade. In 1947 total imports were valued at 636,200,000 pesos; exports totaled 446,200,000 pesos (peso, Bank of Republic, averaged U.S.-\$0.5682 during 1946 to 1948).

Finance. Budgetary expenditures for 1948 were estimated at 308,395,878.26 pesos, as compared with 291,695,159.27 in 1947. Currency in circulation on Dec. 31, 1947, was \$306 million; bank deposits \$335 million. The cost of living index in May, 1948, was 286 (1937 = 100).

Transportation. Railway mileage in 1944 was 4,200. There are 14,245 miles of road, of which 7,208 are highways. Motor vehicle registration shows 36,500 cars of all kinds. There are 175,000 radios and 42,200 telephones. Colombia has excellent national companies providing domestic air transportation, while international air lines connect with the principal countries of the world.

Government. Colombia is a centralized republic of 15 departments, 3 intendencias, and 6 "comisarias." Under the Constitution of Aug. 4, 1886 (extensively amended), it has a bicameral Congress composed of a Senate of 63 members and a Chamber of Deputies of 131 members. The President is elected for a 4-year term, and is aided by a Cabinet of 12 Ministers. The Council of State also assists the President. On May 5, 1946, Mariano Ospina Pérez was elected to the Presidency and took office on August 7 of that year.

Events, 1948. Colombia, traditionally a democratic country, was the scene of a revolt during the Ninth Inter-American Conference of American States at Bogotá, on which wide attention was focused. As a result of this revolt internal politics of the year were much affected.

Preludes to the Revolt. Colombia began the year under the administration of Conservative President Mariano Ospina Pérez, who had been elected as a result of the split between the Liberals. He had, therefore, no real backing among the people. Antagonism between the parties caused serious outbreaks in the department of North Santander which forced the Government to declare a state of siege in that region. Party leaders called their members to order, asking them to prevent a schism in the coalition cabinet and the President decreed complete disarmament of the civilian population.

On February 7, the liberals organized a mass meeting in Bogotá which more than 1,000 persons attended, with feelings high against Ministers of the Interior and Education, but the meeting was held without incident. In preparation for the Ninth Inter-American Conference, the Government appointed Laureano Gómez to the Ministry of Foreign Affairs.

Bogotá Revolt. In the early hours of the afternoon of April 9, a serious revolt broke out in Bogotá. The uprising was provoked by the assassination of the Liberal Party leader Jorge Eliécer Gaitán, who was shot while leaving his office at noon. Enraged people in the street killed the assassin, and indignation among Liberals was so strong that they immediately marched to the Capitol, ostensibly with the intent of attacking Gómez, who was presiding over the Pan American Conference. The Palace was sacked and considerable damage was done, but no harm came to the delegates.

The revolt spread to other sections of the city, and mobs sacked and burned important buildings and stores. When the news of Gaitán's death reached other cities similar movements occurred. It was later disclosed that nearly 600 policemen belonging to the Liberal Party remained neutral

in the conflict, which explained the ease with which the people were able to operate.

Both political parties, Conservative and Liberal, had important conferences with the President, who announced the formation of a new coalition cabinet composed of 6 Conservatives, 6 Liberals, and an Independent. The important Ministry of the Interior was given to Darío Echandía (Liberal), who took Gaitán's place as party President. Minister Laureano Gómez was removed from the Ministry of Foreign Affairs and replaced by Eduardo Zulueta Ángel (Conservative).

Aftermath of the Revolt. Property losses caused by the Bogotá riots were estimated by the U.S. Embassy "Airgram," released June 8, at 88 million pesos. It was also reported that some 740 merchants suffered losses, but that about 70 percent would be able to start businesses again on their own resources. Following the revolt, Darío Echandía secured the promise of the Confederation of Colombian Workers (C.T.C.) that they back the coalition government. The workers then ended the general strike that they had declared following Gaitán's assassination.

At first, various groups, especially the Conservatives and some of the delegates to the Pan American Conference, including Secretary Marshall, attributed the uprising to Communist attempts to sabotage the Conference. This was doubted by other observers, who claimed that the Communist Party was too small in Colombia (affiliation is estimated at 8,000) to have organized such an important revolt on short notice.

The Ospina Pérez administration accused the U.S.S.R. of having instigated the riot and broke off diplomatic relations. However, in diplomatic circles in Washington and several Latin American republics, the prevalent opinion was that although some Communists participated, the revolt was caused by the strong political antagonism between Gaitán's followers and the Conservative administration.

The months following the revolt were characterized by a tense political atmosphere and rumors of possible conflict between the two major parties, with mutual accusations of arms smuggling. Other incidents included the murder at Cartagena of a locally prominent Liberal leader by a police lieutenant of Conservative affiliation.

International Front. Colombia participated in the Ninth Inter-American Conference of American States held at the capital, Bogotá (see PAN AMERICAN ACTIVITIES). She severed diplomatic relations with the Soviet Union in April, and reached a preliminary agreement with the United States for the building of an inter-oceanic canal, using the Atrato River, considered of great importance to both countries. Colombia was a signatory to the Charter of American States.

—MIGUEL JORRÍN

COLORADO. A mountain State. Area: 103,948 sq. mi. Population: (July 1, 1948) 1,165,000, compared with (1940 census) 1,123,296. Chief city: Denver (capital), 322,412 inhabitants in 1940. See AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS, etc.

Vital Statistics. In 1946 there were 29,518 live births (26.8 per 1,000 based on civilian population present in the area); 12,058 deaths (10.6 per 1,000), excluding deaths among armed forces overseas; maternal deaths 57 (1.9 per 1,000 live births); deaths under one year 1,180 (40.0 per 1,000 live births); stillbirths 650 (22.0 per 1,000 live births). During 1946 there were 28,875 cases

of single births, 324 cases of twins, and 3 cases of triplets.

The death rates (per 100,000 of the population) for 10 leading causes, exclusive of stillbirths and of deaths among the armed forces overseas, were as follows: diseases of the heart, 280.1; cancer and other malignant tumors, 127.2; intracranial lesions of vascular origin, 85.3; pneumonia (all forms) and influenza, 66.2; nephritis, 63.5; accidents, excluding motor-vehicle accidents, 57.2; premature birth, 38.2; tuberculosis (all forms), 35.3; motor-vehicle accidents, 31.7; senility, ill defined and unknown, 19.5.

Of the total deaths, 6,074 were 65 years of age or over; 2,877, 45-64; 1,151, 25-44; 373, 15-24; 196, 5-14; 204, 1-4; and 1,180 were in the group under one year of age. Diseases of the heart led the causes of death in the age groups 25-44, 45-64, and 65 years and over during the calendar year of 1946.

Legislation. There was no regular session of the Colorado legislature during 1948. The regular session meets on the first Wednesday in January, every two years, on odd years.

Finance. For the fiscal year ended June 30, 1947, total revenue amounted to \$93,692,000; total expenditure, \$95,437,000.

Elections. Democrats won almost a clean sweep of Statewide offices in the November election. Truman won a plurality of about twenty thousand over Dewey and received the 6 electoral votes which went to Dewey in 1944; Democratic Governor Lee Knous was reelected; and incumbent Senator Edwin C. Johnson was returned for another term. In contests for House seats, Republicans won 1 and Democrats 3—a gain of 2 for the latter. Mrs. Nettie S. Freed, Republican, was reelected Superintendent of Public Instruction. Democrats carried other races: Lieutenant Governor—Walter W. Johnson; Secretary of State—George J. Baker; Attorney General—John W. Metzger; Auditor—Myron C. McGinley; Treasurer—Homer F. Bedford.

Officers, 1948. Governor, William Lee Knous; Lieut. Governor, Homer L. Pearson; Secretary of State, Walter F. Morrison; Attorney General, H. Lawrence Hinkley; State Auditor, Homer F. Bedford; State Treasurer, H. Rodney Anderson.

COMBINED CHIEFS OF STAFF—United States and Great Britain. Establishment of the Combined Chiefs of Staff was announced by the U.S. War Department on Feb. 6, 1942. The Combined Chiefs of Staff work on matters deriving from the wartime cooperation of Great Britain and the United States. U.S. Members: Fleet Admiral William D. Leahy, Chief of Staff to the Commander in Chief of the Armed Forces; Admiral Louis E. Denfeld, Chief of Naval Operations; General Omar N. Bradley, Chief of Staff, U.S. Army; General Hoyt S. Vandenberg, Chief of Staff, U.S. Air Force. British Members: General Sir William Morgan; Admiral Sir Frederick Dalrymple-Hamilton; Air Chief Marshal Sir Charles Medhurst.

COMMERCE, U.S. Department of. A Department of the U.S. Government, created in 1903 as the Department of Commerce and Labor. The activities of the Department include population, agricultural and other censuses; collection, analysis, and dissemination of commercial statistics; promotion of foreign and domestic commerce; coastal and geodetic surveys; establishment of commodity weights, measures, and standards; supervision of the issuance of patents and the registration of trade-marks; the establishment and maintenance of aids to air naviga-

tion, the certification of airmen, the inspection and registration of aircraft, and the enforcement of rules and regulations issued pursuant to the Civil Aeronautics Act of 1938; supervision of the issuance of weather forecasts and warnings for the benefit of agriculture, commerce, and navigation including weather service for aviation, and the publication of climatic statistics; operation of a system of water-line facilities as a common carrier under the trade name Federal Barge Lines; and numerous other functions concerning these activities and related subjects.

The Department of Commerce as at present constituted, with the Office of the Secretary, includes:

- Bureau of the Census
- Bureau of Foreign and Domestic Commerce
 - Office of Business Economics
 - Office of Domestic Commerce
 - Office of Field Service
 - Office of International Trade
- Civil Aeronautics Administration
- Coast and Geodetic Survey
- Inland Waterways Corporation
- Office of Technical Services
- Office of Industry Cooperation
- National Bureau of Standards
- Patent Office
- Weather Bureau

Secretary since May, 1948, Charles Sawyer; Assistant Secretary for Foreign and Domestic Commerce (Acting), Thomas C. Blaisdell, Jr.; Assistant Secretary for Aeronautics, John R. Alison.

COMMODITY CREDIT CORPORATION (CCC). An agency, created under the laws of Delaware (Oct. 17, 1933) pursuant to Executive Order 6340, which became a part of the U.S. Department of Agriculture in 1939. CCC was continued until June 30, 1948, as a U.S. agency by successive amendments to the act on Jan. 31, 1933. In 1948 Congress passed an Act providing a Federal charter for the corporation. This dissolved the Delaware corporation and continued the CCC indefinitely under its Federal charter. The corporation, within the U.S. Department of Agriculture, is managed by a 5-member board of directors, of which the Secretary of Agriculture is one. The other members are appointed by the President of the United States with the advice and consent of the Senate. In carrying on its activities, the CCC makes wide use of the facilities and personnel of the Production and Marketing Administration. It is authorized to engage in buying, selling, lending, and other activities with respect to agricultural commodities and related facilities for the purpose of supporting farm prices, maintaining adequate supplies of agricultural commodities, and facilitating their orderly distribution in both domestic and foreign commerce. CCC procures and makes commodities available to various Government agencies and carries out special import and export programs. President in 1948: Ralph S. Trigg.

COMMODITY EXCHANGE AUTHORITY. The Commodity Exchange Authority of the U.S. Department of Agriculture regulates futures trading on the Chicago and Kansas City boards of trade, the Minneapolis grain exchange, the New York and New Orleans cotton exchanges, and a dozen other commodity futures markets. The volume of grain futures trading under regulation in the year ended June 30, 1948, aggregated 12,000 million bushels, which was the largest in ten years. The volume in cotton futures was 110 million bales, the largest since 1929. There were also large futures markets

in butter, eggs, potatoes, lard, cottonseed oil, and feedstuffs.

The purpose of Federal regulation of these markets under the Commodity Exchange Act is to prevent price manipulation and excessive speculation, and to protect the trading public against cheating and fraud in the execution of commodity futures transactions. Enforcement activities of the CEA in 1947-48 included the institution of criminal proceedings in several instances against persons charged with violating the act. Other infractions are disciplined by denial of trading privileges on the markets, and by suspension of broker registrations. To safeguard customers' funds against misuse, the CEA made an increased number of audits of commodity brokerage firms during the year. It continued the enforcement of fixed limits on speculative transactions of large traders in grains and cotton; and made eight marketwide investigations. One of these disclosed that hundreds of speculators were setting up sham positions in futures to conceal income-tax liabilities. Several million dollars of income tax recoveries should result from this investigation.

COMMONWEALTH FUND, The. Established in 1918 by Mrs. Stephen V. Harkness "to do something for the welfare of mankind." The Fund now amounts to approximately \$50,000,000. Appropriations in the year ended Sept. 30, 1948, totaled \$1,992,208. Activities tending to promote or maintain physical and mental health accounted for more than 80 percent of the total. Grants for more than \$555,000 were made for research on medical and physiological problems. Through contributions to medical education the Fund sought to encourage greater emphasis on problems of personality and emotional adjustment as they affect general and internal medicine and pediatrics. To this end fellowships were given for the training of physicians in psychiatry and psychotherapeutic medicine and support was given to teaching clinics and other arrangements for exploring the possibilities of comprehensive medical care. Fellowships were given also for advanced medical study in other fields by men and women preparing for, or already engaged in, teaching and research.

Public health activities designed to raise standards of rural service centered in Mississippi, Oklahoma, and Tennessee, and professional training for public health was fostered in Louisiana and Florida. In California, in collaboration with the State Department of Health, the Fund arranged an institute on mental health for public health officers. In the rural hospital program emphasis was thrown on the regional linking of small hospitals with medical centers as a means of raising the level of rural medical care, particularly in regions surrounding Rochester, N.Y., and Richmond, Va.

With the addition of five appointees from the Civil Services in the Dominions, the British Fellowship scheme was fully reconstituted after the interruption due to the war; 28 Fellows in all came to the United States for graduate study at American universities and in various technical fields.

New publications during 1948 included 10 books of educational significance. The directors of the Fund are: Malcolm P. Aldrich (President), David P. Barr, William E. Birdsall, Harold B. Hoskins, Lewis Perry, Barry C. Smith, William E. Stevenson, Thomas D. Thacher, and Boylston A. Tompkins. Offices: 41 East 57th St., New York 22, N.Y.

COMMUNICATIONS, Electrical. Continuing high demands for service and new technical developments

were responsible for large plant expansions in both the telephone and telegraph industries during the year. Radio communication service was reported reopened to several areas of the globe, but some difficulty was reported by International Telephone and Telegraph Company in transferring funds out of some countries. New developments appeared in a wide range of subjects which may be classed under communications, because of their potential effects in that field.

The "transistor," a device that is small in size but large in possibilities, was announced by Bell Telephone Laboratories. Small in comparison to an ordinary paper clip, it is capable of performing efficiently nearly all the functions of a vacuum tube, yet it has no plate, grid, nor filament. No vacuum is required, and there is no warm-up delay. The principal parts consist of two hair-thin wires touching a pinhead of a solid semiconductor material, such as germanium, soldered to a metal base. The whole is enclosed in a metal cylinder not much larger than a shoe-lace tip.

Tests have shown that the transistor will amplify at least 100 times, and some test models have been operated as amplifiers at frequencies up to 10 million cycles per second. In operation a voltage supply, such as batteries, energizes the transistor by applying bias potential to the two point contacts, which are only two thousandths of an inch apart. Input power delivered to one of the point contacts is amplified and transmitted to the other where it is delivered to an output circuit. Cost data on the device are not available because it is still in the experimental stage. However, far-reaching significance in electronics and electrical communication is expected.

The action of the transistor depends on the fact that the input contact is surrounded by an "area of interaction" within which the electronic structure is modified by the input current. If the output contact is placed in this area, the output current can be controlled by the input current.

Amplification with a diamond rather than with the conventional vacuum tube also was announced by the same laboratories. The method is based on the discovery that when beams of electrons are shot at an insulator—a diamond chip in this instance—electric currents are produced in the insulator which may be several hundred times as large as the current in the original electron beam.

A system of graphic communication based on a combination of radio, television, and photography to which the name "Ultrafax" has been given was demonstrated on October 21. Developed by RCA Laboratories in cooperation with Eastman Kodak Company and National Broadcasting Company, Ultrafax can transmit and receive printed messages and documents at the rate of a million words per minute. This speed is achieved by transmitting full pages of information as television pictures at the rate of 15 to 30 per second. Steps involved in the transmission include the preparation of the data, scanning of the data and transmission as a television image, and recording of the received image on motion picture film. The film is processed quickly by equipment similar to that used during the war for V-mail. One suggested possible use is for bringing various publications directly into the home.

A printing process that depends on electrostatic effects was developed at Battelle Memorial Institute, Columbus, Ohio. Given the generic name "xerography," it is based on the ability of certain insulating materials to become electrically conductive when acted upon by light, and on the electri-

cal attraction of dissimilar materials in contact. By exposing a plate of the material to an image pattern under a projection lamp, a "latent electrical image" is formed. The printing process then consists of using electrostatic effects to cause the plate to deposit a powder on the paper which can be developed by heat or a spray. The process is said to be dry, fast, simple, and cheap.

Further progress was made during the year in reducing the size of electronic equipment by the use of miniature tubes and printed circuits. Reduction in size sometimes has required special insulating materials because of increases in operating temperatures.

A major change in phonograph records for use in the home began in June when Columbia introduced a long-playing record designated as "LP" or microgroove which, by operating at $33\frac{1}{3}$ r.p.m. and having approximately twice as many grooves per inch as the standard 78 r.p.m. record, reproduces 45 minutes of recording on a single 12-inch record. Because of the difference in speed and the necessity for a stylus or needle having smaller diameter and lighter pressure than the conventional pickup unit, manufacturers began production of record players having two-speed motors and provision for pickups having suitable characteristics to accommodate both types. Sales of records were reported to total 1.5 million for the LP type.

Meanwhile RCA-Victor was developing a different type of record to be played at 45 r.p.m. Records operating at $33\frac{1}{3}$ r.p.m. had been introduced to the public in the early 1930's, but were not satisfactory at that time.

A new type of phonograph pickup was announced in which the needle movements are transmitted directly to an element of an electron tube through a thin vacuum-tight diaphragm in the envelope of the tube. The movement of the element causes the mechanical motion to be converted to electrical pulses.

An entirely new type of metal lens for focussing radio waves in radio relay systems was developed in Bell Telephone Laboratories. Based on the theories of light transmission through atomic and molecular structures, the lenses are built by scaling up the molecular lattice structure of a non-conductor, such as glass, and then substituting electrically conductive elements for the molecules. The elements may be small strips of conducting material rather than spheres. Lenses constructed on this principle have been shown to be usable over a much wider band of wave lengths than former lenses. From 50 to 100 television channels or tens of thousands of simultaneous telephone messages are theoretically within the capacity of the broad band lens.

Growth of power systems, with their increasing complexity and interconnections, has had its effect in the field of communications in so far as that specialized method of transmission known as power line carrier is concerned. One means proposed for relieving the congestion in communication channels provided by the power lines themselves was the use of single sideband transmission, in which the carrier frequency and one sideband are suppressed. The potential number of communication channels is thereby doubled. Microwave space radio also was proposed as a method of communication to be considered by power companies.

Special developments were aimed at improving systems for railroad and airline reservations. The Chesapeake and Ohio Railway established a central reservation bureau in Huntington, W.Va., which can be reached directly by a local telephone

call from most of the principal cities served by the railroad. An electric reservation system was developed under the name of "Intelix" which will make and confirm a reservation in 10 seconds. Operations are performed by circuits using relays, switches, and tubes. A brief coded message of reservation, cancellation, or inquiry may be transmitted by teleprinter from any local office and with no further manual operations the machine will reply automatically to the teleprinter in the office originating the order. Information on the status of all reservations on any specific journey may be obtained at any time.

A new instrument designed and being assembled for radio astronomy investigation at Cornell University with the joint sponsorship of the Office of Naval Research emphasizes the decreasing gap between light waves and radio waves as the frequencies of the latter are made higher and higher. It is a telescope using a sensitive radio receiver fed by a small antenna at the focal point of a 17-foot parabolic reflector instead of visual or photographic observation, and may be used under all types of weather conditions. The sun radiates at all frequencies of the electromagnetic spectrum, but the radio telescope will accept only a small range of frequencies. Whereas optical telescopes have a resolving power of the order of tenths of a second of arc, the radio telescope will have a resolving power of the order of degrees.

A vital part of many items of communication equipment is a crystal of quartz, used to control the frequency. Experiments at Bell Telephone Laboratories showed that it was possible to grow crystals of quartz and thereby produce a source of supply independent of natural supplies. The product is identical in every respect with that of nature, and is produced under heat and pressure from a form of silicon.

A necessary adjunct for progress in communications is progress in the field of measurements. Several advances were made during the year. The United States National Bureau of Standards constructed an atomic clock in which a quartz-crystal oscillator and frequency multiplier chain are locked to an absorption line of ammonia gas at a frequency of 23,870.1 megacycles. The crystal drives a clock through frequency dividers and gives a new standard of physical or atomic time with a potential accuracy of one part in 100 million. The accuracy is permanent because the absorption line is invariant with age.

The Bureau also developed microwave frequency standards in the range of frequencies from 300 to 100,000 megacycles and higher. Such frequencies are available for application to radar, navigation systems, storm and weather reporting, relays for frequency modulation and television broadcasting, blind bombing, guided missiles, and many other uses, both civilian and military.

In connection with studies of radio wave propagation the Bureau also developed an improved electronic phase meter. Designed for a frequency range from 100 to 5,000 cycles per second, the new instrument reads and records directly the phase angle between two sinusoidal voltages having a variation of .1 to 30 volts. A sensitivity of 0.5 degree is attained.

Radio. In the United States the Federal Communications Commission called attention to the need for more regulation or better scientific techniques to make room for all the radio, television, and short-wave broadcasters who want to get space on the air. At mid-year it was reported that there were 131,000 authorized radio stations, plus 150,-

000 mobile stations such as aeronautical, marine, radar, police, fire, and railroad units. Taxicab companies in the cities use 3,000 stations, and about the same number are used in general industry.

The Commission estimates that 37 million families—94 percent of the families in the United States—have one or more receivers. As of June 30, there were 3,163 major broadcasting outlets authorized, including 2,034 standard radio stations, 1,020 FM outlets, and 109 television stations. About 2 million FM receivers were in use in homes. During the year as a whole, manufacturers produced 16 million receivers to give the public an estimated total of 74 million in working order and 5 million more out of order. However, the big wartime accumulation of demand for sets was found to have been wiped out, and many manufacturers turned to television to keep their total business at or above 1947 levels.

Wire and radio telephone communication circuits may be combined to provide telephone service to large groups of mobile units on a common carrier basis. The calling arrangement rings a bell only in the automobile of the one subscriber with whom communication is desired. Such systems have been put into use in many places in the United States, and at the beginning of 1948 there were about 102 land stations serving 4,000 mobile units. To provide service to more than a very few units in a city, more than one frequency channel must be used. A typical land station consists of a 250-watt transmitter together with several fixed receivers placed at favorable locations within the service area to pick up signals from the mobile units. Transmitters of the latter have a power output of from 20 to 40 watts. Operation is in the frequency ranges of 30-44 and 152-162 megacycles.

A new type of radiotelephone system was installed on the Cunard White Star Line's new liner *Caronia*, said to be the first ship in the world to use single sideband telephony—a system hitherto used only on intercontinental radiotelephone circuits to provide improved speech transmission.

Telegraphy. Significant steps were taken toward speeding telegraph service, oldest of the electrical means of communication. Progress was reported in the expansion of facilities in the Mexican Republic, where development has been slow because of the difficult terrain in many regions. Although the telegraph was introduced in 1852, some parts of Mexico have no direct telegraph communication with the capital.

In carrying out an improvement plan that was begun under the presidential term dating from December, 1946, the first steps have been taken toward providing more capacity in already overloaded channels by adding copper circuits. Subsequent plans call for the installation of carrier equipment and improvement of the national radio network by the use of the most modern devices. Because both radiotelephone and radiotelegraph are under control of the Ministry of Communications and Public Works, they are used one with the other to provide maximum service.

In the United States the Western Union Telegraph Company has been turning to the use of microwave radio-relay circuits to provide additional channels. Repeater switching arrangements were installed in many large cities which, in combination with an extensive wire carrier and radio telegraph system, will handle practically all of the company's telegraph traffic. Many private wire systems were installed on the premises of the company's patrons to handle their own messages.

Telephony. The total number of telephones in the world reached 60.6 million on Jan. 1, 1948, an increase of 6 million over the figure for the same date in 1947, according to statistics made available by the American Telephone and Telegraph Company. The number in the United States increased from 31.6 million to almost 34.9 million, but the percentage of the total decreased from 57.9 to 57.5. Thus in a period of one year as many telephones were added as were installed in all the first 25 years after its invention. In the number of telephones per 100 population, San Francisco, Calif., led the world, with Stockholm, Sweden, second, and Geneva, Switzerland, third.

In telephone conversations per capita, however, the order is the United States, Canada, and Sweden in the first three places. In the territory of the Pacific Telephone and Telegraph Company, one million new subscribers were gained in the period between V-J day and September, 1948, but the population on the Pacific Coast was shifting so rapidly that this gain involved the installation of 3 million and the removal of 2 million instruments.

During the year 1948, operating companies in the Bell System added more than 2.8 million telephones, but there still were about 1.2 million unfilled applications on hand at the year-end, and demand continued strong. The volume of telephone calling continued upwards, with the number of local and long distance calls handled by Bell companies averaging 167.3 million a day for the first 11 months.

In July a complex system called automatic message accounting was placed in service in Media, Pa., a suburb of Philadelphia, after having been in the making for more than 15 years. By means of the system all dial telephone calls through a telephone central office are recorded, sorted, and the bill of each subscriber computed. By the elimination of the multitude of meters and human computations which now monitor the price of dial telephone service, the new system is expected to increase the accuracy of billing and gradually extend the area for direct dial calls. Eventually it is planned to be integrated with long-distance toll dialing.

Data for the system are punched on a 3-inch-wide paper tape in a numerical code. The origin, destination, and the time and duration of the call are indicated by the position of holes in the tape, which then goes through highly complex sorting and computing machines for analysis. Information is produced on typed slips for each subscriber and then is transcribed onto the actual bill by clerks.

In August the first units of a rotary dial telephone switching system that is new to the United States but which long has been standard with International Telephone and Telegraph Company and other operating companies throughout the world were placed in service in Rochester, N.Y. The city is served by the second largest independent telephone company in the country, and is being converted from manual to dial operation.

After several years of hearings before the FCC regarding the use of recording devices on telephones, Government regulations were issued requiring that the installation of such equipment be performed by the telephone company and that provision be made to let telephone users know that the conversation is being recorded. An automatic tone device is used to produce a signal at intervals of about 15 seconds as long as the recorder is in use, except on private lines which cannot be connected with the general telephone exchange.

Toll dialing networks were placed in operation

at New York, N.Y., and Chicago, Ill., late in November and early in December. The installations were steps in the plan of the Bell System for a complete long-distance dial service to all parts of the United States and Canada under the method which permits operators to put calls through to distant telephones directly without the aid of other operators en route. With equipment already in operation in Philadelphia, approximately 10 percent of the nation's traffic between toll centers is being handled by operator toll dialing.

Construction of a coaxial cable between Philadelphia and Cleveland was completed and it was placed in long-distance telephone service in November; eventually it also will provide facilities for television. About two thirds of the cable was plowed directly into the ground and the remaining third was placed in conduits. Steel-armored submarine coaxial cable was used in crossing the larger streams and rivers along the route. Another completed coaxial cable is one that extends 3,000 miles from Miami, Fla., to Los Angeles in California.

A private communications network which is entirely automatic was installed for Pan American Airways, Inc., in order to relay messages concerning reservations, operations, and other business matters between some 56 offices located throughout the nation. Messages are typed on one teletypewriter which prepares a tape that is placed in a transmitter. Switching equipment is controlled by coded characters at the beginning of each message and selects the proper circuits and stations.

G. ROSS HENNINGER

COMMUNISM. In 1948, as in 1947, the story of world Communism was the story of the cold war between the Soviet Union and the United States. This year, however, not all the advantages were on the side of the U.S.S.R. Russia tightened its grip on Czechoslovakia, but lost control of Yugoslavia. Communism was defeated, temporarily at any rate, in Italy, and the Communists lost ground in most of western Europe. In China, however, and in parts of southeastern Asia, Communist forces made marked advances.

Czechoslovakia. For some time after its liberation, Czechoslovakia was the one country within the Soviet sphere of influence in which Communists were willing to cooperate with non-Communists. In 1948 it ceased to be an exception to the rule. Late in 1947 the Communists waged a successful struggle against the Slovak Democratic Party, and in January, 1948, they turned their attention to the Czech National Socialist Party. Challenged by opposition leaders, they moved on February 13 to complete their control of the police. When all the non-Communist groups protested this move, the Communists staged a demonstration of factory workers, with threats of violent revolution.

Yielding to this pressure, President Eduard Beneš appointed Klement Gottwald, Communist leader, as Premier, with a Cabinet made up of Communists and their allies. Non-Communists were purged from office, and the Communists announced an election on May 30 with a single slate of candidates. On June 7, refusing to sign the Constitution drawn up by the Communists, Beneš resigned his office. Gottwald became President on June 14, and Antonin Zapotocky, the new Premier, appointed a Cabinet that was even more firmly under Communist control than its predecessor. During the following months the Communists took steps to hasten the nationalization of industry, moved to control the Sokol and other popular or-

ganizations, and reshaped the educational system for the propagation of their ideas.

Yugoslavia. If the Communist seizure of Czechoslovakia had often been predicted, the defection of Yugoslavia surprised most observers. There were indications, to be sure, that perfect harmony did not exist between Tito and the rulers of Russia, but it seemed unlikely that the Yugoslav leader would dare to defy Moscow. The world was startled and bewildered when, on June 28, the Communist Information Bureau (Cominform) denounced Tito and other leaders of the Yugoslav Communist Party as opportunists, bureaucrats, and terrorists, who had carried out "a hateful policy" towards the Soviet Union despite professions of friendship.

One can only surmise that the Soviet leaders had first tried to bring direct pressure upon Tito and that he had proved recalcitrant. Then, in all probability, there was an attempt to take the Communist Party—and thus Yugoslavia itself—away from Tito, but his personal prestige and prompt action prevented this. Thereupon there was nothing for Russia to do but to express its disapproval through the Cominform.

Tito immediately responded to the Cominform charges with an assertion of his complete fidelity to Marxist-Leninist principles. While the other satellite states reaffirmed their loyalty to the Soviet Union and echoed the Cominform's attacks on Tito, he quietly purged his enemies from the party and from the Government, and by the end of the summer his power appeared to be undisputed. It was reported that some Yugoslav Communists were organizing against Tito in various neighboring countries, with the blessings of the satellite governments, but there was no evidence of a movement powerful enough to cause Tito concern.

Through all this, Tito not only proclaimed himself a good Communist but continued to administer Yugoslavia in the typical Communist police-state manner. In a speech on November 11, he warned "exploiting capitalist elements" that the struggle against them would continue until they were exterminated. At the same time he notified his Cominform critics that the way Yugoslavia was building Socialism was none of their business. For the moment there was a deadlock; while rejecting interference in domestic affairs, Tito announced his support of Soviet foreign policy, and was obviously eager to avoid trouble with his powerful neighbor.

Soviet leaders, for their part, were equally eager not to throw Yugoslavia into the hands of the western powers. It seemed unlikely, however, that this situation could endure if relations between Russia and the West continued to deteriorate. Either Russia would find some way of eliminating Tito and drawing Yugoslavia back into the Soviet orbit or he would be forced to come to some sort of terms with the West.

Elsewhere in Eastern Europe. For the Russians, the Yugoslav episode must have been a demonstration of the continuing power of nationalist sentiments and a warning that this was the rock on which all their plans might be wrecked. Within the Soviet sphere of influence, Tito's success may have encouraged other nationalists, but Russia had no intentions of permitting further defections.

In Poland, for example, a milder nationalism than Tito's was quickly suppressed. Apparently Vice Premier Wladyslaw Gomulka objected to the Cominform program for the rapid nationalization of the land as unsuited to Polish conditions. Gomulka was thereupon deposed as secretary general of the Communist Party, and on September 5 his place was taken by President Boleslaw Bierut. (Al-

though he had been a Communist for many years, Bierut had at least pretended to remain aloof from party affairs while he was serving as President of Poland.) Gomulka bowed to party discipline and repudiated his "errors." They were due, he said, to his failure to understand the "real ideological meaning of relations between the peoples' democracies and the Soviet Union" and "the leading role of the All-Union Communist Party of Bolsheviks (i.e. the Russian Communist Party) in the international front in the battle against imperialism." After the successful disciplining of Gomulka, Bierut took up the task of absorbing the Socialist Party, and 16 leaders were expelled from the Socialist Party because of their opposition to amalgamation with the Communists.

In Finland there has always been an avowed opposition to the Communists, but this opposition has sought to conciliate them rather than risk trouble with Russia. It therefore took great courage for President Juho K. Paasikivi to dismiss Yrjo Leino, a leading Communist, as he did on May 23. As Minister of the Interior, Leino had control of the police, and it was obvious that Paasikivi feared such a coup as had taken place in Czechoslovakia.

The Communists responded with extensive strikes, and Paasikivi finally had to yield. A Communist sympathizer was made Minister of the Interior, and a Cabinet position was given to Leino's wife, Hertta Kussinen, who is the daughter of the President of the Finnish Karelian Soviet Republic and is regarded as the real power in the Finnish Communist Party. On July 1 and 2, however, the Finnish people showed their support of Paasikivi by voting four to one against the Communist-dominated People's Democratic Union. Karl August Fagerblom, a Social Democrat, became Premier, and under his leadership Finland continued to pursue its difficult course, in spite of Communist-led strikes and pressure from the Soviet Union.

Germany. In Germany, as in some other countries, it appeared that Communist leaders were not satisfied with the condition of their forces. In May, William Pieck and Otto Grotewohl, co-chairmen of the Socialist Unity Party (SED), the Communist front, denounced the lethargy and defeatism of their associates, and in following months many former Social Democrats were expelled from the Unity Party. Apparently the Communists, who had been so eager to absorb the Socialists, were discovering that the converts were not wholly dependable from the Communist point of view, and the Communists could not tolerate these weaknesses at this particular time.

On November 30, a few days before the municipal elections in Berlin, the Communist Party set up an independent government in the Soviet sector of the city. In the western zone, the Social Democrats won an impressive victory on December 6. Observers believed that by spring the Communists would proclaim a constitution for all Germany, which would be put in operation in the Soviet zone. Thereafter, it seemed likely, Soviet forces would withdraw, leaving the administration of eastern Germany to the Communist front. It was conceivable that such a move could have propaganda value in the whole of Germany, but the Communist leaders themselves seemed uncertain that they were ready to carry it out.

Western Europe. In most of western Europe Communist influence has declined as economic recovery has progressed. In France and Italy, however, the situation has remained critical despite the Communist setback in the Italian election of April 19 and 20.

From May, 1947, when they were finally ousted from Alcide de Gasperi's Cabinet, the Italian Communists worked ceaselessly for the defeat of the Premier and his Christian Democratic Party. Their efforts were met, however, by the vigorous opposition of the Catholic Church and the various anti-Communist parties. Communists centered their attack on the United States, maintaining that this country intended to enslave the Italians and involve them in war with Russia. Anti-Communists replied by pointing to the dependence of Italy on American aid, which, they argued, would not be forthcoming if the Communists controlled the country. In the end the Christian Democrats won a clear majority in the Chamber of Deputies, with 307 seats to 182 for the Popular Front (Communist). The Popular Front received only 30.7 percent of the votes, as against the Christian Democrats' 48.7 percent.

Particularly noteworthy was the decline of the Communist vote in the industrial cities of northern Italy. Communist-led strikes developed in the months following the election, but even after the attempted assassination of Palmiro Togliatti, Communist leader, in July, strikes and other demonstrations seemed less effective than they had once been. On October 10 the Central Committee of the Italian Communist Party reminded Communists that "the strength of the Soviet Union and the political capacity of the glorious Bolshevik Party and its leaders are decisive guarantees of victory over the forces of reaction and war," and appealed for greater militancy and a higher ideological level.

The membership of the Communist Party in France, according to some observers, declined sharply in 1948, but the Communists remained strong enough to embarrass the Government, and they helped to precipitate a series of cabinet crises. In the autumn the Communists initiated a coal strike, with the dual purpose of making difficulties for the Marshall Plan and crippling the Government of Henri Queuille. The strike continued for many weeks, causing incalculable economic loss, and was marked by violence and sabotage.

Elections on November 7 to the advisory Council of the Republic (formerly the Senate) indicated that General de Gaulle was likely to be the chief gainer if disorders and parliamentary crises continued, for the Gaullists emerged as much the strongest party, and Communist representation dropped from 84 to 16.

United States. The attack on American Communists continued from several quarters in 1948. Several prominent Communists, including Alexander Bittelman and Jack Stachel, both members of the party's national committee, were arrested as illegal aliens and held for deportation. Twelve party leaders were indicted in New York City under the Smith Act, being charged with conspiracy to teach and advocate the forcible overthrow of the Government. Committees of both the House and Senate and also several state legislative committees were engaged in investigating Communist activities.

Although public indignation against the Communists was higher than at any time in recent years, and sometimes approximated hysteria, the Communist Party did not seem to be particularly menacing. Its influence in the labor movement continued to decline. Michael J. Quill, President of the Transport Workers Union, broke with the Communists in that union, after having long been regarded as their spokesman, and led a vigorous fight against Communist control. Few of the larger unions followed the Communist line in 1948.

The Communists could and did claim credit for

the organization of Henry Wallace's Progressive Party, and they devoted a large share of their energies to the Wallace campaign. Because the Progressive Party provided a "front" for the Communists and gave them an opportunity to reach large numbers of people, they may have felt that their efforts were profitable. Their spokesmen, however, admitted that the concrete result, as measured in votes, was disappointing.

China. The struggle of the Chinese Communists for Manchuria, which began as soon as the war with Japan ended, achieved a large measure of success in 1948. In February the Communists captured Yingkow, a major port. There was fighting all through the spring and summer, with some victories for Chiang Kai-shek's Nationalist armies, but more for the Communists, and finally, in November, Mukden, the principal Manchurian city, fell into Communist hands. The Communists had already made considerable gains in northern China, and after the fall of Mukden, they launched a heavy attack against Suchow and threatened Nanking, the Nationalist capital. In the meantime, they had succeeded in setting up many bases in the southern provinces, from which they harassed Nationalist troops in guerrilla warfare. In late December it was obvious that the Communists dominated the military situation, and, as the fighting slowed down, observers assumed that negotiations were going on, perhaps looking towards the formation of a coalition government. Whatever might happen, the Communists were clearly destined to play an important part in the future of China.

A rather significant political development was the merging in June of two large Communist areas in northern China into a single administrative and military unit. The new North China Liberated Area had a population of 44,000,000 and included several major cities. In August an assembly was held, and a North China People's Government was set up. This was described by the Communists as a forerunner of a people's government for all China, and the assembly included representatives of areas held by the Nationalists.

On the anniversary of the Russian Revolution, Mao Tse-tung, Chairman of the Chinese Communist Party, and Chu Teh, Commander of the Chinese Red Army, sent a message of congratulation to Premier Stalin: "We hail the constant strengthening of the U.S.S.R., bulwark of world peace and democracy, and close cooperation between the peoples of China and the Soviet Union." Mao Tse-tung also released a statement denouncing "the extreme rottenness of the capitalist world," and calling upon the Chinese people to drive out "the aggressive forces of American imperialism" and to overthrow the government of Chiang Kai-shek.

Elsewhere in Asia. In a broadcast on Dec. 25, 1947, Mao Tse-tung proposed the formation of an Asian Cominform. Although no such organization was known to exist, many observers pointed out that there was close cooperation among the Communist parties of southeastern Asia. Communists were not numerous in Indonesia, but they had great influence, especially in Java.

In September Communists captured Madiun, one of Java's principal cities. In French Indochina, French and colonial troops were unable to suppress the Viet Nameese revolutionaries, whose leaders were Communists. British authorities outlawed the Communist Party and its allies in Malaya, but Communist guerrillas succeeded in paralyzing Malayan industry. In Burma and in India there was a constant ferment stirred by Communists, and the premier of Siam announced in November that he

was taking strong measures to forestall a Communist revolt.

By the end of the year, 1948, it was apparent that, even if the western democracies had made some progress in Europe, they were a long way from winning the battle for the world.

—GRANVILLE HICKS

COMMUNITY CHESTS AND COUNCILS OF AMERICA, Inc. The national association of Community Chests and Councils of Social Agencies, organized in February, 1918, as a national clearing house of ideas and services for local Community Chests and Councils of Social Agencies. For description see YEAR BOOK for 1939, page 161.

Of the 1,369 Community Chests and Councils of Social Agencies in operation in August, 1948, (1,010 Chests and 361 Councils), 964 Chests and 336 Councils were in continental U.S.; 4 Chests and 3 Councils in Hawaii; 38 Chests and 21 Councils in Canada; 2 Chests in South Africa; 1 Chest in the Virgin Islands; 1 Chest in Puerto Rico; and 1 Council in the British West Indies. Almost every city in the U.S. (except New York City, which has a limited joint financing organization) in 1948 had a Community Chest or similar plan of federated financing for its voluntary social services. In 1,010 cities in 1947 more than 16,000,000 contributions totaling \$177,034,294 were given to Community Chests to be used during 1948 for voluntary Red Feather services in local communities. In 1948 the reactivated USO got its major financial support through inclusion in Chest campaigns throughout the country.

Officers for 1948 were: Honorary President, Gerard Swope; President, Edward L. Ryerson; Vice-Presidents, J. B. Adoue, Jr., H. L. R. Emmet, Philip Morgan, Mrs. Henry P. Russell; Treasurer, Milton H. Glover; Secretary, Mrs. Oswald B. Lord; Executive director, Ralph H. Blanchard. Headquarters: 155 East 44 St., New York 17, N.Y.

COMMUNITY FACILITIES, Bureau of. During 1948 the Bureau of Community Facilities of the Federal Works Agency administered the following programs:

Advance Planning Program. The provisions of the War Mobilization and Reconversion Act of 1944, under which the Bureau made advances to State and local governments for the planning of non-Federal public works, expired June 30, 1947. During 1948 the Bureau concentrated on speeding up the completion of approved plans, reviewing completed plans to insure readiness for construction, and collecting repayments when construction began.

Veterans' Educational Facilities Program. Under Public Law 697, 79th Congress, war surplus buildings and facilities, other than housing, were transferred to colleges and universities requiring them for the training or education of veterans under the G.I. Bill of Rights.

Disaster Surplus Property Program. The program was established by Public Law 233, 80th Congress, July, 1947. Surplus personal property was lent or transferred to State and local governments to assist them in the alleviation of damage caused by flood or other catastrophe.

Water Pollution Control Program. On June 30, 1948, the Water Pollution Control Act was approved (Public Law 845, 80th Congress). The Bureau was engaged in studies preliminary to the making of grants and loans to State and local governments for treatment works to control pollution in interstate waters.

Maintenance and Operation of Schools. The Bureau furnished financial aid in the maintenance and operation of certain schools which were in need of such aid after the discontinuance of Federal grants under the Lanham Act Program.

Public Works Programs in the Virgin Islands and Hawaii were also administered in 1948.

COMMUNITY TRUSTS. The aggregate charitable resources of upwards of 60 community trusts and foundations had risen to \$81,362,269 at the beginning of 1948 from \$77,835,014 a year before. The New York Community Trust administers 85 memorial funds having a value of \$17,398,817. Resources of \$13,250,000 were reported by the Chicago Community Trust; \$10,814,276 by the Cleveland Foundation; \$8,452,154 by the Permanent Charity Fund, Boston; and \$4,794,929 by the California Community Foundation, Los Angeles.

Philanthropic distribution from these funds rose to \$2,250,169 in 1947 from \$2,205,459 in 1946. The largest outpayments were in New York \$594,019; Chicago, \$368,542; Cleveland, \$301,240; and Boston, \$258,842. Gifts to the community foundations in 1947 totaled \$9,464,875. The largest receipts were in Boston, \$2,471,398; Pittsburgh, \$1,801,553; Winston-Salem, \$1,715,699; and New York, \$599,263. During 1947, foundations in Newton Centre, Mass., and Seattle, Wash., received their initial principal funds.

Community trusts are administrative media for multiple charitable funds, each of which retains its separate identity within the trust. A distinguishing feature of these trusts is their power to amend the uses for which particular funds are applicable, if, in changing conditions, originally designated charitable purposes become obsolete.

Directing personnel of the New York Community Trust, 120 Broadway, New York 5, include Thomas M. Debevoise, Chairman of the Distribution Committee, Winthrop W. Aldrich, Chairman of the Trustees' Committee, and Ralph Hayes, Executive Director.

COMPTROLLER OF THE CURRENCY, Bureau of the. A Bureau of the U.S. Department of the Treasury which has general supervision over national banks; established 1863. Comptroller: Preston Delano.

CONGREGATIONAL CHRISTIAN CHURCHES. The Congregational churches in America date back to the early settlers in Massachusetts, in 1620. The Christian churches originated at the time of the Wesleyan and revival movements of the 18th century. These two church groups merged in 1931. From earliest days the denomination has preached and taught democratic ideals and has fostered colleges, schools, and social agencies.

The denomination includes 5,765 self-governing churches, 3,312 pastors, 2,732 ordained persons engaged as educators, chaplains, missionaries, etc., with a total membership of 1,173,626 in the United States. There are 489 missionary churches with 95,640 members.

Contributions totaled \$5,536,816 (1947), investments, \$35,611,583, and church property had a value of \$205,184,715. The American Board of Foreign Missions reported income of \$1,917,862, while the total income of all national agencies from all sources was \$8,764,134. Headquarters: 287 Fourth Ave., New York 10, N.Y.

CONGRESS, United States. The 81st U.S. Congress convened for its first session on Jan. 3, 1949. As of that date, it comprised the following members:

United States Senate. Alben W. Barkley is Vice President of the United States and President of the Senate.

President pro tempore: Kenneth McKellar
Chaplain: Rev. Peter Marshall

Majority floor leader: Scott Lucas

Majority whip: Francis J. Myers

Minority floor leader: Kenneth S. Wherry

Minority whip: Leverett Saltonstall

Secretary of the Senate: Leslie L. Biffle

Secretary for the majority: Felton Johnston

Secretary for the minority: J. Mark Trice

Sergeant at arms: Joseph C. Duke

Chief clerk: Emery L. Frazier

^b Popular Democrat. Elected for a 4-year term.

CONGRESS OF INDUSTRIAL ORGANIZATIONS (CIO). A central national labor body committed to organization of workers into unions that will best fit the needs of the workers involved, without discrimination as to race, creed, or color, for the purpose of collective bargaining. Founded: November, 1935. Claimed membership: 6,500,000. President, Philip Murray; Secretary-Treasurer, James B. Carey. Headquarters: 718 Jackson Place NW, Washington 6, D.C. The 1948 National Convention was held at Portland, Oregon, on November 22-26.

CONNECTICUT. A New England State. Area: 5,004 sq. mi. Population (July 1, 1948): 2,011,000, compared with (1940 census) 1,709,242. Chief city: Hartford (capital), 166,267 inhabitants in 1940. See AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS, etc.

Legislation. A special session was called in February to reduce the state sales tax enacted at the regular 1947 session. Revenues under the act had greatly exceeded estimates, so the tax was reduced from the original 3 percent rate to 1 percent, to be increased to 2 percent on July 1, 1949. A brief session also was called in August.

Finance. For the fiscal year ended June 30, 1947, total revenue amounted to \$116,473,000; total expenditure, \$123,544,000.

Elections. Dewey, with 438,226 votes to 422,228 for Truman and 13,370 for Wallace, won the State's 8 electoral votes which went to Roosevelt in 1944. Democrats and Republicans each won 3 House seats, a gain of 3 for the Democrats. There was no Senatorial contest. In the race for Governor, Republican incumbent James C. Shannon lost to Chester Bowles, Democrat. Republican State Treasurer, Joseph A. Adorno was reelected, but Democrats won the other Statewide offices: Lieutenant Governor—William T. Carroll; Secretary of State—Mrs. Winifred McDonald; Comptroller—Raymond S. Thatcher.

Officers, 1948. Governor, James L. McConaughy (d. Mar. 7, 1948), succeeded by Lieut. Governor James C. Shannon. Secretary of State, Frances Burke Redick; Attorney General, William L. Hadden; State Treasurer, Joseph A. Adorno; State Comptroller, Fred R. Zeller.

CONSTRUCTION. This is the term applied to those activities which "are directed at providing and maintaining the greater part of the entire physical plant of the nation." It is second only to agriculture in magnitude and accounts for approximately 10 percent of the national income. The above definition of construction by the Bureau of the Census includes original construction and maintenance and repairs.

Estimates of construction activity in the United

States prepared by the Construction Division, Bureau of Foreign and Domestic Commerce, U.S. Department of Commerce, measure the value of construction work put in place. This includes the cost of materials installed and expenditures for labor and overhead. Separate estimates are prepared for new construction activity and for maintenance and repairs. The estimates do not include oil-well drilling, actual mining operations, and farm work which is an integral part of farm operations. Estimates for tourist courts and cabins, some playground and park construction, privately-owned water systems and some other minor items are not available and are not included.

Engineering News-Record reports the amount of "contracts let" for engineering construction in the continental United States. Public works reported include waterworks, sewerage, bridges, earthwork and waterways, streets and roads, buildings, and unclassified. The items included under private construction are bridges, industrial buildings, commercial buildings, and unclassified. The reports include projects of the following minimum costs: waterworks, excavation, drainage, and irrigation, \$28,000; other public works, \$50,000; industrial buildings, \$68,000; other buildings, \$250,000.

The F. W. Dodge Corporation reports construction contracts awarded in the 37 States east of the Rocky Mountains. The reports exclude farm construction and may not be complete for low-cost projects.

Total Construction. The dollar volume of new construction activity reached an all-time high in 1948 of about \$17,750 million. The dollar volume of maintenance and repairs is estimated at \$7,750 million, giving a total for the year of \$25,500 million. The corresponding figures for 1947 were: new construction activity, \$14,000 million; maintenance and repairs \$7,100 million; total construction activity \$21,100 million.

The 1948 private new construction was approximately \$13,750 million (\$10,900 million in 1947) and public new construction was about \$4,000

^a Joint estimates of the U.S. Department of Commerce and the U.S. Department of Labor.

million (\$3,100 million in 1947). Private new construction constitutes between 75 percent and 80 percent of total new construction. Private new con-

struction has been equal to or greater than public new construction, and in some years almost four times as much, since 1915, except in 1932, 1933, 1934, 1942, 1943, and 1944. These will be recognized as the depression and war years.

About a third of the increase in dollar volume of new construction activity from 1947 to 1948 may be attributed to the increase in costs. The balance is due to the increase in physical volume.

The 1948 total of private residential construction was approximately \$7,100 million, an increase of about 35 percent over the 1947 amount of \$5,260 million. Private residential construction constituted a little more than 50 percent of the total private new construction activity in 1948 as compared to a little less than 50 percent in 1947.

Highway construction was the largest single item (38 percent) of public new construction in 1948 and held the same relative place in 1947 (40 per-

transient crews, and subject to the vagaries of the weather. If a building is enclosed before cold weather, operations may continue. Highways, dams, and similar structures are built in the open where weather conditions are important. The industry is making some progress in lengthening the construction season. The seasonal patterns of certain types of construction are indicated by the indexes in Table 3.

New Housing. Private residential construction has comprised an average of 41 percent of total private new construction from 1915 through 1948. The lowest amount percentage-wise was 25 percent in 1945 and the highest was 54 percent in 1924, 1925, 1939, and 1948. It is usually the largest single classification under private new construction.

The number of new permanent dwelling units put under construction in the first 10 months of 1948 was 803,000 compared to 710,500 for the

TABLE 2—TOTAL NEW CONSTRUCTION ACTIVITY

cent), the respective amounts being \$1,550 million and \$1,230 million.

Employment on construction contracts reached a postwar peak of 2¼ million workers in August, 1948. The number of workers in September, October, and November averaged about 110,000 greater than the number in the corresponding months of 1947. The maximum number of workers in 1947 was 2.1 million in September.

Geographical Distribution. The East North Central Census region led in total new construction activity

same period of 1947. The total units for 1948 will probably be between 900,000 and 925,000. The total number for 1947 was 855,000. The number of units completed in 1947 was 835,000. The number of publicly owned units started in 1948 constitutes less than 2 percent of the total number of starts. The number of units put under construction in 1948 is exceeded only by the 937,000 units started in 1925.

Approximately 40,000 prefabricated units were erected in 1948, less than 5 percent of the total.

TABLE 3—SEASONAL INDEXES FOR SELECTED TYPES OF NEW CONSTRUCTION ACTIVITY

during the first three quarters of 1948 with approximately \$2,500 million, followed by the Pacific region with \$2,400 million, and the Middle Atlantic region with about \$2,100 million. During the same period California led all States with about \$1,860 million followed by Texas, \$980 million and New York, \$938 million. These regions and States held the same relative standing for total new construction activity in 1947. Table 2 shows the regional and quarterly distribution of total new construction activity for the first three quarters of 1948 and for the four quarters of 1947.

Seasonal Variation. New construction activity follows a fairly distinct seasonal pattern being at a low ebb during the winter months and reaching peak production during the late summer and early fall. This seasonal pattern results from the nature of the operations. The work is done at the site, by

About 80 firms are manufacturing prefabs of which 5 make steel dwellings. Some of the plants are not operating at full capacity. Merchandising and financing are the important problems rather than consumers' acceptance. One company introduced a porcelain-enamel steel house during the year.

Costs. Construction costs continued to rise throughout 1948 and will average about 10 percent above 1947 costs. Large variation in costs exists between various localities resulting from the difference in demand and the productivity of labor. A seller's market still exists. Cost trends are depicted by various indexes. Some are general in nature while others indicate the trend of a particular type of structure. Some are local in character while others are more or less national. The base year also varies.

Engineering News-Record reports two cost in-

indexes. The E.N.-R. construction cost-index is based on the cost of structural steel, cement, lumber, and common labor rates at selected points and weighted in proportion to the importance of each in heavy construction. The E.N.-R. building cost-index is based on the same material items as given above, and skilled labor rates.

Court Decisions. The U.S. Supreme Court rendered two decisions of importance to the construction industry. The decision of the Court in the Federal Trade Commission vs. the Cement Institute case upheld the FTC and affirmed that a multiple-basing point delivered price system as used by the

TABLE 4—COST INDEXES
[Engineering News-Record] [1913=100]

November.....	478.25	429.30	355.86	322.27
December.....	477.66	432.30	355.55	325.27

cement industry results in (1) restraint of competition and (2) systematic price discrimination, which are prohibited by the FTC Act and the Clayton Act respectively. This court ruling affects cement, steel, and other products of common use in construction. This decision may well result in a group of regional or local monopolies and will increase the cost of some products. Contractors will experience some difficulty in arriving at a price to use in bidding. The determination of freight rates over a wide area is not a simple matter.

The second decision resulting from the case of New York longshoremen against stevedoring companies redefines overtime and is popularly referred to as "overtime-on-overtime." The interpretation or redefinition of overtime pay is applicable in the construction industry and has caused considerable confusion in the preparation of payrolls. Employers and employees have had a long-time understanding that overtime pay at 1½ or 2 times the regular rate applied to hours worked outside the regular shift of 8 a.m. to 5 p.m., Monday through Friday. The court ruled that such pay, unless for work in excess of 40 hours, was in reality premium pay for undesirable hours and must be considered in determining the base rate from which overtime pay is computed. The application of this decision is variable in different cases depending somewhat upon contract agreements or company policy. In some cases its application will result in a varying "regular rate" from which overtime will be computed. Any given employee's "regular rate" may be \$1 per hour one week, \$1.07 per hour another week, and still a different amount during a succeeding week. The amount added to the total weekly pay of an employee is variable, ranging from nothing to \$5, or \$10, or more. This court ruling adds to the labor and cost of preparing payrolls and will cause some difficulty in preparing estimates for contract bidding purposes. Shifting the work week to Monday through Sunday may be helpful in some cases.

Construction Equipment. The Road Show, sponsored by the American Road Builders' Association, was held during the summer for the first time since the war. All forms of construction equipment were exhibited and the variety of machines on display is indicative of the effort being made to mechanize all possible operations. Machines displayed ranged

from small power tools and 150 lb. generators to 3½ cu. yd. power shovels and 750 h.p. bulldozers. One machine can dig and load 750 cu. yd. per hour.

The trend in design is to increase size, power, mobility, operator's comfort, power control, and reduce maintenance costs. More manufacturers are introducing models of motor-scraper units and rubber-tired bulldozers. The application of large-size, low-pressure tires to construction equipment continues to gain favor. Diesel power continues in favor in the heavier machines.

Large capacity portable aggregate plants are available to meet strict specifications for aggregates. These units are becoming economical as hauling costs rise. Truck haul of aggregate is now about 6¢ to 8¢ per ton-mile.

Tractor loaders are being used in many operations to reduce hand labor. Powered rubber-tired buggies are replacing the wheelbarrows and 2-man concrete buggies. One-pass soil stabilizers are now available for the construction of relatively low cost roads.

Needs. The Joint Congressional Committee on Housing recommended 1,250,000 new homes a year for 12 years. This recommendation was based on figures gathered by the committee, some of which are: F. W. Dodge Corporation, 820,000 per year for 10 years; National Housing Agency, 1,260,000 per year; American Federation of Labor, 1,560,000 per year; Charles Adams, 1,860,000 per year for 10 years; Twentieth Century Fund, 1,133,000 per year for 15 years; Producers Council, 900,000 to 1,000,000 per year for 3 or 4 years; and Association of Real Estate Boards, 300,000 per year for 10 years. The *Construction News* indicates 900,000 new units per year for at least 8 years will be required before the situation becomes normal.

Estimates prepared by State Highway Commissions indicate the need for vast sums to raise the several systems to acceptable standards. The departments of some States are barely able to maintain the highways in serviceable condition due to the lack of funds, lack of trained personnel, and the increase in both traffic and magnitude of loads.

Indiana estimates it will require \$67.5 million per year for 11 years (1950-1960) for necessary improvements to raise the system to tolerable standards. Michigan needs \$179 million per year for 12 years to correct present deficiencies and for replacement and maintenance. Nebraska highway needs are placed at \$64 million per year for 10 years and the California highway needs are placed at 210 million in 1949, increasing to \$240 million in 1959. All the above figures are based on carefully prepared engineering analyses.

Outlook, 1949. The outlook for 1949 is bright. The volume of new construction activity may amount to \$18,750 million. The number of housing units to be placed under construction will probably be a little smaller than in 1948. Construction costs may be expected to increase about 5 percent above the 1948 level.

CONSUMERS' COOPERATIVES. Again, in 1947, the consumers' cooperatives in the United States reached all-time peaks in membership and business. For the first time the annual aggregate retail distributive business of these associations exceeded 1,000 million dollars.

Among the retail petroleum associations, slightly less than 3 percent showed losses on the year's business and, of those showing earnings, in well over half were the earnings greater than in 1946. Although the retail store associations had a rate of increase in volume of business which exceeded any previous year for which there is record, their operating results were less satisfactory than in 1946. Among those reporting, over a fourth (28.5 percent) sustained a loss on the year's operations, as compared with 16.1 percent in 1946; among those which were "in the black," over half had smaller earnings than in 1946. For both types of associations, earnings included patronage refunds on purchases made from wholesale cooperatives, and for some retail associations, such refunds were all that kept them on the earnings side of the ledger. Difficult operations were reflected in an unusually large number of dissolutions of associations in 1947 and early 1948.

More than 4,200 retail associations were affiliated to regional wholesales at the end of 1947, and 24 of these wholesales were, in turn, members of National Cooperatives, Inc.

Among the commercial federations, the regional and district wholesales had a distributive and service business of nearly 261 million dollars (as compared with 222 millions in 1946). Earnings of the reporting regional wholesales, which exceeded 15 million dollars, were nearly 30 percent above those of 1946; in 1946, however, earnings had been nearly 88 percent above those of 1945. Combined earnings for the group were reduced considerably by the losses of a few associations. As among the retail associations, some of the wholesales found the going hard in 1947. This was particularly true of the three which deal mainly in groceries; two of these sustained a loss on the year's business. In two other wholesales with grocery departments, those departments ended the year with an operating loss.

Patronage refunds to the affiliated member associations by the wholesales totaled nearly 12¼ million dollars—or nearly half again as much as in 1946.

The year 1947 saw another sizable increase in value of goods produced by the wholesales and productive federations, reaching nearly 128½ million dollars as compared with 95½ millions in the previous year. Over 60 percent of this product came from plants operated by the regional wholesales, and somewhat over a third came from those of the productive federations.

In many cases, the interest in cooperatives manifested during the past year by organized labor has died without anything concrete emerging. In numerous other places, however, new cooperatives have been formed, and some existing associations report an influx (large or small) of unionists as new members or patrons. One of the results has been a new "warehouse" type of retail store, handling only a few hundred major food items needed by a household, compared with the thousand or more ordinarily carried in stock by grocery stores. As the goods in these warehouses are displayed in the boxes in which they are shipped, the processes of shelving and pricing are eliminated. The results are said to be quick turnover of inventory, lower labor and other overhead costs, and greater savings for the patrons.

Important in the domestic scene in 1948 was the holding of the Sixteenth Biennial Congress of the Cooperative League of the U.S.A. in Minneapolis, in November. This was a working congress dealing with the various aspects and problems of the cooperative movement. Special sessions consid-

ered finance, taxation, housing, petroleum, retail services, public relations, and labor and cooperatives. Their conclusions were reported to the general sessions, in most cases with recommendations for specific action.

The annual convention of the Cooperative Health Federation of America preceded the Congress of the League.

In the international field, the outstanding event was the Seventeenth Congress of the International Cooperative Alliance (founded in 1895), at Prague, Czechoslovakia, in September. Cooperatives and nationalization, and the expansion of the cooperative movement in the economic and business field, were the two main themes of the Congress, both evoking considerable discussion and widely differing points of view. The resolution passed by the Congress on the former subject expressed the belief that, although nationalization is desirable in certain basic industries, cooperation is preferable to nationalization in all industries which cater to individuals or in which individual preferences and tastes are important. The Congress also reiterated the historic stand of the Alliance, asserting its political and religious neutrality and its independence of any ties with organizations in either field.

COPPER. For the third postwar year, consumption of primary copper by domestic industry in 1948 exceeded high level consumption prewar years by about 100 percent, reaching approximately 1,230,000 net tons (1947: 1,278,400 tons). Heavy postwar consumption of copper has been caused by pent-up consumer and industrial demand after the war, and the heavy use of certain brass mill products to substitute for scarce steel products.

Domestic mine production of copper was at the high level of approximately 826,000 tons in 1948, the additional tonnage required by domestic consumption coming from imports, largely from Chile. (1947 production, revised: 847,560 tons.) About 50,000 tons of copper production was lost by a

strike of railroad workers at the Bingham, Utah open-pit mine of Kennecott Copper Corp., that was still unsettled at year end.

Domestic consumers of copper were hit hard by a shortage throughout the year that grew particularly acute in the fall and winter. The principal cause of the shortage was the heavy demand by domestic industry, and the strike in the last quarter. Other contributing causes were the strategic stock-piling program of the government which was accelerated in the last half of the year, and the granting of dollar credits to the nations of western Europe for purchases of copper and mill products under the Economic Cooperation Administration program.

Major producers distributed available tonnages to domestic and foreign consumers with care so as to prevent price increases during the year. An increase of 2¢ per lb. in August brought the price to 23.50¢ delivered Connecticut Valley, with a premium of 1/8¢ per lb. for Midwest delivery. Demand that could not be satisfied grew so heavy in the last half of the year that premium prices were paid as high as 28¢ per lb. by many consumers, largely for foreign metal. Consumers also entered the scrap market to buy copper for conversion by custom smelters on a toll basis. This added buying pressure bid up the price of scrap copper as high as 22¢ per lb., which was reflected in high prices for secondary ingot.

Heavy wartime construction of fabricating plants in the Midwest has wrought an important change in the geographical center of consumption, which has moved westward from the eastern seaboard. The refining plants have been heavily centered in the eastern seaports to serve the market, where they are fed by imported concentrates and domestic concentrates from western mining areas. Construction of additional refining capacity in the West and Midwest will cut down on freight costs involved in consumption by plants in that area. Kennecott Copper Corp. began the construction of a refinery at Garfield, Utah, to handle the output of its Bingham, Utah, mine.

Arizona was again the leading mine producing state and its production together with that of Utah constituted nearly three-fourths of total domestic production. Other leading producing states were New Mexico, Montana, and Nevada.

Imports in the form of ore, matte, crude and refined copper totaled 496,320 tons in 1948 (1947 imports: 407,937 tons). Of this amount, 258,156 tons came from Chile, more than 80 percent of it in refined form. Mexico, Canada, Peru and other Western Hemisphere nations sent the balance, except small tonnages from Rhodesia, Yugoslavia, South Africa, and Cyprus. The tariff on copper imports has been suspended until Mar. 31, 1949. Copper exports of the United States in the form of ingots, bars, etc. reached 142,598 tons (1947 exports: 148,399 tons). The United Kingdom took 50 percent of U.S. exports of refined copper.

The principal copper-producing countries of the world, excluding Russia for which statistics are not available, based on mine production in 1947 were as follows (net tons): United States, 847,560; Chile, 470,318; Canada, 227,209; Rhodesia, 218,222; Belgian Congo, 166,271; and Mexico, 72,675. The world total was estimated at 2,280,000 net tons.

—JOHN ANTHONY

COPYRIGHT, U.S. The three most significant events in copyright in 1948 were the increase in the fees charged for the registration of copyrights and other services performed by the U.S. Copyright Office,

the increase in the appropriation voted by Congress for the maintenance of that Office, and the improvement in the *Catalog of Copyright Entries*.

The fees charged the public for the various services performed by the Copyright Office have remained extremely low for many years; in a number of instances below the schedule of a century and a half ago. They were so far out of line with the pay scale for federal employees that it was possible to secure for \$1 an hour the making of bibliographical and other Copyright Office searches costing the government \$3 an hour. This situation led the Appropriations Committee of the House of Representatives to refer to the Copyright Office fees as "woefully inadequate to cover present day costs" and the Congress to increase almost all the Copyright Office fees effective May 27, 1948. The most significant changes were the increase of the fee for the registration of each original copyright to \$4 (the charge for registering prints and labels remains at \$6) and of that for making searches to \$3 per hour.

To compensate the users of the Copyright Office for the higher fees they were to pay, the Congress increased the appropriation of the Copyright Office so that it could give the public better service. The new appropriation did not become effective until July 1st and it takes time to secure and train new employees, so the public has not yet received the full benefit of the increase appropriation. However, the public has already received better and prompter service and it is hoped that the improvement will be even more marked in the year 1949.

The *Catalog of Copyright Entries* changed in 1947 its form, contents, price, and frequency of publication. Its size has been changed to quarto so as to facilitate the use of larger and more readable type. The form and content of the entries has been altered to make them more useful and readily understandable. All parts of the catalog are now published semi-annually. The Catalog can be purchased as a whole or any one of its eleven separate parts can be bought separately (each covering a different class of copyrighted material) either from the Superintendent of Documents, or the Copyright Office. The price of the entire Catalog for one year is \$20.

The number of claims to copyrights registered in fiscal year 1948 was the largest ever received in the Copyright Office, numbering 238,121. Of this number 51,546 were for books (of which 9,786 were monographs), 72,339 for musical compositions, 59,699 for periodicals, 1,456 for maps, and 1,631 for motion pictures. Of the 573,698 registrations made in the fiscal five-year period 1915-1920, 62,100, or 10.8 percent were renewed in the fiscal years 1943 to 1948.

—SAM B. WARNER

CORN (Maize). World corn output for 1948 was forecast at the record figure of 5,900 million bushels, on the basis of information available in the Office of Foreign Agricultural Relations, U.S. Department of Agriculture. At that level the crop would be 25 percent above the 1935-39 average of 4,800 million bushels. The increase was accounted for by the record outturn in the United States, and a slight gain in Africa. All other continental totals were estimated below average. Production yields of the continents for 1948 were estimated (in bushels) as follows: North America 3,753 million, Europe 671 million, U.S.S.R. 125 million (in 1947), Asia 630 million, Africa 272 million, South America 464 million, Oceania 5 million.

United States. The 1948 corn crop of the United States, according to the U.S. Department of Agriculture Crop Report of December 1948, amounted to a record of 3,651 million bushels, compared with 2,384 million bushels in 1947. Yields of the principal producing States in 1948 (in bushels) were: Iowa 666,730,000, Illinois 549,793,000, Indiana 279,780,000, Minnesota 272,055,000, Nebraska 252,468,000, Ohio 215,924,000, Missouri 201,110,000, South Dakota 131,472,000, Wisconsin 113,252,000, Kentucky 100,040,000, Kansas 81,304,000, Tennessee 74,415,000, North Carolina 69,006,000, Michigan 67,119,000, Pennsylvania 65,379,000, Alabama 58,824,000, Mississippi 53,544,000, Virginia 50,525,000, Georgia 49,182,000, Texas 44,698,000.

CORSICA. A French island department in the western Mediterranean, 100 miles southeast of Nice. Area, 3,367 square miles. Population (March, 1946), 267,971. Chief towns: Ajaccio (capital), 38,000 inhabitants; Bastia, 52,208.

COSTA RICA. A Republic of Central America. The interior is mountainous with a small highland plateau, hemmed by volcanic cones and cordillera ranges. The coastal plains border the Pacific and the Caribbean oceans. Along the coast, the climate is hot and humid, while cool and refreshing climates prevail in the highland plateaus.

Area and Population. Area: 19,656 square miles. Population (census, Dec. 31, 1945): 746,535 (1948 est. 835,000), of whom about 80 percent are of European descent; 15 percent mestizos; 4 percent Negro; one percent Indian. Chief cities: San José (capital), 86,952 inhabitants in 1948; Cartago, Heredia, and Alajuela. Limón is the principal port.

Education and Religion. The Constitution guarantees freedom of religion, but Roman Catholicism is the official religion. Over 80 percent of the population is literate under a program of free and compulsory education. In 1947, there were nearly 900 primary public schools with 83,000 students; 5 secondary schools with more than 4,000 students. The national university of Costa Rica is a well-known institution of higher learning in Central America.

Production. Agriculture is the leading occupation, with 1,040,000 acres under cultivation. Principal export crops are coffee, bananas and cocoa, which usually amount to 80 percent of the total value of exports. Coffee production in 1947 was estimated at 307,000 bags of 60 kilos. The value of exports of agricultural products in 1946 follows: coffee \$6,528,569; bananas, \$4,388,357; cocoa, \$792,848. There are some small industries of consumer goods as well as dairy-farming and cattle-raising (401,104 head in 1945). Although forest covers about 80 percent of the total area of the country, the timber industry is not well developed (10,246 metric tons exported in 1946).

Foreign Trade. Total exports in 1947 amounted to \$14,357,272; imports to \$33,041,135. With such an unfavorable balance of trade the economy of the country was seriously affected. Coffee exports (1947) totaled 302,937 bags, 79 percent of which went to the United States. Banana exports, January-July, 1947, consisted of 3,851,627 stems (1946 total export 5,500,000 stems). Cocoa exports (1946) totaled 8,751,000 lb. Lumber exports for the period January-August, 1947, totaled \$745,000, or about twice that of 1946. Principal buyers are the United States, Canada, Switzerland, Colombia, and Panama. Principal suppliers are the

United States, Mexico, Nicaragua, Argentina, and Chile.

Finance. The budget estimate for 1947 was \$17,000,000, both for revenues and expenditures. On Jan. 1, 1947, the public debt amounted to 256,406,852 colones (one colon equals U.S.\$0.1764; 1948). The foreign debt is distributed among French, British, and American bondholders. The internal debt is approximately 77,000,000 colones. Currency in circulation at the end of 1947 totaled 82.6 million colones; bank deposits, 105 million colones; gold reserves, \$2,000,000. The cost of living index in August, 1947, was 226 (1936 = 100).

Transportation. Costa Rica has a total of some 600 miles of narrow-gage railroad, of which 301 miles are main lines. The United Fruit Company maintains approximately 190 miles of the railroad. There are about 1,017 miles of highway (1947), of which 921 miles are hard surfaced, the remainder improved. Local air service is supplied by TACA, LACSA, and TAN. International service is supplied by the Pan American Airways and TACA. There are 1,904 miles of telegraphic lines and 350 miles of telephone line; the first are government owned, the latter private.

Government. Under the Constitution of 1871 (amended 1943), Costa Rica is a centralized republic of 7 provinces. Legislative power rests in a unicameral Congress of 45 members (elected for 4 years). The President, who serves a 4-year term, is assisted by a Cabinet of 9 members. In May, 1948, a revolutionary Junta headed by José Figueres assumed power. (See below EVENTS.)

Events, 1948. A peaceful and traditionally democratic country, Costa Rica had her share of violence in 1948.

Presidential Elections. In preparation for the elections to be held on February 8, the three political parties opened the year stressing their different ideologies. Rafael Calderón Guardia was the candidate of the liberally inclined Partido Nacional Republicano; Otilio Ulate Blanco, nominated by the Partido Unión Nacional, represented the landed classes, and Manuel Mora Valverde was nominated by the pro-Communist Van-Guardia Popular, a small party.

Early election returns gave a majority to Ulate, but this was immediately contested by the other parties, who claimed fraud. The case was referred to an electoral tribunal which decided in favor of Ulate on February 28. The decision was close, with the President of the Tribunal stating that Congress should make the decision. After considerable bickering, Congress voted 20 to 19 to annul the elections, and announced that a provisional government would be appointed until a new election could be held.

Preludes to Civil War. After the decision of Congress was published, the government took measures to stop revolts, the first step being a house search by police at the home of Dr. Valverde, one of Ulate's backers. Entrance denied, an exchange of shots followed in which two policemen were killed and Dr. Valverde was fatally wounded. Out of this incident serious tension arose; Ulate and some of his followers were placed under arrest and accused of being responsible for the incident, since they had resisted the government order.

The Figueres Uprising. Early in March, a group headed by Col. José Figueres took possession of three planes of the TACA line, and smuggled arms and ammunition from Guatemala. A veritable civil war broke out and the rebels bombed the presidential palace from the air. President Picado, whose term did not expire until May 8, asked the diplo-

matic corps to intervene; they accepted and formed a committee headed by the Papal Nuncio and the Ambassadors from the United States, Mexico, the Dominican Republic, Panama, and Chile. Figueres appointed an emissary to work out an agreement, under which it was understood that Ulate's election would be recognized and a coalition government formed. However, on April 28, Figueres' troops entered San José in a triumphal march and, instead of delivering the government to Ulate, formed a revolutionary Junta controlled by himself. He then announced that a Constituent Assembly would be convoked to draw up a new constitution.

De Facto Government. Figueres is ruling Costa Rica and the political situation is confused. The Conservatives are disturbed by the socialistic trends of the present administration, while the democratic group is dissatisfied with the dictatorial, strong-arm methods used to repress political opposition. On the international front, in spite of internal unrest, Costa Rica attended the Ninth Inter-American Conference of American States held in Bogotá in April, and became signatory to the Charter of the Americas.

Invasion and the Inter-American System. On December 10, the country was invaded by a revolutionary group headed by defeated candidate Rafael Calderón Guardia. The rebel troops came from Nicaragua, and Figueres' government immediately referred the case to the Organization of American States, which immediately intervened and appointed an investigation commission, composed of delegates from Mexico, Paraguay, Brazil, Colombia and the United States. The commission went to Costa Rica and Nicaragua and conducted several hearings, with the following results: that the movement was organized in Nicaraguan territory, and that the government of that country had taken no preventive measures against it until after December 10; that the rebel troops were formed mostly by citizens of Costa Rica and some Nicaraguans, but that there was no evidence of participation by Nicaraguan armed forces; and that the government of Costa Rica, before the invasion, had given moral and material support to the so-called Caribbean Legion, whose objective, among others, is the overthrow of the Nicaraguan government. The Council of the Organization of American States took the following steps: A request to the governments of Nicaragua and Costa Rica to refrain from any hostile acts; a statement to the Nicaraguan government that they should have taken steps to prevent the invasion, and to the Costa Rican government that they should in the future block activities of revolutionary groups against neighboring governments; and, in general, a request to both countries to obey the principles of non-intervention that they had formally accepted.

—MIGUEL JORRÍN

COTTON. The 1948 output of cotton lint in the United States (based on information received by the United States Crop Reporting Board, as of Dec. 1, 1948) was estimated to total 14,937,000 bales (of 500 lb.), compared with 11,857,000 bales in 1947 and the 10-year average of 12,014,000 bales. The record crop was 18,946,000 bales produced in 1937. Yields (in 500-lb. bales) for 1948 of the chief producing States were: Texas 3,200,000, Mississippi 2,350,000, Arkansas 2,000,000, Alabama 1,200,000, California 960,000, South Carolina 890,000, Louisiana 760,000, Georgia 760,000, North Carolina 680,000, Tennessee 650,000, Missouri 505,000, Oklahoma 370,000, Arizona 320,000, and New Mexico 240,000.

Cottonseed production for 1948, if the ratio of

lint to cottonseed is the same as the average for the past 5 years, would amount to 6,036,000 tons, compared with 4,681,000 tons in 1947 and the 10-year average of 4,947,000 tons. The chief producing States, with production in tons, follow: Texas 1,417,000, Mississippi 603,000, Arkansas 490,000, Alabama 347,000, California 295,000, Georgia 253,000, South Carolina 253,000, Louisiana 201,000, Tennessee 197,000, North Carolina 177,000, Oklahoma 137,000, Missouri 132,000.

World Cotton Output. The Office of Foreign Agricultural Relations of the U.S. Department of Agriculture, in a press release dated Jan. 31, 1949, estimated the 1948-49 world output of cotton at 29,200,000 bales (of 500 lb. gross), compared with the 1947-48 output of 25,300,000 bales and the 10-year average (1935-39) of 31,676,000 bales.

Yields (in 500-lb. bales) of the principal producing countries, in 1948-49, were: United States 14,937,000, U.S.S.R. (Europe and Asia) 2,500,000, China (including Manchuria) 2,300,000, India 2,050,000, Egypt 1,772,000, Brazil 1,400,000, Pakistan 1,055,000, Mexico 560,000, Argentina 369,000, Peru 325,000, Uganda 292,000, Turkey 235,000, and Anglo-Egyptian Sudan 225,000. The world area planted to cotton in the year beginning Aug. 1, 1948, was estimated (preliminary) at 64,875,000 acres.

World Cottonseed Output. According to a press release of the Office of Foreign Agricultural Relations, Nov. 8, 1948, the world 1948-49 cottonseed production was forecast at 13,740,000 short tons, compared with 11,755,000 short tons in 1947-49 and the 10-year average (1935-39) of 15,285,000 short tons. The chief producing countries (with yields in short tons) were: United States 6,091,000, India 1,400,000 tons, China (including Manchuria) 1,232,000, U.S.S.R. (Europe and Asia) 1,250,000, Egypt 920,000, Brazil 672,000, Pakistan 536,000, Mexico 269,000, Argentina 234,000, Uganda 128,000, Turkey 120,000.

COUNCIL OF STATE GOVERNMENTS. A joint governmental agency established (1925) by the States, for service to the States, supported by the States. The Council serves as: A clearing house for information and research, serving the 48 States; A medium for improving legislative and administrative practices of State governments; An instrument for encouraging full cooperation among the States in the solution of interstate problems, both regional and national; and A means of facilitating and improving Federal-State relations.

The Council is composed of commissions or committees on interstate cooperation established in each of the 48 States. The Council also serves as the secretariat for the Governors' Conference, the American Legislators' Association, the National Association of Attorneys General, the National Association of Secretaries of State, etc.

Besides the central office located in Chicago (at 1313 East Sixtieth Street, Chicago 37, Ill.), the Council maintains regional offices in New York, San Francisco, and Washington, D.C. Major publications of the Council include *The Book of the States* (biennial), *State Government* (monthly), and the *Washington Legislative Bulletin* (monthly).

Officers: President, Governor William Preston Lane, Jr., Maryland; First Vice President, Chairman of the Board, Senator Burton M. Gross, Maine; Executive Director, Frank Bane.

COURT GAMES. Robert Grant, 3d, and J. Richards Leonard, New York stars, stood out in racquets competition, Grant capturing the national singles

championship and the Pell Cup for his biggest achievements of the campaign, while Leonard's many conquests included triumphs in the U.S. doubles with Malcolm Kirkbride of Boston, Mass.; the Tuxedo Gold Racquet; the Canadian singles; and the Canadian doubles, in which he paired with Fred de Rham, another New Yorker.

In squash racquets, the United States won the Lapham International Trophy again. Stanley Pearson, Jr., of Philadelphia emerged triumphant in the national championships, taking the singles and combining with Charles Brinton of Philadelphia for the doubles. Other major national title winners included Al Ramsay of Cleveland, professional; George Waring of Boston, veterans; Diehl Mateer, Jr., of Haverford College, intercollegiate; Cecile Bowes of Philadelphia, women's singles, and Peggy Scott of the Germantown (Pa.) Cricket Club and Mrs. Dudley Vail, Jr., of New York, women's doubles.

H. Robert Reeve of the Bayside Tennis Club of Long Island was among the year's outstanding squash players and carried off the national singles squash tennis crown. Joseph Lordi of the New York A.C. won the national veterans' title.

Top event of the court tennis season was the meeting between Pierre Etchebaster, formerly of France, and James Dear of England in their challenge match at the Racquet and Tennis Club in New York City. Etchebaster, truly an iron man in this sport, extended his reign as world champion to 20 years by turning back Dear, English titleholder, by 7 sets to 4.

United States singles honors were won by Ogden Phipps of Roslyn, L.I., who also teamed with Alastair B. Martin of Glen Head, L.I., for the national doubles title.

—THOMAS V. HANEY

CRETE. A mountainous island in the eastern Mediterranean, forming the most southerly part of Greece. Crete is 160 miles long and from 6 to 35 miles wide. Area, 3,235 square miles. Population, 441,687 on Jan. 1, 1939. Chief towns: Canea (capital), 26,604 inhabitants; Candia, 33,404.

CRIMINOLOGY. In 1930, at the request of the International Association of Chiefs of Police and pursuant to an act of Congress, the Federal Bureau of Investigation began the Uniform Crime Reporting program, collecting statistics on crime from law enforcement agencies throughout the land and publishing them at regular intervals in booklets which were given nationwide distribution. Prior to this time, unfortunately, there was no way to tell whether the problem of crime was worse in our day than it was centuries ago. To limit the discussion to the American scene—it is not even possible to make a comparison of the present-day problem with that of two decades ago.

In 1947, there were a total of 1,665,110 estimated serious crimes in the United States. The total for 1937, for example, was 1,415,816. This number increased steadily during the prewar years, reaching a peak of 1,531,272 in 1941. When the nation went to war, crime rates began a slow decline. The total number of major offenses committed dropped to a low of 1,381,681 for 1943. Then the backwash of war set in. The figures mounted steadily from 1943 until they reached an all-time high in 1946.

An average day during 1947 saw 21 persons slain and 47 women raped. Each day in 1947 left 205 persons feloniously assaulted, 159 robbed. Each day, 1,023 burglaries were committed, 506 automobiles stolen and 2,585 larcenies reported.

The first nine months of 1948, compared with the first nine months of 1941, the last peacetime year, show the continued seriousness of the crime problem. Aggravated assault is up 44 percent in 1948; rape rose 84 percent; burglary is 21 percent higher; robbery, 17 percent higher; negligent manslaughter, 6.5 percent higher; and murder increased 6.9 percent. Larceny showed only a 1.8 percent rise and auto thefts declined 10 percent.

Based on the wilful homicide figures for 1947, it is estimated that if the crime rate continues, approximately 154,000 Americans will commit murder before they die, and they will murder approximately 231,000 persons. It is estimated that during the next thirty years, 515,400 rapes will be committed and over 59 percent of these will be forcible in nature. It is further estimated that in the next thirty years there will be 1,743,000 robberies, 2,240,700 aggravated assaults, 11,203,500 burglaries, 28,302,900 larcenies and 5,541,900 auto thefts.

The crime trends reflected by fingerprint arrest records received by the FBI reveal that America is still faced with a serious crime problem among youth. Figures for 1947 compared with 1946 reflect a 21.4 percent increase in arrests of boys 18 to 20 years of age and a 10.5 percent increase in arrests of boys under 21. This comparison reflects that there was a 6.6 percent decrease in arrests of girls under 21. In comparing the 1947 arrest records of young people with 1941, it is to be noted that there is a 4.1 percent increase in arrests of males under 21 and a 30.8 percent increase in arrests of females under 21.

The causes of juvenile delinquency and adult lawlessness do not stem from any one source. Crime is as old as mankind and its roots are imbedded in our whole culture. Progressive research, which considers the criminal or delinquent not only as an individual but also as a member of many groups—the community, the family, the work group, the play group and others—discovers that the individual has been provided with values and attitudes from these sections of social life and that his conduct among his fellow men is guided by such values and attitudes.

The Federal Bureau of Investigation and other law enforcement agencies possess convincing evidence of factors which pave the way for antisocial behavior. Many criminal careers have their beginnings in childhood and early youth. It is to be recalled that gangsterism was the scourge of the land in the period following the first World War. Many members of these gangs started on the road to crime by engaging in delinquent acts during their childhood. They graduated into the ranks of hoodlumism which reached into every walk of life through the medium of powerful criminal syndicates. These gangs brutally victimized those who stood for law, order and decency.

This situation led to a wholesome, aroused public wrath. Law enforcement at the time was not adequately equipped to meet the crisis. Local agencies were handicapped by limitations of jurisdiction. The availability of high-powered automobiles, fast trains, a network of national highways and other modes of travel, gave criminals a mobility they had never before enjoyed. In many instances the equipment available to gang leaders was far superior to that at the command of law enforcement agencies. Federal agencies were powerless to render assistance because they had no jurisdiction to investigate such crimes.

In the 1930's Congress passed a series of laws known as the Federal Crime Bills, giving the FBI

concurrent jurisdiction with local agencies in types of crimes most frequently committed by organized gangs or individuals operating on an interstate basis. American law enforcement on all levels developed a unity of purpose and action which resulted in an overwhelming victory against the underworld before the advent of World War II brought us face to face with another acute problem.

During the recent war years, America was faced with an unhealthy juvenile delinquency problem. In 1941, for example, age 19 predominated in the frequency of arrests. In 1942 and 1943, age 18 predominated. In 1944 and 1945, age 17 led all other age groups. In 1946 and 1947, age 21 was the leading age group.

The pattern of delinquency found fertile ground in the wholesale shifting of rural and village populations to crowded industrial areas. The emotional stresses incident to broken homes, the uprooting of established family practices, the housing shortage, and the lack of recreational facilities produced unique and complicated problems among our youth. The spirit of wartime abandon, the lack of family responsibility and the indifference of parents generally forced legions of youngsters to the streets, for whatever guidance they could obtain, as their parents spent leisure hours seeking enjoyment outside the family hearth.

Behind the confines of the home the road to delinquency becomes easy for children who are welcomed in disreputable dance halls, gambling dens, and other media of moral degradation. The prevention of crime becomes a mockery under our democratic system when corruption in some communities is allowed to seep into the machinery of daily life and shackle justice. The power of the venal politician to influence the processes of law enforcement accounts to some degree for the gravity of the criminal situation. Corrupt political authority and manipulating schemers have abused, in many instances, the worthwhile systems of parole and probation. This has resulted in forcing back upon society scores of ravaging desperadoes who recognize no law but their own.

The real solution to the problem of crime is the responsibility of the American public. Citizens must decide what action shall be taken against the dives where crime is bred, against the subtle forms of dishonesty and obscenity which choke communities, and against the corruption and venality in high places. It is the responsibility of each American to see to it that youth is provided with sufficient training in the homes, in the schools, and in the churches in order that honesty and decency will take the place of lawlessness.

Prompt detection, vigorous and quick prosecution, adequate and certain punishment fitted to the crime, the criminal, and the needs of the community, should be recognized as a program which constitutes a definite deterrent to the commission of crimes and contributes to the reduction of crime among all age groups. —JOHN EDGAR HOOVER

CROSS-COUNTRY RUNNING. Bob Black, Rhode Island State star, captured three of the major prizes in the hill-and-dale sport, his greatest victory coming on November 27 at Detroit, Mich., when he annexed the national Amateur Athletic Union senior championship by the unbelievable margin of two inches. Matching stride for stride with Curtis Stone, defending champion from Philadelphia, Black won by one one-hundredth of a second with a desperate lunge at the tape. The slender war veteran from North Attleboro, Mass., was timed in 30 minutes, two seconds for the grind of approximately six and

one-quarter miles. Team honors were captured by Michigan State.

Black's other titles came in the National Collegiate Athletic Association and Intercollegiate A.A.A.A. runs, his time of 19 minutes 52 and three-tenths seconds for the four-mile N.C.A.A. test shattering the mark of 20:12.9 set by Greg Rice in 1939. Black won the I.C.4-A run after defeating Horace Ashenfelter of Penn State for the second year in a row. Team championships in both college events were won by Michigan State, giving the Spartans a sweep of major team honors for 1948.

The metropolitan A.A.U. senior title was won by Victor Dyrvall of the Millrose A.A., with the New York A.C. team victor. Dyrvall had captured the national A.A.U. 20-kilometer run earlier, the Boston A.A. finishing first for the team prize.

Manhattan College retained its metropolitan intercollegiate crown although Bob Berger of Columbia led home the pack, and Army's harriers repeated in the Heptagonal grind as Stanley Waterman of Dartmouth placed first. In the initial competition for the Malcolm Main Trophy, Yale defeated Princeton and Harvard although Stanley Johnson and Don Wittreich of Princeton finished one-two.

Bob Palmer of the University of Maryland set a record of 19 minutes, 40 seconds for the College Park, Md., course as he paced his team to the Southern Conference title. Wisconsin took Western Conference laurels as its ace harrier, Don Gehrmann, placed first.

Sydney Wooderson, former world mile king, starred abroad, winning the English crown after having defeated 449 rivals in the Southern Counties (English) race. The Coolcross Harriers from County Tipperary, running in bare feet, retained the championship of Ireland, Pat Fitzgerald of the titleholders finishing first.

The classic Boston Marathon on April 19 served as the final American Olympic Marathon tryout and Gerard Cote of St. Hyacinthe, Quebec, won by 250 yards. Johnny Kelley of West Acton, Mass., ran fourth, but reversed the tables on September 12 in New York when he carried off the national A.A.U. marathon crown, Cote being fourth on that occasion. The team title was won by the Millrose A.A. See OLYMPIC GAMES. —THOMAS V. HANEY

CUBA. An island republic of the West Indies. About one-fourth of the surface is mountainous, the remainder being composed of lowland terraces and gentle slopes. The climate is subtropical, with a rainy season from May to November.

Area and Population. Area, 44,217 square miles. Population, 5,130,000 (1947 est.). About 65 percent of European descent, the rest mulattoes or Negroes, and a small percentage of Asiatics. There are no Indians in Cuba. Principal cities: Havana (capital), Santiago, Cienfuegos, Matanzas.

Education and Religion. The Constitution guarantees freedom of worship and separation of Church and State. Roman Catholicism is predominant. Spanish is the official language. About 70 percent of the population is literate. Recent statistics estimated a total school-age population (7 to 14 years) of 1,100,000, of whom over 65 percent were enrolled in about 6,000 primary schools of all kinds. There are more than 200 secondary schools of various types, with an enrollment of nearly 35,000 students. The University of Havana is the only complete institution of higher learning, with about 15,000 students.

Production. Cuban economy rests mainly on sugar, tobacco, and minerals. Coffee, cocoa, cereals, and fruits are also grown. With some 2.8 million acres

devoted to sugar cane, Cuba's record 1947 crop of 52,500,000 short tons of cane yielded 6,450,000 short tons of sugar and 299,400,000 gallons of blackstrap molasses. Total value of the crop was about \$700,000,000. The United States bought 76 percent of the 1947 crop at a fixed price. Anticipated crop in 1948 was about 5,900,000 short tons of sugar.

Some 155,624 acres are devoted to tobacco; these yielded 84,700,000 lb. in 1946; 78,200,000 lb. in 1947. The 1947-48 crop has been limited to 53,800,000 lb. Coffee production totaled 556,000 bags (of 60 kilos) in 1947-48. Since 1946 its export has been forbidden by decree. Fruit and vegetables rank third in commercial importance; 210,000 short tons of pineapples was produced in 1947-48, of which some 87 percent were exported. Vegetable production includes tomatoes, lima beans, okra, and avacados; exports for the fiscal year ending Oct. 31, 1948, totaled 47,750,000 lb.

The country has a well developed cattle industry (3,844,158 head of cattle in 1945), sufficient for domestic consumption and a small amount of export. Mineral production includes manganese, copper, iron, chromium, nickel, and asphalt. Cuba has a wide range of consumer goods industries, such as textiles, cotton and rayon piece goods, ropes, paint, shoes, cement, beer, rum, cigars, cigarettes, and agricultural tools. In general, 1948 was a year of great economic prosperity.

Foreign Trade. Total 1947 exports were valued at \$746,592,325; imports at \$519,890,402; a substantial increase in the favorable trade balance over 1946. The United States furnished 74 percent of Cuba's imports and took 67 percent of her exports. Cuba's favorable trade balance continued until September, 1948, when imports exceeded exports by some \$4 million.

Finance. Budget estimates for 1947 placed revenue at 349 million pesos; expenditure at 200 million pesos. (U.S. dollar equals 1.00 peso). Failure of Congress to enact the 1948 budget, calling for an expenditure of 234.5 million pesos, resulted in the *de facto* adoption of the 1947 budget. Currency in circulation on Dec. 31, 1947 totaled 467 million pesos; bank deposits, 474 million pesos; gold reserves, 290 million pesos. There is no exchange or import control in Cuba, but the Government instituted some measures to regulate the export of currency.

Transportation. The country has 3,653 miles of railroad and 2,324 miles of highways and roads. Motor vehicle registration indicated nearly 50,000 cars, or approximately one vehicle for every 100 persons. Cuba has 1,000,000 radio receivers, 84 radio stations and 70,000 telephones. Air transportation is provided by international companies, while domestic firms fly the lines within the republic.

Government. Under the Constitution of 1940, Cuba is a centralized republic of 6 provinces, with a semi-parliamentary form of government. Legislative power rests in a bicameral Congress, a Senate composed of 54 members (elected for a 4-year term), and a House of Representatives (elected for four years, one for each 35,000 inhabitants). The President, elected for four years, is assisted by a Council of Ministers who are politically responsible to Congress. Dr. Carlos Prío Socarrás was elected President on June 1, 1948 and took office on October 10.

Events, 1948. Early in January, political attention was focused on the Orthodox Auténticos headed by Senator Chibás, who had withdrawn from President Grau San Martín's party. The opposition was

trying to form a united front and names were mentioned for their presidential candidate. Some were looking toward Florida, where ex-President Fulgencio Batista was residing, and there were rumors that he would actively participate in the campaign. Batista finally agreed to run for Senator for the Liberal Party, and gave this group his support.

Among the Auténticos were three or four candidates for the nomination, but the great question was what action President Grau would take. The Cuban Constitution prohibits reelection, but there was talk of a constitutional amendment to allow him to succeed himself. An agreement was later reached and Dr. Carlos Prío Socarrás was nominated presidential candidate for the Auténtico Party, with President Grau's endorsement. During the election campaign no serious incidents were registered, although it was marked by violent language and mutual accusations.

Before elections, the political forces were divided into four main coalitions: the Auténtico Party, in an alliance with the Republicans, supported Prío Socarrás; the Liberals and Democrats, backed Dr. Ricardo Nuñez Portuondo; the so-called Orthodox Auténticos (Partido del Pueblo Cubano) with Senator Eduardo Chibás; and the Communists (Socialist Popular Party) who had nominated Senator Juan Marinello.

Victory of Prío Socarrás. Elections were held in an orderly way on June 1, with an unusually high number of ballots cast. The Auténticos received an overwhelming majority and Dr. Prío Socarrás was elected. Noteworthy was the large number of votes (320,000) received by Senator Chibás. The Communists lagged behind with only 140,203 votes. Prío Socarrás, a lawyer, served as Prime Minister and Minister of Labor during the Grau administration.

Shortly before his inauguration on October 10, he announced his first Cabinet, among whom it is important to mention Carlos Hevia, as Minister of Foreign Affairs. Hevia, one of the few Latin American graduates of the U.S. Naval Academy at Annapolis, has been active in politics for a number of years. The appointments of Dr. Alberto Oteiza as Minister of Public Health and Dr. Aureliano Sánchez Arango as Minister of Education were well received; the former is President of the Cuban Medical Association, the latter a well-known professor at Havana University.

Labor Crisis. A serious split continued to exist within the C.T.C. (Cuban Confederation of Workers). It was caused by groups who either preferred to follow the Communist political line, or were adherents of the government party. This situation was aggravated by labor protests and strikes motivated by conflicts with employers. There was unrest among the sugar and railroad workers, an especially serious strike of textile operatives, and a strike of streetcar conductors of Havana. The most important strike was the one caused by the increase, in September, of the bus fare in Havana; from 5 to 10 cents. There were public protests enlivened by the intervention of University students who overturned some of the buses, after having requested the passengers to alight.

New Government Platform. On October 10, President Prío Socarrás was formally inaugurated and his political platform summarized as follows: respect for the democratic principle of separation of power; creation of a National Bank; creation of a Labor Code, civil liberty program, and measures against inflation and black market; intensification of agricultural production and the creation of agrarian cooperatives.

International Front. President Prío Socarrás stated he would continue President Grau's foreign policy and would pledge his country to the defense of democracy. Cuba took an active part in the Ninth Inter-American Conference of American States held at Bogotá, Colombia, in April (see PAN AMERICAN ACTIVITIES). —MIGUEL JORRÍN

CURAÇAO. A territory in the Netherlands West Indies comprising two groups of islands 500 miles apart. One group, just north of Venezuela, includes Aruba (69 sq. mi., pop. 39,138); Bonaire (95 sq. mi., pop. 5,500); and Curaçao (210 sq. mi., pop. 88,323). The other group, just east of the Virgin Islands, includes Saba (5 sq. mi., pop. 1,143); St. Eustatius (7 sq. mi., pop. 970); and the southern part of St. Martin (17 sq. mi., pop. 1,609). Total area: 403 square miles. Population (Jan. 1, 1947): 136,733 (1948 est., 180,000). Capital: Willemstad (pop. 39,678 in 1947) on the island of Curaçao.

Production and Trade. The refining of imported crude oil is the chief industry, and 114,732,942 barrels of refined oil were exported in 1946. Approximately 100,000 tons of calcium phosphate are produced yearly. Other products are straw hats and salt. Foreign trade (1945): 472,391,122 guilders; exports 442,615,122 guilders.

Government. Budget estimates (1948): revenue 38,834,758 guilders (1947: 31,380,023 guilders); expenditure 37,714,386 guilders (1947: 29,738,198 guilders). Curaçao is administered by a governor assisted by a council of 5 members and a States Council of 15 members (10 elected and 5 nominated). Governor: P. A. Kasteel.

CUSTOMS, Bureau of. A somewhat smaller volume of imports accompanied by a reduction in rates of duty resulted in smaller customs collections during 1948 than for either of the two preceding fiscal years. Of the \$542,078,499 total collected in 1948, \$425,825,964 consisted of duties and other customs collections, \$112,880,326 of internal revenue taxes on imported distilled liquors and wines, and the balance of head taxes on incoming immigrants and various other collections for other governmental agencies.

The lower volume of imports was in part due to the high level of prices, so that the total value of imported materials, \$6,271,580,000, was the greatest in the history of the Customs Service. The reduction in the rates of duty was the result of General Agreement on Tariffs and Trade negotiated at Geneva in 1947, a considerable portion of which became effective Jan. 1, 1948, with subsequent reductions in rates of duty on other articles as other signatory nations agreed to the pact. In some instances rates of duty were cut the full 50 percent of the existing rate which had already been reduced 50 percent from the original rate under the Tariff Act of 1930. This made the new rates only one-fourth of the rates specified by the tariff act. That this reduction in rates produced no greater volume of importations than it did was due in part to the high unit prices and in part to the continued scarcity abroad of goods for which the demand in the American market was greatest. In addition, some of the most important types of goods from the revenue viewpoint, such as raw wool, encountered a slower American market than during either of the two preceding years, and on other commodities, such as distilled liquors, the reduced demand was accompanied by sharp reductions in rates of duty.

Customs activities as a whole were at a somewhat higher level than in 1947. More automobiles and buses crossed the border than ever before in

Customs history, and more people entered the United States by various means than ever before. There were more entries of merchandise made in 1948 than at any time in the history of the country. Seizures of merchandise as a result of attempts to smuggle in goods by returning tourists and for other customs violations remained at a high level, considerably exceeding the number of seizures made during the previous year. The seizures in 1948 were effected largely by regular customs officers since the force of mobile patrolmen along the Canadian border was disbanded when the year began and a similar force of patrolmen along the Mexican border was demobilized as the year ended.

Due to the establishment of new roads or new businesses, customs stations were established during the year at Morgan City, Louisiana; Bremerton and Port Orchard, Washington; Taku Inlet, Alaska; Estcourt, Quebec; and Boquillas, Texas, while the stations at Quebec, Canada, and Perry's Mill, New York, were discontinued. —C. A. FREEMAN

CYPRUS. A British island colony in the eastern Mediterranean, 40 miles from the coast of Asia Minor and 60 miles from Syria. Area: 3,572 square miles. Population (1946 census): 450,114 (excluding military forces), of whom 361,199 were Greek Orthodox and 80,548 Moslems. Chief cities: Nicosia (capital), 34,485 inhabitants; Limassol, 22,799; Famagusta, 16,194. Education (1946-47): 478 Greek elementary schools with 48,327 pupils; 208 Moslem schools with 11,413 pupils. Secondary schools include 28 Greek, 2 Turkish, and 4 Catholic. There is a separate educational system for each religion. Greek, Turkish, and English are the official languages.

Production and Trade. The country's economy is based on agriculture. Chief products (1946) were: wheat (2,206,492 bushels), barley (2,283,975 bushels), vetches, olives, carobs, potatoes, raisins, cotton, cheese, flax, hemp, citrus fruits, and oil. Wine production (1946): 3,375,576 gallons. Minerals produced include iron pyrites, asbestos, gypsum, amber, and chrome concentrates. Foreign trade (1946): imports £8,131,831 (first 6 months of 1948, £8,678,499); exports £4,202,300 (first 6 months of 1948, £1,931,011).

Government. Budget estimates for 1948 placed revenue at £4,444,466 (1947: £3,550,703); expenditure at £4,856,971 (1947: £3,510,868). Public debt (Jan. 1, 1947), £3,274,633. Administration of the colony rests with a governor assisted by an Executive Council and a newly reestablished Legislature. A new Constitution for Cyprus was adopted by the Consultative Assembly on May 21, 1948. Governor: Lord Winster.

CZECHOSLOVAKIA. A republic in central Europe composed of two related Slav nations: (1) the Czechs of Bohemia, Moravia, and Silesia in the west, and (2) the Slovaks of Slovakia in the east. Total area, 49,330 square miles; total population (est. July 1, 1948), 12,338,000. The decline in population of about two million since the end of the war, in spite of a large natural increase, is accounted for by the expulsion of the Sudeten Germans. Capital, Praha (Prague), 921,800 (1947). Other important cities: Brno (Brünn), 266,000; Moravska Ostrava, 172,000; Bratislava, 166,000; Plzeň (Pilsen), 126,000. Vital statistics in 1947 (rate per 1,000): births, 23.8; deaths, 11.9.

Education and Religion. The population is predominantly Catholic, an estimated 9,300,000 of whom are Roman Catholic, and 900,000 members of the Czechoslovak Church.

During 1948, the universities had a total enrollment of 50,755 students. A total of 1,056,874 students attended 11,482 elementary schools, and 387,909 students were enrolled in 1,955 high schools in 1945.

Production. Agriculture is the chief industry, with 41 percent of the total land area under cultivation. About one third of the population is engaged in farming and forestry. Principal crops in 1947 were: wheat and rye, 2,716,400 tons; other grain crops, 2,141,180 tons. Meat production averaged 36,000 tons and butter production 1,600 tons monthly in 1947. Livestock (1947 estimate): cattle, 3,941,000; swine, 2,940,000; goats, 1,113,000; and horses, 651,000.

The number of factories in 1947 was 19,695. Of these 2,286 were textile mills; 2,588 glass works and stone factories; 1,789 food production; 1,164 furniture and wood manufacture; 2,827 machinery and metals. Number of industrial workers (1947): textile, 189,100; glass and stone, 109,900; food, 65,000; wood, 44,500; machinery and metals, 412,000.

Industrial production, in metric tons (1947): coal (bituminous), 16,216,000; lignite, 22,362,000; iron ore, 1,363,000; pig iron, 1,422,000; steel, 2,286,000; copper and alloys, 6,000; lead and alloys, 8,000; phosphate fertilizers, 344,000; nitrate fertilizers, 132,000; soda, 89,000; staple fiber, 14,000; rayon, 4,000; hollow glass, 120,000; plate glass, 126,000; small glassware, 8,000; kaolin, 608,000; sanitary ceramic appliances, 5,000; paper, 227,000; cotton yarn, 59,000; worsted yarn, 7,000; carded yarn, 24,000; flax yarn, 9,000. Timber sawn, 2,965,000 cubic meters; plywood, 51,000 cubic meters; veneer, 6,485,000 square meters. Production of footwear, 50 million pairs. Production of electricity, 6,663 million kwh in 1947.

Foreign Trade. Exports (28,609 million crowns) and imports (28,633 million crowns) balanced almost evenly in 1947, as compared with 10,308 million crowns of imports and 14,280 million crowns of exports in 1946.

In Prague on December 12 there was announced a 4,500 million crown textile deal with the Soviet Union, under which the U.S.S.R. will supply 45,000 tons of raw cotton and will receive 8,000 to 10,000 tons of finished textile products from Czechoslovakia in payment. Other agreements, on wool, camel hair, flax fiber, jute, animal hair, and skins, contributed to making this the largest single deal in the history of Czechoslovak foreign trade.

Government. A new Constitution, replacing that of 1920, went into effect on June 10, 1948. It concentrates all power in the 800-man National Assembly. Klement Gottwald, a Communist, was elected President of the republic on June 14, 1948. Antonin Zapotocky, also a Communist, is Premier (for details, see below under *Events*).

Events, 1948. For the second time in a decade, Czechoslovakia lost her democratic liberties and was submerged under a totalitarian regime by the will of a foreign power. What Nazi Germany had done to the little country in 1938-39, Communist Russia did to it again ten years later, except that no changes of the territorial status quo were involved, as yet. In every other respect, Czechoslovakia by the end of 1948 was as thoroughly subjugated to the policies and to the ideology of Soviet Russia as it had been to those of the Third Reich, immediately prior to the outbreak of World War II. It is true that Moscow's intervention in Czechoslovakia's internal affairs was not nearly as overt and brutal as had been Hitler's, yet the final result was practically the same. Where the Nazis

had conquered by the mere display of overwhelming military might, the Russians triumphed through a political maneuver, Trojan Horse style, that made Hitler's fifth column pale by comparison.

The Five Days That Shook Prague. Ever since the Czechoslovak Government, in a flurry of independent action, had attempted to join the Marshall Plan, in July, 1947, it was clear that the Kremlin would take no further chances with the coalition regime then in power in Prague. When Communist Premier Klement Gottwald came back from Moscow, where he had been called on the carpet for his government's stand on the Marshall Plan, he knew that he must get rid of his bourgeois coalition partners at the first opportunity.

That opportunity arose in mid-February, 1948. For some time, the non-Communist members of Gottwald's Cabinet had shown restiveness at the complete control exercised over the national police by the Communist Interior Minister Vaclav Nosek. On February 13 they demanded that Nosek recall his appointment of several more Communists to key police posts.

When Nosek failed to take notice of the demand, although it was backed by a majority of the members of Parliament, and Premier Gottwald also refused to take action, twelve non-Communist members of the Cabinet resigned in protest on February 20.

Thus began the dramatic sequence of events which came to be known as the "Five Days." Immediately after the announcement of the Cabinet crisis, the Communists organized mass demonstrations throughout the country. Addressing a huge rally in Prague, Premier Gottwald denounced the twelve members of his government who had resigned as "agents of foreign reaction," and vowed that they would never be permitted to return to their posts. He publicly demanded that President Beneš let him form what he called a "people's government," in other words a Cabinet composed of Communists and their sympathizers only. Beneš replied that while he recognized the right of the Communists, the strongest party in Parliament, to head the Government, he could not approve the formation of a Cabinet excluding some of the other important groups.

On February 22 the executive council of the Communist-led General Federation of Labor met and threw the full weight of the trades union movement behind Gottwald's demands. "Action committees" were formed with a view to solving the crisis by direct, revolutionary action. The next day, the Prague headquarters of the National Socialist party was occupied by heavily armed police, as other police units marched through the streets of Prague with automatic rifles at the ready. From Interior Minister Nosek came a statement that the National Socialist party (President Beneš' own group) had planned an armed revolt against the state.

On February 24 the "action committees" formed by the Communists, with the blessing of Premier Gottwald and under the protection of Nosek's police, practically took over the administrative machinery. They seized all ministries formerly run by non-Communists, searched the headquarters of other political groups, including the allied Social-Democratic party's, and occupied opposition newspaper plants. The General Confederation of Labor announced plans for a general strike should Beneš persist in his refusal to appoint the Government demanded by Gottwald and the Communists.

By the morning of February 25 the Communists were in physical control of practically all government agencies, communications, industrial plants,

streets and public squares. In the early afternoon their marching columns converged on the Wenceslas Square in Prague for a decisive show of strength. At about 4 o'clock, Beneš gave in to the Communists' clamor and threats, which amounted to an ultimatum. In Gottwald's own words, the President "did not arrive at his decision easily," but "had to accept the will of the people."

The new Government, which Beneš thus reluctantly approved, was composed exclusively of Communists and fellow-travelers, with one notable exception: Jan Masaryk, son of the founder and first President of Czechoslovakia, again accepted the post of Foreign Minister.

The Communist coup had strong reverberations throughout the world. While Moscow rejoiced, though disclaiming all responsibility for what had happened, the western democracies deplored and condemned the events in Prague. World opinion was unanimous in its verdict: those events had been inspired, if not actively directed, by the Kremlin. It was not so generally understood, perhaps, that Czechoslovakia, one of the truly democratic nations of Europe, had fallen a victim to the "cold war." But for the relentless deterioration in Russia's relations with the western powers, and worldwide fears of a new armed conflict, Russia might have tolerated the democratically constituted regime in Prague, at least for some time. The Soviet rulers, in this case, were not so much concerned with "communizing" the Czechoslovak people as they were with establishing a strongly held economic and military outpost in the heart of Europe. (See COMMUNISM.)

Death of Masaryk. What made Jan Masaryk, a tested democrat with an indisputably "western" frame of mind, accept an important role in an otherwise all-Communist regime? For three weeks a puzzled world tried to figure out this enigma. Then the object of all this wondering and guessing ended the enigma by substituting an even greater mystery: he committed suicide, without leaving any conclusive clue as to his real motive.

But, was it really suicide? According to the official version, Masaryk on the morning of March 10—the day he was due for his first appearance in Parliament as Foreign Minister in the new Government—leaped from the bathroom window of his apartment on the third floor of the Foreign Office in Prague. The sole explanation of this startling act offered by the Gottwald Government was that Masaryk had taken his life in despair over the reproaches addressed to him by former friends in England and America, who resented his collaboration with the new regime.

Masaryk's suicide—for, in the absence of any evidence to substantiate rumors of foul play, one cannot but accept this version—produced an even greater shock in the outside world than that of the "Five Days." In Washington, Secretary of State George Marshall commented: "The affair today of Masaryk . . . indicates very plainly what is going on. It is a reign of terror in Czechoslovakia." This was the keynote of press comments and utterances of leading statesmen throughout the world.

More Czechoslovak diplomatic representatives broke with the new regime in Prague. (The ambassadors in Washington and Ottawa already had resigned after the Communist coup in February). At Lake Success, the Czechoslovak delegate to the United Nations, Jan Papanek, not only cut connections with Prague but moved to bring the Moscow-inspired change of regime before the Security Council. When the Secretary General refused to accept the note from Papanek, who by resigning

his post had become a private citizen, the delegate of Chile moved to have the matter put on the Council's agenda. However, the Western powers, lacking positive evidence of Russian intervention in the Czechoslovak crisis, gave only half-hearted support to the Chilean charges and nothing came of the Council debate.

A New Constitution, and an "Election." The new Gottwald Government, now more homogeneous than ever after Vladimir Clementis, a Communist sympathizer, had taken over the foreign ministry, immediately set about revising the constitution in a sense that opened the door to totalitarianism. On May 9, the draft of the new fundamental charter was railroaded through Parliament and then presented to the President for his signature. Beneš immediately made known his unwillingness to sign a document lacking an adequate division of powers and sufficiently guaranteed civil rights, and he offered to resign. However, he was prevailed upon by the Government to wait until after the new election set for May 30.

The preparations for, and modalities of this election followed a pattern already familiar in Eastern Europe. Instead of being able to make his choice among a variety of competing political parties, as in the past, the Czech or Slovak voter on May 30 was confronted with a single slate of candidates nominated by the action committees. Out of the total list of candidates for the 300-member Parliament, 211 were Communists and the remainder sympathizers.

The only opportunity that was afforded the voters for expressing disapproval of the single slate, or any part of it, was to turn in a white ballot. Several weeks before the election, sources close to the Government forecast that the "National Front," as the single list of candidates was called, would get 90 percent of the vote. When the returns were in, this forecast turned out to have been remarkably accurate, for the list got 89.3 percent of the valid votes cast. According to the official figures released by the Ministry of Interior on May 31, 6,431,693 persons voted for the regime, and 772,293 against it.

Beneš Resigns—and Dies. Immediately after the poll, reports from various sources indicated that the President would resign. While the opposition looked to such a move as a gesture of protest, Government circles cited ill health as the reason. Actually both sides were correct. Beneš had been a very sick man for some time and the march of events obviously did nothing to improve his state of health. However, when the President finally stepped down, he left no doubt as to his compelling motive.

On June 7, one day before the deadline for the presidential signature, Beneš announced his resignation. In a letter to Premier Gottwald, he confirmed what previously had been rumored: that his decision had been taken as early as May 4. "We have discussed at that time this decision of mine in connection with the problem of the over-all political situation," he wrote, and went on, "I also announced to you that my doctors recommended to me that I take into consideration the recent state of my health."

In the afternoon of that day the Cabinet, after accepting Beneš' resignation, empowered Gottwald to sign laws, including the new constitution. He promptly did so the following day. On June 10, the new Parliament convened in Prague and four days later it elected Gottwald President, as had been expected. Antonín Zapotočský, Communist Deputy Premier in the former Cabinet and head of the

General Confederation of Labor, was picked to succeed Gottwald as Premier.

In the meantime, former President Beneš had retired to his country estate at Sezimovo Usti, where his condition continued to worsen rapidly. After suffering a third stroke, he died at 6:10 p.m. on September 3, at the age of 64. His passing brought forth an outburst of national sorrow unmatched since the death of the elder Masaryk. The Communist heads of the new regime could not but participate in the universal tribute. A week of official mourning was proclaimed and a state funeral was held on September 8. In order to guard against all contingencies, the ceremony was surrounded by an unprecedented display of armed might. Heavily armed military, police and Communist militiamen watched over every phase of the funeral procession, as 250,000 paid their last homage to a truly beloved president. His body was laid to rest in a simple grave at Sezimovo Usti, as he had requested.

Beneš' death, following so soon after his resignation, removed the last moral as well as political obstacle to the establishment of a Communist dictatorship. There being no longer any possibility of organized opposition at home, scores of prominent Czech politicians fled abroad to organize resistance movements in Paris, London, and New York. On September 10, Hubert Ripka, former Minister of Foreign Trade, announced the formation of a "Council of Free Czechoslovakia" in Paris, which had all the trimmings of a new government-in-exile.

Meanwhile, the new regime was busy uncovering alleged foreign spy plots and purging its armed forces of suspected Western sympathizers. On September 22 an Army captain was sentenced to death as a British spy. Three days later, several arrests and convictions of alleged U.S. secret agents were announced by the Prague regime. Discovery of another "widespread underground plot" resulted in heavy jail sentences for fifty persons on October 8. Early in December, Premier Zapotocky, at the head of a large delegation, paid a state visit to Moscow. He was received by Stalin on December 8. Secrecy surrounded the subject and scope of the talks.

—JOACHIM JOESTEN

DAMS. Among the basic studies of dams made this year are those relating to compaction of earth dams, the studies of percolation, and structural analyses of foundations. Research has been announced which will utilize the analogy of the flow of viscous fluids between parallel plates to determine flow of water through permeable foundation material. The development of satisfactory procedures for allocating costs of multiple-purpose hydraulic projects has been reported.

Excavations for the foundations have been made for the Davis Dam, sixth of a series built by Federal agencies for control of waters of the lower Colorado River. It will be a 3,800,000 cu. yd. rolled-earth rock-filled dam, and will cost \$70 million. It will provide 1,700,000 acre feet of storage for regulation and will permit development of 225,000 kw-a of power. It is located between Hoover Dam and Parker Dam. The Utah Construction Company was the low bidder in 1946 when work was resumed following the war.

Construction of several new dams forming an essential part of the Grand Coulee Irrigation Project of the U.S. Reclamation Bureau made progress during the year 1948 (ground was broken for the great dam and power plants in December, 1933). The ultimate goal is 3,920,000 acre feet of irrigation water to be delivered annually to more than a million acres and an ultimate power development

of 2,300,000 kw. Of especial interest now to report is that on July 1, 1948 the South Dam forming the equalization reservoir at the pumping plant was 88 percent complete, total cost, \$3,820,000; the Long Lake Dam and Reservoir was 70 percent complete, total cost \$2,276,000; and the Potholes Dam and Reservoir, renamed O'Sullivan Dam was 80 percent complete, total cost \$10,983,000.

The "left" power plant on the main river is complete and is able to furnish 1 million kw. The "initial stage" of the pumping plant was complete in 1947. Projects have received "approval in preliminary form" for the construction of the Hell's Canyon Dam on the Snake River, a tributary of the Columbia. It will be 710 feet high with a powerhouse to develop 810,000 kw and form a lake 89 miles long.

The huge McNary dam on the Columbia River extending between the states of Washington and Oregon and located upstream from the Bonneville Dam was started in August. The original contract was let for \$21.7-million but the total cost of the project will be \$227 million at 1947 prices. It will be 8,725 ft. long, and 158 ft. high and it has been designed by the Corps of Engineers. It will develop about a million kw of power. A unique feature of the project is a lock which will be the world's largest—675 ft. x 86 ft. in horizontal cross-section and with a lift of 92 feet. A huge fish ladder will also be provided.

The second largest contract to be signed in the 46-year history of the Bureau of Reclamation was for \$48.4-million to construct the Hungry Horse Dam in Montana. This is only about 10 percent less than the huge contract signed with the Six Companies, Inc., for the Hoover Dam.

The first major unit in the Missouri Basin plan began operation this year. The Kanapolis Dam was dedicated. It consists of an earthen structure 3 miles long, rising 131 feet above the river bed and it will create a lake 12 miles long in the Smoky Hill river valley. Another earth-filled dam to be built by the Bureau of Reclamation in the Missouri Basin for which bids are called is the Cedar Bluff dam also on the Smoky Hill River. It will be an earth-filled structure approximately 134 feet high, and 12,500 feet long. The Army Engineers announced in July a program to spend \$1,200 million in the succeeding 12 months.

Among the dams to be built, beside the McNary Dam already listed, were the following: Garrison Reservoir, North Dakota, cost \$26 million; Ft. Randall Reservoir, South Dakota, cost \$18 million; Bull Shoals Reservoir, Arkansas, cost \$14 million; Wolf Creek Reservoir, Kentucky, cost \$12.4 million; Bugs Island Reservoir, Virginia, cost \$9 million; Center Hill Reservoir, Tennessee, cost \$9 million; Harlan County Reservoir, Nebraska, cost \$8 million; Allatoona Reservoir, Georgia, cost \$8 million; a number of other earth-filled dams to be built this year in the Missouri Basin project have been announced by the Bureau of Reclamation.

The Watauga Dam in Tennessee, an earth-filled structure 320 feet high is being completed by the Tennessee Valley Authority. The Center Hill Dam near Cookeville, Tenn., a masonry structure, 240 feet high is being completed by the Corps of Engineers. The Dairyland Power Cooperators, Inc., has recently begun to build a \$3.1 million dam and hydroelectric power plant, near Ladysmith, Rusk County, Wis. Construction has begun of a \$27 million dam on a branch of the Trinity River near Lewisville, Tex. The Engineering Corps approval has been granted for a \$58 million dam on Blue River at Topeka, Kans.

Among the foreign dams mentioned in the news this year is the following; The Genissiat Dam which was to be completed in December of 1948. It is located on the Rhone River and except for the Dnieperstroy Dam, it will be the largest hydraulic project in Europe, its ultimate capacity to total 470,000 kw.

A dam projected for India across the Kosi River near Barahkshetra in Nepal territory will rise 750 to 850 feet above bedrock and this will be the tallest in the world (Hoover Dam, now the highest, is 780 feet high). It will make possible the development of 1.8 million kw of power and the irrigation of 3 million acres of land which in turn will add a million tons of food annually to the area. Needed flood protection will also be afforded. The cost will be \$300 million.

Another dam to be built is on the Godavari River in Madras Province, to cost \$250 million, to be 420 feet high and 6,000 feet long, and which will provide 100,000 kw of power and will irrigate 2 million acres. The \$150 million Hirakud Dam on the Mahanadi River in Orissa has been started. It will be 150 feet high and 3 miles long and will furnish 350,000 kw of power and irrigate 1 million acres of land. Several other projects are under consideration.

—W. E. HOWLAND

DANUBE CONFERENCE. The "Conference to consider Free Navigation on the Danube" was held in Belgrade, the Yugoslav capital on the Danube, during July and August of 1948. Participants were: the four Big Powers (France, Great Britain, U.S.S.R. and U.S.A.) and the riparian states, Bulgaria, Czechoslovakia, Hungary, Rumania, Ukraine, and Yugoslavia. A British-U.S.A. motion to grant voting rights to Austria's observer was defeated by all other votes. It was the only major international conference of "Western" and "Eastern" nations since the end of the war in which the "Western" nations were outvoted.

Background. The Danube, one of Europe's principal waterways, flows through or forms the border of German, Austrian, Hungarian, Czechoslovak, Yugoslav, Bulgarian, Rumanian, and Ukrainian territory. At the Paris Peace Conference of 1946, the demand for a "free" Danube caused one of the main arguments. The U.S.A. wanted "free navigation" in order to counteract Russian preponderance in the Danubian states. Russia and the two Danubian Allies, Czechoslovakia and Yugoslavia, argued that a "free navigation" clause would interfere with the right of Danubian states to organize the Danube regime and expose them to too strong economic and political influence from the U.S.A. In essence, the American standpoint prevailed, when the following identical article was inserted in the Peace Treaties with Hitler's wartime allies, Bulgaria, Hungary, and Rumania:

Navigation on the Danube shall be free and open to the nationals, vessels of commerce and goods of all states on a footing of equality in regards to port and navigation charges and conditions for merchant shipping. The foregoing shall not apply to traffic between parts of the same state.

Issues and Decisions. At Belgrade, the only question was how to implement this rule—i.e. what "free navigation" on the Danube was to mean.

After three weeks of sometimes very acid discussions, the Soviet draft convention was adopted with minor changes.

Art. 1 provides for free navigation in the same

words as in the just quoted article of the peace treaties.

The United States considered that these provisions on non-discriminatory treatment did not go far enough. It criticized, especially, articles providing that otherwise commerce was to be "subject to regulations established by the Danube states concerned" viz., "on the basis of agreements concluded with the appropriate transportation and expeditionary agencies." These clauses would perpetuate the privileged position of the Soviet-Hungarian and Soviet-Rumanian companies. Instead, the U.S.A. demanded the right for American and any other navigation companies, once and for ever, to establish and maintain agencies and acquire the necessary buildings and business facilities along the river in those various states—rather than having to use the facilities of "privileged" companies or being otherwise under the legislation of the respective Danube state.

Russia and the Danubian states insisted that this would be an entering wedge for the U.S.A. to use its superior economic strength for dominating the Danube area; that it would deprive the countries directly concerned of the right to organize their economic life with the necessary flexibility; and that the U.S.A. would never agree to a similar regime on, say, the St. Lawrence.

The Western Powers also moved unsuccessfully to have the four big Powers represented on the Danube Commission. U.S.A. participation was requested because, and for such a period as, the U.S.A. represented the interests of Southern Germany, and part of Austria, as occupying Power, and because these two territories participate in the Marshall Plan. But the Balkan states repeated their argument of the Paris Peace Conference of 1946, namely, that their past experiences with similar arrangements were too unfavorable. As adopted, the Treaty provides for a Danube Commission composed of one representative of each riparian state.

Another U.S.A.—British Proposal was to link the Danube Commission with the United Nations; and to have the detailed arrangements not decided by this Conference but worked out later, between the Danube Commission and UN. The Danubian states declined, because in this way they would have to negotiate in a body where they would be hopelessly outvoted.

Again arguing that they would not yield their hard-won national sovereignty on the jurisdiction over their main artery of communication, they rejected the proposal that disputes about the Treaty should finally go before the International Court of Justice in The Hague. As adopted, the Treaty provides, instead, for a Conciliation Commission composed of one representative of each party to the dispute, and one representative appointed by the Chairman of the Danube Commission from among the nationals of a State involved in the dispute, the third Conciliator to be appointed by the whole Danube Commission.

All in all, the U.S. position was to give the "free regime" an extensive interpretation, practically amounting to internationalization of the river. This would have prevented the Danubian states from legislating on Danube commerce, and from entering into preferential treaties among themselves and with third states (e.g. Russia). The Danubian countries east of Austria, while guaranteeing "free and equal navigation" obtained a Treaty which permits them to carry out their intentions of organizing Danube traffic within the framework of their planned economies.

The U.S.A. and the British delegates did not sign the Convention as adopted by the majority of the Conference. The U.S. State Department formally declared that the U.S.A. "will not recognize any commission set up to rule over areas of the river flowing through American-occupied Austria and Germany."

—JOHN H. E. FRIED

DEFENSE TRANSPORTATION, Office of (ODT). During the year 1948 the Office of Defense Transportation was concerned with a number of problems arising from acute shortages of domestic railway freight cars. Efforts were continued to secure maximum utilization of the limited number of domestic freight cars available, and to accelerate the construction of such equipment.

The inadequate supply of domestic railway freight cars has made it necessary to continue some "wartime" controls over rail traffic. These controls consist of heavy loading requirements on carload freight, the loading of cars containing merchandise (less-than-carload freight) to a weight not less than 20,000 lb., and restrictions on carload freight moving by rail to port areas for further movement by water. The removal of these controls would result in considerable increases in freight car shortages.

In the early part of 1947 a voluntary program was undertaken which had as its objective the construction of a minimum of 10,000 domestic freight cars per month and the prompt repair of railroad rolling stock. With the enactment of Public Law 395 on Dec. 30, 1947, steps were taken to formalize under that law the then existing plan covering the voluntary allocation of steel products for the construction of domestic freight cars and the repair of railroad rolling stock. The plan was formally approved on Mar. 30, 1948.

Under the plan the Secretary of Commerce determines the over-all quantities of steel products to be furnished for the car building and repair program. The individual car builders participating in the program submit to the Office of Defense Transportation schedules showing, by plants, the number and types of domestic freight cars scheduled for production monthly. Participating car builders, component parts manufacturers, railroads, and private car lines each submit quarterly estimates of their steel products requirements for the car building and repair program. The Office of Defense Transportation reviews the individual car building schedules and quarterly estimates submitted, and relates the estimated requirements to the over-all program. The quantities and types of steel products to be made available under the program to each individual consumer from steel rollings in each quarterly period are determined by the Office of Defense Transportation and an equitable distribution of the steel products tonnage required in the program is made among the various steel producers participating in the program. Each individual consumer makes its own arrangements for securing the steel products assigned to it. Approximately 250,000 tons of steel products per month are required under the program.

In the first 10 months of 1948 the construction of domestic freight cars totaled 93,383, or an average of 9,338 cars per month. During the year 1947, 68,507 domestic freight cars were built, or an average of 5,709 per month. Although the increase in domestic freight car construction during 1948 is encouraging, the heavy rate of retirements of worn-out cars and increases in "bad order" cars have prevented any substantial increase in the number of serviceable freight cars since Jan. 1, 1948. Of

the 93,383 domestic freight cars built during the first 10 months of 1948, 80,599 were delivered to Class I railroads. Retirements of worn-out cars by Class I railroads during the same period totaled 58,131 cars. Bad order cars of Class I railroads rose from 71,636 on Jan. 1, 1948, to 78,401 on Nov. 1, 1948, an increase of 6,765. The net gain in serviceable freight cars of Class I railroads from Jan. 1, 1948, to Nov. 1, 1948, was only 15,703 cars, or an average of 1,570 per month at a time when the construction of domestic freight cars averaged 9,338 cars per month. More than one-fifth of the freight cars in service at the beginning of 1948 were over 30 years old and a high rate of freight car retirements may be anticipated for the next several years.

In addition to the freight car program the Office of Defense Transportation has developed a program relating to the voluntary allocation of steel products for the construction, repair, and conversion of domestic freight-carrying barges and towing vessels of 3,000 gross tons or less. The proposal for a barge program gained its impetus originally from studies made by the National Petroleum Council on steel requirements of the oil industry to meet greatly increased demands for petroleum products. The objective of the program is the construction of approximately 75 barges per month and a necessary complement of towing vessels, as well as making available sufficient steel products to permit the prompt repair and conversion of barges and towboats. As in the case of the freight car program, the Office of Defense Transportation, with the assistance of industry advisory committees, recommends steel products tonnages to be made available for the program by each participating steel producer and establishes monthly steel products quotas for each consumer participating in the program. At the present time approximately 20,000 tons of steel products per month are being made available for the barge program. It is expected that this will be increased to approximately 25,000 tons per month early in 1949.

The Office of Defense Transportation has repeatedly recommended an enlargement of the present freight car construction program. It is felt that such action is warranted in spite of the present acute shortage of steel. Shortages of freight cars adversely affect the domestic economy and present serious implications from a standpoint of national security. Although freight car loadings for 1948 were 3.7 percent below those for 1947, they approximated those of 1944—the peak war year. At the end of 1948 there were approximately 25,000 fewer serviceable freight cars in operation than were in operation on V-J Day. —J. M. JOHNSON

DELAWARE. A south Atlantic State. Area: 2,370 sq. mi. Population: (July 1, 1948) 297,000, compared with (1940 census) 266,505. Chief cities: Dover (capital), 5,517 inhabitants in 1940; Wilmington, 112,504. See AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS.

Finance. For the fiscal year ended June 30, 1947, total revenue amounted to \$19,819,000; total expenditure, \$19,605,000.

Elections. Dewey won the State's 3 electoral votes by receiving 69,633 votes to Truman's 67,921. The State's single seat in the lower house remained Republican. Other contests went to the Democrats. Incumbent Republican Senator Buck lost his race for reelection to J. Allen Frear, Jr.; and Democrat Elbert N. Carvel beat Hyland P. George for the governorship. Democrats won the following: Lieu-

tenant Governor, Alexis du Pont Bayard; Treasurer, Willard D. Boyce; Auditor, James W. W. Baker.

Officers, 1948. Governor, Walter W. Bacon; Lieut. Governor, Elbert N. Carvel; Secretary of State, William J. Storey; Attorney General, Albert W. James; State Treasurer, Benjamin F. Johnson; State Auditor, Benjamin I. Shaw.

DENMARK. A kingdom of northwestern Europe, comprising the peninsula of Jutland, the two main islands of Zealand and Fyn, and about 200 smaller adjacent islands in the Baltic. Capital of Denmark, Copenhagen. King, Frederik IX, who succeeded to the throne Apr. 21, 1947.

Area and Population. Total area, excluding outlying possessions, 16,575 square miles. Estimated population (July 1, 1947), 4,146,000, as compared with 3,844,300 at the census of Nov. 5, 1940. Birth rate (1947): 22.1 per 1,000 inhabitants; death rate, 9.7; marriage rate, 9.6. Chief cities (1946 pop.): Copenhagen (with suburbs) 1,079,000; Aarhus, 107,393; Odense, 97,436; Aalborg, 60,880.

Education and Religion. There is no illiteracy. In 1946 there were 4,171 elementary schools with 471,748 pupils and 388 secondary schools with 76,800 pupils. The number of registered students at the two universities—Copenhagen and Aarhus—in 1946 was about 7,000, including 1,700 women. While there is full religious liberty, the Lutheran Church is the Established Church of Denmark, supported by the state. At the time of the last census, in November 1940, all but about 70,000 persons—who were mostly Roman Catholics—belonged to the Lutheran Church.

Production. Denmark is essentially a land of intensive dairy farming. Industry, however, is also important, despite an almost complete lack of minerals and water power. Shipbuilding and engineering, in particular, are leading Danish industries. Before the war, 35 percent of the working population was employed in agriculture and dairying and 33 percent in industry. Commerce and fishing were the other important occupations.

The 1948 harvest was, on the whole, good. According to preliminary estimates, the grain crop amounted to about 3,400,000 tons, or about 265,000 tons more than in 1947. Other crops also were better than in the preceding year.

Meat production in 1947 averaged 16,700 tons of beef and 16,900 tons of pork monthly. Butter production was 10,400 tons monthly. Livestock in 1948 included 2,830,000 head of cattle; 1,462,000 pigs; 23,800,000 poultry.

Foreign Trade. Imports, in 1947 amounted to 3,087 million crowns; exports, 2,316 million crowns. Thus the import surplus was 771 million crowns against 1,230 million in 1946. Exports of agricultural products, especially butter, eggs, bacon, and meat, were substantially higher both in quantity and value than in 1946.

Finance. The budget for the fiscal year 1949-50 balances at 1,900 million crowns, showing a surplus of 11 million crowns. Expenditure and revenue are approximately the same as in the preceding fiscal year.

Transportation. On Jan. 1, 1947, Denmark had 5,057 miles of road, 3,031 miles of railway. The merchant marine, hard hit by the war, declined from 1,210,000 gross register tons in 1939 to 921,000 tons in 1946; at the same time, the number of registered ships increased slightly from 1,902 to 1,961.

Government. The Constitution of June 5, 1915, as amended Sept. 10, 1920, vests executive power in

the King acting through a cabinet responsible to the Rigsdag (Parliament). Legislative power rests jointly in the King and Rigsdag. The Folketing (lower chamber of the Rigsdag) consists of 149 members elected for four years by proportional representation. The Landsting (upper chamber) comprises 76 members serving for eight years; its powers are very limited. Prime Minister: Hans Hedtoft, (appointed Nov. 12, 1947).

Events, 1948. It was an uneventful year for the Danes, the quietest yet since the end of the war. There were no changes in government, no political battles to speak of, no quarrels with foreign powers. The only happenings worth mentioning were new developments in the unfinished business carried over from the preceding year.

South Schleswig: The Debate Goes On. The unsolved South Schleswig issue remained in the forefront of public attention. It continued to tax Danish relations with Great Britain as well as with the German state of Schleswig-Holstein, even though nothing dramatic was done by either side.

In a note delivered to the Danish Ambassador in London on Dec. 8, 1947, and made public ten days later, British Foreign Secretary Ernest Bevin censured the South Schleswig Association (SSV), the political and cultural organization of the Danish minority in Germany, for its separatist activities. He declared that official recognition of the group by the British Military Government would be withheld if it continued its "intimate connection" with organizations outside Germany. The note went on to say that if the SSV were recognized, Britain would consider it improper for the group to advocate the transfer of part of German territory of another country—Denmark—or the creation of an independent territory.

The note, which was generally regarded as a triumph for the German viewpoint, caused disappointment and irritation in Denmark. It put a damper on the agitation around Schleswig, but not for long. In April, a new campaign for changing the status quo in Schleswig got under way in the Danish press and certain political circles. The idea began to take root that Denmark, instead of seeking outright annexation of South Schleswig, should strive for separation of the contested territory from the purely German Holstein, as the first step toward a plebiscite to be held perhaps in five years. Even the Social-Democratic Government of Premier Hans Hedtoft favored this view.

Accordingly, the SSV changed its tack. In June, the organization divided itself into two groups, one limiting itself to cultural matters and relief work (under the old name of SSV), while the other ("South Schleswig Voters Union" or SSW) applied to the British Military Government for recognition as a German political party. In doing so, the SSW announced a 12-point program calling, among other things, for administrative separation of Schleswig from Holstein and equal rights for the Danish language in the former state, which was to remain within the framework of Germany and the British zone of occupation, at least until further notice.

The Danish Government, for its part, gave strong diplomatic support to this program. On June 28, the British Military Governor for Germany, Gen. Sir Brian Robertson, arrived in Copenhagen for talks with Foreign Minister Gustav Rasmussen on this and related issues. A month later, on August 3, Rasmussen went to Germany. He conferred with the British regional governor for Schleswig-Holstein, Mr. William Asbury, and with the German Minister-President of that state,

Hermann Luedemann, in Kiel. Then he continued to Berlin, where he saw representatives of the Soviet as well as of the Western Allied military governments.

The upshot of Rasmussen's travels was that the British licensed the SSW as a political party (on August 6) and promised to take up the question of Schleswig's administrative future at a special conference in the fall. The conference was opened in London on October 18, a few days before the Schleswig-Holstein municipal elections, (at which the SSW and another Danish group together polled 92,000 votes, or 7.4 percent of the total cast). On October 23 a statement was issued which forecast a special status to the Danish-minded minority in South Schleswig in order to "secure to them in addition to their normal civic rights the freedom to enjoy their ancient Danish culture," but not administrative separation.

The Refugees Go Home. While comparatively little progress was made on the Schleswig issue, Denmark's No. 2 postwar problem, that of the German refugees, was all but completely settled during the year. Of more than 250,000 German nationals stranded in Denmark at the time of the surrender, about one-fifth were still left at the start of 1948. Their fate was the subject of protracted talks in London in April and May. But it was not until after Foreign Minister Rasmussen's trip to Germany (see above) that a final solution was found. In August, the repatriation of 25,000 more refugees into the American-British bizonal zone began and early in September the French Military Government agreed to admit 15,000 into its zone of occupation. However, Rasmussen's efforts, during his stay in Berlin, to obtain admission into the Soviet zone for a comparatively small number of refugees remained without result. By the end of the year, only a hard core of about 5,000 unrepatriables remained in Denmark.

Nordic Cooperation. The natural bonds with the neighboring Scandinavian states, which the war years had loosened, were strengthened again at a number of conferences held during the year (see also SWEDEN). The question of a Northern customs union, analogous to "Benelux," was the object of two meetings in Copenhagen, on April 24 and June 3, by a permanent inter-Scandinavian committee of experts. Recommendations were drafted for a detailed study of all problems inherent to the establishment of such a customs union and it was decided to maintain close contact with the Benelux countries for this purpose.

The touchy question of a Scandinavian military alliance was approached by all sides with understandable caution. Observers noted with interest, however, that Denmark, which in prewar years had been the least responsive to proposals of military alliance, now appeared to favor such a course, while Sweden was holding back.

Denmark and the "Cold War." The world-wide propaganda war between Russia and the West was not without its repercussions in peaceful Denmark. Reckless charges of a secret military alliance and American bases on Danish soil were bandied about by the Soviet press and radio. When the Danish Government in March took certain precautions against subversive activities, Moscow interpreted this as a move designed to cover up military negotiations with the United States and the Western Union. On April 7, the Soviet mouthpiece in foreign affairs, "New Times," charged once again that Denmark was about to turn over Greenland to the United States.

Otherwise, however, Greenland did not figure

as prominently in the news as it had in the preceding year. On July 9, the Danish Communist party issued an appeal to the Government to "take effective steps" in order to ensure a complete withdrawal of American military forces from Greenland, "if necessary through United Nations intervention." In July and August, Premier Hans Hedtoft visited both Danish overseas possessions, Greenland and the Faeroe Islands.

In September, unauthorized flights of Russian military planes over the Danish island of Bornholm were reported on several occasions. One of these, on September 9, happened to coincide with a Scandinavian Foreign Ministers' meeting in Stockholm. At the same time Soviet warships were sighted off the coast of the island, adding to the impression that this was an intentional warning.

War Crimes and Punishment. The long-expected trial of the Nazi war criminals in Denmark finally was held during the year. In mid-June, the four top men in the German occupation regime were arraigned before a Copenhagen court on 225 charges of war crimes and terroristic acts. The trial ended on September 20 with death sentences against Werner Best, Hitler's "plenipotentiary" (actually civil governor) in Denmark and the Gestapo chief Otto Bovensiepen. Gen. Hermann von Hanneken, commander of the occupation forces, and SS Gen. Guenther Pancke, head of the Security Police, were sentenced to 8 and 20 years in prison, respectively. The sentences were appealed.

The Economic Situation. Economic conditions in Denmark in 1948 showed a marked improvement over the preceding year. A good harvest and the beneficial effects of the Marshall Plan combined to ease shortages and bring prices down. Gas rationing and certain restrictions on the use of electric power were lifted on September 1. At the same time, the bread ration was restored to the rather generous level of the period before the 1947 crop failure (see 1947 YEAR BOOK). Clothing coupons were made freely available.

During the first part of the year a tight situation prevailed in industry, due to sharply curtailed deliveries of coal from the Ruhr, when Danish importers fell behind in their payments of scarce dollars. In July, however, funds from the ERP became available for this purpose and coal deliveries were resumed on an increased scale. From England, too, considerably more coal was forthcoming than at any time since the war. As a result, allocation of coal to Danish industry was increased by 25 percent in September and stocks for winter home use were brought to a satisfactory level before the end of the year.

Denmark's foreign commerce also took a favorable turn. New trade agreements were concluded with Great Britain, Russia, and Belgium, among other countries. With each of the three divisions of Germany (bizonal, Soviet, and French) a separate arrangement was made. The bizonal trade agreement, signed on September 3, provided for an exchange of \$21.5 million worth of goods.

The agreement with Britain, announced on February 22, gave Danish exporters much of the price increases sought by them, ranging from 3 percent on butter to 40 percent on bacon and 48 percent on eggs. An 18-month trade pact with Russia, signed on July 10, called for \$31 million worth of goods to be exchanged between the two countries.

In September a new trade pact with Britain was concluded for the period Oct. 1, 1948 through Sept. 30, 1949. Under its terms, 90 percent of Denmark's exportable surplus of bacon and 60 percent of the butter were reserved for the British con-

sumer, at current prices. Britain agreed to deliver 1.6 million tons of coal, or about twice the amount shipped to Denmark in the preceding year.

—JOACHIM JOESTEN

DENTISTRY. A critical analysis of dentistry and its problems points to the probable course that dental practice will follow in the foreseeable future. The first of these is the recognition of the importance of dental health at the national level and secondly that the practicing dentist must be prepared to utilize more fully the preventive measures that are being made available.

At the national level, the 80th Congress has provided funds for the establishment of a National Dental Health Institute at a cost of some \$2 million, with some \$750,000 additional to be expended on various research problems involving dental disease. The two predominant diseases to be studied are dental decay and periodontal disease. There are 17 Federal dental research studies being made; one by the Army, four by the Navy, and twelve by the Public Health Service.

A clearcut exposition of this program is presented in an address by Dr. Leonard A. Scheele, Surgeon General, U.S. Public Health Service, and published in the December, 1948, issue of the *Journal of the American Dental Association*. Dr. Scheele develops the thesis that research develops the technique for the mass prevention of dental disease and through consultations requested by the various State Health departments develops programs for the individual States to inaugurate and project to the community level.

The American Dental Association, through the various State dental societies, has pursued an extensive campaign acquainting the dental practitioner with the most efficient methods of applying topically sodium fluoride to the teeth, the use of carbamide and ammonium compounds in tooth powders, and the revived use of silver nitrate and zinc chloride as preventive agents.

Dental Manpower. The success of any program is the availability to provide sufficient manpower. The present dental directory, the first published in 25 years, indicates that there are slightly over 70,000 practicing dentists in the United States, one dentist to every 2,000 inhabitants—with a marked concentration in the urban areas and a marked deficiency in the rural areas, and this is an unfortunate distribution. Of this number, some 3,500 are serving with the Federal Government in the Army, Navy, and Public Health Service, while an estimated additional 1,000 are employed by State and local institutions and departments of health.

Dental Schools. The enrollment of dental students is continuing at a capacity level with a majority of the students still in the G.I. category. Some 7,244 are in pre dental training, and 7,314 in the dental schools. There is still an acute shortage of dental personnel in the Armed services. Definite efforts are being made to make this service more attractive by furthering the autonomy of the Dental Corps, by increasing the base pay of dental officers in recognition of their increased investment in time and expense in getting dental training, and by the granting of deferments by Selective Service to bona-fide pre dental and dental students.

There has been established a new School of Dentistry at the University of Alabama, two new schools of oral hygiene at New York State Colleges of Arts and Sciences in Brooklyn and in Buffalo, and a pre dental course project for North Dakota. The following dental schools—Baylor University, Howard University, University of Kansas City, Lo-

yola University (Chicago), University of Oregon, University of Tennessee, University of Texas, Tufts College Dental School, Medical College of Virginia, University of Washington, and the Eastman Dental Dispensary are undertaking extensive building and rehabilitation programs which will improve their teaching facilities and provide for enlarged research programs that have been so lamentably underdeveloped.

Dental Teaching. Two important adjuncts to the dissemination of dental information were inaugurated in 1948. First, the use of long-distance telephone lines to transmit a series of postgraduate courses to Scranton, Pa., dentists by instructors speaking in distant cities to groups gathered before a loudspeaker; secondly, the use of radio by means of which an instructor confined to his home, lectured to his students assembled in a lecture hall at the University of Pennsylvania; and thirdly, the application of video—the first dental meeting to be televised was held in Philadelphia in February, and the first demonstration of technique in periodontia presented to a large group at Creighton University.

What's New in Dentistry. The outstanding contribution of the year for the practicing dentists was the introduction of an absorbable cellulose packing that could be placed in the tooth socket following post-operation which prevented the entrance of infection, and reduced bleeding to a minimum.

During the past year a number of popular articles have been written on dentistry for the layman, in such magazines as the *Saturday Evening Post*, *Colliers*, *Life*, *Cosmopolitan*, and *Scientific American*. These emphasize the three channels of mass prevention of dental decay:

(1) Fluorine—the use of sodium fluoride in drinking water. Fluorine is also used in direct application to children's teeth, though experts are at variance as to the time between treatments.

(2) The use of a tooth powder containing carbamide and ammonia which tends to reduce the acid-producing powers of the mouth flora.

(3) The reintroduction of zinc chloride and silver nitrate as caries resistants when topically applied.

In New York City there is a tremendous undertaking in the prevention of dental caries where 50,000 children are receiving topical applications of sodium fluoride.

Perhaps the most interesting innovation of the year is the establishment of a caries-control clinic at the dental school of the University of Pennsylvania, at which dentists living within 100 miles of Philadelphia can have individual patient saliva examined for potential acid-producing bacteria. Such examination and report includes the determination of methods suggested for control. Significant in the service are the suggestions for dietary control.

This year has seen the first accrediting of Hospital Dental Departments. About 30 hospitals in 10 States and 4 Army and 5 Navy hospitals have been certified to have dental service acceptable to the standards adapted by the American Dental Association.

Two important observations have been made: first, that dental schools are taking a more definite place in initiating dental research, and second, that they are providing long-term postgraduate courses in specialized fields of dentistry leading to advanced degrees and short-term refresher courses.

—RALPH S. VOORHEES

DISCIPLES OF CHRIST. A Christian unity movement which had its beginning during the revival period

of the early 19th century. Its leaders were Barton W. Stone, in Kentucky, and Thomas and Alexander Campbell in Western Pennsylvania. Congregational in policy, they believe that sects are unscriptural.

The communion maintains 9 hospitals, 16 dispensaries, 6 homes for children, and 355 mission schools. In 1946, 25 colleges, universities, foundations, and Bible Schools cooperated with the Board of Higher Education. Total church membership in the United States (1948): 1,724,905. Headquarters: 516 K of P Building, Indianapolis 4, Ind.

DISTRICT OF COLUMBIA. A district, co-extensive with Washington, the national capital of the United States. It is enclosed by the State of Maryland, and on the west is bounded by the Potomac River. Total land area: 62 square miles, excluding inland water of 8 square miles. The population, according to the census of 1940, was 663,091, of whom 474,326 were white, 187,266 Negro, 190 Indian, and 724 Asiatic. In 1940, 62.2 percent of the population (212,118 men and 131,915 women) were gainfully employed; 4,037 men and 7,276 women were reported divorced; families numbered 170,640 (of 3.9 persons). The estimated population (July 1, 1948) was 898,000.

The city of Washington, with Georgetown, covers about one-seventh of the area of the District. About six-sevenths of the area is occupied by farms, gardens, and suburbs. In 1940 there were 65 farms averaging 36 acres. Flowers, vegetables, and dairy products were the principal products of the farms.

Government. A board of three commissioners administers the government of the District of Columbia. Two of the commissioners are appointed from civil life by the President of the United States and are confirmed by the United States Senate; the third is detailed (by the President) from the Engineering Corps of the United States Army. District commissioners are in charge of ordinary municipal matters. Legislation is enacted by the Congress of the United States, after consultation with the board of commissioners. Residents of the District of Columbia do not vote.

DOGS. Champion Rock Ridge Night Rocket, Bedlington terrier belonging to Mr. and Mrs. William A. Rockefeller of Greenwich, Conn., gained unique honors by winning both the biggest indoor and outdoor bench classics. Night Rocket went best in show at the Westminster Kennel Club's seventy-second fixture in Madison Square Garden February 11-12, taking top prize for this blue-ribbon classic after keen judging of 2,540 canines.

The Rocket then repeated his victory of 1947 in the Morris and Essex Kennel Club exhibition—largest outdoor dog show—in May. The 1948 show at Madison, N.J., attracted 2,664 entries.

An old English classic was restored in October, and the first postwar Crufts exhibition, staged in London, resulted in a triumph for Tracey Witch, cocker spaniel bitch shown by Herbert S. Lloyd of Uxbridge. Lloyd, an exhibitor for 51 years, saw his cocker spaniels capture five awards.

Tip Top Bob, pointer owned by E. J. Laney of Daytona Beach, Fla., took the United States Field Trial Association's open all-age stake; Peter Rinski, pointer owned by R. R. Waugh of Peoria, Ill., took bird dog honors and Briscoe's Carolina Doughgirl, pointer owned by P. Briscoe of Oklahoma City, Okla., was the amateur field trial winner.

—THOMAS V. HANEY

DOMINICAN REPUBLIC. A republic of the West Indies, in the eastern part of the island of Hispan-

iola. More than two-thirds of the surface is occupied by highlands, the rest by low plains and tropical coastlines. The central plains receive the heaviest rainfall. Temperature in the lowlands is high throughout the year.

Area and Population. Area: 19,332 square miles. Population: 2,182,109 (1948 est.), of whom about 67 percent are mestizos; 19 percent Negroes; 14 percent of European descent. The capital is Santo Domingo de Guzmán (now officially named Ciudad Trujillo), 139,090 inhabitants in 1946. Other cities of importance: Santiago de los Caballeros, San Pedro de Macoris, Barahona, and Bani.

Education and Religion. The Constitution guarantees freedom of worship. Roman Catholicism is predominant. Spanish is the official language. Illiteracy in 1946 amounted to 35.75 percent of the population, compared with 75 percent in 1930. In the 1947-48 school year there were 2,184 public primary schools attended by 220,409 students; 35 public secondary schools and 13 special ones with 4,531 students, and the University of Santo Domingo with an enrollment of 1,558.

Production and Trade. The Dominican Republic is an agricultural country, with a few industries of consumer goods. Sugar is the chief crop, yielding 465,428 metric tons in 1946-47. Principal lines of production in 1947, with figures representing export values in dollars, were: sugar, 50,424,067; cacao, 12,951,998; tobacco, 4,547,867; coffee beans, 4,050,355; molasses 2,962,271; corn, 1,135,754; roasted coffee, 1,076,020; refined sugar, 873,214; and bananas, 651,080.

Livestock (1945): 762,845 head of cattle; 783,015 hogs; 468,026 goats and 40,037 sheep. Forest products are chiefly cedar and mahogany, and furniture exports in 1947 were valued at \$107,181. Local industries include sugar refineries, rum, peanut oil, cigars, cigarettes, and other consumer goods.

Total exports in 1947 were \$83,205,993; imports, \$48,700,000. Principal customers in order of importance were Great Britain, the United States, Canada, Chile, Puerto Rico, and the Netherlands West Indies. Principal suppliers were the United States, India, Canada, Netherlands West Indies, Mexico, and Argentina. Imports during the first six months of 1948 were \$28,990,000; exports, \$40,660,000.

Transportation. The Dominican Republic has 245 kilometers of government-owned railroad, plus about 1,000 kilometers of private lines, mostly owned by the sugar companies. There are 2,500 kilometers of highway, and in 1947 there were 2,884 cars, 2,555 trucks, and 356 buses. International air service is provided by the Pan American Airways, British Airways, and Royal Dutch Airlines; domestic air transportation by the Compania Dominicana de Aviacion.

Finance. The 1948 budget shows revenue of \$58,132,600; expenditure of \$58,158,318. This is an increase in revenue of \$17,907,908; in expenditure of \$18,071,163, over the 1947 budget. Currency in circulation on Sept. 30, 1947, was \$27 million; bank deposits, \$35.3 million. The Dominican Central Bank balance sheet on Apr. 30, 1948, showed total assets of \$25,319,515. A system of exchange control has been established. Cost of living index at the end of 1947, was 219 (1937 = 100).

Government. Under the Constitution of Jan. 10, 1947, the Dominican Republic is a centralized republic of 18 provinces. It has a Senate of 19 members and a Chamber of Deputies of 45. Members serve for 5-year terms, as does the President, who is assisted by a Cabinet. On May 16, 1947, General

Rafael Leonidas Trujillo was elected for the fourth time to the office of President, thus continuing the political control which he has maintained, directly or indirectly, for 18 years.

Events, 1948. Another year was added to Trujillo's long dictatorship. Domestic political opposition was uneventful, as the *Juventud Democrática* and *Partido Socialista Popular* groups were allowed little activity. Attention was focused chiefly on the international Caribbean front, and speculation as to the possibility of another attempt to overthrow the Government by means of an invasion, as in 1947 (see YEAR BOOK, Events of 1947, page 138).

Propaganda and Achievements. The administration intensified its propaganda campaigns in order to win the support of the outside world—especially the United States—and Trujillo's paper, *La Nación*, carried stories featuring achievements of the Government. The nation's economy profited from export increases, and new government projects were inaugurated, while various old ones were completed. Among administrative developments, one of the most important was the creation of a Secretariat for National Economy, set up to control various fields of industry and foreign and domestic commerce. This new department of Trujillo's machinery is the official licensing agency for sugar exports, and imports of some essential products. It will also control the issuance of bank drafts, thus strengthening still more the President's hold on the country's economy.

An important government project was the beginning of the University City in the old Universidad de Santo Domingo, at a cost of \$2 million. Another was the erection of a \$1 million Institute of Agriculture at San Cristobal, to systematize all phases of agricultural instruction. President Trujillo also announced a 3-year bridge-construction program to replace all wooden bridges with modern concrete ones.

International Politics. External affairs were characterized by the open antagonism of the peoples of Venezuela, Costa Rica, Guatemala, and Cuba against the Trujillo regime. There were rumors of activities of the so-called Caribbean Legion, composed of Dominican exiles residing in those countries, as well as exiles from Honduras and Nicaragua, and the organization of an armed invasion of the island was thought possible. An alliance was reported between Trujillo, Somoza (Nicaragua's "strong man") and Carias Andino of Honduras, to maintain their hold over their respective peoples. In the last days of 1948, Costa Rica was invaded from Nicaragua; some considered it a countermeasure of the Nicaraguan Government to prevent the activities of the Legion, which planned to use Costa Rica as a base to invade Somoza's territory.

The Dominican Republic attended the Ninth Inter-American Conference of American States held in Bogotá in April (see PAN AMERICAN ACTIVITIES), and became signatory to the Charter of the Americas.

—MIGUEL JORRÍN

DUKE ENDOWMENT, The. A foundation created by James B. Duke in 1924, known for its connection with Duke University, hospital work, and a number of other activities in the Carolinas. The Endowment is a permanent one with a self-perpetuating board of 15 trustees. Except for the \$17,000,000 spent in erecting and equipping Duke University, it is not authorized to expend any of its principal. A report covering its first 23 years, ending Dec. 31, 1947, showed that the Endowment had distributed and allocated \$71,129,201 as follows: Duke University, \$41,124,286; hospitals, \$20,107,030; Da-

vidson College, \$1,696,792; Furman University, \$1,695,620; Johnson C. Smith University, \$1,192,546; orphanages, \$2,724,628; superannuated Methodist preachers, \$548,691; rural churches, \$1,002,157 for building and \$1,037,447 for operations. Chairman of the Board of Trustees, George G. Allen; Vice Chairman, Norman A. Cocke; Secretary, Alex. H. Sands, Jr.; Treasurer, Walter C. Parker. Headquarters: Power Building, Charlotte 1, N.C.

EAST AFRICA HIGH COMMISSION. An interterritorial organization which came into force on Jan. 1, 1948. It replaces the former East African Governor's Conference. The High Commission consists of the governors of Kenya, Tanganyika, and Uganda and administers certain services common to all, chiefly economic and technical.

There is also an East African Central Assembly composed of 10 official and 13 unofficial members. The High Commission has power to legislate with the advice and consent of the Central Assembly in matters relating to interterritorial services. Officers: Sir George Sanford, Administrator to the High Commission; C. C. Spencer, Economic Secretary; J. C. Mundy, Member for Finance; Sir Reginald Robins, Member for Transport; H. C. Wilbourn, Postmaster General. Headquarters: Nairobi, Kenya.

EASTERN ORTHODOX CHURCHES. There are in the United States 11 different bodies of the Orthodox church, with a total membership of 711,287. Two major groups, the Greek Orthodox Church (Hellenic) and the Russian Orthodox Church, account for about 600,000 of the total members.

Greek Orthodox Church (Hellenic). The Greek-speaking Orthodox Christians have had scattered parishes in the United States for the last 70 years. They were first under the jurisdiction of the Metropolitan of Athens, later under the Patriarchate of Constantinople. Political changes in Europe have been reflected in all branches of the Church in the U.S. Considerable unity and order resulted from the 1931 convention in New York, under the presidency of Archbishop Athenagoras. The Greek Archdiocese of North and South America has 300 churches, 325 priests, 275,000 reported members, and 500,000 communicants. Its many educational institutions has an enrollment of 25,000 students, and 200 persons are cared for in its 3 benevolent institutions. Headquarters, 10 East 79th St., New York 21, N.Y.

Russian Orthodox Church. Entering Alaska in 1792, before its purchase by the United States, the Russian Orthodox Church moved its headquarters to San Francisco in 1872, and to New York in 1905. Total membership in the United States, 300,000 (1947). Metropolitan of America and Canada, Most Reverend Theophilus Pashkovsky. Headquarters, 59 East Second St., New York 3, N.Y.

ECUADOR. A republic of South America. It comprises three natural regions, the coast, the Andean highlands, and the Amazon. The climate is tropical in the eastern lowlands and the Amazon region, intermediate in the plateaus and cold in the highlands.

Area and Population. The exact area has not been determined due to unsettled boundary claims, but it is estimated at 175,855 square miles, including the Galápagos Islands. Population: 3,400,000 in 1947 (54 percent mestizos, 27 percent Indians, 8 percent of European descent and 11 percent of other ethnic groups). Chief cities: Quito (capital),

211,174 (1947); Guayaquil, 81,893; Cuenca, 53,871.

Education and Religion. Freedom of worship is guaranteed in the constitution. Roman Catholicism prevails and Spanish is the official language, although the Indians speak the tongues of their ancestors. About 40 percent of the population is literate. According to the census of 1947, there were 3,189 elementary schools with 284,052 students; 156 secondary schools with 19,418 students; 66 institutions of intermediate training (normal schools and "schools of humanities") with 11,843 students, and four universities.

Production. The principal lines of agricultural production in 1946 included rice, 2,219,000 quintals (46 kilos each); coffee, 7,360,000 kilos; cacao, 303,000 quintals of 100 pounds each; rubber, 1,327,000 kilos and tagua nuts, 12,531,000 kilos. Mineral production for the same year: gold, 75,390,000 troy oz.; petroleum, 97,647,000 U.S. gal.; kerosene, 12,271,000 U.S. gal.; silver, 24,073,000 troy oz. The monthly production of crude petroleum in 1947 was estimated to total 25,900 metric tons.

Foreign Trade. Total imports in 1947 amounted to 604,400,000 sucres (a sucre equals \$0.07 U.S. currency). The chief buyers from Ecuador are the U.S., Jamaica, Cuba, Venezuela, Colombia and Panama; the chief suppliers are the U.S., Argentina, Great Britain, Colombia, Canada and Costa Rica.

Transportation. Ecuador has 800 miles of railways and about 4,500 miles of all types of roads. The most recent data on motor vehicle registration indicated a total of 5,898. There is international air service provided by foreign companies and a few national airlines connect the larger cities in the country. Ecuador has about 30,000 radio sets and 7,100 telephones.

Finance. In 1948 the budget receipts and expenditures were estimated to balance at 385 million sucres. At the end of September, 1948, currency in circulation amounted to 338 million sucres. Bank deposits on Aug. 30, 1948, totaled 313 million sucres. The public debt on Nov. 30, 1947, was: internal—112,943,000 sucres; external—\$37,595,000. (The sucre was worth U.S.\$0.0741, Central Bank—official, on Oct. 11, 1948).

The Central Bank of Ecuador maintains a cost-of-living index based on market prices at Quito of certain staple foodstuffs. At the end of September, 1948, the domestic debt to the Central Bank was reduced to 65.7 million sucres, against the high of 153.1 million at the end of 1946. The money supply, however, was 656.6 million against 588.7 million at the end of January, 1948. Net gold and foreign exchange resources were 306.8 million sucres (\$24.1 million).

Government. Under the constitution of Dec. 31, 1946, Ecuador is a centralized republic of 17 provinces. Legislative power rests in two chambers (upper and lower). The Senate is composed of two Senators for each province of the Sierra and the Litoral, one from the rest of the provinces, and several functional senators designated by business and professional groups. Deputies are elected by the provinces in the proportion of one for every 50,000 inhabitants. Executive power is exercised by a President elected for a four-year term. On June 6, 1948, Galo Plaza Lasso was elected President and took office on August 31.

Events, 1948. The different political parties started early in the year to get ready for the presidential campaign. The Liberal Radical Party formed a coalition with the Socialist Party, and together

nominated General Alberto Enríquez Gallo, ex-president of the republic, as their presidential candidate. Dr. Gallo is a member of the Liberal Party. The Conservative Party nominated Dr. Manuel Eliseo Flor Torres, and the new independent party, called the Civic Democratic Movement, nominated Galo Plaza Lasso.

Elections. On June 6, the elections were held in an orderly manner, and candidate Galo Plaza obtained a majority of 3,867 votes over his nearest opponent, Dr. Flor Torres. The increase in the number of voters was noteworthy, 300,000 having cast their ballots as compared with only 82,000 in the 1940 elections. On July 10, the President-elect came to the United States for medical treatment, but in political circles it was rumored that his real purpose was to get the International Basic Economic Corporation, through his friend Nelson Rockefeller, to help toward the industrial development of Ecuador, and to obtain a loan.

The Gran Colombia Conference. The elections did not stand in the way of the celebration in Quito of an important economic conference, in which delegates from Ecuador, Colombia, Panama, and Venezuela participated. The preparatory sessions were held from May 24 to June 5, and on June 24 the official sessions of the conference were inaugurated. The results were a step forward in the defense of the economies of the countries involved, and the Quito Charter was signed on August 9, setting the bases for the establishment of a customs union between the participating nations.

Presidential Inauguration. On August 31, Galo Plaza Lasso took over the presidency of the republic, with Manuel Sotomayor as Vice-President. The new president announced a progressive program of government, and the people appeared to be hopeful of success.

International Front. Ecuador participated in the Ninth Conference of American States held in Bogotá, Colombia in April (see PAN AMERICAN ACTIVITIES). In international circles, there were favorable comments on the special delegation sent from Peru for the inauguration of the president, which was thought to indicate that future relations between the two countries might be better than in the past.

—MIGUEL JORRÍN

EDUCATION. In a year characterized by growing international tensions throughout the world and by several full scale wars, the educators of many countries continued with unabated vigor their efforts through educational means to improve the conditions for peace.

UNESCO. Disregarding various proposals that the third General Conference of the United Nations Educational, Scientific, and Cultural Organization scheduled to be held in Lebanon, should be postponed or should be held in some other place, the organization decided in an extraordinary session in Paris on September 15 to go ahead with the plans for the third general session. The third session of the General Conference opened in Beirut, Lebanon, on November 17 and continued its work into December.

During 1948 UNESCO sponsored conferences, seminars, and other meetings of many educational, scientific, and cultural organizations. Among the most important of these for education were the three summer seminars held for teachers from many countries in the fields of teaching about the United Nations, teacher education, and childhood education. These three seminars were held respectively at Lake Success, in England, and in Czechoslovakia.

Immediately before the formal opening of the Beirut conference, representatives of 28 national commissions of UNESCO and of persons concerned with setting up of national commissions in member states which do not now have such organizations, met in Lebanon to discuss the role of national commissions and national cooperating bodies in relation to their governments and to the secretariat of the UNESCO and to report on the 1948 programs of the national commissions.

Educational Reconstruction. The Commission for International Educational Reconstruction, planned and operated a program of study and travel for a group of educators from 17 war-devastated countries of Europe and Asia, with financial aid from cooperating national organizations in the United States. A chief feature of the program was a Seminar in International Education conducted for one month in July and August at the University of Maryland. The American Association of Colleges for Teacher Education, The American Association of University Women, The Association for Childhood Education, The American National Red Cross, The Canadian Education Association, The Department of Classroom Teachers of the National Education Association, The Michigan Education Association, and The Ohio Education Association contributed to the expenses of the foreign teachers and helped formulate the program of travel and study.

The Overseas Teacher-Relief Fund of the National Education Association collected more than \$276,000 for the year 1947-48. Countries receiving aid from the fund were Albania, Austria, Belgium, Bulgaria, Burma, China, Czechoslovakia, Ethiopia, Finland, France, Germany, Greece, Hungary, Indonesia, Italy, Japan, Korea, Luxembourg, the Netherlands, Norway, the Philippines, Poland, Siam, the United Kingdom, Corfu, Guam, Malta, and Okinawa. The money was expended for CARE packages, for books, for surgical instruments, and for scholarships. In deciding to continue this program of assistance to teachers in other countries, the National Education Association announced plans to bring teachers from other countries for short visits to observe schools and to get acquainted with teachers in the United States.

Fulbright Act. Agreements providing for educational exchanges under this act were signed by Dec. 1, 1948, with nine countries: Belgium and Luxembourg, Burma, China, France, Greece, New Zealand, the Philippines, and the United Kingdom. Agreements were being considered with the following countries: Australia, Austria, Egypt, India, Iran, Italy, the Netherlands, the Netherlands East Indies, Norway, Pakistan, Siam, and Turkey. Since the only funds made available by the act were in foreign currencies, each American participating in the program had to make his own individual arrangements for such dollar balances as he required to meet obligations in the United States during his absence from the country.

International Book Exchange. On September 1 a new national office for the exchange of books and periodicals between the libraries and scientific and educational institutions of the United States and other countries was established in the Library of Congress. This organization, The United States Book Exchange, handled only printed matter of scientific or literary character.

Higher Education. The Report of the President's Commission on Higher Education, published early in the year, created wide discussion. Chief among the Commission's recommendations were a proposal of Federal grants-in-aid to individual needy

students in their last two years of high school, a federally supported program of scholarships at the undergraduate level in all types of higher educational institutions, and a federally administered plan of fellowships for graduate study. The Commission envisioned a need for 350,000 faculty members in 1960 for the 4.6 million students who should be in the colleges and universities by that time. The estimated cost of education given in the publicly controlled institutions of higher education in 1960 was \$2,727,500,000. The Commission assumed that the Federal Government would contribute heavily toward this cost.

Federal Aid to Education. The National Education Association, local and state educational associations, many individual civic and professional leaders, and numerous organizations of men and women in various groups carried on a vigorous and highly effective campaign for Federal aid to education. For the first time a president of the United States recommended in his State-of-the-Union messages to the Congress the urgent need of such legislation. A bill authorizing \$300 million of Federal funds each year for the purpose of more nearly equalizing educational opportunities and for building a minimum public school program for the youth of the nation was passed by the Senate by a vote of 58 to 22, was favorably reported by a House subcommittee, was extensively supported by the press and the radio, but was blocked by the House majority leadership which refused to allow the bill to come to a vote in that chamber. Under the same Congressional leadership appropriations for European Federal aid were made with \$265 million earmarked for tobacco and about \$70 million specified for liquor.

Teacher Supply and Demand. The National Commission on Teacher Education and Professional Standards of the National Education Association reported that only 72 percent as many college and university students were completing standard certificate requirements for elementary teaching in 1948 as had completed the requirements in 1941. The comparable figure for high-school teachers completing standard certificate requirements in 1948 was 90 percent of those in 1941. In certain high school teaching fields, however, supply had already achieved balance with demand by 1948. The situation in the elementary field was very serious. It was generally estimated that the country would need about 100,000 new elementary teachers annually for the period 1948-1958. The colleges which prepared elementary teachers in 1948 graduated about 20,000 students, of whom less than 12,000 were 4-year college graduates. More than 4 million children of school age in the United States in 1948 were not enrolled in any school. More than 8 million persons, 14 years of age and older, had less than a fifth-grade education, and almost 3 million of these persons were illiterate.

Teachers salaries at the beginning of the academic year 1948-49 appeared to show a much smaller annual increase than in the previous year. According to estimates of the United States Office of Education, based on statements from State Departments of Education, 13 states expected no salary increase on the average during the coming year. Twelve states predicted some increases and 21 states expected an approximate increase of 8 percent over those in effect in the academic year 1947-48. In 1947-48 the average increase in teachers salaries over 1946-47 was approximately 21 percent in a total of 43 states reporting.

In 1948, furthermore, a decided slackening of the wave of resignations from teaching positions

was noted. For the year ending June, 1948, only half as many teachers resigned from the New York City school system as in either of the preceding two years.

Various teacher education institutions and organizations studied the problem of recruitment of teachers and made attempts to interest high school and college students in teaching as a profession. The School of Education of the University of Indiana, in a bulletin by Richey and Fox, reported that freshman students were more likely to decide to enter teaching when they were older, men students, men who had been in the armed services, younger women students, women from rural areas, villages, and large cities rather than from small cities, men from rural areas, villages, and small cities rather than from large cities, students whose parents were in the lower income bracket, students who had attended small high schools, students whose fathers were farmers, skilled or unskilled laborers, or school teachers or administrators, and students who had had previous experience of a teaching nature. The students who had decided not to enter teaching gave as their reasons poor salaries, lack of appeal in the profession, and the restricted personal life and limited social contacts of teachers. The College of Education of Ohio State University issued a recruitment booklet which described the jobs available to teachers, gave an account of the shortage in the field, and discussed the advantages of teaching. The American Association of Colleges for Teacher Education issued a statement by its president, Walter Hager, pointing out the great career opportunities which will be offered to the teaching profession during the next decade.

Curriculum. The American Automobile Association reported that in 1948, 238,000 students completed driver-training courses in high school compared with 70,000 in 1947. States listed by the Association as having made progress in the promotion of driver education were North Dakota, Wisconsin, Illinois, Massachusetts, New Jersey, Virginia, West Virginia, Arizona, and Delaware.

The Classical Association of the Middle West and South began an experiment with Latin teaching based on the 2-year course on the *Aeneid* which was expected to feature a greater emphasis on the study of Latin culture and a lesser emphasis on language structure.

Along with the Zeal for Democracy program sponsored by the United States Office of Education, were many developments in social studies teaching in the schools. Emphasis in many schools was placed on a new attention to the study of democracy and its competitors, the ideals and principles of American democracy, the relationship of American history and politics to those of other countries, and education for world understanding.

In many high schools of the country a new emphasis was placed on the study of home and family living. Courses for boys as well as for girls were established to include study of family finances, budgeting, mental hygiene problems, and child development.

Professional Relations. Accompanying the activities of the House Committee on Un-American Activities, various state and local agencies hunted assiduously for "red" elements in teaching staffs. The Ohio State University adopted a new requirement that each member of the faculty must sign an affidavit that he did not belong to any political party or organization which advocated the overthrow of either the Federal or the State Government by force or violence. Investigation of various teachers' organizations, notably those affiliated with

labor organizations, was made in various parts of the country. The CIO teachers' local in New York City was investigated by a sub-committee of the House of Representatives Committee on Education and Labor. Teachers were discharged in various parts of the country for being members of the Communist Party, although a vigorous minority protested that so long as the Communist Party was legal, membership in it was not a sufficient cause in itself for dismissal of a teacher.

The Commission for the Defense of Democracy through Education of the National Education Association investigated numerous cases of reportedly unfair dismissal procedures employed by school boards against teachers and administrators. One of the most notable of these cases was that in which the Board of Education of Chandler, Arizona, dismissed 5 teachers without explanation, charges, or hearings. In a widely circulated report on this case, the Commission took the position that it was unprofessional for a school board to operate without a carefully organized procedure of fair dismissal to which the board scrupulously adheres.

Federal Legislation. The educational legislation passed by the 80th Congress of the United States was fairly small and inconsequential. The Lanham Act was amended in minor administrative details. The secretaries of the three armed services were authorized to donate obsolete or surplus property to educational institutions. Minor clarifying amendments were made to the law commonly called the GI Bill of Rights. Federal legislation most directly affecting education was the Selective Service Act of 1948. This Act had provisions for the deferment from service, under certain conditions, of high school and college students and authorized the President to provide for the deferment of other groups of students when appropriate.

During the fiscal year ending June 30, 1948, the Federal Government spent more than \$2,000 million for the education and training of veterans. It also gave about \$500 million worth of surplus property to schools and colleges, and the usual regular Federal appropriation for the support of Land-Grant colleges (\$5,030,000), agriculture experiment stations (\$8,950,000), vocational education in the public schools (\$25 million), vocational rehabilitation (\$18 million), and school lunches (\$54 million).

—HAROLD BENJAMIN

EDUCATION, U.S. Office of. For the purpose "of collecting such statistics and facts as shall show the condition and progress of education . . . and of diffusing such information . . . as shall aid the people . . . and otherwise promote the cause of education . . ." the Office of Education was established. Accordingly the Office had developed a variety of supporting services to aid the schools and colleges of the Nation.

In addition to the publication of statistics and facts collected, the divisions and staff members of the Office serve in a consultative capacity. Although not operating educational systems or institutions, the Office has relationships with agencies that do operate educational systems and institutions. In this sense, therefore, developments in American education are somewhat keyed to the work of the Office of Education; and conversely, the emphases of the Office mirror the problems and achievements of American education.

Enrollments. The concern about increases in school enrollment derives from two major trends: (1) the increased birthrate during the 40's, and (2) the re-entry of veterans into educational systems and institutions, stimulated by the GI Bill benefits. The

first has only begun to affect the schools in the elementary levels, but is of long-term significance. The latter is of primary concern to institutions of higher education. See *SCHOOLS, U.S.; UNIVERSITIES AND COLLEGES*.

Plant. Plant needs are extremely serious in view of (1) deferred maintenance and expansion, (2) increased building costs, and (3) increased demand. The Office of Education has estimated that public and nonpublic elementary and secondary educational plant needs were about 7,500 million dollars late in 1947, and of colleges and universities, totaling about 3,500 million dollars.

Federal Legislation; Court Decisions. A number of bills relating to education became public law during the year, among them three measures to facilitate the disposal of surplus properties for educational purposes. In passing the National Selective Service Act of 1948, Congress provided for deferment from military service of high school and college students under certain conditions, and authorized the President to provide for the deferment of other categories of students.

Supreme Court decisions affecting education among the several States included the following: (1) The New Jersey case holding that the use of public tax funds by school districts for paying the transportation of children attending parochial schools was not in violation of any provision of the Constitution of the United States; (2) The decision holding that the State of Oklahoma, in conformity with the fourteenth amendment, was required to provide qualified Negro applicants with professional legal education equal to that afforded by the State institution for white students; (3) The decision rendered in the case of *McCullum vs. the Board of Education in Champaign, Illinois*, holding that sectarian religious instruction on public school premises during school time was not permissible under the first amendment of the Constitution.

Rural Education. Primarily because of financial limitations, small school units, common in most rural areas, cannot offer the range of educational services considered necessary today. Consolidation, however, is not the whole answer. To meet present-day needs more adequately, rural schools are forced to develop other ways of broadening their services. Sometimes this is done through sharing teachers on a part time basis with other schools.

Children of migrant workers are another cause for concern in rural areas. This subject has been studied at length by a committee representing several Federal agencies, the recommendations of which were placed before the Congress for its consideration.

Science in Education. The understanding of science has assumed new proportions as a requirement in American education from elementary through college levels. The new emphasis is in part related to an understanding of national security and world politics. In elementary grades, children learn principles of the scientific method by conducting simple experiments. In secondary schools, the students learn about the inductive and the deductive methods, and the many techniques used by scientists. This general approach is quite aside from application of science as studied in many vocational courses.

Aviation Education. The emphasis on aviation education, especially in the secondary schools, is aimed at (1) holding and improving the technical position of the nation, and (2) bringing about understanding of national and international problems in light of progress in aviation.

Significant Trends in College Curricula. Noticeable

in the development of college curricula is an increase in programs of general education. In the preparation for various professions, more emphasis is being placed on general education, especially the social sciences. This is true for example in such diverse fields as engineering, journalism, and librarianship. The broad effect is to devote more of the undergraduate years to general education, thereby requiring that technical phases of professional preparation be gained in graduate programs, as happened earlier in medicine and law.

Zeal for American Democracy. The Office of Education, in giving leadership and stimulation to the Zeal for American Democracy program, has worked with and through the States in a service relationship. The main emphasis has been upon increasing in the States the awareness of the need for improved citizenship education and bringing to them examples of ways in which such improvement might be accomplished.

Teachers. The supply of teachers is not uniform among various school levels and subject fields. In general the shortest supply is at the elementary level. Here the condition is not improving, nor are there prospects for improvement during the coming year. Shortages also exist in certain subject fields in secondary education, especially in home economics.

Teacher Education. Problems of teacher education center on the preparation of more than 90,000 teachers annually, improvement in qualifications of several hundred thousand teachers in service, the extension of the body of professional subject matter, and the improvement of procedures in teacher education.

The Office staff in teacher education assisted during the year in solving these problems in cooperation with institutions approved for the education of teachers; with State departments of education; with local schools and school systems; with national, regional, State, and local school organizations; and with other agencies.

Education of Negro Leaders. Because of the growing interest in the education of Negro leaders, the Office of Education in 1947-48 undertook a study of the problem, and a publication based thereon was completed.

Citizens Federal Committee on Education. Two years ago the Citizens Federal Committee on Education was organized to advise the Office on the broad national aspects of educational problems. One of its first tasks was to present the facts about the crisis in education to the American people. Through the intensive services of the Advertising Council of America—a public service organization representing all phases of the advertising business—the Committee continued during the past year to foster its highly successful nationwide "Improve Our Schools" campaign.

Health Services. School health services received increasing attention from a large number of sources, both educational and noneducational during 1947-48. The National Health Assembly held in Washington in May, 1948, made these, among other recommendations: That a national conference on school health be called; that similar State Conferences be called; that local full-time public health units be sponsored because of the contribution they can make to the health of the school-age child; that teachers be better trained in functional health and physical education; that the mental hygiene program be extended.

Library Services. At present, the United States is served by 7,500 municipal and county public libraries, 1,700 college and university libraries, and

more than 20,000 centralized school libraries, exclusive of innumerable classroom collections. In addition, there are some 250 Federal and State libraries, and at least 1,500 specialized libraries serving the business, industrial, financial, and technical concerns.

Veterans' Educational Facilities. The Federal Security Agency, through the Commissioner of Education, and the Federal Works Agency were authorized by Congress to provide buildings and equipment from war surplus materials when they were needed to provide education for veterans. These agencies established the Veterans Educational Facilities Program which had, to June 30, 1948, provided to schools and colleges more than 100 million items of equipment, which had a War Assets Administration fair value of \$114,665,000, an amount that provided \$74 worth of equipment for each veteran enrolled.

This program also provided classrooms, laboratories, and other instructional facilities to the extent of 17 million square feet, for which the Federal Government expended approximately \$75,000,000. Even larger sums have been expended by the Public Housing Administration to build and equip residential facilities for veterans engaged in programs of education and training. These emergency programs will provide, however, for only approximately 11 percent of the space college administrators say they need to combat the shortage.

GRANT-IN-AID PROGRAMS

Vocational Education. Total enrollments for 1947-48 in the federally aided program of vocational education, when State reports are finally tabulated, are expected to exceed the previous peak enrollment of 2.6 million in 1941-42. After the passage of the George-Deen Act in 1936, authorizing a substantial increase in funds for allotment to the States for the further development of vocational education, enrollments increased annually until 1941-42. During the war years, total enrollments receded to slightly more than 2 million. During those years, however, the vocational schools were being used to capacity in training war production workers. After the conclusion of the war, enrollments started to climb again until in 1946-47 they had passed 2.5 million. Further increase is expected, in part as a result of the passage of the George-Barden Act which authorized additional funds for allotment to States and Territories.

The amount of Federal funds made available for allotment to the States for vocational education during fiscal year 1948 increased by more than \$5 million. This was due to the increase in the appropriation under the George-Barden Act, the first important increase in the amount of Federal funds available for allotment to the States since 1939.

Agricultural Education. Owing to a world-wide shortage of food and the need for heavy exports of food and feed to depleted areas of Europe and Asia, the production and conservation of food were emphasized in agricultural classes for adult farmers. School-community canneries, operated under the supervision of teachers of vocational agriculture and home economics, enabled thousands of families to conserve a supply of food for their families.

Membership in the Future Farmers of America, the national organization of students of vocational agriculture in public secondary schools, increased during the year roughly from 240,000 to 260,000. The New Farmers of America, an organization similar to the F.F.A. for farm boys in high schools for Negroes, likewise completed a successful year.

Membership in the N.F.A. increased roughly from 24,000 to 26,000.

Distributive Occupations Education. As a result of an increase in the demand for training programs suited to the needs of proprietors and employees of small business enterprises, State Boards for Vocational Education in California, Illinois, Kentucky, New Jersey, New York, Texas, Virginia, and other States sponsored training courses for these groups. Such courses recently were introduced into some 30 vocational schools in New York City. New York University, Syracuse University, the University of Houston, Ball State Teachers College, Mississippi Southern College, and a number of other institutions of higher education are now offering training for men and women engaged in small businesses.

Home Economics Education. In 1948, approximately 1 million youth and adults were attending home economic classes in schools reimbursed from Federal vocational education funds. Home economics has moved from its restricted definition of cooking, sewing, and housekeeping to a comprehensive one built around homemaking and community responsibilities centered in the family.

During 1946-47 the Trade and Industrial Education Service worked with the Union Pacific Railroad and the representatives of a number of States in the preparation of instructional material to be used in the training of apprentices in six railroad shop crafts.

Occupational Information and Guidance. Alabama, Arizona, Florida, and Tennessee, made provisions for State programs of Occupational Information and Guidance services during the current year. In addition to these States, 41 States rewrote State plans inserting provisions for guidance services under the George-Barden Act.

Land-Grant Colleges and Universities. The Office of Education carries on the activities related to the Federal administration of the appropriations for the land-grant colleges and universities made in accordance with the Second Morrill Act and supplementary legislation. The Office prepares and publishes an annual report on these institutions; the most recent of these reports is for the fiscal year ended June 30, 1947. The land-grant colleges and universities in the fall of 1947 enrolled 458,759 students, which was approximately 20 percent of the students enrolled in all the colleges and universities of the United States.

EDUCATIONAL RELATIONS WITH OTHER NATIONS

Foreign Student Influx. Although the shortage of dollar credits prevented many foreign students from coming to the United States, approximately 21,000 students from all parts of the world were enrolled in American institutions of higher education during the academic year 1947-48. This was an increase of about 4,000 over the figure for the preceding year. A majority of the foreign students were studying in the various scientific and technical fields in which postwar American education has assumed leadership.

Interchange Programs. During the year 1947-48, 126 teachers from the United States exchanged places with 126 teachers from Great Britain. They were from all levels of education from nursery-kindergartens to teachers colleges. The British teachers were placed in 31 different States. Among these teachers, 85 were placed in elementary schools and 41 in secondary schools. An interchange of teachers between this country and Canada was also made this year. During the year there was also developed a program for interchanging teachers between this country and France.

The Fulbright Act. In full operation, the program will make available approximately \$8 million in foreign currencies for study, teaching, research, and other educational activities. Grants to United States citizens may include the payment of tuition, salaries, maintenance, travel, and expenses incidental to educational work. Only transportation costs may be granted to citizens of participating countries who wish to come to the United States under these programs. (See EDUCATION; SCHOOLS, U.S.; UNIVERSITIES AND COLLEGES.)

EGYPT. An Arab constitutional monarchy in north-east Africa.

Area and Population. Area: 386,198 square miles, of which over 9,000 are cultivated (along the Nile valley and delta, and oases) and over 3,000 more cultivable, the rest being desert. Population: over 19 million. Chief cities: Cairo, (capital) more than 2 million; Alexandria (port) close to 1 million. With one of the world's highest population densities Egypt has one of the highest birth rates, 40 per thousand, and one of the highest death rates, 26 per thousand. Over 90 percent are Moslem, mostly Sunni, and 9 percent are Christians, with Copts predominating.

Education. Education is free and compulsory for all children from 7 to 12. An extensive program of government-financed study abroad is facilitated by 7 Education Offices abroad, including one in Washington. The intensified literacy campaign resulted in 600,000 additional literates in 1948.

EDUCATION ESTIMATES—1947-48

	Schools	Pupils
Elementary schools.....	5,700	
Illiteracy classes.....		2,000,000
ec. and technical.....	200	70,000
'comm., agric., teaching and other institutes.....	630	29,000
'oreign schools incl. American University at Cairo.....	600	70,000

Communications. The railway system (chiefly state-owned) comprises almost 9,000 miles. Rivers and canals are extensively used for transport. Of the 12,000 miles of roads few are good. Strategically located, with a favorable climate, Egypt is a center for air routes connecting three continents. In addition to the recently formed Saide Airlines the (Egyptian) Misr Airways operates internal and Near Eastern lines. There are radio, telegraph, and telephone facilities operated by the government. See SUEZ CANAL.

Production. Almost all the cultivated land is irrigated, with an average of one and a half crops a year. Chief crop is cotton (850 million lb. in 1948 compared with 620 million lb. in 1947); then sugarcane, maize, wheat, rice, millet, and barley. The spring 1948 upsurge in cotton prices was followed by an autumn drop forcing consideration of limiting cotton acreage again. Industrial production increase is indicated by the following: In 1948's first quarter cotton factories reached a record monthly average of 13.4 million square meters as against 12.3 million in 1947. For the first time low grade cotton textiles were exported (6,000 tons to the Near East).

Food processing output increased from 400 tons of canned meat and fish in 1939 to 20,000 tons in 1945. The capacity of chemical factories in 1945 was almost double that of 1939. Electrical output is estimated at about 600 million kw yearly com-

pared with 300 million in 1939; the Asswan hydroelectric project is expected to increase it to 2,000 kw yearly. Although oil production is small, wells drilled in the Sinai Peninsula show promise. Egypt's growing film industry is the largest outside Europe and the United States. In September a new Ford plant was started. The first example of substantial American investment was the completion of a rayon plant built and directed by an American firm.

Foreign Trade. Main exports are raw cotton and its by-products (80 percent), foodstuffs, non-processed animal products, phosphates, tungsten, manganese, and mineral oils. The only important manufactured item is cigarettes. Imports include textiles, automobiles and other machines, industrial raw materials, fertilizers, and foodstuffs unobtainable locally. In 1947 total exports amounted to £E (Egyptian pounds) 89.5 million (chiefly to India, Italy, the United Kingdom, and France) and imports to £E99.6 million. The United Kingdom provided 22 percent of the imports and the United States 11 percent. In the first nine months of 1948, for the first time since 1937, Egypt experienced a favorable balance of trade, chiefly due to the increase in cotton sales. However, both exports to and imports from the U.S. for January-June, 1948, declined from the January-June, 1947, levels.

Finance. The revised Egyptian state budget for 1948-9 was the highest on record, with estimated expenditure of £E183.4 million and revenue of £E141.5 million, the deficit to be covered from the General Reserve Fund and a public loan of £E30 million to cover Palestine military expenses. The 1948 public debt was £E125 million. Notes in circulation in November totaled £E153 million, an all-time high. Although the high cost of living dropped somewhat in 1947, it rose to 280 (1937 = 100) in November. In January a new Anglo-Egyptian Financial Agreement provided for release to Egypt of £32 million (sterling) from Egypt's blocked holdings, of which 6¼ million is convertible into dollars. In December negotiations were started to determine the 1949 amounts. The 1947-48 exchange rate of the Egyptian pound was \$4.127.

Government. The monarchy is hereditary in the male line, King Farouk I having ascended the throne in 1936. The 1923 constitution provides for a Parliament consisting of Senate and Chamber of Deputies. Two-fifths of the former are appointed by the King and the rest elected for 10-year terms. The 264 deputies are elected by universal male suffrage. The Council of Ministers, appointed by the King, is responsible to the Parliament. Civil disputes relating to marriage or inheritance are decided in religious courts. Other cases involving Egyptians are decided before national courts. By the 1937 Montreux Convention the Mixed Courts are scheduled to disappear in 1949. After that foreigners will be subject to the same judicial treatment as Egyptians.

Events, 1948. The United Nations General Assembly elected Egypt a non-permanent member of the Security Council for 1949. Work started on a U.S. Navy Medical Research Center in Cairo for joint research by American and Egyptian scientists. Negotiations proceeded with the Soviet Union for trade exchanges with barter of some Russian wheat for Egyptian cotton completed. Trade agreements for exchanges of goods were signed with bizonal Germany, Switzerland, and France.

Relations with Britain. Two points of difference appeared far from solution. The British Ambassador announced in October that the international situ-

ation prevented Britain from withdrawing her remaining troops, as the Egyptians were anxious to have her do, the provisions of the 1936 Anglo-Egyptian Treaty notwithstanding. Following rejection by the Egyptian Senate's Foreign Affairs Committee of British proposals for Sudanese administration and the breakdown of talks, the British announced in June that Sudan's Governor-General was free to proceed with the Sudanese self-government project. Egypt did not accede to London's ordinance creating an executive council and legislative assembly in the Sudan. See ANGLO-EGYPTIAN SUDAN.

Economic Development. The Prime Minister's speech in November reaffirmed government plans for development projects, including the Asswan hydro-electric project, railroad and road construction, irrigation, agricultural research centers, and measures for health, education, and social reform. The Undersecretary of State for Industry stated that industrial development depended on encouraging foreign investment and using foreign-expert assistance. The Asswan Dam project, started by Swiss contractors, had to be suspended in July because of a shortage of Swiss francs but negotiations proceeded for bartering cotton. Plans were under way to stimulate the export to hard-currency countries of products other than cotton. The Alexandria Futures Market issued a new regulation that every broker, jobber, or head clerk had to be an Egyptian national.

Palestine Problem. See ARAB LEAGUE AFFAIRS, PALESTINE. As an active participant in Arab League discussions Egypt made certain attempts at economic boycott of Israel; government interference with shipping destined for Palestinian ports was accelerated. In May the Egyptian Senate approved armed intervention. A note was despatched to the UN Security Council notifying it of the invasion by two Egyptian columns "to restore security." By the year's end the invasion had been roundly repulsed by smaller but better-trained and equipped Israeli forces. Egypt was active in UN proceedings on the matter.

The year was marked by a series of demonstrations, primarily by students, starting with the UN's partition decision. First in 1948 was by 4,000 Cairo students against the United States and the Soviet Union for actively supporting partition. Over the year two attempts were made on the life of Mustafa Nahas Pasha, former Prime Minister and Wafd Party leader. In November the Secretary General of the Moslem Brotherhood, inflammatory and reactionary organization, was temporarily arrested. In December dissatisfaction with Palestine developments reached a climax. Three days of student rioting followed the assassination of Cairo's police chief. The government, directly accusing the Brotherhood, ordered its dissolution. On December 9 Prime Minister Nokrashy Pasha was reported pleased over "the quietest day of the week." He issued a military order barring students from all non-government-approved organizations. On December 28 he was shot by a student member of the Brotherhood. Nokrashy's fellow-Wafdist, Ibrahim Abdul Hadi, was appointed Prime Minister and Military Governor General and issued a military order to curb terrorism.

—DOROTHEA SEELYE FRANCK

EIRE (Ireland). A sovereign, independent state, designated as a republic in the Republic of Ireland Bill 1948, and, as such, no longer associated with the British Commonwealth of Nations. Eire includes the 26 counties of Southern Ireland formerly

called the Irish Free State. In 1937 the name was officially changed to "Eire" in Gaelic and "Ireland" in English.

Area and Population. The area of the 26 counties is 27,137 square miles. Population (1946 census): 2,953,452. Chief cities: Dublin (capital), 506,635 inhabitants; Cork, 75,361; Limerick, 42,987; Waterford, 28,332.

Education and Religion. Elementary education is free and compulsory. The Irish language is required in the national schools. Secondary schools, which are private, are in many cases religious establishments. There are two universities: the University of Dublin (Trinity College) and the National University of Ireland, which has three constituent colleges. Publicly supported technical schools and agricultural classes are numerous. Total university enrolment in 1946-47, 7,186. Nearly all (94 percent) of the people are Roman Catholics, with the remainder divided among Episcopal, Presbyterian, Methodist, and other churches.

Production. Agriculture and grazing occupy almost one-half of the people and nearly three-fourths of the total land area. Acreage in 1946: hay, 1,935,203; oats, 834,206; wheat, 662,496; potatoes, 387,507. Number of livestock, chief groups on June 1, 1947: Cattle, 3,950,152; sheep, 2,094,057. Value of chief industrial products in 1945: brewing, £13,552,000; grain milling, £12,819,000; tobacco, £12,476,000. Other manufacture is widely diversified.

Foreign Trade. Eire's trade showed an exceedingly unfavorable balance in 1947 and the first half of 1948. The 1947 figures were: total imports, £130,812,000; total exports, £38,802,000; adverse balance, £92,101,000. In the first half of 1948 imports increased and exports decreased, giving an adverse balance at the annual rate of £110,000,000, an all-time record. In 1947 the United Kingdom took 90 percent of Eire's exports and supplied 40 percent of its imports. Imports from the United States rose from £8,476,000 in 1946 to £29,114,000 in 1947, largely because of sizable purchases of coal, wheat, and flour. Chief exports are normally live animals and chief imports manufactured goods and raw materials for manufacture, including cotton and woollen yarns. Eire's trade deficit is met by invisible items, including receipts from foreign investments, immigrant remittances, receipts from tourists (chiefly English), and—of late—drawing on foreign reserves.

Finance. The 1947-48 accounts showed revenue of £65,197,845, giving a surplus over expenditure of £33,177. Budget estimates for 1948-49 placed revenue at £70,508,000 and surplus at £25,000. Public debt on Mar. 31, 1948, was £104,800,000.

Transportation. In 1946 Eire had 2,481 miles of railway and 650 miles of navigable inland waterways. Railways carried 25,502,477 passengers in 1946 and busses 224,011,630. The international air line, Aer Lingus, carried 156,532 passengers in 1947.

Government. Under the Constitution proclaimed on Dec. 29, 1937, the President is elected by popular vote for 7 years. The Oireachtas (Parliament) includes two houses: the Dáil Eireann (House of Representatives) of 138 members and the Seanad Eireann (Senate) of 60 members. Executive power is exercised by the Government, which is responsible to the Dáil. The President, Sean T. O'Kelly, was elected in 1945.

The Prime Minister, John A. Costello, was elected Feb. 18, 1948, after the defeat of former Prime Minister de Valera's Government Party in the general election on Feb. 4, 1948. Costello's inter-party

Cabinet includes Sean MacBride (New Republican) as Minister for External Affairs.

Events, 1948. The election of Feb. 4 was hard-fought. Late in 1947 de Valera had staked his Government on the results of three by-elections to the Dáil. His party (Fianna Fail, or Soldiers of Destiny), lost two of the three; one of them, significantly, to Sean MacBride, leader of the newly formed Clann na Poblachta, or New Republican Party.

In the election Fianna Fail won more than 60 seats, or more than any other single party; but a majority against de Valera was pulled together from groups disunited in almost everything except their wish for a change of government. Fine Gael (United Irish) party, which was fairly conservative, was obliged to join hands with the Republican left, Clann na Poblachta, in order to drive de Valera from the office he had held since 1937. Clann na Poblachta, which won only 10 seats, was nevertheless able to get the Cabinet portfolio of external affairs. Costello, the new Prime Minister, was the leader of Fine Gael, the second largest party.

Coalition Achievements. Costello's election to the post of Prime Minister by the Dáil and the prompt announcement of his Cabinet took place on February 18. De Valera used some of his new-found leisure to make a visit to his native land, the United States. On his first day in New York, March 8, he lunched with Mayor O'Dwyer of New York and on March 9 was given a reception at City Hall.

Costello's Government negotiated a new trade treaty with Britain in June. The four-year agreement, which was signed in Dublin on July 31 by Prime Ministers Attlee and Costello, restored high figures for agricultural exports from Eire to Britain, limited Irish exports of live cattle to other countries to a fraction of those sent to Britain, and fixed favorable prices. Britain promised Eire more coal and automobiles. The agreement offered Irish farmers high and stable prices, and gave the Eire Government some hope of covering a part of its extraordinarily large trade deficit.

The Costello Government also concluded a Marshall Aid agreement with the United States and became one of the first countries to receive assistance. Procurement authorizations for Eire through October 20 were \$4,498,200.

Separation from the Commonwealth. Although Costello said in the Dáil on August 6, when the Anglo-Irish Trade Agreement was unanimously ratified, that Eire wanted both imperial preference and her association with the British Commonwealth of Nations to be retained, it was already clear that he envisaged the repeal of the External Relations Act of 1936. This act provided that so long as Eire was associated with the United Kingdom and the other Dominions the Irish, like the rest, would have the King act on their behalf in appointing diplomatic representatives and concluding trade agreements.

When Costello was in Canada early in September he announced that Eire was about to discontinue the use of the King's signature, and further statements to that effect were made after he returned to Eire. A surprise move at the meeting of Commonwealth Prime Ministers in London October 11-22 was the invitation to Eire's Government from the Canadian, Australian, and New Zealand representatives to come to Britain to talk it over. The meeting took place at Chequers on October 17, with Britain's Prime Minister Attlee also present. Eire sent Sean MacBride, Minister for External Affairs, and Patrick McGilligan, Finance Minister.

Almost no information was released about the Chequers meeting, and observers decided that the other Dominions brought up some knotty questions about continuing trade preferences for Eire after she cut her last link with the Commonwealth. This impression was reinforced when a second meeting of the same Ministers was held in Paris, November 15 and 16, and again no real news was given out.

On November 17 the first constitutional step was taken and the Republic of Ireland Bill, 1948, was introduced in the Dáil Eireann. At the time of the second reading of the bill on November 25 the debate was interrupted by MacBride's announcement of news that was most welcome to the Dáil: that of the decision of Britain, Canada, and South Africa to continue trade preferences and reciprocal citizenship rights after the separation was complete. The most disturbing question still remaining for Eire was the sharpening of the division from Northern Ireland and the decreased chance of Eire's annexing the 6 Ulster counties which were a part of the United Kingdom. On Dec. 21, 1948, the Republic of Ireland Bill was signed by President Sean T. O'Kelly but the final act of proclaiming the republic was delayed until some time in 1949.

ELECTIONS. See U.S. ELECTIONS, each State article, and articles on countries.

ELECTRICAL INDUSTRIES. The electrical manufacturing industry in the United States continued to show substantial gains during the year over the records that had been established in 1947, but the gains were less than had been registered in 1947 over 1946. Nevertheless, the industry continued in a leading position with a gain of more than 10 percent over 1947 as compared with a gain in total industrial production of somewhat more than 3 percent.

An increase in production of electric appliances of about 30 percent made the best showing, but was a decided decrease from the gain of 120 percent that was recorded in 1947. As appliances became more available following the wartime dearth, consumers again became able to be more selective and to have a definite influence on the industry. Substantial gains were shown by household refrigerators and electric washing machines with sales of 4.5 and 4.3 million units, respectively, as compared with sales of 3.4 and 3.6 million in 1947. However, sales of vacuum cleaners decreased from 3.8 million to 3.4 million.

Next highest increase was shown by transmission and distribution apparatus, which reflected the expansion in the facilities of the electric utilities. Here the index figure, with the year 1940 taken as 100, rose from 250 to 334, but again was less than the 1947 increase from 124 to 250.

Relation of industry data to other significant figures may be shown by relative index figures, with the year 1940 taken as 100. U.S. population was 111 compared with 109 for 1947; sale of electric energy was 203 compared with 184; electrical manufacturing industry production was 300 compared with 270.

Several gas-turbine power plants for power generation were under construction in sizes of 3,500 kw and 5,000 kw. Some are planned for the use of fuel oil and others for natural gas. Fuel economy is expected to be competitive with steam plants of comparable size.

Along the lines of more conventional power units, electric power companies in the United States

added about 4 million kw in new generators which included some notable advances. The Public Service Electric and Gas Company of New Jersey placed a 100,000-kw, 3,600-r.p.m., machine in its Essex station which was designed for operation with steam at 1,250 lb. per square inch and 1,000° F. The 23-inch-long last-stage buckets reach a tip speed of 1,390 feet per second, 10 percent higher than previous 3,600-r.p.m. machines were capable of attaining. A few months later the same company installed another 100,000-kw machine in its Sewaren station to operate at a higher temperature. The 3,600-r.p.m. turbine takes steam at 1,500 lb. per square inch and 1,050° F.

Six large Diesel-engine-driven generators were installed by the Mexican Light and Power Company. They were designed for operation at an altitude of 7,450 feet, and each is rated 6,000 kw at 167 r.p.m., is 22 feet in diameter, and weighs 54 tons.

In the United States studies continued on experimental lines operated at 500 kv. A circuit breaker similar to that developed for 500 kv was used in an unprecedented series of switchgear tests in which the maximum short-circuit capacity of the Grand Coulee power plant and the Northwest power pool was interrupted in less than three cycles and the circuit reclosed in less than ten cycles. The 230-kv switchgear units were designed with an interrupting rating of 10,000,000 kva, a great increase over the previous high of 3,500,000 kva.

A new step in high voltage rectifiers was reported in the use of a single 3,000-kw 3,000-volt unit to supply power to mining locomotives in Utah. A battery of 24 high-voltage pumped ignitrons was provided for service on a European railway system, eight of them being arranged as inverters to pump braking energy back into the a-c system.

A railroad gas-turbine power plant was demonstrated and installed for trial in an experimental locomotive. Rating of the power plant is 4,800 h.p. at 6,700 r.p.m. with turbine inlet temperature of 1,400°.

Reports indicated that attention was turned to battery-driven electric automobiles in both England and France with the appearance of vehicles having speeds of approximately 30 m.p.h. and operating for a total distance of 40 miles on a single charge. In Switzerland an experimental model of a railway vehicle was built in which energy is stored in a heavy high-speed flywheel. A motor connected to an outside source of power accelerates the flywheel which then drives the motor as a generator to operate the traction motors until the next stop is reached. A charging time of one minute provides for 6 to 9 miles of travel.

Automatic elevators advanced to a system with an automatic dispatcher which enables from one to four cars to be operating depending on the density of the traffic. A call is answered by the car closest to the call. In answering calls a car automatically reverses at the highest call and automatically answers all corridor calls on the way down.

One of the largest transformers ever built from the standpoint of electrical rating was furnished to the Buffalo Niagara Electric Corporation. Weighing 142 tons, it has a capacity of 110,000 kva. At the smaller end of the size scale were several developments of unusual interest. A single-phase watt-hour meter was introduced in which the rotating element is suspended by small magnets to provide a "bearing" which does not wear and requires no lubrication. The National Bureau of

Standards announced development of a magnetic fluid clutch in which the degree of coupling between the plates is varied by changing the strength of a magnetic field applied to a fluid such as iron powder mixed with oil.

An all-electric camera was developed by the U.S. Navy in which the shutter operates so fast that light travels only ten feet during the time of one exposure. This speed is attained through the use of an electro-optical Kerr cell which is placed between polarizing filters crossed so that no light is transmitted. Application of high voltage to electrodes in the cell alters the polarization of the light, and by controlled timing photographic records with an effective exposure time of 0.01 millionth of a second have been made.

A new scheme was developed for measuring very large direct-currents such as are used in electrolytic plants. A special current transformer of the through type is applied with a winding energized by alternating current. Changes in direct-current affect the reluctance of a magnetic circuit, and hence the flow of alternating current. The latter may be measured in terms of the direct-current.

G. ROSS HENNINGER.

ELECTRIC LIGHT AND POWER. Early in the year the electric power situation in the United States was studied by the National Security Resources Board and was described as tight by Arthur M. Hill, chairman of NSRB. Spare capacity had reached new low points, and system expansion was limited by the capacity of equipment manufacturers to deliver new equipment. Thus did the industry enter into a year which was to set new record peaks.

By the end of the year record growth was shown in physical plant, production, number of customers, and new financing, and the industry was placed in the position of a continuing advance to new peaks. In the first 11 months of the year about \$1,812,500,000 of construction expenditures were financed, and about 4 million kilowatts of new generating capacity were added, the largest addition in a single year on record. Installed capacity reached 55 million kilowatts at the end of the year, and with the addition of 2 million new customers, power generation rose about 10 percent above 1947 figures to reach 282,000 million kilowatt-hours.

Average yearly residential consumption reached a new peak of 1,550 kilowatt-hours, with service available to 97 percent of all homes and in use in 94 percent. Average yearly consumption on farms was about 1,900 kw-hr, with about 75 percent of the nation's farms supplied. About 12 percent more are within a quarter of a mile of power lines, and the industry plans continued expansion of service.

Production. The all-time record of 255,000 million kw-hr of electric energy produced was eclipsed easily by the 1948 production of 282,037 million kw-hr, an increase of 14 percent. Slightly greater than average amounts of increase were shown in the early months of the year, and somewhat less than average in months toward the end.

There were indications, however, of a slowing up of the increase in energy sales. While the largest increase in consumption in the history of the industry was the 26,800 million kw-hr in 1947, exceeding even the increase in the war year of 1943, the year 1948 saw an increase of only 22,400 million kw-hr. Large industrial customers were the chief factor in the decrease, as residential sales continued an upward trend and small industrial light and power sales showed only a smaller increase than in the preceding year.

Production of electric energy by water power increased only slightly as compared to 1947, hence the great bulk of the increased generation was in fuel-burning plants. Their proportion of the total was boosted to 71.5 percent, the highest since 1940 and well above the 69.4 percent in 1947 and 65.3 in 1946. The corresponding percentages of electric power produced in hydroelectric generating plants were 28.5, 30.6, and 34.7, respectively. Classification of the source of electric power by type of ownership produced figures practically identical with similar figures in 1947 and 1946; 81 percent of the total was generated by privately owned utility plants, 12.4 percent by Federal power projects, and 6.6 percent by miscellaneous municipal and other public plants. Other selected comparative statistics are given in Table 1.

TABLE 1—ELECTRIC POWER PRODUCTION IN THE UNITED STATES
(millions of kilowatt-hours)

Year	U.S. plant ownership		Energy source		From Canada	Gross Total	Uses and losses	Available for sale
	Private	Govt.	Fuel	Hydro				
1948 ^a	227,800	54,300	201,300	80,700	1,200	283,200	43,200	240,000
1947 ^b	208,100	47,600	177,300	78,400	1,300	257,000	39,400	217,600
1937	113,400	8,400	77,300	44,500	1,700	123,500	24,200	99,300
1932	87,500	4,900	49,100	33,300	0,400	82,800	19,100	63,700
1929	91,200	4,700	62,700	33,200	1,000	96,900	21,600	75,300

^a Preliminary figures. ^b Revised figures.

Finances For 1948 the estimated gross revenue from the sale of electric power in the United States was reported as nearly 4,300 million dollars as compared with the 1947 final revised figure of nearly 3,852 million. This figure now is almost a 1,000 million dollars higher than the 1945 total of 3,340 million, and is far above the boom year of 1929 with its total of 1,940 million.

To produce the revenue for 1948, an estimated 240,000 million kilowatt-hours were sold. The difference between total generation and sales, of course, is accounted for by losses and energy used by the producer. While sales showed a large increase over the final figure of 217,581 million kw-hr for 1947, it represented a smaller increase than did the gain of nearly 27,000 million kw-hr between 1946 and 1947. Large industrial electric light and power users accounted for almost 124,000 million of the total, an increase of only 10,300 million over 1947 compared to the previous year's increase of 16,600 million over 1946.

The average residential customer continued to use increasing amounts, and the number of new

consumption in 1935 was 672 kw-hr, at 4.99 cents per kw-hr.

The total number of customers at the end of the year 1948 was set tentatively at 40,774,900. One fact revealed by the geographical distribution of the figures was that regions with the most rapid growth in total number of customers did not show the fastest growth in commercial and industrial customers. Data pertaining to electric power sales and revenues for various classes of customers are shown in Table 2.

Gross operating revenue of \$3,875 million was estimated to yield a net income of \$663 million, compared to the 1947 final net income of \$656 million, which came from final gross operating revenue of \$3,480 million. The changed ratio between income and revenue was the result of the effect of

the increased output on the several factors comprising operating expenses. Fuel costs increased to take 19.5 percent of gross revenues as compared with 16.4 percent in 1947. In addition to an increase in the price of coal, the shortage of water in some areas caused the substitution of power from fuel-burning plants for power from hydroelectric plants, a condition that was particularly serious in the first half of the year. Capital charges remained about the same as in 1947, but taxes increased 7 percent because of the greater property value. Table 3 shows the distribution of the average dollar among the several items for selected years.

TABLE 3—DISTRIBUTION OF AVERAGE DOLLAR
(Percentage)

Item	1941	1946	1947	1948 ^a
Fuel	9.6	13.1	16.4	19.5
Salaries and wages	16.1	18.5	20.6	20.6
Other operating expenses	10.8	10.9	10.2	10.3
Depreciation	10.8	9.9	9.4	9.1
Fixed charges	12.0	8.0	6.8	6.1
Taxes	20.0	19.6	18.4	17.8
Dividends and surplus	20.7	20.0	18.2	16.6
Totals	100.0	100.0	100.0	100.0

^a Preliminary figures.

Operation. For the 12-month period ending Oct. 31, 1948, the coal, oil, and gas consumed for the production of electric power amounted to the estimated gross equivalent of 128 million tons of coal as compared to the 1947 equivalent consumption of 115.67 million tons.

Although output grew 14 percent during 1948, new generating capacity grew only 5 percent. Besides the obvious decrease in reserve capacity, the situation was reflected in the cost of generating a kilowatt-hour of electricity because of the need for operating old equipment; few units that were operating 20 years ago have been retired. Furthermore, new equipment in some instances had to be operated beyond its point of maximum efficiency. The result was the continued leveling off of the curve of improvement of fuel efficiency which by 1942 had reached the figure of 1.3 lb. of coal per kilowatt-hour. The figure for 1948 was the same—1.3—although equipment currently being installed is able to generate a kilowatt-hour on one lb. or less.

TABLE 2—ELECTRIC POWER SALES AND REVENUE

	Total number of customers	Energy sales (millions of kw-hr)	Revenue (1,000's of dollars)
Urban Residential			
1948 ^a	33,551,100	50,550	1,525,000
1947 ^b	31,622,000	44,171	1,366,498

1947 ^b	38,431,950	217,581	3,852,765
Change	+2,342,950	+22,419	+434,235

^a Preliminary figures. ^b Revised figures.

customers added in 1948 set another record. From the 1947 final average consumption of 1,438 kw-hr the estimate for 1948 rose to 1,550. Meanwhile the average revenue per kilowatt hour for this service dropped from 3.09 cents to 3.01 cents, thereby continuing its long-time trend. For comparison,

Statistics compiled by the Federal Power Commission for the 12 months ending Oct. 31, 1948, show the actual consumption of 99.08 million tons of coal, 42.94 million barrels of oil, and 461,020 million cubic feet of gas in the production of electric power. In comparison with 1947, the figures show the consumption of 10 percent more coal, 5 percent less oil, and 27 percent more gas. The energy generated in the period ending Oct. 31, 1948, is given as 197,215 million kw-hr.

The decrease in hydroelectric generation was shown in figures reporting the yearly output per kw of capacity. Fuel-burning plants were credited with 5,246 kw-hr for 1948 as compared with the final figure of 4,870 kw-hr for 1947, while hydroelectric stations were credited with only 5,279 kw-hr per kw of capacity as compared with the final figure of 5,442 kw-hr for 1947. The over-all figure was estimated as 5,258 kw-hr; final figure for 1947 was 4,983.

Generating Capacity. Forecasts for the year 1948 as published in *Electrical World* called for the installation of 4,409,044 kw of new capacity. Actual accomplishment fell only slightly short of this figure, with 4,012,166 kw of new capacity divided between 3,132,036 kw in fuel-burning plants and 880,130 kw in hydroelectric plants. The total electric generating capacity, after deduction of retired equipment, was brought to 54,968,000 kw on Nov. 1, 1948, with 39,398,000 kw in fuel-burning plants and 15,570,000 in hydroelectric plants.

TABLE 4—ADDITIONS TO U.S. ELECTRIC GENERATING CAPACITY

Year	Fuel plants or systems			Hydroelectric plants or systems			Grand total of fuel and hydro
	No.	Kilowatts	Total	No.	Kilowatts	Total	
1948.....	13	180,430	92	2,951,606	105	3,132,036	4,012,166
1947.....	10	218,500	61	1,565,499	71	1,783,399	2,203,849
1929.....	2,081,300	2,330,500

The decreasing margin between capacity and demand was shown by the rise to 61 percent of the average hours use of over-all capacity, which means that each typical kilowatt (rated) of generating capacity operated at its full capacity for 61 hours out of every 100. The 1947 figure was 57.5, and in 1934 it was as low as 30.3. Predictions call for the delivery of an average of more than 6 million kw

5,052 million in 1948. The number of systems in operation continued a steady growth—869 in 1946, 911 in 1947, and 955 in 1948. The number of systems generating power was reported as 87, a marked increase from the 81 in 1947 and 79 in 1946. Generating plant capacity for the three years was 217,000 kw, 184,050 kw, and 114,678 kw, respectively.

Public funds allocated to REA by the U.S. Treasury increased during the year by almost \$400 million to bring the total to \$1,590 million. This increase was almost double the increase in 1947, when loans increased from \$958 million to \$1,190 million. Thus in a two-year period an increase of about 50 percent in the number of consumers was accompanied by an increase of about 85 percent in funds, based on 2,515,000 consumers served in 1948 and 1,683,901 in 1946.

—G. ROSS HENNINGER.

TABLE 5—DISTRIBUTION OF GENERATING CAPACITY

Area—State Groups	Fuel ^a		Hydroelectric	
	No. of plants	Kilowatts (thousands)	No. of plants	Kilowatts (thousands)

3 Pacific ...	76	2,157	212	4,842
Totals	2,401	39,398	1,476	15,570
Over-all U.S. Total:	3,877 plants; 54,968,075 kw. capacity			

^a Includes both steam and internal-combustion-engine plants.

of new capacity in each of the years 1949-51, after which the necessity for the addition of new capacity is expected to become less urgent.

Data relative to additions to generating capacity are presented in Table 4. Table 5 shows the geographical distribution of generating capacity as of Nov. 1, 1948, according to statistics published by the Federal Power Commission. The U.S. total of 3,877 plants compared with the 1947 total of 3,860 shows continuation of a trend toward larger units in fewer plants as noted in last year's YEAR BOOK.

EL SALVADOR. The smallest of the Central American republics. Although entirely within the tropics, the greater part of the surface consists of fairly high plateaus and mountain valleys, which makes the climate mostly temperate.

Area and Population. Area: 13,176 square miles. Population: 2,047,000 in 1947 (72 percent mestizos, 20 percent Indians and 8 percent of European descent). Principal cities: San Salvador (capital), 123,143 in 1946; Santa Ana, 98,942; La Libertad, 37,879.

Education and Religion. Freedom of worship is guaranteed by the Constitution. Catholicism is predominant. Spanish is the official language, but the Indians speak their own language. According to recent statistics, some 100,000 pupils attended

nearly 1,600 elementary schools of all kinds. In 1944 there were 63 secondary schools with 4,765 students. Higher education is provided by the National University of El Salvador.

Production. The country is almost completely agricultural, and coffee is the most important export. Production of coffee in 1947-48 was 1,035,000 bags of 60 kilos. Coffee exports during the first part of that crop year amounted to 863,892 bags. The same year, the cotton crop was the largest on record, totaling over 19,000 bales. The sugar crop was estimated at 525,000 quintals and production of tobacco leaf was over a million lb. Other crops were rice, corn, hennequen and beans. Balsam, indigo, gold, silver and hardwoods are exported.

Foreign Trade. Exports in 1947 amounted to \$40,-100,000 and imports to \$35,900,000. Exports during the first five months of 1948 were valued at 81,810,000 colones (colon equals U.S.\$0.40) and imports at only 40,290,000 colones. The principal countries for exports were: the United States, Canada, Honduras, and Guatemala. The most important exporters to El Salvador were the United States, Mexico, Honduras, Great Britain, and Canada.

Transportation. The country had 388 miles of railway, and 3,691 miles of roads. Most recent figures showed 4,074 motor vehicles registered. There were 11,000 radio sets and 4,411 telephones. International companies provide air transportation in El Salvador.

Finance. Budget estimates (1948): revenue, 57,-702,571 colones; expenditure 57,552,571 colones. Public debt (1946) amounted to \$17,263,000. Currency in circulation at the end of 1947 was 55,440,000 colones; bank deposits on the same date were 29,940,000 colones and gold reserves \$15,000,000. Total cost of living in June, 1947, was 199 (1940 = 100). Due to the favorable balance of trade, the foreign exchange holdings on June 30, 1948, amounted to \$21,200,000. There were no import restrictions or exchange control in El Salvador.

Government. Under the constitution of 1886, re-adopted with amendments in 1945, El Salvador is a centralized republic of 14 departments. Legislative authority is vested in the National Assembly of Deputies, a unicameral body whose members are elected by popular vote. The Chief Executive is the President, assisted by a Cabinet of Ministers of State (whom the President appoints). Early in 1947, the Congress created three new ministries: Labor and Social Welfare, Social Assistance, and Agriculture and Industry. In January, 1945, General Castañeda Castro was elected President. On December 14, a military coup d'état overthrew the government of President Salvador Castañeda Castro.

Events, 1948. In February, a large group of University students filed a serious protest with the Minister of the Interior, to the effect that the administration was unnecessarily prolonging the state of siege previously declared. The students complained that there was no political freedom and that party activities were curtailed. They were supported by the "Diario Latino," a San Salvador newspaper, which added that, although it was against the law, the government continued to appoint municipal authorities, using the outward appearance of elections, that were in reality ineffective.

Cabinet Change and Economic Measures. Late in February, the Minister of Finance resigned and was succeeded by Dr. Carlos Alberto Luévano, former private secretary to the President. The ap-

pointment of a personal friend of the President's roused criticism by the opposition. Shortly after, the Federation of Coffee Growers announced that they would not sell the grain at a lower price than quoted in the market in January. The Federation also approved a motion asking for protection of their product, and appointed a delegation to represent their interests at the Bogotá Conference.

Military Revolt. The uprising that deposed President Castañeda Castro on December 14 was composed of younger officers of the army who immediately formed a military junta.

Internationalism. A distinguished Salvadorean jurist, Dr. José Gustavo Guerrero, continued to preside during the year over the International Court of Justice, and his compatriots were highly pleased when the Institute of International Law recommended Dr. Guerrero as their candidate for the Nobel Peace Prize of 1948.

On July 18, Col. José Figueres, head of the de facto government of Costa Rica, visited the country. He was received by the President and other government functionaries. It was disclosed that the purpose of his visit was to strengthen the Central American Union.

El Salvador attended the Ninth Inter-American Conference of American States, held in Bogotá in April (see PAN AMERICAN ACTIVITIES).

—MIGUEL JORRÍN

EMPLOYEES' COMPENSATION, Bureau of. This bureau was created within the Federal Security Agency to perform the functions of the former United States Employees' Compensation Commission (abolished by Reorganization Plan II), which were transferred to the Federal Security Agency (Reorganization Plan II of 1946, effective July 16, 1946). The Bureau administers the Federal laws establishing workmen's compensation programs for employments within Federal jurisdiction. Director: William McCauley.

EMPLOYMENT SECURITY OPERATIONS. As the calendar year of 1948 ended, the Federal-State employment service and the Federal-State unemployment program (UI) had completed six months of unified operations under the Bureau of Employment Security, Social Security Administration, Federal Security Agency. The United States Employment Service (USES) was transferred from the Department of Labor July 1, 1948.

The Bureau of Employment Security, through the USES, promotes and develops a nation-wide system of public employment offices, and maintains a veterans employment service. The bureau also has the obligation of providing leadership in developing the Federal-State program for protecting workers against the risk of unemployment, through unemployment insurance. The bureau is responsible for making recommendations to the Commissioner for Social Security regarding funds for administration of State employment services and State unemployment insurance programs. During the calendar year of 1948, the Bureau recommended a total of \$133,244,355 in administrative grants to the States for operation of the State employment services and the State unemployment insurance programs. These grants exclude postage costs which are computed and paid at the federal level.

Employment Service. The responsibilities of the United States Employment Service and the 48 State employment services were increased by the return on Jan. 1, 1948, of the farm placement function which had been performed by the public employment service before World War II. The return of this function coincided with the termination of

the Emergency Farm Labor Supply program of the U.S. Department of Agriculture Dec. 31, 1947.

During the calendar year of 1948, the State employment services placed approximately 6 million workers in farm and food processing employment with the result that the record crops of the year were grown, harvested, and processed with no losses chargeable to manpower shortages. A comparatively small number of foreign workers were brought in for agricultural employment, particularly in the cotton and beet fields—approximately 60,000 during the year. Nonagricultural placements were more than 5 million.

During the fourth quarter of 1948, the situation confronting the employment service was in sharp contrast to that existing in 1940 when there were some 8 million unemployed persons. In some respects the manpower situation was similar to that of 1941–42 when certain skills were at a premium. All of the services of the employment service were intensified to meet the needs of both workers and employers. These services facilitated the return of veterans to the labor market, assisted youth entering the labor market for the first time, promoted the employment of the physically handicapped, and helped workers transferring from job to job.

Through its interviewing, counseling, and interstate labor-clearance functions the employment service aided millions of workers find job adjustment. During the year the local offices made 16,670,500 referrals of job applicants to employers, and made 2,662,300 calls on employers. In the same period the local offices made placements of 1,650,300 veteran applicants.

Placements of handicapped job applicants totaled 229,000, of which 125,000 were handicapped veterans. The Veterans Employment Service conducted an aggressive year-round program to aid disabled veterans secure suitable employment, and cooperated with schools and colleges to facilitate placement of veteran students completing their studies.

The use of employment service tests, especially the General Aptitude Test Battery, was expanded greatly during the year. Many schools and colleges added aptitude testing to their programs and requested assistance from the employment service.

A technical tool—an occupational guide series—providing information as to the economic characteristics of jobs and methods of entering jobs, was introduced into the field of counseling for the first time. Although primarily intended for use of employment service counselors, the Veterans Administration printed several thousand copies of each occupational guide for its own counseling program. Also, vocational advisors, college and high schools, corporations, and prisons purchased the guides through the Superintendent of Documents.

A revision of the *Dictionary of Occupational Titles*, first published in 1939, was completed during the year for release to public employment offices in February or March, 1949. The new edition will present an expanded occupational coverage in numerous industries, with more than 1,600 new job definitions and more than 500 revisions of old job definitions.

A Federal Advisory Council, consisting of representatives of the public, labor and management, and veterans, was appointed to advise an over-all national policy of the United States Employment Service and Unemployment Insurance programs.

Unemployment Insurance. The Bureau, through the unemployment insurance program, reviews State laws and appraises State administration from the standpoint of conformity with Federal requirements

and eligibility for grants and certification for tax credits. It also provides assistance to the States in developing legislation, rules and regulations, interpretations, and administrative procedures dealing with the unemployment insurance program. The Federal Government grants the entire amount of funds for State administrative costs, as is presently practiced in the case of the State employment services. Each State administers its own unemployment insurance program and employment service.

Under its own unemployment insurance law each State collects contributions from employers (2 States also have employee contributions), which are deposited in the U.S. Treasury to the credit of the individual State. The Bureau's responsibility includes ascertaining that State laws include provisions that benefits be paid through public employment offices or other approved agencies; and that the worker's right to benefits be safeguarded when he refuses a job which fails to meet the standards of suitability of employment provided in Federal and State laws. Provision is also made for an opportunity for a fair hearing in all cases.

During the course of the 1948 calendar year, 45.6 million workers earned some wage credits under State unemployment insurance systems, 3.5 million less than under old-age and survivors insurance. During the year, about 6 million workers filed claims for unemployed insurance. Of this number about 5.1 million workers had sufficient wage credits to qualify for benefits under State systems. About 4.0 million workers actually drew some unemployment insurance benefits.

State employment security agencies paid out \$790 million in unemployment insurance benefits to eligible workers, many of whose skills did not match specifications for available jobs, or to workers who were difficult to place in jobs even in a period of unusually high employment such as prevailed in 1948. The average weekly benefit payment for the country as a whole was \$18.05, and slightly higher than in 1947. As a result of legislative action during the year, New Jersey became the third State which provides unemployment benefits for temporary disability. The two others are California and Rhode Island.

A total of \$1,000 million was collected by the States in 1948 from employers subject to State unemployment insurance laws, and in two States—Alabama and New Jersey—from employees based on a one percent payroll tax.

Interest on investments in the Unemployment Trust Fund in the U.S. Treasury amounted to \$155 million, and State balances in the fund at the end of the year amounted to about 7,600 million dollars.

Temporary reconversion unemployment benefits for officers and members of crews employed by the United States through the War Shipping Administration or its successor, the Maritime Commission, totaled \$3,769,000 between July, 1947, and Sept. 30, 1948. This program is scheduled to expire June 30, 1949.

—ROBERT C. GOODWIN

ENGLISH LITERATURE. The great scarcity of book materials was slightly eased in 1948, but publishers had to use most of the increase of paper to revive standard works which had fallen out of print. An increasing number of English books were published in America, often remaining unavailable to English readers. In literature 1948 seemed to be a boundary line. Most of the older generation of writers were played out; none of the established writers in the various fields produced a happy surprise, and few lived up to the level of their reputations.

The younger generation of writers was still in a state of flux, placing emphasis largely on experimental treatment and psychological approach. In all branches of literature the war, directly or indirectly, was the most powerful shaping force.

Biography. Among biographies of recent figures were R. L. Collins' *Lord Wavell 1883-1941*, a military biography; Roy Jenkins' *Mr. Attlee*, an interim treatment; and Margaret Cole's collection of *Makers of the Labour Movement*. Other English figures include *Garrick* by Margaret Barton; *Beau Brummell* by Kathleen Campbell; *The Great Dr. Burney* by Percy A. Scholes; and *William Temple, Archbishop of Canterbury*, by F. A. Iremonger.

Clare Leighton's charming *Tempestuous Petticoat* was about her mother Mrs. Leighton, the Edwardian novelist. Cardinal Newman was the subject of Masie Ward's *Young Mr. Newman* and Robert Sencourt's *The Life of Newman*. In *Two Quiet Lives* David Cecil wrote about Dorothy Osborne and Thomas Gray. J. H. Whitfield's *Machiavelli* was an attempt to make him plain. Angus Armitage's *Sun, Stand Thou Still* was about Copernicus.

In autobiography Osbert Sitwell's *Laughter in the Next Room* was the fourth volume of his inclusive work. Beatrice Webb's *Our Partnership* and Henry Handel Richardson's *Myself When Young* were both posthumous and unfinished. Rich lives were described in Harold Acton's urbane *Memoirs of an Aesthete*; Sir James Grigg's *Prejudice and Judgment*, by the Secretary of State for War, 1942-45; Phyllis Bottome's *Search for a Soul*.

Literary History and Criticism. The emphasis in literary scholarship was more on interpretation than biography. Siegfried Sassoon's *Meredith* and W. A. M. Peters' *Gerard Manley Hopkins* were outstanding critical appreciations, as was Joan Bennett's *George Eliot* and Lord Gorell's *John Keats*. Laura L. Hinckley's *The Brontës* treated family life, while Katherine Anthony's *The Lambs* emphasized Mary. Other literary studies included Esther Meynell's *Portrait of William Morris*; R. W. Chapman's *Jane Austen*; Florence B. Lennon's psychoanalysis of *Lewis Carroll*; and F. Brittain's biographical *Arthur Quiller-Couch*. Sir William James edited *The Order of Release*, the letters of John Ruskin and Effie Gray. John Cowper Powys interpreted *Rabelais*, while Barker Fairley's *A Study of Goethe* was psychological. R. L. Chambers discussed *The Novels of Virginia Woolf*, while Bernard Blackstone's *Virginia Woolf* was a general analysis. B. Rajan edited a collection of studies of T. S. Eliot. Other literary studies included H. S. Bennett's *Chaucer and the Fifteenth Century*; J. W. H. Atkins' *English Literary Criticism: The Renaissance*; and Elizabeth F. Rogers' edition of *The Correspondence of Sir Thomas More*.

Collections of essays included Geoffrey Grigson's *The Harp of Aeolus*, on esthetics; Virginia Woolf's posthumous *The Moment*; and W. R. Inge's *The End of an Age*. Ernest Gower's official pamphlet, *Plain Words*, became a popular guide to the use of English. Alex Comfort's *Art and Social Responsibility* and Herbert Read's *The Grass Roots of Art* discussed the artist's relation to society. Other books on art included Robert Ironside's well-illustrated *Pre-Raphaelite Painters* and James Lees-Milne's *The Age of Adam*, on architecture. Frank Howes discussed the philosophy of music in *Man, Mind, and Music*. Wilfred Mellers wrote *Studies in Contemporary Music* against a background of national traditions. The Master Musicians Series and the Music of the Masters Series dealt with individual musicians.

History. Recent history was a popular subject but other periods received scant attention. English history was treated in Sir Tresham Lever's *The House of Pitt*, the 18th century; Douglas Jerrold's *An Introduction to the History of England*, to the end of the 12th century; F. C. Turner's *James II*; and John Harvey's *The Plantagenets 1154-1485*. In *The First Europe* C. Delisle Burns drew an analogy between our times and that of medieval Christianity, while John Bowle's *The Unity of European History* was a political and cultural survey. More recent events were the subject of L. B. Namier's *Diplomatic Prelude, 1938-1939*, and J. W. Wheeler-Bennett's *Munich: Prologue to Tragedy*.

Formal chronicles of the war were beginning to emerge, the most important being *The Gathering Storm*, the first volume of Winston Churchill's *The Second World War*. Lord Montgomery's *El Alamein to the River Sangro* traced the military campaign in Africa, Sicily, and Italy. Taprell Darling covered the *Western Mediterranean 1942-1945*, a commentary rather than a narrative. Lord Tedder discussed *Air Power in War*, and B. H. Liddell Hart treated the conduct of the war from the German side in *The Other Side of the Hill*. R. H. Bruce Lockhart's *Comes the Reckoning* and Dudley Clarke's *Seven Assignments* were personal reminiscences by official figures. More informal accounts included Michael Packe's *First Airborne*, a combination of history and fiction; Julian Amery's *Sons of the Eagle*, guerrilla war in Albania; Roy Farran's exciting *Winged Dagger*; Philip Stibbe's *Return Via Rangoon*, jungle warfare with Wingate; and David James' *A Prisoner's Progress* and A. S. B. Arkwright's *Return Journey*, two accounts of escape from prison.

The Contemporary Scene. Contemporary problems exercised many minds. Barbara Ward's brilliant *The West at Bay* analyzed the modern impasse and advocated union of the Western powers. Arnold J. Toynbee's *Civilization on Trial* discussed man's past and future, while John Middleton Murry's *The Free Society* was concerned with foreign and domestic policies. John Parker in *Labour Marches On* and Quintin Hogg in *The Case for Conservatism* presented opposite points of view. Other books on current problems included John Jewkes' *Ordeal by Planning*, a defense of free enterprise; Lord Vansittart's vigorous *Events and Shadows*; and *The Challenge of Our Time*, a group of broadcast talks on the impact of the atomic revolution on human relations.

The American scene inspired two scintillating books: Geoffrey Gorer's *The Americans*, on our customs and manners; and Harold J. Laski's *The American Democracy*, a gloomy look at our culture and politics. D. W. Brogan continued his study of this country in *American Themes*. Wyndham Lewis in *America and Cosmic Man* stated that America is evolving a world man for the world state. Books on other parts of the world included Sacheverell Sitwell's *The Netherlands*, on art and social life; E. Lucas Bridges' *Uttermost Part of the Earth*, Tierra del Fuego; Robert Gibbings' *Over the Reefs*, the Polynesian Islands; Dane Chandos' *Village in the Sun*, daily life in Mexico; George Millar's *Isabel and the Sea*, a Mediterranean trip; and H. W. Tilman's magnificently illustrated *Mt. Everest 1938*, the official account of the 5th Everest expedition. *Dragon Fangs* by Claire and William Band described two years with the Chinese guerrillas. John Bagot Glubb told the *Story of the Arab Legion*. Several volumes were published in The New Naturalist Series, which will be a complete survey of Britain's natural history. L. Dudley

Stamp's *The Land of Britain, Its Use and Misuse* was a standard work on agricultural geography. John Moore's *The Blue Field* was another Brensham book on English village life.

The Novel. The novel received a new spurt of vigor in 1948. Veteran writers turned out their usual reliable product, among them being A. J. Cronin's *Shannon's Way*; Angela Thirkell's *Love Among the Ruins*; L. A. G. Strong's *Trevannion*; P. G. Wodehouse's *Spring Fever*; James Hilton's *Nothing So Strange*; Nevil Shute's *No Highway*; Howard Spring's *There Is No Armour*; Margery Sharp's *The Foolish Gentlewoman*; G. B. Stern's *No Son of Mine*; R. C. Sheriff's *Another Year*; and Frank Swinnerton's *Faithful Company*. English family life was the subject of Phyllis Bentley's *Life Story*; Sheila Kaye-Smith's *The Lardners and the Laurelwoods*; Humphrey Pakington's *The Washbournes of Otterley*; and I. Compton-Burnett's *Bullivant and the Lambs*.

Aspects of the war were treated in Robert Kee's *A Crowd Is Not Company*, about a prisoner-of-war camp; Alexander Baron's *From the City, From the Plow*; Christopher Sykes' *Answer to Question 33*, a tragic wartime romance; and Howard Cleaves' *The Unforgiven*, about the partisans. Storm Jameson in *The Black Laurel* and Francis Stuart in *The Pillar of Cloud* dealt with postwar Europe, while Stuart B. Jackman's *Portrait in Two Colours* and Winston Clewes' *Journey into Spring* treated postwar England. Evelyn Waugh in *The Loved One* and Aldous Huxley in *Ape and Essence* satirized aspects of modern life, while Humphrey Slater in *The Conspirator* dealt with national and party politics.

Historical novels included Margaret Irwin's *Elizabeth, Captive Princess*, about her 19th year; Sylvia Townsend Warner's *The Corner That Held Them*, set in a medieval nunnery; Nigel Balchin's modern treatment of *The Borgia Testament*; Georgette Heyer's pleasant *The Foundling*; C. S. Forester's *The Sky and the Forest*, about 19th century Congo natives; Somerset Maugham's Spanish *Catalina*; and Jane Lane's treatment of Mary, Queen of Scots in *Parcel of Rogues*. Timothy Pember's *The Needle's Eye* and Robert Liddell's *The Last Enchantments* were set in the 1930's.

Among successful fantasies were T. H. White's *The Elephant and the Kangaroo*, an Anglo-Irish Noah; Barbara Gooldeen's *Jig-Saw*; Ronald Frazer's *Maia*; and Shamus Frazer's witty *Barbary Court*. Among unusual backgrounds were the Welsh village of Elizabeth Inglis-Jones' *Aunt Albina*; the London slum of Gerald Kersh's *The Song of the Flea*; the India of Aubrey Menen's first rate *The Prevalence of Witches*; the ballet school of Rumer Godden's *A Candle for St. Jude*; the Ceylon of Robert Standish's *Elephant Walk*; and the witch-burning of Edith Pargeter's *By Firelight*. Ian McLeish in *Adam in the Woodpile* and Elspeth Huxley in *Walled City* wrote about the relationship between white and colored people.

Psychological themes and treatment were used in Peter dePolnay's *The Moot Point* and his disjointed *The Fat of the Land*; John Pudney's sensitive *Estuary*; Jack Lindsay's existential *The Subtle Knot*; and Anna Kavan's novel of a woman's dreams, *Sleep Has His House*. Graham Greene's powerful *The Heart of the Matter* dealt with the religious conscience, as did Ethel Mannin's *Late Have I Loved Thee*.

The handful of promising first novels included Peter Vansittart's *Enemies*; John Cousins' *The Desolate Market*; Jack R. Clemo's Cornish *Wilding Graft*; Dodie Smith's *I Capture the Castle*; J. D.

Scott's novel of psychological suspense, *The Cellar*; Elizabeth Wood's romantic *Afterglow*; and John Prebble's *The Edge of the Night*, about a British soldier in Germany. Ian Niall's violent *No Resting Place* was followed by his *Tune on a Melodeon*, about the same group of tinkers.

Short Stories. Collections by veteran writers included Lord Dunsany's *The Fourth Book of Jorkens*; M. P. Shiel's posthumous *Best Short Stories*; Christine Weston's *There and Then*, with an Indian background; and Laurence Housman's *Strange Ends and Discoveries*. William Sansom's *Something Terrible, Something Lovely*, and L. T. C. Rolt's *Sleep No More* were vivid horror stories, while Reginald Moore's *Silence Comes After* and T. O. Beachcroft's *Malice Bites Back* had technical ability. G. F. Green's original *Land Without Heroes* was a first collection, as was Hallam Tennyson's *The Wall of Dust*. Olivia Manning's *Growing Up* dealt with the development of a woman.

Poetry. 1948 was not a memorable year in poetry. Familiar names appearing with collections included Louis MacNeice, with *Holes in the Sky*, poems 1944-1947; C. Day Lewis, with *Poems 1943-1947*; Sir John Squire, with *Selected Poems*; John Betjeman, with *Selected Poems*; and Edith Sitwell, with *The Song of the Cold*. Among other collections of distinction were Lilian Bowes-Lyon's austere *Collected Poems*; Lawrence Durrell's accomplished *On Seeming to Presume*, with an Aegean background; Norman Nicholson's promising *Rock Face*; Redwood Anderson's philosophic *Pillars to Remembrance*; and Terence Tiller's sophisticated *Unarm, Eros*. An anthology *Poems of the War Years* was compiled by Maurice Wollman.

Philosophy and Science. In philosophy Bertrand Russell's *Human Knowledge* related man to the universe, while C. E. M. Joad analyzed *Decadence*. Christopher Dawson emphasized the importance of religion in *Religion and Culture*. George S. Duncan's *Jesus, Son of Man* was a modern portrait. Maurice Collis traced the effect of Confucius in *The First Holy One*. Werner Jaeger wrote on *The Theology of the Early Greek Philosophers*. In science Sir James Jeans traced *The Growth of Physical Science* from the 15th century, while Sir Arthur Keith explained his radical group theory in *A New Theory of Human Evolution*. (See AMERICAN LITERATURE.)

—ARTHUR E. JENSEN

ENGRAVING AND PRINTING. Bureau of. A Bureau of the U.S. Department of the Treasury which designs, engraves, and prints the U.S. currency and other engraved work for governmental use. Director: Alvin W. Hall.

ERITREA. A former Italian colony on the western shore of the Red Sea, under British Military administration since its conquest by Allied forces in 1941. Area about 15,754 square miles. Population: 700,000, of whom 48,718 were Italians (1944). The natives are racially and linguistically akin to the Ethiopians.

Asmara (the capital: pop. 85,000) and the seaport Massowah are the only towns of any importance. Chief agricultural products are coffee, barley, tobacco, sesame, skins, and hides. Pearls, gold, and potassium salts are found.

ESPERANTO. Increased support for the practical use of Esperanto as a neutral and easy-to-learn Inter-language has become evident through the gathering of more than 12½ million signatures for a petition requesting the United Nations to give "urgent and serious consideration" to the language ques-

tion and to promote the use of Esperanto by "encouraging its teaching in schools . . . and developing its use in travel, international commerce, and correspondence." A total of 9,829,070 signatures were processed up to Dec. 1, 1948. Signers included the President of France, the Prime Ministers of the Netherlands, Czechoslovakia, and Poland, 271 members of national legislatures, 1,823 lawyers, 35,110 teachers, 1,584 clergymen, 1,343 scientists, 523 labor union officials, and 1,849 hotel managers.

Shortwave news broadcasts in Esperanto averaged more than 150 a month. At the beginning of 1948, the French Government radio started a daily program in Esperanto for a world-wide audience. At the beginning of 1949 the schedule was: Prague, twice a day; Paris, daily; Stockholm, 3 times a week; Bern, twice a week; Sofia, twice a week; Vienna, twice a week; Warsaw, weekly; Munich, twice every second week. In Europe, an "underground" station calling itself "Radio-Esperanto" was heard four times every Sunday. Its location remained unknown. There were many hundreds of longwave broadcasts in Esperanto in 1948.

Scholarly journals printing summaries of major articles in Esperanto included in 1948: medical journals in France, the Netherlands, and Japan; an ornithological journal in France; publications on zoology, in Norway; on botany, in the Netherlands; on plant pathology, in Denmark; on physics and earth magnetism, in Japan; on geography and statistics, in Brazil.

Esperanto is taught in hundreds of schools throughout the world, but no comprehensive figures are available. In Athens, Greece, the Interlanguage was taught last year in 8 high schools, 2 teachers' colleges, and the experimental school of Athens University to a total of 1,036 students. In Japan, Esperanto is being taught in about 85 schools, in 6 of them on a compulsory basis. In the western occupation zones of Germany, 95 Peoples' Colleges (Adult Education Centers) featured Esperanto classes. In England, attendance at Esperanto classes was compulsory in 9 schools, optional in 6 (or more) schools. In the United States, Indiana University added a course, "Esperanto—An Introduction to Basic Language," to the home study courses of its Division of Adult Education and Public Services. At the Missouri School of Mines, a charter was granted in February 1948 to an extremely active Esperanto Club.

Approximately 40 international Esperanto conferences and national conferences with foreign guests were held in 1948. They included: the 33rd Universal Congress of Esperanto, Malmö, Sweden, with over 2,000 delegates; the Workers' Esperanto Congress, Amsterdam, with 1,800 delegates; international Esperanto youth camps at Garmisch-Partenkirchen (American zone of Germany) and at Groet (Netherlands), with more than 400 participants; the Danube Valley Esperanto Conference, Budapest; the 38th Congress of the Esperanto Association of North America, Toronto, Canada.

About 70 books in and about Esperanto were published in 1948. The most important were: *Esperanto: The World Interlanguage*, by G. A. and D. T. Connor, W. Solzbacher, and J. B. Se-Tsien Kao, an encyclopedic handbook of the language problem and the practical uses of Esperanto, in English; *Sinopse Estatística do Brasil*, a volume published by the Brazilian Government's Institute of Geography and Statistics, with text in Portuguese, English, and Esperanto; *Sep Fratoj* (Seven Brothers), by Aleksis Kivi, Esperanto translation of a strikingly interesting Finnish novel, published at Helsinki; *Leteroj de L. L. Zamenhof* (Letters

of L. L. Zamenhof), first volume, with comments by Professor G. Waringhien, Paris, containing valuable documents on the early history of Esperanto.

The network of "delegates" of the Universal Esperanto Association (UEA), with headquarters at Rickmansworth, England, and Geneva, Switzerland, consisted in 1948 of 2,438 delegates in 56 countries. "Delegates" render practical services in connection with travel, business, or any other field of interest where the language barrier is acutely felt. The United States is represented on the "Komitato de UEA" by George Alan Connor, New York City.

As in former years, several governments used Esperanto to make their countries better known abroad or to advertise the particular brand of politics which they represent. The New Zealand Government and the Danish Government issued film strips with Esperanto text, the Brazilian Government and the Brazilian State of Santa Catarina various statistical publications. The Prague Government had the new Czechoslovak Constitution translated into Esperanto and had 15,000 copies printed for world-wide distribution. The Polish Government subsidized a book in Esperanto on *Poland Today* (Nuntempa Pollando); the Bulgarian Government a richly illustrated magazine, *Internacia Kulturo*. On the other hand, "people's democracy," Eastern style, was being vigorously denounced by such periodicals as *Ukraina Esperantisto*, published by Ukrainian anti-Communist refugees.

The use of Esperanto for religious purposes has increased considerably. Several Protestant organizations distributed the Bible in Esperanto. A Catholic Esperanto Conference held at Rome Sept. 28, 1948, received a message of encouragement from Pope Pius XII. The International Committee for the Holy Year 1950 (which is expected to draw millions of Catholics from all over the world to the capital of Catholicism) decided to issue its *Pilgrim's Guide-Book* and other literature in Esperanto as well as in other languages. Religious literature in Esperanto published during 1948 represented Catholics, Protestants, Jews, Spiritualists, Moslems, Buddhists, Shintoists, and Bahais.

The linguistic institutions of the Esperanto movement were streamlined in 1948 by the merger of the former *Lingva Komitato* and *Esperantista Akademio* in a new body called *Akademio de Esperanto*. It supervises the linguistic development of Esperanto, decides on the official acceptance of new words, etc. It has headquarters at The Hague and numbers at present 47 members including three Americans: Dr. Walter S. Lippmann, New York; Dr. Ivy Kellerman Reed, Arlington, Va.; and Joseph R. Scherer, Los Angeles.

Esperanto is the only constructed Interlanguage in practical use. Several projects such as Occidental, Panamane, Latino Sine Flexione, and Inter glossa were advocated by their authors and a few supporters on various occasions during 1948. There were also occasional suggestions that Esperanto should change its spelling or one or the other of its grammatical features.

Those using Esperanto have persistently replied to all such suggestions by the same argument which was stated as early as 1922 in the League of Nations Report on "Esperanto as an International Auxiliary Language" (adopted by the Third Assembly of the League): "A study of the history of the proposed reforms . . . which are in many points contradictory, leads to a fear that if a new committee of theorists met today . . . it would propose further modifications which, in their turn,

would be criticized at the end of a few years, and so on indefinitely.

"It is in the interest of the world to have one auxiliary language, not two or three, and, from a practical point of view, there is less risk in taking one of which some experience has been gained and which has already attained some tradition and a guarantee of lasting unity."

—WILLIAM SOLZBACHER

ESTONIA. A Baltic country in northeastern Europe, admitted into the Soviet Union on Aug. 3, 1940. Its status as the Estonian Soviet Socialist Republic has not been recognized either by Great Britain or the United States. Total area (1945): 18,525 square miles. Population (1944 est.): 1,131,000. Capital, Tallinn, population, 147,000 (1944). About 70 percent of the population is engaged in farming and dairying. Chief crops are potatoes, rye, oats, barley, and wheat. Butter is produced for export. The most important industrial products are textiles, paper, cement, and shale-oil. In the fourth Five-Year Plan, 3,500,000 rubles were appropriated for the development of Estonian industries. Finance (1947 est.): revenue 849,619,000 rubles; expenditure 922,601,000 rubles.

ETHIOPIA. An empire in northeast Africa, comprising the Abyssinian highlands and adjacent lowland areas to the east, south and west. Its area is around 350,000 square miles—some of the country's boundaries have not yet been delimited exactly.

Population. Estimates of Ethiopia's population vary widely, for there has never been a proper census. The figure is probably somewhere around 10 to 15 million. Addis Ababa (population 800,000) is the capital. Other important cities are Harar (pop. 25,000), Dire Dawa (pop. 30,000), Gondar, and Dessye. The Amharas, who have long constituted the ruling element in the empire, probably number less than 3,000,000. They speak various derivatives of the ancient Ge'ez, a Semitic language introduced from Southern Arabia. Amharic, the most widely used of these modern tongues, is the official language of the Imperial Government. However, various other languages are spoken by the majority of the people: Galla, Somali, Danakil, Arabic, etc.

Religion. The Amharas are Coptic Christians, as are some of the Gallas. The Somali, Danakil, many of the Gallas, and some of the peoples of southwest Ethiopia profess Islam. The city of Harar is the center of Moslem culture for the entire Horn of Africa. The Coptic Church is politically powerful and owns considerable tracts of land. The clergy is numerous, and in the aggregate represents a force opposing progress. Hitherto the Abuna, or head of the Ethiopian Church, has always been an Egyptian appointed and consecrated by the Coptic Patriarch of Alexandria. In the future, however, the archbishop will be a native Ethiopian. Non-Christian religions are not only tolerated, but the Government supports several Mohammedan schools.

Education. Elementary education is provided, primarily for boys, by government and mission schools in the principal cities. So great had been the disruption wrought by the Italian occupation that Ethiopia's educational facilities have had to be rebuilt virtually from the ground up. Many of the educated young men—perhaps as many as 80 percent of them—were killed by the Fascists as a matter of policy. In addition to numerous old-style Church schools, there were, by September, 1945, 171 modern government schools: 28 in Addis Ababa and 143 in the provinces. Those in the

capital included arts and crafts, teacher training, technical and commercial schools. The students attending government schools numbered 31,542.

Production. The small scale production of minerals includes platinum, gold, iron, mica, and rock salt. From time to time explorers and promoters have reported the discovery of deposits of coal, iron and oil. There is considerable potential water power in the rivers, notably the Blue Nile, but this can be harnessed only by sinking large amounts of capital—and the Ethiopian Government has been loath to open the country to foreign speculators.

Stock-raising and agriculture form the main occupations of the people. Both are conducted on rather primitive levels except where European influences have made themselves felt. Very little agricultural produce is exported, each region being largely self-sufficient. The Ethiopian Ministry of Agriculture provided the following estimates in 1945: wheat, 1,700,000 hectares and 420,000 tons of grain; barley, 1,300,000 hectares and 800,000 tons; maize, 1,500,000 hectares and 1,800,000 tons; giant millet, 3,000,000 hectares and 4,500,000 tons; cattle, 12,000,000; sheep and goats, 2,000,000; horses and mules, 2,000,000; camels, 500,000.

Foreign Trade. In 1946-47 imports were valued at £6,899,684; exports at £6,905,372 (excluding specie). Chief exports were cereals, coffee, hides and skins. Cotton goods accounted for 40 percent of all imports, others being salt, sugar, building materials, and manufactured goods.

Finance. For the fiscal year ended Sept. 10, 1945, revenue amounted to £3,933,803 (including a subsidy of £191,576 from the British government) and expenditure to £4,098,330.

Transportation. The only railway goes from Addis Ababa to Jibuti in French Somaliland, a distance of 486 miles. It is owned and operated by a French company. There are over 7,000 miles of roads.

Government. Ethiopia merits the title of empire because it consists of several ancient kingdoms (such as Tigré, Amhara, Shoa and Gojjam) and comprises peoples who are alien in race and culture to the politically dominant Abyssinians of the plateau. The creation of this empire was the work of several generations, reaching its apogee under Emperor Menelik II (1889-1913).

The political and social structure of Ethiopia is still largely feudal, though the present ruler—Emperor Haile Selassie I—has been making some headway against the entrenched conservatism of the aristocracy and the clergy. At least a nominal modification was introduced into the system of absolute monarchy when in July, 1931, Haile Selassie decreed the creation of a Parliament. This body, first convened in November, 1932, consisted of two houses—a Senate and a Chamber of Deputies—all of whose members were nominated and whose functions were merely advisory. The Senate consisted of 27 members chosen from the hereditary chiefs of the provinces, while the Deputies were selected by the Emperor from among civil and military officials. Prime Minister: Bitwoded Makonnen Endalkatchou.

Since his return from exile (May 5, 1941), Haile Selassie has resumed the process of strengthening the central administration and reforming that in the provinces. He has also called in numerous experts from Great Britain, the United States, Soviet Russia and other countries to give advice in various technical fields. He has further sought to create a corps of trained Ethiopians, especially from among the younger men, who will be loyal to him rather than to the feudal chiefs, and on whom he can rely to modernize his state.

Events, 1948. According to the Italian peace treaty that came into force on Sept. 15, 1947, the four principal Powers (the United States, Great Britain, France, and the U.S.S.R.) were given a year in which to agree on the disposition of the colonies in Africa to which Italy, in that treaty, had renounced sovereignty. A four-Power commission was therefore despatched to Somalia, Eritrea, and Libya to investigate conditions on the spot and report back, preferably with recommendations on which the Council of Ministers could act. This commission returned from its survey and drew up reports during the summer. However, they were unable to agree either as to the facts or on what recommendations to make. There were thus four separate reports submitted to the Council of Ministers.

This latter body met in Paris just before the September 15 deadline but was unable to reach any settlement. The issue was therefore, under the treaty stipulations, thrown into the lap of the United Nations General Assembly. No action was taken, however, by this body at its Paris meeting in the fall.

The Ethiopian government was, of course, intensely concerned that the two adjacent colonies of Eritrea and Somalia not be returned to Italy, either as an outright cession or by conferring on her a United Nations trusteeship for these two areas. Not only was Ethiopia opposed to Italy's return to East Africa in any form, but she herself demanded that both colonies be ceded to her. Haile Selassie in particular protested against "appeasing Italy by returning Eritrea and Somaliland to it." On July 30 the Ethiopian representative, speaking before the four-Power commission in London, threatened that, if Italy were given the trusteeship to Eritrea and Somalia, his government would rearm and close her frontiers. Similar warnings were issued to the United Nations by Addis Ababa when the question went to the General Assembly.

In September reliable reports indicated that there was general agreement among the four Powers on allowing Italy to have a trusteeship over Somalia and permitting Ethiopia to acquire an outlet to the Red Sea through the Danakil country and the port of Assab. The British were said to favor giving most, if not all, of Eritrea to Ethiopia under some form of international supervision. The French and the Russians apparently wanted all of Eritrea except Assab and the Danakil area to become an Italian Trusteeship, with the Americans proposing the same solution except that Ethiopia be given a larger part of Eritrea.

Russian intentions toward Ethiopia remained somewhat of an enigma. A Soviet hospital, with 21 Russian doctors, operated in Addis Ababa, and feeble attempts at propaganda were observed. The Ethiopian government employed no Soviet advisers. Nevertheless, there were evidences that the Soviet government was feeling out the ground, economically and politically.

American relations with Ethiopia were complicated by two incidents. On September 13 the Ethiopian Minister in Washington, Ras Imru, was requested to leave the diplomatic section in Constitution Hall at a session of the American Association for the Advancement of Science addressed by President Truman. The Ethiopian Legation protested this insult and refused to accept the U.S. State Department's official explanation—that it was all just a "mistake." Earlier, in August, Governor Dewey had aroused the ire of the Ethiopian Legation by proposing that the former colonies of Italy be returned to her.

In general, however, relations between the two countries were cordial. Ethiopia naturally looked toward the United States for technical and financial assistance in addition to that which she was already receiving. She watched closely the development of the Stettinius scheme in Liberia. Meanwhile, the Sinclair Petroleum Company was preparing to drill for oil in the Ogaden. The Ethiopian government recruited a number of American and Canadian school teachers for its rapidly growing school system during the year.

United Nations agencies also lent a hand to improve conditions in the country. In January the Food and Agriculture Organization (FAO) was preparing to send out three experts in an effort to control animal diseases there. The Director General of this body, Sir John Boyd Orr, stated that "Ethiopia is one of the countries ripe for development. The application of modern science to open up the natural resources of Ethiopia would lead to a rapid increase in food production and a rise in the standard of living of the people." The World Health Organization (WHO), another UN agency, continued its very important work of surveying health and sanitary conditions in the country, and trying to improve them. In October it announced that the Ethiopian government had asked that the WHO mission stay through 1949.

By October 15 the British Administration of Italian Somaliland had completed the evacuation of the Ogaden which it had occupied under treaty with Ethiopia. Thenceforth, the Ethiopian government was responsible for administering the area, which was an integral part of its territory. Early in the fall the authorities at Addis Ababa had to move troops into the northern part of Tigré province, adjacent to Eritrea, in order to quell an uprising said to have been caused by protests at high taxes.

—ROBERT GALE WOOLBERT

EUROPE. A continent in the Eastern Hemisphere, with an area of about 2,079,000 square miles (excluding European U.S.S.R.) and a population estimated at 402,550,000 (excluding the population of European U.S.S.R.) on Jan. 1, 1940.

EUROPEAN RECOVERY PROGRAM (Marshall Plan). On Apr. 3, 1948, President Truman signed into law the Foreign Assistance Act of 1948, based on certain proposals outlined by Secretary of State Gen. George C. Marshall in an address at Harvard University ten months before. The 80th Congress, "... Recognizing the intimate economic and other relationships between the United States and the nations of Europe, and recognizing that disruption following in the wake of war is not contained by national frontiers . . ." had found that the existing situation in Europe "endangered the establishment of a lasting peace, [and] the general welfare and national interest of the United States . . ." and had sent the bill (now Public Law 472) to the President after four months' consideration.

The United States was now pledged "to sustain and strengthen principles of individual liberty, free institutions, and genuine independence in Europe through assistance to those countries of Europe which participate in a joint recovery program based upon self-help and mutual cooperation." The destitute nations of western Europe, hungry for bread, lined up to accept (1) emergency food, (2) money for economic and industrial reconstruction, and (3) marriage with the United States, for better or for worse, in all decisions political, ideological, and economic. Less than three years after the end of actual fighting in World War II, Europe was in

fact split east and west, the countries clinging either to the Communist ideological line or to the United States money life-line.

The Economic Cooperation Administration (ECA) was the agency created to implement the Act. ECA "has the responsibility to promote through provision of aid under the Act and co-operation with the Organization for European Economic Cooperation (OEEC) and other international organizations the most effective use of the economic resources of the participating countries, looking toward their mutual economic recovery." ECA's first administrator was sworn in on April 9: Paul G. Hoffman, president of the Studebaker Corp. and a Republican, was given Cabinet rank.

One week later the temporary organization of the European countries, the CEEC (Committee for European Economic Cooperation, organized in the summer of 1947), was terminated and representatives of 16 nations and the occupying powers of western Germany signed at Paris a multilateral agreement for economic cooperation. A permanent body, the Organization for European Economic Cooperation, was immediately created, with headquarters in Paris, to develop and carry through with the assistance of the United States the combined program for the economic rehabilitation of the European nations. OEEC is an intergovernmental organization headed by a council of ministers—representatives of the western European governments participating in the Recovery Program. The council is a policy-making body, under which is an executive committee consisting of elected experts from ERP countries.

The Program. ERP manifests three broad aims:

1. To promote industrial and agricultural production in the participating countries;

2. To further the restoration or maintenance of the soundness of European currencies, budgets, and finances; and

3. To facilitate and stimulate the growth of international trade of participating countries with one another and with other countries by appropriate measures, including reduction of barriers which may hamper trade.

The Program thus embraces the whole range of economic activities involved in the effort of participating nations to achieve a status of self-support. The attainment of this economic goal requires many fundamental and far-reaching actions on the part of the European governments—including some readjustments which, while bringing the countries to U.S. ground economically, will mean serious rupture of ideologies perhaps native to the countries, certainly strange to the United States, and probably not worth a World War III.

Under the Program each nation determines its goals within the framework of a common plan taking into account the economic capacity of Europe as a whole. Each country assumes the responsibility for planning for comprehensive and cooperative action with respect to agricultural and industrial production, finance, and trade.

Specific Aims. Improvement in the European standard of living is the most important element in the reconstruction project. Also upon the living standard hinges the productive capacity of the workers, and price stability is closely related to it. Although under ERP plans consumption levels of the populations were to remain, in 1948–1949, still appreciably below the prewar figures, there was anticipated, on the whole, a slight improvement over 1947, and the position of countries whose consumption level was seriously low in 1947 was to be somewhat alleviated.

1. Per capita consumption of bread grains was expected to increase by an average of 19 percent in relation to 1947, while still remaining 10 percent lower than that of 1935–1938. The position of certain countries, such as France or Belgium, whose position was particularly bad in 1947 (when per capita consumption had fallen to 50 percent of the prewar level), was expected to be improved.

2. There was to be practically no change compared with 1947 in the consumption level of meat, which would remain 35 percent lower than that of prewar. Certain countries whose situation, again, was particularly bad in 1947 should show an improvement, e.g. Austria where the level was only 30 percent of that before the war, and Italy where it was only 60 percent. Consumption of meat in the Bizone would continue at about 25 percent of prewar.

3. For fats and oils, an average increase of 15 percent over 1947 consumption would still leave the general consumption level at 20 percent below that of 1935–1938. The increase would be more marked in Austria and Belgium whose 1947 consumption levels were only 35 and 60 percent, respectively, of prewar. The Bizone consumption of fats and oils was to be increased by 50 percent compared with 1947 and would thus reach a level approximately 32 percent of prewar.

4. Consumption of sugar, generally speaking, was to remain the same as in 1947. It would increase in Austria, the Bizone, and Iceland, where the consumption in 1947 was 30, 65, and 80 percent, respectively, of prewar.

5. For tobacco, an increase in average consumption per head was expected to reach a level above the prewar average. There was to be a marked increase in the Bizone, Austria, and Belgium, where consumption in 1947 was 25, 35, and 70 percent of prewar.

6. There was anticipated no increase in the consumption of textiles in 1948–1949 as compared with 1947.

Progress in 1948. As 1948 closes, an analysis of reports from the 17 participating countries reveals that:

1. Total output of mines and factories in ERP countries during the third quarter of 1948 was 10 percent above the 1947 rate and nearly equal to the 1938 rate.

2. Excluding the depressed output of western Germany, steel operations were well above the 1938 rate, and equaled the prewar high of 1937.

3. Production of cement, a basic construction material, is far ahead of prewar in every country except Italy and western Germany.

4. Total electric-power production in ERP countries, excluding Germany, is 50 percent above prewar, and railway freight traffic is up about one third.

5. Agricultural crop yields in 1948 are estimated at 20 percent above 1947, though still below prewar.

The position of the consumer has not, however, improved as much as the over-all increase in output might indicate. A larger proportion of available resources is now being channeled into investment than before the war. Consequently, the increases in output have been greater in the capital-goods industries than in the consumer-goods industries. In addition, part of the farm output is being used to build up depleted herds and to reduce imports.

The supply of food and clothing, while greater than a year ago, remains below prewar. In contrast to the gains in such industries as steel and cement, textile output falls short of the prewar average by

25 percent. The food supply has improved over the preceding year but in caloric content is about 5 percent below prewar. In terms of quality and variety the comparison with prewar is still more unfavorable.

While postwar trade recovery has lagged behind production, the ability of western Europe to pay for imports is improving, as exports in 1948 generally increased along with production. Excluding western Germany, the volume of exports and imports now approximates prewar levels. Exports of the most important trading nation, the United Kingdom, have expanded rapidly over the year, reaching a level of 40 percent above prewar in the third quarter of 1948. Imports have been held to 18 percent below the prewar volume. In other countries, however, exports have increased less or have actually declined, and the total remains considerably smaller than before the war. Imports of these countries have generally been falling off over the past year, but are still above prewar levels.

These shifts in trade are reflected, in part, in some reduction in trade deficits through the first three quarters of 1948. An outstanding development was the narrowing of the very large trade deficit with the United States. This was mostly due to a reduction in imports, but a small increase in much-needed exports to the United States helped. Expansion and redirection of trade among the participating countries and with other parts of the world remains a major obstacle to recovery.

ERP ALLOTMENTS AND PROCUREMENT
(Thousands of dollars)

Progress toward monetary stability and the more efficient use of manpower have contributed to the improvement in production and trade. With few exceptions, the participating countries have achieved some success in coping with the disruptive effects of inflation. Rises in both prices and the money supply slowed down significantly in most countries during 1948. Improvements in living conditions, transportation, and supplies of materials and fuels are permitting increased output per worker, although productivity has not generally regained prewar levels. The wartime dislocation of the labor force has been largely overcome, but scattered labor shortages hinder expansion in production. On the other hand, unemployment is serious in Italy and Greece and among displaced persons.

The gains achieved by the participating countries in the early phases of the European Recovery Program must be set against the longer-run task of recovery and stability. To realize this goal, new levels and relationships between production, trade, and consumption are required. While the recovery

trends are encouraging, the participating countries still have many difficulties to overcome before a satisfactory balancing of international accounts is achieved.

EXECUTIVE OFFICE OF THE PRESIDENT. Under authority of the Reorganization Act of 1939 and in accordance with the President's Reorganization Plans No. I and No. II, various agencies were transferred to the Executive Office of the President. The Office now includes: The White House Office, Bureau of the Budget, Liaison Office for Personnel Management, Office for Emergency Management, Council of Economic Advisers, National Security Council, and the National Security Resources Board. Executive Order No. 8248 of Sept. 8, 1939, established the divisions and defined their functions with the exception of: The Council of Economic Advisers which was established by Public Law 304—79th Congress; the National Security Council and the National Security Resources Board which were established by Public Law 253—80th Congress.

EXPLORATION. The year saw numerous expeditions in the field; scientific expeditions in search of prehistoric man, archaeological expeditions to copy the text of the Rosetta Stone, and marine expeditions for the study of the ocean floor. The Antarctic had expeditions from nearly all the countries involved in the Falkland Islands dispute, and Denmark had 14 groups exploring in Greenland.

Africa. One of the largest scientific expeditions ever undertaken is the University of California expedition in Africa. The group of 40 scientists, organized by Wendell Phillips, a young paleontologist on the staff of the university's Museum of Paleontology, represents an investment of \$500,000. The scientists are divided into three groups for study in South Africa, the Kalahari Desert, and North and East Africa. A progress report of 14 months' work in the field, made in November, 1948, reveals numerous finds to shed added light on early civilizations and the origin of man. Among them were a school of fossil whales, a primitive Kenya tribe that lived on a diet of blood and milk, and pygmies and Watusi warriors 8 ft. tall living within a few miles of each other. Evidence was also found that Moses did not lead the Exodus across the Red Sea, but across Reed Sea, to the north. Skeletons of Stone Age man were found in Turkana.

Scientists from Greenwich Observatory reported a solar eclipse in Kenya on Nov. 1, 1948. A brilliant, long-tailed comet was seen by RAF observers during the totality.

The Belgian Congo expedition from the N.Y. Zoological Society yielded rare specimens for their collections, including 3 Congo peafowl (afropavos) and 2 elephant shrews. The Carpenter Expedition worked in the Lake Victoria region; its animal specimens go to the Philadelphia Academy of Natural Sciences.

Asia. Dr. Dillon Ripley of Yale University headed an expedition to Nepal, in search of mammals, birds, and fresh-water fish to complete the American collection relating to the zoology of the Indian continent. Jointly sponsored by the Smithsonian Institution and the National Geographic Society, the expedition planned to be in the field for six months. Dr. Ripley left for India Oct. 6, 1948.

An expedition sponsored jointly by the American Schools of Oriental Research and the University of Michigan went to Iran for the purpose of copying and photographing the inscriptions of the Rosetta Stone of Western Asia. The expedition leader is

Dr. George C. Cameron, professor of Near Eastern Culture at the University of Michigan.

Australia. The 1948 Archbold Cape York Expedition of the Museum of Natural History left for Australia on Jan. 24, 1948. This is the Museum's first major expedition to the Cape York area.

Arctic. Most exciting news from the Arctic during the past year was the discovery, on Aug. 3, 1948, of a cairn at Cape Sheridan on Ellismere Land, left by Comdr. Peary in 1905. A joint Canadian-American weather expedition, Task Force 80, made the discovery of the cairn from a helicopter. The find included a bottle with notes signed by Comdr. Peary and Sir George Nares.

A party of Canadians headed by Paul Serson went to the Arctic to determine the exact position of the magnetic pole. Their observations seemed to confirm the observations made in the previous year, that the magnetic pole is on the northwestern part of Prince of Wales Island. A Canadian survey expedition discovered two hitherto unknown islands off the west coast of Baffin Land, in the Fox Basin. This discovery adds some 5,000 square miles to Canadian territory.

Expeditions to Greenland included the 27th Arctic trip by Donald B. Macmillan to the northwest coast, where he and his University of Michigan co-workers continued their meteorological studies. Of the 14 expeditions sponsored by Denmark for mapping and scientific purposes, the most important was that led by the veteran Greenland explorer Dr. Laue Koch to the northeast coast. In the region of King Oscar Fjord at Lat. 72° N., uranium deposits in large enough amounts for exploitation were found. Pure lead ore was also found in a deposit estimated at 1 million tons.

Paul-Emile Victor headed a large French expedition to the west coast of Greenland. Preliminary work was done along the west coast in the summer of 1948. A permanent base will be established on the icecap in 1949. The 3-year program is termed purely scientific and includes traversing the icecap between Lat. 60° N. and 80° N.

Antarctic. A French expedition left France on November 26 for Adelie Land. Organized by Victor and led by André Liotard, the 48-man party will survey the coast and explore the interior of the plateau. During the year the British Falkland Dependencies Survey completed work on its seven permanent bases and laid plans for the construction of an eighth base on Alexander I Land.

In January a Chilean naval expedition left for Antarctica to establish a base on Graham Land, Chile's third base in the Antarctic territory claimed by Great Britain. Meanwhile the Argentine High Seas Fleet sent its Task Force I to Antarctic waters for maneuvers. Chile's president, Gabriel Gonzalez Videla, went to Deception Island in February, and with appropriate ceremonies claimed for Chile land now under dispute between Great Britain, Argentina, and Chile.

In August, the United States Government proposed the establishment of international control over Antarctica to solve the long-standing international problem created by the overlapping claims of seven nations. Informal discussions have been held with the respective countries, namely Argentina, Australia, Chile, France, Great Britain, New Zealand, and Norway.

The Ronne Antarctic Expedition returned to the United States in April. During the year's sojourn on the Palmer Peninsula, the party mapped some 450,000 square miles along the southern shore of Weddell Sea and established that Antarctica is a solid continent.

South America. The International Institute of the Hylean Amazon was set up by UNESCO in 1948. Headquarters of the Institute were established at Manaus, the former wild-rubber center of Brazil. Preliminary investigations were to include physical geography, biology, social sciences, agriculture, and nutrition.

An ethnological expedition to French Guiana was co-sponsored by the French Government and UNESCO. Captain Hassoldt Davis and his wife returned in November, 1948, from their six-month trip, during which they had made a 500-mile trek to the headwaters of the Maroni River.

Marine. The Swedish Deep Sea Expedition led by professor Hans Pettersson in the M/S *Albatross* completed (in September) a 15-month worldwide study of the deep sea. This was the first such expedition since that of the British in the *Challenger* (1871-76). The journey covered about 44,000 nautical miles, sediment cores were taken from ocean bottoms, and soundings exceeding 25,000 feet taken over the Romanche Deep near the Atlantic Ridge. Trawling was carried out below the 5,500 fathom line and new specimens were taken.

Accompanied by 5 Belgian and French scientists the Piccard-Cosyns expedition left Antwerp on September 15. In a so-called "bathyscope" Piccard and Cosyns planned to descend some 2½ miles below the surface of the sea in the Gulf of Guiana, off the west coast of Africa. The first descent was made by Professor Piccard and a companion on October 26, when a depth of 82 feet was attained during an 18-minute submersion. In a second, and unmanned dive, the bathyscope successfully reached a depth of 4,250 feet, but serious damage to the superstructure prevented any further experiments, and the expedition was terminated.

EXPORT-IMPORT BANK OF WASHINGTON (EIB). Created in 1934, the Bank operates as an independent agency of the U.S. Government under the Export-Import Bank Act of 1945, as amended. The purpose of the Bank is to aid in the financing of the exports and imports of the United States.

The Act of 1945 vested the management of the Bank in a board of directors consisting of the Secretary of State and four full-time directors appointed by the President by and with the advice and consent of the Senate. It also authorized an increase in the limit on outstanding loans and guaranties from \$700 million to \$3,500 million and removed the prohibition on loans by the Bank to governments in default on their obligations to the U.S. Government.

This increase in the lending authority of the Bank enabled it during the early postwar period to extend long-term reconstruction credits to liberated and war-devastated countries to assist them in purchasing from the United States the equipment, materials and services required for the restoration of their economies.

The Bank is authorized to do a general banking business in the field of United States foreign trade; aiding, supplementing and not competing with private capital. It can extend credits to domestic and foreign private entities and to foreign governments where United States trade is involved.

The Bank finances specific export and import transactions on application of U.S. exporters and importers where the nature of the risk involved is such that private credit cannot be obtained. It makes loans to assist in financing the export of U.S. materials and equipment required for development projects in foreign countries. It also arranges in favor of foreign purchasers credits which are avail-

able on equal terms to all qualified U.S. exporters to finance the sale of export staples such as raw cotton.

The cumulative total of credit authorizations increased from approximately \$4,134 million at the close of 1947 to approximately \$4,272 million at the close of 1948. Disbursements during 1948 were approximately \$429 million and repayments were approximately \$261 million. Accordingly, the outstanding loans of the Bank increased from approximately \$1,971 million at the end of 1947 to approximately \$2,139 million at the end of 1948.

—SIDNEY SHERWOOD

EXTENSION SERVICE. A branch of the U.S. Department of Agriculture, functioning in accordance with the Act of May 8, 1914 (Smith-Lever Act). The Extension Service office is composed of administrative and professional personnel serving as the liaison between departmental research and action agencies and the administrative and extension subject-matter staffs at the respective State land-grant colleges. County agricultural, home demonstration, and 4-H club agents are located in nearly all the agricultural counties of the United States. These county extension agents make available to farmers, farm homemakers, and rural youth the results of research conducted by the U.S. Department of Agriculture, the land-grant colleges, and other research agencies. Of the total money that is put into the cooperative Extension Service the Federal government furnishes about 46 percent and the States and counties supply the balance. Director of Extension Work: M. L. Wilson.

FAEROES. A group of 21 islands in the Atlantic Ocean, north of Scotland, constituting a self-governing community of the Danish Commonwealth. Chief islands: Bordö, Kalsö, Osterö, Sandö, Strömö, Suderö, Vaagö, and Viderö. Total area: 540 square miles. Population (1945 census): 29,198. Capital, Thorshavn (on Strömö), 3,611 inhabitants. Fishing is the principal occupation. Exports include fish, whale oil, woolen goods, lambskins, feathers.

Events, 1948. The great event of the year for the Faeroese was the granting of home rule to the islands in April. Henceforth, laws concerning the islands exclusively must be passed by the local Lagting (parliament) before being signed by the King. The Faeroes will continue to send 2 representatives to the Danish *Riksdag* (parliament). The Faero language has been declared official and the islands will have their own flag.

FAIK FOUNDATION, The Maurice and Laura. Established by Maurice Falk in 1929 with the provision that principal, as well as income, must be used within 35 years for such efforts to advance general welfare as the Foundation's Board of Managers might select. The Foundation concentrates on economic research grants for studies of specific problems affecting the progress of the domestic economy of the United States.

In 1948 grants totaled \$390,500. The principal appropriations in 1948 were allotments of \$225,000 to the American Law Institute for studies to recommend changes in the legal structure of the Federal income-tax law; and \$75,000 to the Alfred P. Sloan Foundation, Inc., to share that organization's support of efforts to develop motion-picture techniques for presenting economic information. Grants outside the field of economics included allotments to the American Red Cross, United Jewish Fund, and the Community Chest of Allegheny County, Pa.

Economic studies published in 1948, under grants made in earlier years, included: *Governmental Costs and Tax Levels*, *Industry-Wide Bargaining*, *Economic Systems*, *Our National Debt and Life Insurance*, and *Our National Debt and the National Welfare*. Chairman of the Board of Managers, Leon Falk, Jr.; Executive Director, J. Steele Gow. Offices: 1911 Farmers Bank Building, Pittsburgh, Pa.

FALKLAND ISLANDS. A British crown colony in the South Atlantic, 480 miles northeast of Cape Horn, South America. Area, 4,618 square miles; population (1946 census) 2,239. Capital: Stanley (on East Falkland), 1,250 inhabitants. Chief occupation of the people is sheep farming. Wool is the principal product but tallow and hides are also exported. The number of sheep in 1946 totaled 619,449. Imports (1946) totaled £221,559; exports, £293,913. Finance (1946): £198,879 for revenue and £222,164 for expenditure. The administration is headed by a governor, assisted by an Executive Council and a Legislative Council. Governor: G. Miles Clifford (appointed 1946).

Dependencies. These include all islands and territories between 20° and 50° W., south of 50° S., and between 50° and 80° W., south of 58° S. The chief divisions are South Georgia (1,450 sq. mi.; pop. 360, in 1944), South Shetlands, South Orkneys, South Sandwich Islands, and Graham Land. Estimated population (1944) 360. Whaling is the chief industry. During 1946, exports from the dependencies totaled £931,176, more than 50 percent of which went to the United Kingdom. Finance (1946): revenue £119,084; expenditure £83,660.

FARM CREDIT ADMINISTRATION (FCA). This branch of the United States Department of Agriculture supervises a complete and coordinated cooperative credit system for farmers and farmers' business cooperatives in the United States and Puerto Rico. The United States is divided into 12 farm credit districts. In one city in each district are a Federal land bank, a Federal intermediate credit bank, a production credit corporation, and a bank for cooperatives. The island of Puerto Rico is included in the Baltimore Farm Credit Administration district.

Farmers obtain long-term farm mortgage (land bank) loans through local national farm loan associations (except in Puerto Rico where loans are made direct); and loans for production of crops and livestock from local production credit associations. Loans to farmers' cooperatives for operating capital, to finance commodities stored, and for facilities are made by the 12 district banks for cooperatives or, if large regional cooperatives, by the Central Bank for Cooperatives in Washington, D.C.

In the year ended Dec. 31, 1948, farmers and farmers' cooperatives in the United States and Puerto Rico obtained \$1,749,949,000 in credit from the institutions and associations operating under the supervision of the Farm Credit Administration. Included in this amount were loans totaling \$924,314,000 made by the production credit associations, long-term farm mortgage loans amounting to \$150,530,831 made by Federal land banks through local national farm loan associations, and \$494,678,000 in credit extended by the 13 banks for cooperatives. The 12 Federal intermediate credit banks acting as banks of discount for the production credit associations, banks for cooperatives, and other lenders on agricultural security, made loans and discounts totaling \$1,546,083,000 in 1948.

A farmer who obtains a land bank loan through a national farm loan association becomes a member and buys stock in the association equal to 5 percent of his loan. The association, in turn, invests this money in land bank stock. Borrowers in Puerto Rico buy stock directly in the Baltimore Federal Land Bank. Borrowers from production credit associations also must be members and own stock in their associations equal to 5 percent of their loans. A farmer cooperative borrowing from one of the 13 banks for cooperatives also must own stock in the bank from which it obtains its loan.

Capital stock owned by farmers and farmers' cooperatives in all Farm Credit institutions and associations went from \$116,459,698 on Dec. 31, 1947, to \$128,138,804 on Dec. 31, 1948, an increase of 10 percent. Capital stock owned by members of production credit associations went from \$46,488,483 on Dec. 31, 1947, to \$56,842,038 on Dec. 31, 1948. At the end of the year 52 production credit associations were completely farmer-owned. Capital stock in the 13 banks for cooperatives owned by farmers' cooperatives in the year went from \$13,016,700 to \$15,379,000. Capital stock of the 12 Federal land banks totaled \$55,917,766 on Dec. 31, 1948, all of which was owned by farmer-borrowers either direct or through their national farm loan associations.

Aside from the credit extended through the district offices and associations and by the Central Bank for Cooperatives, the Regional Agricultural Credit Corporation of Washington, D.C., and the Agricultural Marketing Act Revolving Fund have some loans outstanding. The Farm Credit Administration also has a Cooperative Research and Service Division which is engaged in research and service activities helpful to farmers' cooperatives. Governor in 1948: I. W. Duggan.

FARMERS HOME ADMINISTRATION. This agency of the U.S. Department of Agriculture makes loans to assist farm families who cannot obtain credit elsewhere on reasonable rates and terms. Veterans have preference.

In 1948, through October, 112,000 farm-operating loans were made for livestock, machinery and other essentials, and 2,000 loans were made for the purchase, enlargement or development of family-type farms. Also, 430 farm ownership loans advanced by private lenders were insured by the agency. Water facilities loans were made in the West to 786 individual farmers and 24 farmers' groups. Two hundred emergency loans were made from a special appropriation to aid farmers who suffered losses from the 1948 floods.

Veterans who are becoming established in agriculture received 45 percent of the money loaned. The amount paid by all borrowers on past loans far exceeded the \$81,500,000 advanced during the ten months.

County supervisors assisted borrowers to plan and carry out successful farming operations and provide a better living for their families. Their reports showed gains in crop diversification, new sources of income, and widespread adoption of modern practices on the farms. The average borrower has more working capital and higher net worth than before receiving a loan.

FASHIONS. The year 1948 saw designers adapting 1947's New Look along practical lines, modifying it, preserving the grace, but not the cumbersome of the previous year's models. Skirts grew slimmer and daytime hemlines rose from the radical 11 inches to a more sensible 13 or 14 inches

from the ground. Evening hemlines on the popular semiformal gowns still hovered over the ankles, however.

In general, 1948 was a year of dress-up fashions. Stress on femininity in styling, richness of fabrics, and elegance in accessories predominated. Necklines plunged, occasionally to the waist, or were scooped out into the "bateau" or boat-shaped outline. Shoulders were rounded and narrow—the "sloping shoulder" completely replaced squared-off, masculine padding. Back fullness was a notable feature of coat and dress styles. Dresses and suits had a maximum of tasteful detailing—graceful drapings of fabric, shawl necklines, unusual button treatments, accordion pleatings. Hemline flounces recalled the frills of Gay Nineties' dress. Elaborate fabrics, e.g. iridescent taffetas, bengalines, satins, tissue failles and tie silks, achieved almost universal popularity.

Hats again became important after the no-hat trend of previous years. Small bejewelled hats were the rule, perhaps to accommodate the new short hairdos, cropped and curled about mid-ear. Spring hat specialty was the straw "rooftop of Paris" hat—a small, flat ledge of a bonnet, veiled and bowed under the chin. Berets were the biggest all-year fashion, usually brightened by a jewelled emblem or tiny pins added by the wearer herself. Velour, satin, and velvet hats were common, with feathers almost indispensable on fall and winter styles.

Victorian influence was strong in early-year fashions. The stole completely captured feminine imagination and was adopted for casual and formal wear. Fur stoles were all-important; wool, chiffon, silk, and rayon stoles were so popular as separate accessories that dress manufacturers made dresses with stoles to match. Many women knitted their own stoles. Scarfs, too, were worn in every shape and manner; small scarfs were considered smartest.

The Victorian influence was also apparent in handbags. Dainty tapestry and brocade bags were important even for daytime wear. Women's umbrellas took on a nineteenth century air. The long slim walking-stick-handle umbrella was the most chic; parasol umbrellas with ruffles galore were the gayest. Borrowed, too, from grandmother's day were petticoats deliberately designed to hang below the fuller skirts. These were concocted of bright plaid taffetas, of lacy and beribboned cottons, of silks and rayons.

The 1948 cosmetic colors were predominantly pinks. Demure feminine fashions made the brazen reds passé; the sought-after "fragile look" called for pale-hued lipstick, nail polish, and the faintest blush of rouge.

Shoe silhouettes really introduced innovations. Unusually low-cut vampes were the rage, best typified by the "shell shoe," a minimum of shoe whittled down almost to the toes. The curved Louis heel (copied from the Louis XIV court shoe) was a favorite feature of higher priced shoes, but was not much in evidence in the lower price lines. Ballerina shoes modeled after ballet slippers were a favorite until fall, when their advocates weakened, probably due to general masculine disapproval. The opera pump with a pointed toe was the most widely accepted shoe of the year. Low heels were popular with all age groups—usually in dressy styles with low-cut V-vamps, scalloped insteps, leather lacings. The ankle-strap shoe remained a best-seller; open-toe shoes disappeared almost completely.

Straw basket handbags with fabric drawstring tops were an outstanding spring and summer fashion, especially appropriate when worn with casual

bareback-plus-bolero dresses. Summer brought such a wave of gold accessories that the season was often tagged "The Gold Rush of 1948." Gold handbags, shoes, and belts were worn in the cities as well as resort areas, by day and by night. Even bathing suits were shot with gold-colored threads. Silver and bronze accessories appeared.

Tiny scatter pins were the biggest jewelry fad of the year. Flowers and geometrics of simulated pearl and gold, stone-studded bugs, butterflies, and animals were important motifs. Women wore groups of them on suits, hats, handbags, and scarfs. In tune with the elegance and party-like atmosphere of most dresses, simulated pearl jewelry was enormously popular. Long rope necklaces and high chokers were the smartest, but almost every style—and color—of pearl jewelry was worn.

New emphasis on ladylike manners greatly curbed the bareleg boom which had harassed stocking manufacturers during recent years. Most every woman wore her nylon stockings all-year-round. Dark shades—off black, particularly—were in demand. Colored nylons, especially navy and green, were popular in some sections.

September brought an onrush of bogus leopard accessories. Leopard-stencilled velvet, silk, and cotton plush was employed in every conceivable form. Imitation leopard scarfs, stoles, muffs, gloves, belts, and ear-muffs flooded the fashion scene. Entire skirts bore the leopard imprint—raincoats, even lounging robes, showed their spots.

Fall and winter dress fashions were inspired to a great extent by the French Empire period. The high waistline, low-cut neckline, and emphasized bosom which Napoleon's Josephine popularized returned to grace daytime and evening gowns. Needless to say, lingerie played its part in creating the Empire illusion. Half-bras and waistlets were important props for the new silhouette.

Introduction of tweed into fall dress styles was immediately popular. Wool or wool-and-rayon tweeds were usually enriched with velveteen trim. Wool jersey was in great demand for casual wear. Blouse interpretations varied from one extreme—the plunging neckline jersey—to the other, the high "stove-pipe" neckline blouse that buttoned tightly under the chin.

Fall and winter coats were often overshadowed by their own collars. Large shawl collars, sometimes proportioned to cape size, swept elegantly about fur and cloth coats. The reverse fashion, tiny-fur-collar styles, were equally in vogue. Typical of these were the poised, small ermine collar and cuff coats. Recent experimentation in mink mutations produced an amazing range of new mink shades—from blue toned to platinum mink. Black Persian, however, was unchallenged as the year's most popular fur. The stole, the short cape, and the three-quarter coat were highly featured fur silhouettes.

Paris continued to dictate fashion news. In November of 1948, however, Christian Dior, a leading French designer, opened a New York office to wholesale his American-designed fashions. Fashion analysts considered the event significant of the growing importance of New York City as an independent fashion center. —JANE E. COLLINS

FEDERAL BUREAU OF INVESTIGATION (FBI). This Bureau, established in 1908 by Attorney General Charles J. Bonaparte, is the investigative arm of the U.S. Department of Justice. Originally known as the Bureau of Investigation, on July 1, 1935, by Congressional enactment, the name Federal Bureau of Investigation was adopted.

The jurisdiction of the Federal Bureau of Investigation extends generally to all Federal crimes not specifically assigned to another agency of the Federal Government. Specifically, it is charged with the duty of investigating violations of the laws of the United States, collecting evidence in cases in which the United States is or may be a party in interest, and performing other duties imposed upon it by law.

The headquarters of the FBI is located in the Department of Justice Building in Washington, D.C. Field offices are located in strategic cities throughout the United States and its Territorial Possessions. In addition to the administrative offices it maintains in Washington its Identification Division, the FBI Laboratory, the FBI National Academy, and the Uniform Crime Reporting facilities.

The Identification Division serves as a repository for identification data and today maintains the largest collection of fingerprint records in the world. Established in 1924 with a nucleus of 810,188 sets of fingerprints, the Division as of December, 1948, contained more than 111 million sets. The number of fingerprints received in the Division increased from 87,918 in the fiscal year 1924 to 28,733,286 in the peak year of 1943. A total of 5,134,307 sets of fingerprints were received from 12,080 contributors during the 1948 fiscal year. Seventy-eight foreign countries, Territories, and Possessions of the United States cooperated in the International Exchange of fingerprint data during the 1948 fiscal year. At the end of that year the Division had notations in its files indicating that 97,798 fugitives were "wanted" by law enforcement agencies.

The FBI Laboratory, established on Nov. 24, 1932, with one technician and a single microscope, now utilizes valuable precision equipment and employs technicians schooled in 88 branches of science or its subdivisions. The FBI Laboratory serves as a scientific aid in crime detection, its facilities being available without charge to duly constituted law enforcement agencies which may submit evidence to it for scientific examination and analysis. Research is conducted to further aid law enforcement. Techniques developed and perfected in connection with wartime work are presently being adapted to the examination of evidence in criminal cases.

During the 1948 fiscal year 17,471 requests for assistance were made of the Laboratory, 11,343 being in connection with FBI investigations, 368 from other Federal agencies, and the remaining 5,760 from non-Federal law enforcement agencies throughout the nation in connection with the investigation of criminal matters. In connection with these requests the Laboratory received 63,868 specimens of evidence for examination, 46,420 of them in connection with FBI work, 1,659 of them from other Federal agencies, and 15,789 from non-Federal agencies. These specimens required 74,596 scientific examinations of various types, the submission of written reports, testimony in 207 cases, and depositions in lieu of testimony in 7 cases.

The FBI National Academy, founded in July, 1935, is concerned primarily with the training of police instructors and administrators. Applicants for attendance are carefully selected from local, county, and state law enforcement agencies. The Academy offers a 12-week course three times each year. The faculty and facilities used in the training of FBI Agents are utilized, and, in addition, persons in highly specialized fields serve as guest lecturers.

The first ten weeks of training are devoted to a general course in law enforcement. In the final

two weeks the men take specialized training in subjects selected by the heads of their respective departments. Among the graduates of the Academy are representatives from every state in the Union, from the United States Territorial Possessions and from several foreign countries. With the graduation of the Thirty-ninth session of the Academy in October, 1948, the total number of graduates reached 1,913. It is estimated that the training given these men has been made available locally to more than 100,000 police officers.

The type of training afforded in the FBI National Academy is made available locally to law enforcement officers through the medium of FBI Field Police-Training Schools. In all 51 field divisions of the FBI there are specially trained agents who, in addition to their regular investigative duties, act as instructors and course planners for training schools established by municipal, county, or state law enforcement agencies.

The initiative in setting up schools is taken by the local agencies and the FBI participates only upon specific request. Normally most of the instruction is given by FBI agents and FBI National Academy graduates. In a number of instances schools devoted exclusively to fingerprint work were conducted by special agents who are experts in this field. In the 1948 fiscal year the FBI participated in 1,237 local police-training schools with an estimated attendance of 61,850 officers.

In its Uniform Crime Reporting project the FBI, at the request of the International Association of Chiefs of Police and pursuant to an Act of Congress, acts as a central clearinghouse for police statistics on a nation-wide basis. Monthly and annual crime reports forwarded to the FBI reflecting information as to the number of persons arrested, the number found guilty, and related crime data, are summarized and published in the Uniform Crime Reports bulletin. The bulletin, which is published semiannually, also contains information concerning the age, sex, race, and previous criminal history of persons arrested throughout the United States as reflected by the fingerprint cards received in the Identification Division.

The responsibility of the FBI in the criminal field includes the enforcement of such laws as the Federal Bank Robbery Act, National Motor Vehicle Theft Act, Federal Kidnaping Act, National Stolen Property Act, White Slave Traffic Act, Theft from Interstate Shipment Statute, and many others.

All of the 33 kidnaping cases over which the FBI had jurisdiction during the 1948 fiscal year were solved. Sentences of 462 years, 2 days, and 1 life term resulted from the 51 convictions in this category. Since the passing of the Federal Kidnaping Statute in June, 1932, the FBI has investigated 351 kidnapings. Of this number 349 have been solved and the remaining two are still under active investigation.

During the 1948 fiscal year there were 84 robberies, 77 burglaries, and 31 larcenies in banks within the FBI investigative jurisdiction. During this period there were 99 convictions, and sentences imposed totaled 954 years, 11 months, and 21 days. Fines amounting to \$31,673 were levied. Savings and recoveries effected amounted to \$184,517.

During the 1948 fiscal year there were 11,262 automobiles recovered in National Motor Vehicle Theft cases investigated by the FBI. This Act, which became effective on Oct. 29, 1919, provides punishment for persons who transport in interstate commerce any motor vehicle which they know to be stolen. On Sept. 24, 1945, the Act was amended

to include aircraft. A total of 4,452 convictions resulted from cases in this category investigated by the FBI. Sentences totaled 12,155 years, 6 months, and 18 days. Fines in the amount of \$82,831 were levied and savings and recoveries amounted to \$13,403,893.

Criminal activities involving theft from interstate shipment continued to be a serious menace during the 1948 fiscal year. The investigation of crimes in this category by the FBI resulted in 973 convictions during this period. Total sentences imposed amounted to 2,359 years and 20 days. Fines of \$62,797 were levied and savings and recoveries totaled \$606,561.

The National Stolen Property Act makes it a Federal offense to transport in interstate or foreign commerce any stolen goods valued at \$5,000 or more. It also provides punishment for the interstate transportation of any altered, falsely made, forged, or counterfeit security of any value, and it has a pledging section covering stolen property valued at \$500 or more, which is transported across state lines and pledged. The number of convictions during the 1948 fiscal year more than doubled that of the previous year.

Among those brought to trial in FBI cases were many professional confidence men, jewel thieves, and fraudulent check artists who were operating on a nation-wide basis. There were 345 convictions in the past fiscal year, with prison sentences totaling 1,071 years, 10 months, and 19 days. Fines totaled \$24,652. Savings and recoveries effected amounted to \$192,186.

The Federal Extortion Statute makes it a Federal offense to send through the mail or to transmit interstate by any means a communication threatening to kill, kidnap, or injure an individual or his property, or demanding ransom for the release of a kidnaped person. Since the Act was passed on July 8, 1932, 1,284 convictions have resulted from investigations conducted by the FBI. During the 1948 fiscal year there were 89 convictions, with sentences totaling 282 years, 6 months, and 5 days. Fines levied amounted to \$3,401.

The FBI, since September, 1939, has had the primary responsibility of collecting information relating to the general internal security of the Nation. During the 1948 fiscal year, the FBI handled an unusually large volume of work in this field, collecting and disseminating to other government agencies security information relating to their official interest. Special security operations handled by the FBI largely involve applicant and employee investigations. The bulk of the work derives from Acts of Congress or Presidential Orders in which the FBI is specifically designated to make security, character, or loyalty checks. Most notable of these are the Atomic Energy Act of 1946 and the Federal Employee Loyalty Program.

The Atomic Energy Act of 1946 approved by the President on Aug. 1, 1946, gives the FBI responsibility for determining the character, association, and loyalty of all Atomic Energy Commission employees and applicants and of all other persons having access to restricted Atomic Energy data. The FBI is also responsible for investigating all alleged criminal violations of the Act. At the close of the 1948 fiscal year the program of investigating incumbent employees of the Atomic Energy Commission and of contractors' employees who had access to restricted data was more than 95 percent complete.

On Mar. 21, 1947, the President signed Executive Order Number 9385 outlining procedures for the administration of a Loyalty Program covering

all civilian employees and applicants in the Executive Branch of the Government. This order was implemented by a Congressional Act on July 24, 1947. The FBI was required to search through its files the names and fingerprints of all employees and applicants for positions in the Executive Branch of the Government and to report any information indicating disloyalty to the American form of government which is found. If a search discloses information of this type, the FBI conducts full field investigations. The facts collected are reported without bias, conclusions, or recommendations.

It is the responsibility of the employing agency and the Loyalty Hearing Boards to weigh the facts and to take or decline administrative action. In the 11 month period from Aug. 1, 1947, to June 30, 1948, a total of 2,020,975 loyalty forms on employees and applicants were processed. Full field investigations were ordered in 5,510 cases. Of the 2,632 investigations completed there were 438 cases where employees resigned during investigation. Processing forms on individuals applying for government jobs will continue.

As a result of FBI investigations during the 1948 fiscal year, there were a total of 9,966 convictions. These resulted in sentences of 24,671 years, 4 months, and 14 days. In addition there were 6 death and 10 life sentences. There were 5,250 fugitives located in all cases investigated by the FBI. Of all persons brought to court in FBI cases, 97.1 percent were convicted, 93.3 percent of the convictions being on pleas of guilty. During the 1948 fiscal year as a result of FBI investigative activity returns to the taxpayers totaling \$54,327,283 were effected in fines, savings, recoveries, and Renegotiation Act claims adjusted in favor of the government. This figure exceeds by more than \$5 million the entire cost of all FBI operations during the 1948 fiscal year.

—JOHN EDGAR HOOVER

FEDERAL COMMUNICATIONS COMMISSION (FCC). Federal Communications Commission activities in 1948 were highlighted by review and revamping of existing radio services in an effort to find spectrum space to meet mounting demands for frequencies. The Commission also played an increasingly active role in world conferences to standardize practices and usages in international communications.

International interest was focused on 35 radio and other sessions, held or proposed, to enable various nations to work out mutual communications problems. Most of these stem from the International Telecommunications Conferences of 1947, which rewrote previous world agreements in the light of developments. Besides doing a large share of the preliminary work, the Commission furnished delegates or advisers to these sessions.

Domestic regulation involved 676,000 radio authorizations of all kinds. Of this number, 535,000 were radio operators, and 141,000 were radio stations. Not included in the station figures were about 150,000 mobile units associated with various nonbroadcast services. Applications relating to radio exceeded 200,000.

Broadcast authorizations exceeded 4,000. The older standard (AM) commercial service led with more than 2,100, followed by nearly 1,000 frequency modulation (FM) stations, and 125 television (TV) stations. The remainder comprised international, educational, facsimile, experimental and developmental stations. Texas and California led all States in the number of commercial broadcast station authorizations.

The period since Jan. 1, 1948, witnessed a sudden surge in TV applications. The latter exceeded

the presently available frequencies. As a result, the Commission on September 29 withheld action on TV applications pending a determination of the possible use of higher frequencies for television and to resolve current interference to TV stations in the present band.

FM service continued to expand with the result that its static-free high-fidelity programs can now be heard in most of the populous areas of the country.

AM broadcast income in 1947 (the most recent year for which statistics were available) was less than the year previous, though the major networks showed a gain. Slightly more than 1,100 AM stations were affiliated with the four nation-wide networks, and there were more than a score of regional AM networks. Under the impetus of re-broadcast opportunities and expanding coaxial cable and microwave facilities, FM and TV networks were developing. Broadcast receivers of all types were nearing the 75,000,000 mark.

Noncommercial educational broadcast station authorizations were nearing 50, and international broadcast stations (under State Department supervision) remained at 37. Rules to permit low-powered educational FM broadcasting became effective September 27.

Facsimile made its debut as a regular broadcast service on July 15, 1948, when its operation over FM stations was authorized. It had previously been on an experimental basis.

Safety and special radio services numbered some 136,000 authorizations, including over 81,000 amateur stations. A new highway maintenance service was inaugurated during the year. The largest increase took place in the aeronautical field, which had some 25,000 stations. Marine services accounted for 17,200 ship and shore stations. Public safety stations—such as police, fire, forestry, highway and special emergency, numbered 5,150. There were about 3,600 railroad transit, utility, bus and taxicab stations. Petroleum, lumber and other industries accounted for 3,500.

A proposed Citizens Radio Service, which will permit the use of small transmitter-receivers by individuals, awaited final rule-making. New classes of Industrial and Land Transportation services are in prospect.

Common carrier services had more than a thousand radio authorizations, including 27 fixed public telephone and 56 public telegraph stations. Common carrier regulation by the Commission covers interstate and international service. More than 3,100 applications and nearly 30,000 tariff and other filings were received by the Commission in connection with this phase of its work.

Telephones in service exceeded 36,000,000. The Bell system handled 36,000,000,000 calls.

There were no material interstate rate reductions during the year. However, State utility commissions had since the war granted increases of \$138,000,000 in interstate rates, and requests for increases totaling \$66,000,000 were pending before those state bodies.

During the year the FCC authorized the use of telephone recording devices, with appropriate tone-warning signal, for interstate and international service.

Nearly 8,000 miles of coaxial cable, representing an investment of \$170,000,000, had been authorized for the Bell system. This cable can accommodate many types of communication services, including television.

Telephone carriers had made or were making mobile telephone service available in nearly 100

cities, and highway service was operating or planned in more than 130 areas.

Overseas telephone service was reestablished with four countries and inaugurated for the first time with seven other countries. About 570,000 overseas radiotelephone calls were handled as compared with 50,000 before the war.

Telegraph regulation dealt mainly with Western Union, which now has a monopoly in that field, and with international radio and cable telegraph carriers. Western Union was carrying out its \$72,000,000 mechanization program, including a microwave triangle connecting New York, Philadelphia, Washington and Pittsburgh.

Repeal, during the year, of the Post Roads Act resulted in the Federal Government losing the benefits of special telegraph rates on its domestic traffic.

Cable and radio telegraph carriers handled more than 656,000,000 paid words, of which more than half was outbound.

To meet the urgent revenue needs of international telegraph carriers, the Commission granted two outbound rate increases totaling \$8,673,000. The revised rates do not exceed 30 cents a word.

Radio operators in commercial service numbered 363,000 and amateurs exceeded 80,000. Special aircraft operator authorizations amounted to over 91,000. As a convenience to private flyers, the latter are issued at air fields.

Field engineering and monitoring activities, conducted through 83 field offices and 21 monitoring stations, dealt primarily with technical supervision of radio operation. Nearly 30,000 ship and land stations were inspected; 17,000 violation and other notices served; 22,000 interference cases handled, and 153 illicit operations detected and closed. Operator examinations, largely given in the field, approximated 100,000.

Technical studies covered possibilities of using higher frequencies, effects of wave propagation, skywave reflections, ground conductivity, signal intensity, harmonics, directional antennas, etc.

Laboratory work centered on the testing of new equipment submitted by manufacturers for type approval prior to being placed on the market. In this way, many potential interference problems are dealt with before they materialize. Commission membership change during the year saw the induction of the first woman to serve as a member of the FCC—Miss Frieda B. Hennock.

—GEORGE O. GILLINGHAM

FEDERAL COUNCIL OF THE CHURCHES OF CHRIST IN AMERICA. An organization established in 1908 by 28 Protestant denominations to act for them in matters of common interest. The Council now includes most of the major Protestant denominations of the United States, and also 3 branches of the Eastern Orthodox Church.

Through Church World Service, Inc., created by joint action of the Council and the Foreign Missions Conference of North America, shipments of about one million dollars a month were made to Europe and Asia for distribution by church agencies. A new department of the Church and Economic Life was created. This was the outgrowth of a national study conference held in 1947.

Religious broadcasting over 3 national networks continued to be an important responsibility of the Council. In evangelism, special emphasis was given to interdenominational missions on college and university campuses. In the social service field major attention was given to family problems. A survey of the work of the Protestant churches for aged

was begun. The relation of the churches to international issues was a prominent objective of educational effort in the Council. Interracial cooperation and the rights of minority groups was also a main point of interest.

Publications: Information Service, Federal Council Bulletin (monthly), *Interracial News Letter* (bi-monthly), and *Town and Country Church*.

Officers: President, Charles P. Taft. Vice President, Bishop John S. Stamm. Treasurer, Harper Sibley. General Secretary, Rev. Samuel McCrea Cavert. National offices: 297 Fourth Ave., New York 10, N.Y.; also Woodward Building, Washington 5, D.C.

FEDERAL CROP INSURANCE CORPORATION. The Federal Crop Insurance Corporation, an agency of the U.S. Department of Agriculture, is developing a system of insurance protection for farmers against major crop losses from unavoidable production risks such as weather, insects, and plant diseases.

Considerable latitude is given the Corporation to experiment with plans and methods. The basic problem in developing a sound system of crop insurance is to attain the proper relationship on a long-range basis between protection provided and premiums paid. Premiums paid by farmers are used only to pay indemnities on crop losses with administrative funds provided by direct appropriation. Coverage on a farm for any crop may not exceed 75 percent of the average yield established for the farm or the general level of the cost of producing the crop in the area.

The 80th Congress amended the Federal Crop Insurance Act to establish a maximum number of counties in which insurance on each commodity may be offered. These maximums are 200 counties for wheat, 56 for cotton, 50 for corn, 50 for flax, 35 for tobacco, and 50 for any new trial programs that may be initiated.

FEDERAL DEPOSIT INSURANCE CORPORATION (FDIC). An independent agency of the U.S. Government, organized under the Banking Act of 1933 to insure the deposits of all banks which are entitled to the benefits of insurance under the law. The major functions of the Corporation are to pay off the depositors of insured banks closed without adequate provision having been made to pay claims of their depositors, to act as receiver for all suspended national banks and for suspended State banks when appointed by State authorities, and to prevent the continuance or development of unsafe and unsound banking practices. The Corporation may also make loans to or purchase assets from the insured banks when such loans or purchases will facilitate a merger or consolidation and will reduce the probable loss to the Corporation.

On June 30, 1948, total assets of the Corporation amounted to \$1,023,383,000. Liabilities amounted to \$5,966,000. Total capital and surplus of \$1,017,417,000 consisted of \$22,604,000 balance of the original capital of \$289,300,000 and an accumulated surplus of \$994,813,000. The original capital stock of the Corporation which had no vote and was not entitled to receive dividends, has been retired under provisions of Public Law 363 from the surplus of the Corporation in excess of \$1,000 million. On Sept. 9, 1947, the original subscription by the Federal Reserve banks, amounting to \$139,300,000 was retired in full and in addition, \$7,396,000 out of \$150 million of stock held by the United States Treasury was repaid. Additional payments in multiples of \$10 million were made as the money became available. On

Aug. 30, 1948, final payment of \$12,604,000 was made.

Of the 14,772 operating commercial banks and trust companies in the United States and possessions on June 30, 1948, deposits in 13,420 banks were insured by the Federal Deposit Insurance Corporation. Of the 532 mutual savings banks, 193 were insured by the Corporation.

Federal credit unions were supervised by the Federal Deposit Insurance Corporation from May 16, 1942, to July 29, 1948, when the supervision of all Federal credit unions was transferred to the Federal Security Agency. On June 30, 1948, there were 3,942 operating Federal credit unions. Share balances in credit unions have never been insured by the Corporation. Chairman in 1948: Maple T. Harl.

FEDERAL MEDIATION AND CONCILIATION SERVICE.

The Federal Mediation and Conciliation Service, an independent agency, was created by the Labor Management Relations Act, 1947. Principle objective of the Service is to prevent or minimize interruptions of the free flow of commerce growing out of labor-management disputes by assisting the parties to settle such disputes through conciliation and mediation.

In carrying out its duties the Service places primary emphasis upon the prevention of disputes and the promotion of the collective bargaining process. Normally, the Service provides mediation and conciliation services in specific disputes only when there is threatened such a significant interruption of commerce as clearly to require Federal intercession. Employers and unions are encouraged to resolve industrial differences by themselves without the aid of the Federal Government.

Under section 8(d) of the Labor Management Relations Act, 1947, employers and unions are required to file with the Service a notice of every dispute affecting commerce not settled within 30 days after prior service of a notice to terminate or modify an existing contract. The parties are required at the same time to notify the respective state or territorial agency of the existence of such a dispute. The Service cooperates fully with state and other conciliation agencies and suggests to the parties the utilization of such facilities to the greatest possible extent.

The Labor Management Relations Act, 1947, also established the National Labor-Management Panel, the duty of which is to advise the Director of the Service on the avoidance of industrial controversies and the manner in which mediation and voluntary adjustment shall be administered, particularly with reference to controversies affecting the general welfare of the country.

The Service has a staff of about 240 active conciliators operating through twelve regional offices under the guidance of a very small national office staff.

During the calendar year 1948 the Service received approximately 20,000 calls for its services. Of this number only about 12,000 cases were properly within the jurisdiction of the Service.

FEDERAL POWER COMMISSION (FPC). An independent agency of the United States Government, first established in 1920, which has jurisdiction to license hydroelectric power projects on navigable waters of the United States or on public lands, to regulate electric utilities engaged in the transmission or sale at wholesale of electric energy in interstate commerce and natural-gas companies engaged in the transportation or sale of natural gas

for resale in interstate commerce. The Commission also has miscellaneous authority with respect to public power projects under the Bonneville Act, the Fort Peck Act, various rivers and harbors and flood control acts and other statutes and executive orders. Chairman: Nelson Lee Smith.

FEDERAL RESERVE SYSTEM. Board of Governors: Thomas B. McCabe, chairman; Marriner S. Eccles, M. S. Szymczak, Ernest G. Draper, R. M. Evans, James K. Vardaman, Jr., Lawrence Clayton. Address: Washington 25, D.C. Reserve Banks are maintained in Boston; New York; Philadelphia; Cleveland; Richmond; Atlanta; Chicago; St. Louis; Minneapolis; Kansas City, Mo.; Dallas; and San Francisco.

The Federal Reserve System was established (1913) under an Act of Congress for the purpose of providing a central supervisory authority over banking and currency. The System comprises the Board of Governors; the Federal Open Market Committee; 12 Federal Reserve Banks and their 24 branches situated in different sections of the country; and the Federal Advisory Council. All national banks are members, and State banks and trust companies which apply for and are admitted to membership upon complying with certain prescribed conditions.

The Board is composed of seven members appointed by the President and representing financial, agricultural, industrial and commercial interests from various sections of the country. No two members may be from the same Federal Reserve district. The principal duties of the Board consist of exerting an influence over credit conditions, in order to avoid injurious credit expansion or contraction, and supervising the Federal Reserve Banks and member banks. It is authorized to change the requirements governing reserves maintained by member banks against deposits, and to review and determine the discount rates charged by the Federal Reserve Banks on their discounts and advances. To curb undue diversion of funds into speculative operations, the Board has authority to regulate the amount of credit that may be initially extended and subsequently maintained on any security (with certain exceptions) registered on a national securities exchange. Until June 30, 1949, the Board has authority to regulate the use of credit for instalment buying.

Other duties of the Board include supervision of the issue and retirement of Federal Reserve notes; regulation of interest payments by member banks on time and savings deposits; and regulation of international or foreign banking by member banks. It has authority to remove officers and directors of member banks for continued violations of law or unsafe or unsound practices in conducting the business of their banks. It also may suspend member banks from the use of the credit facilities of the Reserve System for making undue use of bank credit for speculative purposes or for any other purpose considered inconsistent with the maintenance of sound credit conditions. To meet its expenses and pay the salaries of its members, the Board makes semiannual assessments upon the Reserve Banks in proportion to their capital stock and surplus.

The capital stock of the Reserve Banks is all "owned" by the member banks, as required by law, and may not be transferred or hypothecated. Member banks are required to buy stock of the Reserve Bank of their district in an amount equal to 3 percent of the subscribing bank's paid up capital and surplus. The Federal Reserve Banks

are primarily bankers' banks. Their principal activities consist of holding the reserves which member banks are required to maintain, supplying banks with currency and coin as needed, providing a nationwide check clearing and collection system, making loans to member banks, engaging in open market operations as referred to below, making transfers of funds by wire, and acting as depositaries and fiscal agents of the United States.

Federal Open Market Committee. All members of the Board of Governors of the Federal Reserve System also serve on the Federal Open Market Committee, whose membership also includes five representatives of the Reserve Banks. The Committee regulates open market operations conducted by the Reserve Banks with a view to accommodating commerce and business and with regard to their bearing upon the general credit situation of the country. These open market operations consist of the purchase and sale in the open market of Government obligations, certain other securities, and bills of exchange and bankers' acceptances eligible for discount by the Reserve Banks.

Federal Advisory Council. The Council is composed of 12 representative bankers, one from each Federal Reserve District, who are selected annually by the boards of directors of the respective Federal Reserve Banks. It meets in Washington at least four times a year and confers with the Board of Governors on business conditions and makes advisory recommendations to the Board regarding the affairs of the System.

FEDERAL SECURITY AGENCY (FSA). An Agency of the U.S. Government, established in 1939 to promote "social and economic security, educational opportunity, and the health of the citizens of the Nation." The constituent organizations of the Agency are the Office of Education; the Public Health Service (including Freedmen's Hospital); the Social Security Administration; the Office of Special Services, which includes the Food and Drug Administration, Office of Vocational Rehabilitation, and Bureau of Employees' Compensation; and Saint Elizabeths Hospital. The Agency also participates in the work of Howard University, the Columbia Institution for the Deaf, and the American Printing House for the Blind. Operations of the Agency are under the direction of the Federal Security Administrator.

On July 1, 1948, the United States Employment Service was transferred from the Department of Labor, and on July 29, the Federal Employees' Credit Unions from the Federal Deposit Insurance Corporation, to become part of the Social Security Administration.

A reorganization of the regional offices of all the constituent units resulted in the establishment on July 1, 1948, of a single system of 10 Federal Security Agency Regional Offices, each under the direction of a Federal Security Regional Director.

The FSA's Office of Education is charged by Congress "to collect and diffuse educational facts and statistics to show the condition and progress of education" and "to promote the cause of education throughout the country." For the fall of 1948, it reported a record school and college enrollment of nearly 32 million. Peak enrollments will continue through 1956, when high birth-rates during and after the war will swell the total by 7 million. High schools graduated 1,056,000 this year, the highest number since before the war.

Emphasis in elementary schools was on building curricula around the needs of the children rather

than around formal discussion matter. At the secondary school level, the stress was on "life adjustment education for youth" to reach the 60 percent of high school students not going on to college or into a skilled trade. There was also stimulation of citizenship education through a Nation-wide Zeal for American Democracy program, and promotion of school health, guidance, and adult education programs. The Federal-State program of aid to vocational education continued during the year.

Progress was impeded by the teacher shortage, which was especially acute at the elementary level and in rural areas. The need for more buildings to accommodate growing school and college enrollments, and for properly lighted, well-equipped classrooms to serve modern education needs was emphasized. There was continued effort to make the public more aware of school conditions, to recruit more and better-qualified teachers, and to improve education generally.

For the operations of the FSA's Public Health Service during fiscal 1947-48, Congress provided almost \$192.5 million. Of this amount, almost \$114.5 million was for grants-in-aid to States; \$3.6 million to schools of nursing; \$12.3 million to universities and institutions for research and fellowship programs; \$2.7 million to initiate construction of a clinical research center; and nearly \$60 million for programs operated directly by the Service.

The Water Pollution Control Act, approved June 30, 1948, established a Federal-State-municipal program to combat the increasing pollution of interstate waters. Among its provisions is authorization for the next five years of an annual appropriation of \$22.5 million to be used for loans for the construction of necessary sewage treatment works.

During the year, a major control program was initiated in mental health. This supplemented the special control programs already active in cancer, venereal disease, tuberculosis, and industrial hygiene, and the general control programs supported with grants-in-aid money. As a part of the tuberculosis control program, assistance was given in a series of mass case-finding surveys, in which over a million X-rays were taken.

Emphasis in the venereal disease control program was in assisting States in the operation of rapid-treatment centers employing penicillin therapy, and in improving case-finding methods. In dental health, the effectiveness of the topical fluoride technique in reducing dental caries in children was established. As a result, Congress appropriated \$1 million, beginning July 1, 1948, to provide for a number of topical fluoride demonstration units in the States.

The expansion of research activities in particular diseases resulted in changing the name of the National Institute of Health to "National Institutes of Health." These now include the National Heart Institute and National Institute of Dental Research, which were established by Congress in 1948, as well as the National Cancer Institute and the Experimental Biology and Medicine Institute. For fiscal year 1947-48, Congress increased the Cancer Institute's appropriation to \$14 million, compared with \$4.3 million, the previous year. A new provision provided for expanded Federal aid for teaching about cancer in professional schools.

Among the achievements of research workers in the Service during the year were the isolation of one specific virus causing the common cold; demonstration that the addition of niacin to the diet of animals resulted in the correction of certain blood diseases; development of promising drugs and antibiotics for the treatment of tuberculosis; discovery,

in the testing of many synthesized chemical compounds, of 50 chemotherapeutic agents that produced destructive effects on tumors in mice; and demonstration of significant reductions in the incidence of diarrhea through effective fly control.

During the year, the National Mental Hygiene Program was enabled to increase its assistance to schools for the training of psychiatrists, psychologists, and other personnel.

In 1948, the construction phase of the program authorized by the Hospital Survey and Construction Act of 1946 gained momentum. Plans of 52 States and Territories had been submitted and approved. The Act authorizes approximately \$75 million annually to assist States and communities in the survey and construction of hospitals and health centers.

Under the social security program, there was an increase in the number of recipients of old-age and survivors insurance, which is financed by payroll deductions on both employers and workers. In July, 1948, the number of recipients was 2,182,000, compared with 1,855,000 at the same time in 1947. About 37 million workers are in jobs covered by the law; about 23 million are still in uninsured jobs.

Principally because of the high cost of living, the number of recipients of public assistance, which is financed jointly by the Federal Government and the States, remained high. Many recipients of old-age and survivors insurance found it necessary to turn to public assistance for supplemental help. Recipients of the three types of public assistance (old-age assistance, aid to dependent children, and aid to the blind) in September, 1948, totaled 3,691,517, compared with 3,415,282, one year prior. During 1947-48, some 3.8 million workers received benefits under the unemployment insurance program, averaging around \$18 a week for 11 weeks.

The Children's Bureau continued its function of investigating and reporting "upon all matters pertaining to the welfare of children and child life among all classes of our people," and of administering Federal grants to the States to assist them in developing State and local services for children. In 1948, these grants, which supplement State and local expenditures for this purpose, totaled \$22 million, which included \$11 million for maternal and child health services; \$7.5 million for services for crippled children; and \$3.5 million for child welfare services. The Bureau published a widely used series of bulletins for parents, including *Infant Care*, *Your Child From One to Six*, *Your Child From Six to Twelve*, and *Guiding the Adolescent*.

The year 1948 was the most successful in the 28-year history of the State-Federal program of vocational rehabilitation. A record high of 53,000 disabled men and women were fully rehabilitated to gainful employment; another 9,000 were awaiting only a final decision that they and their employers were mutually satisfied; and a third group of over 7,000 were ready to enter self-sustaining employment. Earnings of rehabilitated persons rose from \$17 million annually before to \$86 million the first year after rehabilitation services. In the past five years, these services resulted in an estimated increase of \$900 million in earned income for rehabilitated persons, who paid an estimated \$75 million into the Federal Treasury in income taxes alone.

During fiscal year 1947-48, the FSA's Food and Drug Administration examined nearly 50,000 samples of foods, drugs, and cosmetics shipped in interstate commerce and conducted some 13,000 factory inspections to determine compliance with the

law. It initiated over 1,600 court actions through the Department of Justice, involving food adulteration, harmful drugs, and cosmetics, and false and misleading labeling. It reported the greatest number of substantial fines ever assessed by Federal courts in such cases. Of particular importance were a Supreme Court decision in January, 1948, and an amendment to the Food, Drug, and Cosmetic Act in June, 1948, which established the jurisdiction of the Act to carry its protective features through to the ultimate consumer.

The continuing concern of the Federal Security Agency is for the conservation and development of the human resources of the Nation. Its success is measured by the extent to which the Nation can provide for its citizens opportunities for education, safeguards against sickness and disease, and protection against the uncertainties of employment and the economic hazards of disability and old age.

—OSCAR R. EWING

FEDERAL SUPPLY, Bureau of. A Bureau of the U.S. Treasury Department which determines policies and methods of procurement, warehousing, and distribution of supplies, materials, equipment, and services for Federal establishments. It procures, inspects, stores and distributes such items for Federal establishments through its central office in Washington and its nine Supply Centers and two branch Supply Centers located in Boston, New York, Atlanta, Cleveland, Chicago, Kansas City, Fort Worth, Denver, Los Angeles, San Francisco and Seattle. In addition it prepares purchasing standards, such as Federal Specifications, and standard forms of contract, for use of Federal establishments; purchases strategic and critical materials for inclusion in the National stockpile and controls the distribution of surplus personal property of Federal establishments. The Bureau also makes purchases of a large variety of commodities for the relief and rehabilitation of countries devastated by the war. Director, Bureau of Federal Supply: Clifton E. Mack.

FEDERAL TRADE COMMISSION (FTC). An administrative agency of the U.S. Government, established in 1914, and consisting of five Commissioners appointed by the President with the advice and consent of the Senate. It administers the Federal Trade Commission Act; certain sections of the Clayton Antitrust Act, as amended by the Robinson-Patman Act; the Wool Products Labeling Act; the Export Trade Act; and certain sections of the Lanham Trade-Mark Act. Under these statutes, the duties of the Commission, in general, are: (1) to promote free and fair competition in interstate trade in the interest of the public through prevention of price-fixing agreements or combinations, boycotts, injurious price and other unlawful discriminations, and other practices which are in restraint of trade or which otherwise constitute unfair methods of competition or unfair or deceptive acts or practices; (2) to safeguard the consuming public by preventing the dissemination of false advertisements, including those relating to food, drugs, cosmetics and therapeutic devices which may be injurious to health; (3) to protect industry, trade and the consumer against the unrevealed presence of substitutes and mixtures in wool products; (4) to supervise the operations of export trade associations granted exemption from the antitrust laws; (5) to apply to the Commissioner of Patents for cancellation of trade-marks obtained fraudulently or in violation of other provisions of law; and (6) to conduct investigations of economic conditions

in interstate and foreign commerce and to make the resulting facts available to the President, the Congress and the public.

During the fiscal year 1948 the Commission issued 70 formal complaints alleging violations of the laws under its jurisdiction, entered 73 orders to cease and desist from proved violations, and accepted 110 stipulations in which respondents voluntarily agreed to discontinue unlawful practices. Trade practice rules, by which unfair practices may be eliminated voluntarily on an industry-wide basis, were promulgated for the watch case, office machine marketing, wholesale confectionery and hand knitting yarn industries.

Reports to Congress covered investigations of the merger movement; steel cartels; international electrical equipment cartel; and manufacture and distribution of farm implements. The Commission also continued, in collaboration with the Securities and Exchange Commission, the publication of quarterly reports disclosing the financial characteristics and operating results of American manufacturing corporations. Chairman (1948): Robert E. Freer. Other Commissioners: Garland S. Ferguson, Ewin L. Davis, William A. Ayres and Lowell B. Mason.

FEDERAL WORKS AGENCY (FWA). An agency of the U.S. Government comprising three constituents which are concerned with the provision and financing of public works and services, namely, Public Buildings Administration, Public Roads Administration, and the Bureau of Community Facilities. Six projects of the former Public Works Administration are now in process of liquidation in the Office of the Federal Works Administrator. Administrator in 1948: Maj. Gen. Philip B. Fleming.

FENCING. Spirited competition in sectional and national meets, which served as trials for the Olympics, marked the sport in 1948. See OLYMPIC GAMES.

Nathaniel Lubell of the Fencers Club, New York, won national foil honors. Norman Lewis of Salle Santelli, New York, led the epee stars and Dean Cetrulo of Salle Santelli took the saber crown. Team champions were New York A.C., foil; Salle Santelli, epee, saber, and three-weapon.

Mrs. Helena Dow of the Fencers Club retained the women's national title, the Faulkner School of Fencing, Hollywood, Calif., capturing team honors. Diane Greenberg, New York University star, won national intercollegiate laurels as Hunter College kept the team championship. Estelle Osher of Brooklyn College successfully defended her Intercollegiate Women's Fencing Association laurels.

City College of New York and the Naval Academy just about monopolized the men's intercollegiate trophies. In the National Collegiate Athletic Association championships, the winners were Albert Axelrod, C.C.N.Y., foil; Bill Bryan, Navy, epee; Jim Day, Navy, saber, and C.C.N.Y., team. Intercollegiate Fencing Association victors were Axelrod, foil; C.C.N.Y., foil team; Bob Kaplan, New York University, epee; Navy, epee team; Day, saber; Navy, saber team, and C.C.N.Y., three-weapon.

—THOMAS V. HANEY

FIIJ. A British colony in the South Pacific, due east of northern Australia, consisting of some 250 islands, about 80 of which are inhabited, and the dependent island of Rotuma. Total area: 7,083 square miles, of which Viti Levu, the largest island, occupies 4,053 square miles. Population (1946 census): 259,638 (incl. Rotuma). Capital: Suva (pop. 15,-

522). Education (1946): 450 schools of all kinds, with 36,804 pupils. The European and Fijian population is predominantly Christian, with the Methodist Church numerically the strongest. Most of the Indians (120,414) are Hindus.

Bananas, coconuts, maize, sugar cane, rice, and tobacco are the principal products. Valuable woods are obtained in some of the southern islands. A number of factories process the island's products, but it is necessary to import clothing, tools, and machines. Trade (1947): imports £5,078,272; exports £6,067,989. Finance (1948 est.): revenue £2,157,000; expenditure £1,982,000.

Fiji is administered by a governor, assisted by an Executive Council and a Legislative Council. The governor is High Commissioner for the Western Pacific. Self-government is maintained through the Council of Chiefs. Governor: Sir B. Freeston.

FILIPINO REHABILITATION COMMISSION. A Commission created by Act of Congress, approved June 29, 1944, to investigate and formulate recommendations on all matters affecting postwar economy, trade, finance, economic stability, and rehabilitation of the Philippine Islands, including the matter of damages to public and private property and to persons occasioned by enemy attack and occupation. Chairman, Millard E. Tydings (United States); Vice Chairman, Brig. Gen. Carlos P. Romulo.

FINANCIAL REVIEW. The financial situation in 1948 was again dominated by the business boom and the continued upward trend of commodity prices for a good part of the year. As a result, the requirements of business for capital for plant and equipment, inventories, and credit to customers was almost at the high level of the preceding year. The major part (65 percent) of the funds needed by business for expansion and working capital continued to come from internal resources, in the form of undistributed profits and depreciation allowances.

Of the external sources, bonds were more important and bank loans and stock issues less important than in 1947. A large proportion of the outside financing came from institutional investors, principally insurance companies, which sold government bonds to the Federal Reserve Banks and used the proceeds to buy corporate and municipal issues and mortgages. The support of the government bond market by the monetary authorities resulted in a continued low level of interest rates and bond yields.

The Stock Market. As during the preceding year, stock prices in 1948 continued to move within a narrow range and to exhibit a number of temporary swings in either direction. Favorable influences on prices included the reduction in Federal income tax rates, larger expenditures for foreign aid, and the prospects of increased outlays for national defense. These factors were largely offset, however, by the deflationary influences of the disturbed international situation, further anti-inflationary measures of the monetary authorities, and the renewed fears of a business recession.

The average closing prices were somewhat less than at the end of 1947, and on the whole, the ratio of prices to earnings remained surprisingly low. The yield on industrial common stocks in December (as measured by Standard and Poor's index) was 6.19 percent, the highest in six years. This figure was 50 percent above the average return on preferred stocks and more than twice the yield on high grade bonds. The ratio of stock to bond yields was nearly the highest on record.

After showing a decline early in the year, stock prices rose by about a fifth between February and June and then retreated about a tenth during the following three months. A rally in October lifted prices about 5 percent, but the liquidation that took place after election, because of the expectation of unfavorable repercussions on the stock market, again caused a sharp decline. Together with the customary year-end selling for the purpose of establishing losses for income tax deductions, it brought about a drop of nearly 10 percent in one month. In December the trend was again reversed, resulting in recovery of about half of the losses.

In the early months, the volume of trading on the New York Stock Exchange generally averaged less than one million shares daily but during the subsequent period of rising prices it increased, reaching an average of nearly two million shares a day in May. The turnover then fell off, remaining at about a million shares or under during most of the summer. During the upturn in October, the decline in November and the subsequent improvement the volume was maintained at about one million shares a day or slightly higher.

For the year as a whole, the volume of trading, 302 million shares, was 19 percent above the total recorded in 1947 but considerably below the 1945 and 1946 figures. Stock transactions on the New York Curb Exchange totaled 75 million shares, somewhat above the volume of the previous year.

Although on the whole stock values showed a slight decline during the year, several industry groups registered substantial advances. For the most part, these were in the heavy industry or transportation fields, including railroad, aircraft, shipbuilding, electrical equipment, steel, copper, lead and zinc, petroleum, and coal stocks. The favorable showing of these groups reflected the larger defense orders and the heavy demand for metals and fuels.

trend evidenced the slowed-up demand in some of the consumer goods and service industries and the expectation of lower farm income in 1949.

The price range of active stocks on the New York Stock Exchange is shown in Table 1.

Wall Street Journal
DOW-JONES INDUSTRIAL AVERAGE

Among the consumer goods industries, radio, rayon and brewery stocks made outstanding gains. Groups of stocks that showed declines included drug and cosmetic, apparel, leather and shoe, non-alcoholic beverage, moving picture, air transport, fertilizer, and agricultural machinery shares. This

The Bond Market. Largely because of support of basic bond prices by the Federal Reserve System, the bond market was relatively stable in 1948. At the beginning of the year the drop in prices that had started in the autumn of 1947 came to an end, and for several months bond values made a moderate recovery, declining again in the second half of the year. Yields on medium-term taxable U.S. Government bonds fell from 2.09 percent in January to 1.89 percent in June, while yields on high-grade corporate bonds dropped from 2.85 percent to 2.73 percent. The strong demand for high-grade bonds and the firmness in prices appeared to reflect confidence in the prospect for the maintenance of stable long-term interest rates.

The decline in bond prices and the higher yields that started around the middle of the year were the result of a number of factors, including the special offerings of Savings bonds to institutional investors and especially the anti-inflationary measures taken by the Treasury and the Federal Reserve System, such as the increases in reserve requirements of member banks and the raising of the rate on new short-term Treasury issues. These factors, as well as renewed fear that support of government bonds by the Federal Reserve at the pegged levels might be removed, led again to large-scale selling of long-term Treasury bonds. As a result, prices declined until they reached support levels for most issues in August, where they remained through October.

Prices of high and medium-grade corporate bonds and of municipal obligations moved along somewhat similar lines, recovering through June, declining in the following two months and then leveling off. The fluctuations in these issues, however, were wider than those of long-term government bonds, since they did not receive official support and their supply was increasing.

DOW-JONES 40-BOND AVERAGE

Municipal bonds, in turn, declined somewhat more rapidly than corporate issues owing to the stronger demand for the higher-yielding corporate bonds on the part of insurance companies and other institutional investors, who purchased them with funds received from the sale of their government bonds to the Federal Reserve System. At the end of October yields on corporate high-grade and municipal bonds were again at about the same levels they had reached at the beginning of the year. The rally in the closing months, however, brought prices at the end of the year to a higher level than in December 1947.

Following the elections in November, Treasury bond prices again rose above the Federal Reserve support levels, where they had sold during the preceding few months. This rally was due primarily to the sudden termination of the wave of selling of government bonds, which in the period from July through November 10 had added \$4,700 million of long-term bonds to the portfolios of the Federal Reserve Banks. This change in sentiment was attributed to the general belief that the election results assured a continuance of the policy of the monetary authorities of guaranteeing prices of at least par to holders of marketable government

bonds. The decline in offerings and a broadening of demand resulted in higher prices.

The range of government, municipal and corporate bond yields in 1948 is shown in Table 2.

In 1948, the increase in the differential between the yields on corporate and government bonds that had been noted in the previous year, due to the wider movements in corporate bond yields, was brought to a halt. The decline in yields during the first half of the year was accompanied by a shrinkage in the spread, which again increased, however, as the weakness appeared in the bond market beginning in June. Nevertheless, at the end of the year the differential was less than that of a year before, reflecting in part the heavy demand for corporate bonds on the part of institutional investors. Because of this demand, high-grade corporate bonds were selling at prices giving yields of under 3 percent.

Yields on corporation bonds of various ratings are shown in Table 3.

Bond dealings on the New York Stock Exchange in 1948, totaling \$1,014 million, not only continued the decline of the past several years but were the smallest since 1915. This situation was due to the dominant position of the large institutional investors in the field of high-grade investments and to the prevailing practice of many large corporations of selling their obligations to insurance companies directly.

New Issues. Flotations of new securities in 1948, amounting to approximately \$10,000 million, reached about the same level as in the previous year. Issues sold for the purpose of obtaining new funds for plant and equipment and working capital, making up seven-eighths of the total, were considerably in excess of the offerings for 1947 but the volume of refunding issues was only one half the 1947 sales. Corporation flotations, constituting more than three-fifths of all new capital issues, registered a substantial gain, corporation bond issues exceeding all former records.

Private sales by corporations to insurance companies and other financial institutions continued to bulk large in the total, representing about two-fifths of all corporate financing for the year. New state and municipal flotations registered a gain of more than a quarter over the 1947 total, which in turn was far above any previous record. As in preceding years, bonds accounted for the major part of the new capital, stock offerings making up less than a tenth of all security issues.

Among the various industrial groups, public utilities made up the most important class of new securities offered in the market, constituting well over two-fifths of all new capital flotations. Within this group, electric power and telephone corporations were the principal seekers of new money. In-

by the strong competition for available investment funds provided by corporation bond issues.

New financing for 1948 is shown in Table 4.

The Nation's Savings. Consumer income and expenditures both went up in 1948, but the rise in the income exceeded the increase in outlays. As a

dustrial and mining enterprises accounted for over a third of the total, the leading industrial issuers of securities being petroleum, machinery, transportation equipment, iron and steel, and tobacco enterprises. Railroad securities recorded the largest gain for any major group, reflecting the greatly increased expansion program of the railways.

result, personal savings increased more rapidly than in 1947, amounting to 7 percent of disposable personal income as against 5 percent the year before. Liquid savings in the form of currency and bank deposits, insurance policies and securities went up more than \$3,000 in the first nine months of the year, a slower rate of gain than in the preceding

TABLE 5—TRENDS IN CONSUMERS' SAVINGS

Year	Disposable Personal Income	Less: Consumer Expenditures (Millions of dollars)	Equals: Personal Savings	Percent of Disposable Income Saved
1939.....	70,200	67,500	2,700	3.8

1944.....	145,600	110,400	35,200	24.2
1946.....	159,200	147,400	11,800	7.4
1947.....	173,600	164,800	8,800	5.1
1948 (first three quarters at annual rate).....	188,700	175,700	13,000	6.9

The volume of new issues floated by State and local governments, totaling \$2,600 million, was 17 percent above the previous record total reached in 1947. At times some difficulty was experienced in selling municipal securities to the public and in general higher interest rates had to be offered in order to attract investors. The situation was due to

year. A larger proportion of savings, however, was invested in housing, farms, durable consumer goods and small businesses.

It was evident that many people were drawing on their accumulated savings or running into debt to make current purchases. This was indicated by the large increase in consumer instalment sales and loans and by the findings of the Federal Reserve Board's consumer finance survey, which showed that over a quarter of all families spent more than they earned in 1947, while one-twelfth of all spending units broke even. Furthermore, for the first time since the end of the war there was a decline in the proportion of families owning either bank accounts or government bonds.

Consumers' expenditures and savings for the past several years are shown in Table 5.

Corporate Working Capital. Financing of investments by corporations in plant and equipment, inventories and customer credit in 1948 required \$26,000 million, about 7 percent less than in 1947. The amount spent on new plant and equipment increased, however. Preliminary data for the year indicated a considerable slowing up in the growth of working capital needs, due to the reduced rate of inventory accumulation and of increase in accounts receivable. On June 30, 1948, corporate liquid assets (cash and U.S. Government securities) totaled \$35,000 million, a decline of 1,000 million dollars from the end of 1947. They accounted for 30 percent of total current assets of corporations. Current assets as a whole were more than

the large and growing supply of new State and local government bond issues floated to finance public works and bonus payments to veterans and

FINLAND. A republic of Northern Europe. Capital, Helsinki (Helsingfors).

Area and Population. Finland's original area of 149,588 sq. mi., including about 11 percent of inland water area, was reduced to 134,253 sq. mi. by the Soviet-Finnish peace treaty of Mar. 12, 1940, and was further reduced to 130,160 sq. mi. under the terms of the peace treaty of Feb. 10, 1947, which ended the country's second war with Soviet Russia. The population on Jan. 1, 1947, was 4,053,700. About 90 percent of the inhabitants speak Finnish and 9.6 percent speak Swedish. Estimated populations of the chief cities on Jan. 1, 1945, were: Helsinki (Helsingfors), 331,192; Tampere (Tammerfors), 85,168; Turku (Åbo), 78,492; Viipuri (Viborg)—ceded to the Soviet Union—60,725; Vaasa (Vasa), 35,973. Swedish place names are given above in parentheses.

Education and Religion. There were, in 1945, 5,458 elementary schools with 419,064 pupils, and (in

1946) 286 secondary schools with 82,549 pupils. Finland has three universities, one at Helsinki and two at Turku (of which one is Swedish). Helsinki University had more than 10,000 enrolled in 1947.

The Evangelical Lutheran religion is predominant. In 1944, 3,790,491 persons belonged to the Established Church. About 70,000 were Orthodox (Greek Catholics) and 11,000 belonged to various Free Churches.

Production. Agriculture is the chief occupation of the people of Finland, although the cultivated area covers only 6.6 percent of the land. However, the country's principal source of wealth lies in its forests, of which there are about 53,771,000 acres, with productivity on 42,206,000 acres. The wood-working industries account for more than 80 percent of the gross value of exports.

Foreign Trade. In 1947 imports were valued at 46,971 million Finnish marks and exports at 45,228 million marks. Chief export staples are timber, woodpulp, newsprint and paper.

Finance. In the 1948 budget, revenue (65,831 million marks) and expenditure (65,814 million) were approximately balanced. The public debt in March, 1947, reached 110,420 million marks. Exchange rate (Official Selling Rate): U.S.\$ = 136.00 marks, 1946–October, 1948.

Government. The Constitution of July 17, 1919, vested executive powers in a President elected for six years by 300 electors, chosen in the same manner as members of the Diet. Legislative power rests with the unicameral Diet and the President. The 200 members of the Diet are elected by direct vote of all citizens, male and female, 24 years or more of age. The standing of the parties in the Diet elected on July 1, 1948 (see *Events*, below) was: Agrarians, 56; Social-Democrats, 55; Popular Democrats, 38; Conservatives (Coalition party), 32; Swedes, 14; Liberals (Progressives), 5. President of the republic: Juho K. Paasikivi, who succeeded President Mannerheim on Mar. 9, 1946. Premier, since July 29, 1948: Karl August Fagerholm, Social-Democrat.

Events, 1948. Almost miraculously, Finnish democracy survived in a year that saw the other democratic stalwart of the Soviet orbit, Czechoslovakia, succumb to totalitarian pressures. Time and again, as the year went by, it looked as though Finland would have to go the way of Czechoslovakia, but there was always a last-minute reprieve. Just why the former country was spared, while the latter was ruthlessly sacrificed on the altar of the Cold War, nobody could tell. What made the riddle appear even more inexplicable was the fact that Finland, only a few years back, had been a belligerent enemy of the Soviet Union, while Czechoslovakia had been a friend and ally. Perhaps the best explanation of the paradox was that the Kremlin judged Finland safe enough behind the screen of Scandinavian neutrality to allow the little country some latitude in internal affairs, while Czechoslovakia was deemed too exposed—being a neighbor of the American zone in Germany—for similar experiments in democracy.

The Tide Turns. Even in the last months of the preceding year there were indications that the political tide had begun to turn against communism. On Dec. 4–5, 1947, local elections were held in cities, towns and rural communities. The returns showed a definite setback for the Communists throughout the country, some Social-Democratic gains in urban areas (compensated by some losses in the country) and generally a swing to the right and center parties.

This outcome did not strengthen the position of the Communist-led coalition government, which had already been shaken by a wave of unauthorized strikes (in November, 1947) and by rising criticism in the Finnish press. Early in January, the Premier's brother, Eino Pekkala, resigned as Minister of Justice. A resignation of the entire Cabinet was narrowly averted, as the view prevailed that the Government, in spite of all difficulties, should remain in office until after the general election scheduled for July.

Treaty With Russia. In February, a major political and diplomatic crisis began to shape up concurrently with the alarming events in Czechoslovakia. For some time rumors had been current that Moscow desired to strengthen its grip on Finland by means of a military alliance, which under the circumstances would be of necessity a very one-sided affair. Reportedly the idea had been put up to Premier Mauno Pekkala during a visit to Moscow in November, 1947, but had not been followed up because of a cool reception at home.

The Soviet approach, when it came, was overwhelmingly direct and compelling, though in an ostensibly friendly manner. It took the form of a handwritten letter from Stalin to President Paasikivi, dated February 22, urging the conclusion of a Soviet-Finnish pact of friendship, cooperation and mutual assistance, similar to those recently signed by the U.S.S.R. with Hungary and Rumania. Like the latter, the proposed pact was to be aimed against "possible German aggression" and was to "establish conditions for a radical improvement in the relations between our countries." In making the proposal Stalin left it up to the Finns to decide whether negotiations should be carried on in Moscow or Helsinki.

Due to external circumstances, rather than to its tenor and implications per se, the Stalin letter exploded in Finland like a bombshell and sent strong reverberations around the world. There was no mistaking the significance of the timing. Written at the height of the Czechoslovak crisis, the letter was made public on February 26, the day after the triumphant completion of the Communist coup in Prague.

Immediately after receiving the note, Paasikivi consulted with his top diplomatic and military advisors and with the political party leaders in the Diet. The Communists naturally favored acceptance of Stalin's proposals. All other parties in the parliament were opposed, in varying degrees of intensity, to a military alliance, though none objected to a friendship pact. The Cabinet was similarly split along party lines, but the feeling prevailed that Finland had no choice but to accept and could only hope to gain some concessions by skillful negotiation.

Accordingly, the Cabinet on March 7 agreed to negotiate and on the 9th Paasikivi, in a personal letter to Stalin, accepted the invitation to a parley in Moscow. The President expressed the hope, though, that Finland would be permitted to "remain outside international conflicts."

The Finnish reluctance, which had been apparent in the parliamentary debate and even in Paasikivi's acceptance letter, was underlined by a mass demonstration in Helsinki on March 7, the only meeting of its kind, i.e. against signing a treaty with Russia, permitted by the police. It was broken up by a Communist mob. Two days later it was reported that Communist flying squads, calling themselves "workers' committees," had invaded all newspaper offices in Helsinki, warning editors against "anti-Soviet propaganda."

On March 20, a Finnish delegation headed by Premier Pekkala and Foreign Minister Carl J. A. Enckell left for Moscow, where negotiations began two days later. On March 31, it was learned that the Finns had rejected a clause in the proposed military pact that would have permitted the Russians to decide when the mutual aid stipulations should become operative, or in other words when to send Soviet troops into Finland. After several weeks of weary negotiations, the Finnish delegation was able to win important concessions on this and related issues.

The treaty, signed on April 6, committed Finland to resisting armed attack across her territory against Russia by Germany and any state allied with her and to accepting Soviet military assistance "in case of necessity." It was stipulated, however, that the terms of this assistance should be agreed on by the two countries and that Finland's armed forces should not be obligated to fight outside Finnish soil. This proviso and the preamble to the treaty, recognizing "Finland's desire to stand aside from conflicts between interests of great powers," guarantees, at least theoretically, Finnish neutrality in the event of war not affecting Finland's territory.

The treaty was concluded for a period of ten years, renewable every five years thereafter unless terminated by either party at a year's notice. In a radio broadcast defending the treaty on April 9, President Paasikivi vouched that there were no secret clauses of any kind. The agreement was ratified by the Diet on April 28, by a vote of 157 to 11, with 32 abstentions.

Ouster of Leino. Although the Finnish Communists had their way, at least partially, in the matter of the treaty with the U.S.S.R., they were losing ground in the fight for political control at home, it soon became apparent. For all their oratory about "following the example of Czechoslovakia" they proved unable likewise to create a revolutionary situation and exploit it. This failure evidently can be explained only by a lack of direct and overt support from Soviet Russia. For, in the present state of affairs, there can be little doubt that the Kremlin could "communize" Finland any time it wished to.

According to some reports the so-called "barriade faction" of the Finnish Communist party did make an attempt, in late April, to wrest control from the Government. In a letter to the *New York Times* (June 27, 1948), Hjalmar Procope, former Finnish Minister to Washington, gave an interesting account of this abortive coup. After raising the question why communism in Finland had "slowed up," Mr. Procope wrote: "The answer is that the quick counter action of the Finnish Army on Apr. 26, 1948, made it impossible to overthrow the present coalition government of Finland. That is now a certain and historic fact. On that historic day all police and army leave permissions were cancelled. Ammunition depots were confiscated and transported to safe places where police officers of Communist stripe could not get hold of them. An armored battalion was stationed near Kerava, about twenty miles from Helsinki. Two gunboats arrived at Helsinki. One light brigade was stationed near Hyvinkää. And the castle of President Paasikivi was put under special guard to prevent any surprise move.

"Communist leader Leino (Minister of Interior Yrjö Leino) asked Gen. Sihvo (Gen. Aarne Sihvo, commander-in-chief of Finland's armed forces) to withdraw the emergency alarm and to recall all troops. 'This is action against Communists,' he de-

claimed. 'A Fascist coup will result from it.' . . . Prime Minister Pekkala refused to change the orders. He summoned an emergency meeting of Parliament, and what happened on that day marked, I believe, the beginning of the end of Leino's career as a Soviet agent operating inside the Finnish Government. . . .

It should be added, however, that very little of the events referred to in Mr. Procope's story appeared at the time in the reports of foreign correspondents stationed in Finland. One should also bear in mind that Mr. Procope was affiliated with the pro-Nazi wartime regime in Finland and that his credibility, therefore, is not beyond question.

In any event it is certain that shortly after the events referred to above Finnish communism suffered a severe setback. On May 19, the Diet, by a vote of 80 to 60, passed a vote of censure against Minister Leino on the grounds that he had extradited twenty people to the U.S.S.R. in 1945 without Cabinet authorization. Under the terms of the Finnish Constitution, Leino, having received a vote of no-confidence was obliged to resign, but he failed to do so. He even ignored an order from President Paasikivi to resign. Thereupon he was removed from his office by a vote of the Cabinet, on May 22.

Leino's ouster led to mass demonstrations spearheaded by Communist "action committees" and left-wing trade unions. On May 24, a general strike was proclaimed, lasting five days. There were incidents, but none of them serious enough to cause mass violence. Nevertheless the situation might have degenerated into a Communist uprising, but for the appointment of Eino Kilpi, a left-wing socialist, as successor to Leino. A few days before his appointment, Mr. Kilpi had resigned from the Social-Democratic party, joining the (Communist-controlled) Popular Democratic party.

In a further move to appease the Communists, Hertta Kuusinen, wife of ex-Minister Leino and a top leader of the Finnish Communist party in her own right, was given a minor post in the reconstructed Cabinet. The Communists accepted the compromise, the general strike was called off, and the crisis blew over.

A Free Election, and a Change of Government. "We will have elections in the legal fashion and there will be no question of postponing them. . . . The elections will be totally free and the will of the people will be the deciding factor," President Paasikivi told American reporters on March 22. He repeated this promise in his broadcast of April 9 defending the treaty with the Soviet Union.

His promise was kept to the letter. The general election was held on July 1-2, as scheduled, in an atmosphere of absolute order and freedom of vote. The Communists, as had been generally expected, were the principal losers, but the magnitude of their defeat came as a shock even to their opponents, on account of the inevitable displeasure of Moscow.

Soviet Russia's immediate interest in the ballot was apparent in a political maneuver which failed, however, to produce the expected result. A few weeks before the election, the Soviet Minister in Helsinki, Gen. G. M. Savonenkov, informed Premier Pekkala that the U.S.S.R. had canceled half the remaining reparations due from Finland, a sum of about \$75 million. Former Minister Leino and two other Communist members of the Finnish Cabinet were given chief credit for obtaining the abatement.

While the Finns could not but rejoice over this

windfall, they did not see in it any reason to vote for the Communists. On the contrary, they dropped the "People's Democratic Union" (Communists and allied Socialists) to third place in the Diet.

The chief victor at the July 1-2 election was the Agrarian party, which gained 7 seats, for a total of 56; the Social-Democrats ran second, with 55 seats (against 50 before); then came the Popular Democrats, losing 11 seats and retaining 38; the Conservatives ranked fourth, with 32 seats, a gain of 4; the Swedish party came out with 14, losing one; and the Liberals were left with only 5 of the 9 seats they had in the 1945 Diet.

In spite of their crushing defeat at the polls, the Communists immediately after the election laid claim to the Interior Ministry in a new coalition government. On July 6, Mrs. Hertta Kuusinen-Leino informed a news conference that in her view any other arrangement would be incompatible with the spirit of the peace treaty. The other parties firmly rejected this bid.

The new Parliament met on July 21 and the following day Premier Pekkala resigned with his entire Cabinet. When the largest party, the Agrarians, turned down an offer to form the new government, President Paasikivi asked the Social-Democratic leader, Karl August Fagerholm, to undertake this task. After a few days of futile negotiations with the other parties, Fagerholm on July 29 formed a minority government staffed exclusively with members of his own party, except for two non-party men, one of whom was Foreign Minister Enckell, who retained his post. The Agrarian party, while refusing to join the Cabinet, promised conditional support.

Faced with overt and vocal opposition from the Communists, Fagerholm and his Cabinet looked anxiously to Moscow for possible signs of forceful intervention. Surprisingly, the Kremlin took no action, although the appointment of an all-Social-Democratic Cabinet evidently was not to its taste. Even when the new Government proceeded to reorganize the police force, which Mr. Leino had fashioned into an instrument of Communist power politics, the opposition did not go beyond verbal protests.

A wave of Communist-inspired strikes in October failed to bring the widely feared showdown. Toward the end of the year, the Fagerholm Cabinet appeared to have matters well in hand. At any rate it had foiled the forecasts of a very short life freely made at its birth.

In the economic field, Finland made excellent progress during the year. There was no unemployment, as industrial production remained in high gear. The food situation was better than in most European countries. Meat, in particular, was plentiful and was taken off the rationing list. Prices were generally high. Although forced to remain outside the Marshall Plan, Finland did its best to expand its trade relations with the West. In response, United States export controls on industrial equipment were relaxed on May 26 in favor of Finland.

—JOACHIM JOESTEN

FIRE PROTECTION. The upward trend in fire losses so apparent during the past decade continued during 1948. Preliminary estimate of property damage by fire announced by the National Board of Fire Underwriters was \$711,114,000. This figure exceeds comparable estimates of any previous year but it should be noted that dollar value of property destruction is not necessarily the best index. In a period of inflation such as currently prevails a larger dollar loss may be produced by less actual physi-

cal destruction than in some previous years. Nevertheless there is nothing in the current fire loss situation to engender complacency. For purposes of comparison, preliminary estimates of the fire losses for the past ten years follow:

1939.....	\$275,102,119	1944.....	\$423,458,000
1940.....	285,878,697	1945.....	455,329,000
1941.....	303,895,000	1946.....	561,487,000
1942.....	314,295,000	1947.....	692,635,000
1943.....	373,000,000	1948.....	711,114,000

According to the records of the National Fire Protection Association there were 268 fires in the United States and Canada with losses of \$250,000 or more, including 33 which resulted in losses of \$1 million or more. Of these 24 occurred in Canada, four in Alaska, one in Hawaii, and one United States vessel was destroyed by fire on the high seas. Omitted from this total are several large fires in other parts of the world.

The largest monetary loss resulted from the destruction of the U.S. Army Transport "Joseph V. Connolly" at sea on January 12. The vessel was eastbound, with a cargo of plywood-encased coffins for the repatriation of war dead, when fire broke out in the engine room. The fire could not be controlled and the vessel was so severely damaged that she sank while in tow. The loss is estimated at \$1.5 million for the vessel and \$4.8 million for the cargo.

Among fires occurring on land the largest loss resulted from a starch dust explosion at the Chicago candy factory of E. J. Brach & Sons on September 7. Seventeen persons were killed and property damage was estimated at \$5 million. The largest loss of life in accidents where fire is believed responsible occurred when a DC-6 passenger transport of United Airlines crashed at Mt. Carmel, Pa. on July 17. Forty-three persons died.

The impetus to fire prevention created by President Truman's Conference on Fire Prevention which was held in Washington in 1947 continued to a considerable degree throughout 1948. The recommendations coming out of the President's Conference were transferred by the Conference to the States and cities. During 1948 State conferences sponsored by the governors were held in Alabama, Colorado, Connecticut, Florida, Georgia, Illinois, Iowa, Maine, Maryland, Minnesota, Ohio, Rhode Island, Tennessee, and Virginia. Also in the States of California, Michigan, Nevada, New Mexico, Oklahoma, and Utah State fire advisory boards were created by the governors.

The question of planning for civil defense in the event of another world war and a possible attack upon our own country is of significance to the fire protection fraternity because of the devastating role that fire played as a weapon in World War II. The subject of civil defense planning is important to State and municipal officials, but the American public at large appears to be indifferent and uninterested. The report, entitled "Civil Defense for National Security," prepared by the U.S. Office of Civil Defense Planning for Secretary of Defense Forrestal, appeared late in 1948 and the next step, so far as federal interest in civil defense planning is concerned, appears to be up to the 81st Congress. The report recommends a fire service division in the Federal Office of Civil Defense, a State fire services division under a State civil defense director in each State, and a local fire service division for civil defense in each locality under the direction of the fire chief. In general, the responsibility is transferred to the individual States and cities and away from the military.

The modern trend of reducing the actual working hours of all classes of labor is being felt in the fire service more strongly than ever before. In hundreds of communities during 1948 the workweek of firemen was reduced, in many places to as low as 48 hours per week. The acute shortages of fire apparatus experienced during and after the war have eased to some extent. Municipal fire apparatus has been more readily obtainable, but like everything else has become more expensive.

The use of 2-way short-wave radio is becoming increasingly popular in the fire service as its value becomes more firmly established. Of 97 United States cities having a population between 25,000 and 1 million which reported improvements during 1948, 25 reported installation or expansion of radio communication facilities.

The progressive trends in fire department training have continued throughout 1948. An estimated 35,000 firemen participated in courses affiliated with firemen's training programs in some 35 States which reported their training activities on a State-wide basis. Of course, many additional thousands of firemen, both paid and volunteer, participated in training work in individual departments by instructors trained through the State programs. Today in most States the training programs, whether given by an itinerant instructor, by a local instructor trained at a State-sponsored training course, or given at a central fire-training school, consist of measured systematic instruction.

A rather unusual but nevertheless well-deserved tribute to the thousands of volunteer firemen in the United States was provided in 1948 by the issuance of a new United States postage stamp commemorating the 300th anniversary of organized volunteer fire service.

Throughout 1948 the interest developed in 1947 in adequate measures for hotel fire safety was maintained. A number of State laws and a considerable number of local ordinances regulating hotel safety were enacted during the year and some cities such as Hartford, Conn., secured proper interior fire protection in all their hotels. A new edition of the NFPA Building Exits Code, a code widely used in States and cities, appeared in 1948. The State of Georgia adopted the NFPA Building Code as law. The State of Virginia is undertaking a revision of its laws governing fire protection in buildings and is taking steps to provide a number of changes in various State standards for fire protection. Similar action is also under way or completed in Ohio and New Hampshire.

In its comparatively new Division of Safety, New York State has created a Bureau of Fire Mobilization and Control. Fire officials in port cities were encouraged by a case in Los Angeles Harbor which provided an important precedent for the enforcement of local fire regulations governing the safe handling of hazardous cargoes. In this case, failure of the S.S. *River Raisin* to follow local harbor regulations resulted in a large oil spill and a serious fire hazard. The ship's captain and second mate were fined \$250 each in municipal court and the cost of clean-up estimated at \$9,000 was charged against the ship.

There is a slowly growing recognition that careless smokers are responsible for altogether too many fires, and local ordinances designed to prohibit smoking or to penalize the careless smoker in theaters, department stores, hotel bedrooms, etc., were adopted in numerous cities during 1948. The largest city to take such action was Chicago, late in the year.

New hazards that caused considerable interest

during the year were the introduction of self-service and coin-operated gasoline stations, and the widespread development of television. Various types of self-service gasoline stations have been tried out, some with obviously more fire hazard than others, and action has been taken by some States and cities to prohibit self-service gasoline stations. The growth of this movement is yet to be determined and the fire hazard aspects have not yet been clearly defined. Further experience and investigation during the coming year will bring a clearer answer to this problem.

In the case of television, the development is still too new and experience too meagre to make any final observations as to its importance as a fire hazard. A good many city building-officials have been concerned about the erection of television antennae, with a consequent increase in possible accident and lightning hazard.

There is a growing interest in fire prevention education not only of workers, housewives, and other adults, but of children. The demand for educational material on common fire hazards is growing markedly. The interest of the U.S. Office of Education and of the National Education Association in fire prevention education in the schools is most welcome. The junior fire brigade development as exemplified in Los Angeles and Dallas is attracting great interest and will undoubtedly spread to many other cities.

The perennial popularity of Fire Prevention Week as a device to stimulate public interest in fire prevention increases year after year. In the Fire Prevention Week competition among cities sponsored by the NFPA, entries were received from 2,928 cities, the largest number ever enrolled. The top ten cities in the United States in the order of their final grade were Oak Ridge, Tenn.; Memphis, Tenn.; Chicago, Ill.; Jersey City, N.J.; Louisville, Ky.; Fort Collins, Colo.; Hartford, Conn.; Los Alamos, N.M.; Anderson, Ind.; and Fort Wayne, Ind. Ottawa, Ont., was the winner in Canada.

Winners in the National Fire Waste Council contest for year-round excellence in fire prevention activities for 1947 as announced early in 1948 were Chicago, Atlanta, Tulsa, Alameda, Calif., Parkersburg, W.Va., and Fort Collins, Colo.—the latter was the grand winner. —CHARLES S. MORGAN

FISCAL SERVICE. Under direction of a permanent Fiscal Assistant Secretary (Edward F. Bartelt), the Fiscal Service conducts the financing operations of the United States Treasury. It is composed of the Office of the Fiscal Assistant Secretary of the Treasury, Office of the Treasurer of the United States (William A. Julian, Treasurer), Bureau of the Public Debt (Edwin L. Kilby, Commissioner), and the Bureau of Accounts (Robert W. Maxwell, Commissioner). It exercises supervision over the depository system of the United States; maintains the daily cash position of the Treasury; keeps the central accounts of the Government relating to receipts, appropriations, and expenditures of all departments and agencies; services and manages the public debt; administers the Government's investment accounts; maintains a nationwide disbursing system (Paul D. Banning, Chief Disbursing Officer) covering all activities of the executive branch of the Government except military and postal service activities; issues licenses to, and fixes underwriting limitations of, surety companies authorized to do business with the United States; liquidates fiscal affairs of war agencies; and is generally responsible for the receipt, safekeeping, and disbursement of the public funds.

FISH AND WILDLIFE SERVICE. This Federal agency is charged with the conservation of the fishery and wildlife resources of the United States and its territories. The activities of the Service during the fiscal year ended June 30, 1948, reflect the varied and challenging nature of the task of maintaining this segment of our national wealth.

The most intensive war ever waged against rats was conducted on a nationwide basis in 1948 in cities and rural areas to save grain and food needed for the European Relief Program. Rats, as the Service pointed out, cause food and grain losses of \$2,000 million annually, spread eight deadly diseases, and outnumber the country's human inhabitants. To enlist the public in the campaign, the Service forwarded more than 4 million pieces of literature in bulk shipments to about 650 cities to tell citizens how to use traps and poisons correctly and how to rat-proof their buildings. Of the 631 cities which participated in the National Urban Rat Control Program, 62 percent have enacted rat control ordinances or have rat-proofed city property and improved garbage collection and sewage disposal.

To halt depredations on valuable livestock, poultry, and game, 99,452 predatory animals were destroyed by Federal-supervised predator control work during the fiscal year 1948. The total recorded take consisted of 90,270 coyotes, 7,223 lynxes, bobcats, and ocelots, 744 stock-killing bears, and 148 mountain lions. The highest kill of 28,605 predatory animals was made in Texas. Poisoning, shooting, and trapping were the chief methods of control.

During the calendar year ended Dec. 31, 1947, the 97 fish hatcheries operated by the Service produced 2,659,261,576 eggs, fry, and fingerling fishes for stocking purposes. Fish hatcheries on the Pacific coast are concerned chiefly with the maintenance of salmon runs in coastal waters. Hatcheries producing warm-water species such as bass and sunfish are supplying large quantities of fish for stocking farm ponds, particularly in the South Central states.

The propagation of shad was resumed at the Fort Belvoir, Va., hatchery. The propagation of fresh-water mussels was started at the Crab Orchard National Wildlife Refuge, Cartersville, Ill., as part of an artificial propagation program begun in June, 1948, in rivers and streams of the Mississippi River basin.

Although not commissioned until March, 1948, the fishery research vessel *Albatross III* has greatly facilitated work on the North Atlantic fishing banks. Most important have been the studies in the use of a large-mesh cod end in otter-trawl fishing for haddock, cod, and other fishes.

Scientists investigating problems of fur-seal management on the Pribilof Islands in Bering Sea tagged nearly 20,000 seal pups and made two extensive cruises in north Pacific waters in the motorship *Black Douglas*, gathering information on the migration routes and food habits of the seals.

Service biologists studied the Pacific tunas to obtain preliminary data on the life history, abundance, and distribution of these valuable food fishes. Service personnel were detailed as consultants and observers aboard several vessels engaged in freezing fish in Pacific waters. General statistical surveys of the fisheries covered each of the coastal states except those in the South Atlantic and Gulf areas.

The Mexican Fishery Mission continued during the fiscal year 1948 to assist both countries to uncover facts pertaining to the little-known fishery

resources of Mexico and to aid that country in training a competent staff of fishery investigators. An aquatic biologist of the Service was assigned early in 1948 to a year-long investigation of the marine fisheries of Venezuela, at the request of that Government. A specialist in the biology of shellfish was assigned in January, 1948, to an investigation of the pearl-oyster resources of Panama, upon the request of the Panamanian Government. At the invitation of the Cuban Government a party of three ornithologists was sent in February to make a two-month survey of the migratory birds that winter in Cuba.

The January, 1948, annual inventory of waterfowl wintering in Canada, Alaska, coastal Latin America, and the United States showed little change from the total populations observed in 1947. Regionally, the picture was uneven. Decreases were reported in the Central flyway, Mexico, and most of Canada except the Maritime Provinces; these were approximately balanced by increases in the Atlantic and Mississippi flyways and the Pacific Coast States of the Pacific flyway.

Studies of the effects of DDT on wildlife, begun in 1945, were continued in the fiscal year 1948. Aerial applications of DDT were made specifically to observe the effects on wildlife. According to present knowledge of the problem, it is unsafe to apply by airplane more than 2 lb. of DDT per acre if harm to birds, mammals, and amphibians is to be avoided.

Investigations on wildlife in relation to agriculture and soil conservation practices continued in Maryland and in the southeast. Two experimental farms are being developed on the Patuxent Research Refuge in Maryland. One area has a complete modern soil conservation and agricultural program while the other is managed by out-dated but commonly used farming practices. Living fences of multiflora rose, contour hedges, and legume field borders are examples of developments recently installed and which will be evaluated, as they grow, in terms of their effects on quail, rabbits, songbirds, rodents, and other species.

Research projects at the 10 Cooperative Wildlife Research units active during 1948 totaled around 100 and involved work on waterfowl, small and big game, wildlife environment, and many other phases of wildlife management. More than 100 technical papers, bulletins, and popular articles on the research findings of the units were published during the year.

The Service made field surveys and completed reports on 33 Missouri River Basin projects; 29 sponsored by the Bureau of Reclamation and 4 by the Corps of Engineers. These surveys provide useful data for evaluating the basin-wide effects, good or bad, which these engineering projects will have on fish and game populations and habitat in that basin.

Since the Pittman-Robertson Act became effective in 1938, 2,490 Federal aid wildlife-restoration projects have been conducted under its provisions. Congressional appropriations have varied from a low of \$900,000 for the fiscal year 1945 to a high of \$9,031,272 for the fiscal year 1948. During this 10-year period, \$48,175,429 was collected from the 11 percent excise tax on the sale of sporting arms and ammunition, and the Congress appropriated a total of \$34,707,961 to finance the Federal share of the costs of program work.

An important event of the fiscal year 1948 was the establishment of the Crab Orchard National Wildlife Refuge in southern Illinois. This area, consisting of about 44,000 acres, located in Jack-

son, Union, and Williamson counties, will be an important link in the chain of Mississippi flyway refuges, particularly valuable in the protection of Canada geese.

More than 2,200 individuals participated, under special use permit, in the economic use program on national wildlife refuges, exclusive of the number purchasing surplus big-game animals and those who trapped fur animals on refuges. A total net revenue of \$386,000 for the fiscal year 1948 resulted from all economic uses, including the disposition of big-game animals, fur-animal pelts, and surplus products. By law, 25 percent of this revenue was paid to the counties in which the national wildlife refuges are situated, and the balance was deposited in the Treasury. The number of national wildlife refuges at the end of the fiscal year was 282, totaling 18,107,024 acres.

The eight principal statutes administered by the Service for the protection of wildlife are the Migratory Bird Treaty Act, Lacey Act, Migratory Bird Conservation Act, Migratory Bird Stamp Act, the law protecting wildlife and property on Federal refuges, Black Bass Law, Bald Eagle Act, and the Alaska Game Law. A summary of penalties imposed for violations of these statutes during fiscal year 1948 listed 3,061 convictions for which fines and costs assessed amounted to \$124,602. Jail sentences totaled 734 days. These Federal game laws are enforced by 6 regional supervisors of law enforcement and 64 United States game-management agents.

A total of 2,045 importation permits was issued to authorize the entry of 87,918 birds and 31,194 mammals from foreign ports. Fifty-six birds and two mammals, of species prohibited entry into the United States, were seized at ports of entry, both on the Atlantic and Pacific coasts, and were either destroyed or returned to the foreign ports of origin.

—ALBERT M. DAY

FLAXSEED. The 1948 flaxseed crop of the United States, as estimated in December, 1948, by the Crop Reporting Board of the U.S. Dept. of Agriculture, reached a record of 52,533,000 bushels, which was nearly a third more than was produced in 1947 (40,536,000 bu.) and almost twice the 10-year average (1937-46) production of 26,756,000 bu. States with the highest yields (in bushels) for 1948 were: Minnesota 19,102,000, North Dakota 14,896,000, South Dakota 7,788,000, California 4,851,000, Iowa 1,425,000, Texas 1,320,000, Montana 1,071,000, Arizona 1,064,000.

The Oregon output of flax fiber in 1948 amounted to 3,400 tons of straw, compared to the 1947 output of 9,200 tons of straw. Production of flaxseed from Oregon flax fiber acreage in 1948 was estimated at 19,400 bu., compared with the 1947 production of 59,000 bu.

FLOOD CONTROL. At the close of the year, announcement was made from Washington that "the nation's planners have blue-printed a \$57,000 million program for developing the vast water resources in our river basins," to be completed about the year 2000. Of this, about \$24,000 million would be spent on hydro-electric power development; \$12,300 million would be spent on flood control; \$8,600 million on irrigation; \$6,200 million on navigation improvements; \$4,000 million on water-shed work aimed at saving of surface soil, improving farm procedures, and reducing floods; \$1,370 million would be spent on pollution control and \$45 million on preservation of fish and wild life and provision of recreation facilities.

Flood control is largely the responsibility of the army engineers. Lt. Gen. R. A. Wheeler, Chief of Army Engineers, estimates that prevention of flood damage and transportation savings would net \$825 million annually. Of the total \$57,000 million proper, he estimates that about \$4,780 million worth has been completed in the last 10 years and that other projects which would cost \$4,590 million have been begun.

In loss of life and property, the summer floods this year in the Columbia River basin are probably the most disastrous in its history. A \$3,000 million program for this general area has been reported upon by the Corps of Engineers. The plan calls for immediate authorization of the following six great projects: (1) Libby project on the Kootenai River in Montana; (2) Albeni Falls project on Idaho's Pend Oreille River; (3) Priest Rapids project in Washington in the Columbia River; (4) Hells Canyon project, Snake River, Oregon, and Idaho; (5) John Day project on the Columbia River in Oregon and Washington; and (6) The Dalles project on the Columbia River in Washington and Oregon.

Many other projects in this area are also recommended in the plan. Power installation in the main control plan would increase from 6 to 11.7 million kw and significant flood regulation and irrigation water would be provided.

In New England and in Iowa steps are being taken to organize for State-wide and interstate flood-control work. Apparently an interstate flood-control compact among Massachusetts, Connecticut, Vermont, and New Hampshire is about to be approved. The construction of ten dams is contemplated under the compact.

Rapid graphical-correlation methods and electronic calculators developed by the U.S. Weather Bureau's new forecasting and flood-warning service have continued to prove successful in predicting floods on the Ohio—in particular the floods of April, 1948,—the seventh largest in the 90 years of record at Cincinnati. Striking agreements between actual and predicted crest heights made sometimes several days in advance have occurred. This service helped greatly to reduce losses by permitting erection of barricades in time, by securing removal of goods in areas about to be flooded in time to escape inundation, and by permitting wisest use of flood regulation reservoirs.

It is believed that the recent severe annual losses from floods in the United States of \$225 million would have been \$25 million greater without the flood-warning service.

Public attention has been called to certain broad problems of soil conservation and flood control and heated discussions have been aroused by the publication of two popularly written books, *Our Plundered Planet* and *The Road to Survival*.

—W. E. HOWLAND

FLORIDA. A south Atlantic State. Area: 58,666 sq. mi. Population: (July 1, 1948) 2,356,000, compared with (1940 census) 1,897,414. Chief cities: Tallahassee (capital), 16,240 inhabitants in 1940; Jacksonville, 173,065. See AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS.

Finance. For the fiscal year ended June 30, 1947, total revenue amounted to \$167,907,000; total expenditure, \$159,728,000.

Elections. Truman won a plurality over Dewey, Thurmond, and Wallace, and carried the State's 8 electoral votes. Democrat Fuller Warren won the governorship, and the 6 Congressional seats re-

mained Democratic. No Senatorial contest was held. Democrats won the other statewide races including: Secretary of State—R. A. Gray; Attorney General—Richard W. Ervin; Treasurer—J. Edwin Larson; Comptroller—C. M. Gay; Superintendent of Public Instruction—Thomas D. Bailey. The voters authorized legislative pay raises.

Officers, 1948. Governor, Millard F. Caldwell; Lieut. Governor, None; Secretary of State, R. A. Gray; Attorney General, J. Tom Watson; State Treasurer, J. Edwin Larson; Commissioner of Agriculture, Nathan Mayo; Superintendent of Public Instruction, Colin English; State Comptroller, C. M. Gay.

FOLKLORE. During 1948 activities in folklore increased in nature and scope. The center of this activity was the American Folklore Society. This society published in its quarterly, *Journal of American Folklore*, many studies and articles concerned with folklore over the world; and in addition, it published a monograph, *Myths and Tales of the Coeur d'Alene*, by Gladys Reichard. This is a study of the myths and folk tales of the Coeur d'Alene Indians of Idaho. It won the Chicago folklore prize for 1948.

The society held a three-day meeting in Toronto in December for the reading of papers and the discussion of folklore problems. The society has been active in other ways. Its Education Committee (Richard Dorson, Chairman) made a detailed study of the teaching of folklore in the United States and will soon bring in recommendations. Its Research Committee (Richard A. Waterman, Chairman) continued the study of methods and materials for research in folklore. Its Committee on Utilization (Thelma James, Chairman) studied the relation of folklore to other arts and sciences. The society through the gift of Miss Jo Stafford established an annual prize of \$250 for the best collection of folklore or folk song made by a student in an American school or college.

Likewise many regional folklore societies have been active in publication and in conducting meetings. Among the most active were: The California Folklore Society (*Western Folklore*), The Texas Folklore Society (*Publications of the Texas Folklore Society*), The New York Folklore Society (*The New York Folklore Quarterly*), French Folklore Society (*The Magazine of French Folklore*), New Mexico Folklore Society (*New Mexico Folklore Record*), Pennsylvania German Folklore Society (*Publications of the Pennsylvania Folklore Society*), Michigan Folklore Society, Hoosier Folklore Society, Badger State Folklore Society, North Carolina Folklore Society, South Carolina Negro Folklore Guild, The Southern Folklore Society (*Southern Folklore Quarterly*). This last contains the valuable annual bibliography of folklore by R. S. Boggs.

During 1948 a number of important folk festivals were held. The Fourteenth Annual National Folk Festival was conducted at St. Louis, April 7–10, under the direction of Sarah Gertrude Knott. On June 18–19, the Carolina Folk Festival was held at Chapel Hill under the direction of Bascom Lunsford. The Thirteenth Mountain Folk Festival was held at Berea College, Kentucky, April 8–10. This was participated in by groups largely from schools and colleges of the southern mountain States. The Cayuga Soursprings Longhouse Mid-winter Ceremonials took place in Ohsweken, Ont., February 14–20.

Several symposia and conferences in folklore were conducted in 1948. Seminars in American culture, sponsored by the New York Historical As-

sociation, Cooperstown, N.Y., were held July 11–17 under the direction of Louis C. Jones. A conference concerned with Western folklore was held at the University of Denver under the direction of Levette J. Davidson. The Library of Congress sponsored several lectures on folklore.

The wide current interest in folklore matters is further attested by the continuing large number of books published in this field. These are about equally divided between anthologies of folk tales and songs and critical studies. Knowledge of these books can be had through the review sections of the *Journal of American Folklore*. Several interesting record collections were brought out in 1948. The most important of these were the 21 albums of folk songs, folk music, and folk dances issued by the Folk Music Section of the Library of Congress, under the editorship of the Chief of the Section, Duncan Enrich. To be noted also is the series of folk music albums released by Decca Records under the editorship of Alan Lomax.

During 1948 folklore as a subject for instruction found a wider place on the curricula of the schools and colleges of America. Extensive work in this field was done at the University of Indiana, the University of North Carolina, the University of Pennsylvania, Murray State College, Cornell University, University of Colorado, Wayne University, Occidental College, University of California, and Michigan State College. —MACEDWARD LEACH

FOOD AND AGRICULTURE ORGANIZATION OF THE UNITED NATIONS (FAO). This organization was officially founded at Quebec City, Canada, on Oct. 16, 1945, but it had its root in the Hot Springs Conference, called by President Roosevelt in May, 1943, to discuss food and agricultural problems of the United Nations. Forty-four countries were represented and delegates reached agreement on a number of basic points which became foundation stones of FAO policy. Some of these were:

"The world has never had enough to eat. At least two-thirds of its people are ill-nourished in spite of the fact that two-thirds of the world's people are farmers.

"The modern science of production shows that it is entirely possible to produce enough of the right kinds of food.

"The modern science of nutrition proves beyond doubt that if all people could get enough of the right kinds of food, the average level of health and well-being could be raised much higher than it is now.

"But production alone is not enough. Foods must be so distributed that the levels of consumption of those who do not have enough are progressively raised.

"This implies an expanding world economy, in which each nation will play its own part, but all will act together."

Delegates also agreed on taking immediate steps by concerted action toward realizing such a new world of plenty based on scientific findings. The Hot Springs Conference created, therefore, an Interim Commission to make plans for a permanent international organization to carry through the design of its program.

Two years later, in the winter of 1945, FAO came into being in Quebec, as the first permanent United Nations organization to be set up and with 42 charter members. In 1948, the membership was increased to 58.

The Quebec Conference named Sir John Boyd Orr, Scottish farmer and world-famed nutritionist, as FAO's first Director General. In 1948, Norris E.

Dodd, then Under Secretary of Agriculture of the United States, was elected by a special session of the FAO Conference to succeed Sir John.

The year 1948 was an eventful one for FAO. Its two-sided program of increasing output and improving distribution of the products of farms, forests, and fisheries was progressively intensified all through the year in the following ten major spheres of work:

FAO Council. The council of FAO, or World Food Council—composed of representatives from 18 elected member nations and FAO's ruling body between sessions of the Conference—kept world problems of food and agriculture under constant review. It instructed the Director General to draw up a program of work for 1949, according to the urgency of needs, and to set priorities for the numerous recommendations for FAO activities made by the Conference.

Allocation of Food. International allocation of basic foods such as rice, cocoa, fats, and oils, took the sharp edge off some acute shortages in 1948. This work was continued all through the year without interruption by the International Emergency Food Committee of the Council of FAO, which in January took over the functions and responsibilities of the former International Emergency Food Council. A total of 475 allocations were recommended, and only in 13 cases did a government refuse to concur.

Regional Meetings. Several regional meetings were held in 1948 to lay foundations for future work. At Cairo, representatives of Near East countries made proposals for irrigation and other improvements capable of greatly stimulating the economy of that region. At Baguio, in the Philippines, a series of conferences drew up plans for cooperative action designed to increase rice and fish supplies and to improve the nutrition of peoples of South and East Asia. At Teresopolis, Brazil, a timber conference agreed on far-reaching measures needed for developing the forest resources of Latin-American countries. At Montevideo, Uruguay, the countries of Latin America made plans for future work in nutrition. At Rome, representatives of European National FAO Committees dealt with problems of agricultural rehabilitation and development.

Technical Advisory Services. A wide range of technical advisory services designed to help countries and regions overcome handicaps to increased production and better distribution of food and other products were supplied to member countries all through the year. In Europe, some 35 assignments were completed by the end of June 1948. Hybrid corn seed, which has revolutionized corn production in parts of the United States, was sent by FAO early for distribution to 19 countries in Europe and the Near East. When a blight attacked Italy's chestnut trees—important for both food and timber—FAO helped the country obtain blight-resistant strains from China. FAO experts assisted Hungary in the use of farm machinery. In Poland and Czechoslovakia, FAO veterinary consultants demonstrated methods of controlling animal diseases, such as pig paralysis and tuberculosis.

In China, a many-sided agricultural development program went forward with FAO aid. FAO irrigation and drainage specialists helped in projects in ten provinces that will benefit 1,750,000 farmers. An FAO consulting engineer helped in planning a long-term program for development of flood control, hydro-electric power, navigation, irrigation, and fisheries throughout the Pearl River basin.

On two islands in the Yangtze River, chosen as demonstration areas for an agricultural improvement project emphasizing the use of farm ma-

chinery, FAO specialists helped farmers operate tractors and other equipment in terracing, irrigation, and drainage. In another major project, FAO assisted in an intensive drive against rinderpest—the “cattle plague” which kills a million animals a year in China. A program is now under way for vaccinating 15 million animals against this deadly disease.

Missions. FAO missions went to two countries in 1948, at the request of their governments. One mission went to Siam to make a broad survey emphasizing possible improvements in the production of rice and forest products, and in the management of livestock. One of the findings of the mission was that malaria has been one of the main causes of reduced production. This malady strikes an estimated 3 million Siamese each year and thus weakens the food-producing population. Another mission went to Venezuela to investigate palms and other plants as possible sources of edible fats and oils, long lacking in Venezuelan diets.

Joint Working Parties. In 1948, FAO took active part in various joint working parties set up by the regional economic commissions of the United Nations. For example, working with the Economic Commission for Europe (ECE), one FAO group rounded up and analyzed the agricultural reconstruction and development program of 26 European countries through 1950–51.

With other international agencies a network of cooperation began to develop in 1948. Throughout the year, FAO worked hand in hand with the UN International Children's Emergency Fund, and established a close working relationship with the World Health Organization (WHO). Day to day cooperation on technical matters was maintained with various UN units, such as the Economic and Social Council, the International Bank for Reconstruction and Development, and the International Monetary Fund.

Regional Offices. The nucleus of a regional office for the Near East was established in Cairo during the first part of the year 1948. In Europe, the work of the regional office at Rome began to be supplemented by FAO activities at Geneva, the center for cooperation with ECE. An interim appointment was made of a regional representative for the Far East, whose office is in Bangkok, Siam. Plans were made to appoint a regional representative for Latin America.

Service to Governments. General and regular services to governments, crystallized into more definite patterns as needs became clearer. In particular, the year saw some notable publications in international statistics—*A Yearbook of Food and Agricultural Commodities*, a *Yearbook of Fisheries Statistics*, the first ever to be compiled. Publication of statistical bulletins for agriculture, forestry, fisheries, and nutrition was also begun. A number of technical studies in fields of interest to all or most member nations were published: *Breeding Livestock Adapted to Unfavorable Environments*; *Soil Conservation: An International Study*; *Storing and Drying Grain*.

Annual Conference. The Fourth Annual Conference of FAO was held in Washington in November, 1948. A full-scale consultation on the world food situation and the programs of member governments for the year 1949, were the principal topics discussed by the 58-nation gathering. Perhaps the best way to summarize the achievements of this Conference is to quote the observation made by the Conference Chairman, U.S. Secretary of Agriculture, Charles F. Brannan:

“It has set in motion work on commodity studies and agreements which should do much to promote

an abundant flow of food in the channels of international trade and security for both producers and consumers. . . . It has moved forward FAO's work in the field of increasing production in those areas where such production is so badly needed.”

—NORRIS E. DOND

FOOD AND DRUG ADMINISTRATION. The Food, Drug, and Cosmetic Act, 10 years old in June, 1948, is a proven instrument of consumer protection. In general, manufacturers have come to regard the statute “as a measure of their obligations to the public.” Liberal judicial interpretations and prompt amendatory legislation when additional coverage was required or weaknesses became apparent have strengthened it throughout the decade.

Such strengthening was marked in 1948. In January the Supreme Court sustained the conviction of a retail druggist who had taken prescription drugs from their properly labeled interstate container and sold them without adequate directions or warnings. The Court ruled that the protective features of the Federal law are to be carried through to the ultimate consumer. In June, 1948, Congress amended the Act to cover specifically this type of violation and others whereby foods, drugs, and cosmetics that meet the Federal requirements at the time of interstate shipment might become adulterated or misbranded before they reach the user.

In November, 1948, the Supreme Court ruled that literature designed for use in the distribution and sale of a product is accompanying labeling, whether or not it physically accompanies the article during its interstate journey. This will protect the public from drugs and devices misbranded by misleading literature sent separately from the articles in an attempt to circumvent the rigid misbranding provisions of the 1938 Act.

Three-year jail sentences and the highest total fine of the year (\$18,640) were imposed upon two physician brothers for the distribution of a vinegar solution of saltpeter for the treatment of diabetes, with deaths and serious illnesses resulting. Criminal prosecution cases charging false and misleading curative claims were instituted against 39 medicine and 6 therapeutic device promoters.

Faulty controls in the manufacture and labeling of drugs continued to be a regulatory problem, with more recall programs required in 1948 than in any previous year. In a number of instances, when the efforts of manufacturers and the inspection force failed to recover all potentially injurious lots, the Administration was compelled to issue warnings for the safety of the public. Determined efforts have been instituted by the industry to prevent the occurrence of manufacturing errors.

Improved conditions were found in almost every major food industry. The conspicuously small minority prosecuted for violations received higher penalties, in general, than during any year of food-law enforcement. The highest food fine (\$15,000) was imposed on a macaroni corporation and its manager, for use of rodent-contaminated materials and operations in a filthy factory.

The use of poisonous preservatives or decomposition inhibitors and of mineral oil in foods was encountered rarely in 1948, a result of recent regulatory campaigns against deleterious ingredients. Two-thirds of the food seizures were based on decomposition or filth. Fewer violative frozen foods were found, largely because of more adequate freezing and storage facilities and the withdrawal from the industry of many opportunists without the “know-how” or the will to pack sound products.

Of the three groups of drugs requiring certification before distribution, 269 batches of insulin, 11,564 of penicillin, and 897 of streptomycin were certified. In addition, 4,699 batches of coal-tar colors were certified for use in foods, drugs, and cosmetics.

During the year, 194 new-drug applications were made effective. Relatively few were actually new chemical entities; a large proportion represented new dosage forms, modifications, combinations, or duplications of types of products already known in drug therapy. Each required adequate study by the introducer to assure safety under proper use, and proof that proper production controls can be maintained.

In the fiscal year 1948, 945 shipments of foods, 206 of drugs and devices, 20 of vitamins and foods for special dietary uses, 20 of cosmetics, and 2 of caustic poisons were removed from the market by seizure. Criminal prosecution actions were brought against 421 individuals and firms charged with violating the Act, and 20 injunctions were requested of the courts. Fines in terminated cases totaled \$297,426. In 89 actions the fines imposed were \$1,000 or more. Jail sentences, ranging from 1 day to 3 years, were imposed upon 19 individuals, with sentences suspended for 9 of these defendants, who were placed upon probation.

—PAUL B. DUNBAR

FOOTBALL. The college game, riding a wave of prosperity, continued to gain in attendance, a press survey of 99 major schools showing a rise of almost 6 percent in the number of fans. The colleges in the survey played 487 home contests, before 13,051,248 spectators.

The year was not without the usual number of thrillers and upsets, with two of the big surprises coming near the very end of the regular season. The first of these came before 102,500 at Philadelphia's Municipal Stadium when Navy, which had lost all eight of its earlier games, held powerful Army, which had gone unbeaten and untied in eight games, to a 21-21 tie.

Notre Dame, sailing along to its third straight campaign without a defeat, ran onto the rocks before 100,571 in the Los Angeles Memorial Coliseum when thrice-beaten Southern California reared up to battle the Irish to a 14-14 tie. Only a desperate rally in the closing seconds saved Notre Dame from defeat. The Irish entered the battle with two all-time Notre Dame records to their credit, having won 21 straight games and gone unbeaten through 28 in a row.

The ties dropped Army and Notre Dame from contention for the mythical national title and left Michigan alone at the top. Michigan completed its second straight season with a perfect record and retained the Western Conference championship. Benny Oosterbaan of the Wolverines was voted the coach of the year.

Penn State was victim of another major surprise when it lost to an in-and-out Pitt eleven, 7-0. California had a perfect record in the regular campaign and shared Pacific Coast Conference honors with Oregon. Oklahoma won the Big Seven crown, Army gained the Lambert Trophy as the East's leader, and Cornell was crowned king of the Ivy League. Other champions were Georgia, Southeastern; Southern Methodist, Southwest; Clemson, Southern; Utah, Big Six; Oklahoma A. and M., Missouri Valley; Ripon, Midwest Conference; Toronto, Canadian intercollegiate.

The year produced hundreds of individual stars, with Doak Walker of Southern Methodist winning

the Heisman Trophy as the outstanding player of the season. Charley Justice of North Carolina and Pennsylvania's Chuck Bednarik were among his closest rivals in the voting. Levi Jackson, star back, became the first Negro ever to captain a Yale University sports team when the Elis elected him their 1949 leader.

Northwestern, runner-up to Michigan in the Western Conference, represented the Big Nine in Pasadena's Rose Bowl and turned in a 20-14 victory over California on Ed Tunnick's 43-yard run with three minutes to play. Bowl games on January 1 were scattered across the nation, Oklahoma downing North Carolina, 14-6, before 82,000 in the New Orleans Sugar Bowl, while Southern Methodist stopped Oregon, 21-13, in the Dallas Cotton Bowl as 69,000 looked on. Texas routed Georgia, 41-28, before 60,523 in the Miami Orange Bowl, and West Virginia beat Texas Mines, 21-12, in El Paso's Sun Bowl as 20,000 watched.

The annual Shrine benefit game between the East and West at San Francisco resulted in a 14-12 triumph for the East as Columbia's Gene Rossides tallied the deciding touchdown. In Christmas Day benefit contests, the North's Blues set back the South's Grays, 19-13, before 15,000 at Montgomery, Alabama, and the Southern All-Stars beat the Northern All-Stars, 24-14, before 33,056 in the Orange Bowl.

With the continued war between two rival leagues cutting deeply into attendance, the professionals did not enjoy the success that came to the collegians. Cleveland's Browns continued their domination of the All-American Conference by defeating the Buffalo Bills, Eastern Division champions, 49-7, at Cleveland. The Browns set a new pro football record when 82,769 fans filled the Cleveland Municipal Stadium to see a contest with San Francisco.

In the National League, the Philadelphia Eagles won the championship by halting the powerful Chicago Cardinals, Western Division winners, 7-0, in a heavy snowstorm at Philadelphia.

—THOMAS V. HANEY

FORD FOUNDATION. Incorporated on Jan. 15, 1936, in order to receive and administer funds for scientific, educational, and charitable purposes; all for the public welfare. Assets, \$205 million, Dec. 31, 1948. A board of six Trustees and annually elected officers head the Foundation. President, Henry Ford II; Secretary Treasurer, B. J. Craig. Annual meetings are held in April. Headquarters: 2612 Buhl Building, Detroit 26, Mich.

FOREIGN AGRICULTURAL RELATIONS, Office of. A branch of the U.S. Department of Agriculture which has been collecting, analyzing, and disseminating information on foreign competition and demand for farm products and agricultural policy. Its primary purpose is to study the factors influencing the food supply and needs of foreign countries, competition, trade barriers, production and marketing, and other developments affecting American agriculture. It also directs and coordinates the participation of the Department of Agriculture in the reciprocal trade agreement program and in other international agreements affecting agriculture. Director: D. A. FitzGerald.

FOREIGN AND DOMESTIC COMMERCE, Bureau of. The functions of the Bureau were carried out during the fiscal year (July 1, 1947, to June 30, 1948) by the following five major offices: (1) Office of Business Economics, (2) Office of Domestic Com-

merce, (3) Office of International Trade, (4) Office of Field Service, and (5) Office of Small Business. At the end of the period, principal functions of the Office of Small Business were absorbed by the Office of Domestic Commerce when Congress did not appropriate funds for the continuance of that Office.

Office of Business Economics. The Office of Business Economics was called upon to meet a steady demand for its basic economic data and analyses—a demand which was heightened by the wide attention given to developing postwar tendencies in the domestic economy and the necessity for determining quantitatively the effect of new international programs. At the same time, it was also necessary to concentrate some resources upon bringing up-to-date the work interrupted early in the war emergency period, much of which was essential to profitable analysis for postwar guidance. After publication early this year of the National Income Supplement to the Survey of Current Business, containing completely revised data on the national income and the gross national product for the years 1929 through 1946, these valuable new series were posted quarterly. They are considered standard guides in business operations. Resuming the detailed record of the United States balance of international payments which has been published since 1922, the Office made available "International Transactions of the United States During the War Years, 1940-1945" to provide a comprehensive record of what this country contributed to and received from other nations during 6 years of global war. It has also been possible to footnote and explain the 2,500 statistical series regularly published each month in the Survey of Current Business by issuance of a new Statistical Supplement which in one handy volume carries all those data back to 1935.

OBE has continued to serve the Council of Economic Advisers and other Government agencies through provision of special economic materials and analyses, and has played an important role in the considerations leading to adoption of the Economic Cooperation Program. Successful efforts were made throughout the year to meet the desires of business concerns and trade journals, their economists and advisers, for timely and meaningful presentation of basic economic indicators.

Office of Domestic Commerce. This separate unit of the Bureau of Foreign and Domestic Commerce continued, under a reorganization begun the previous year, the progress in expanding and strengthening its services to business and industry. The trend from a seller's to a buyer's market in several important products brought about increased demands for assistance in meeting conditions in production, construction, distribution, transportation, and market research. Problems arose which were new to many of the persons who had established business enterprises since the beginning of the war.

To assist both business and Government, stress was on a program to develop basic demand-supply studies in the principal industries and several releases on the subjects were made available. Considerable work was done in assembling and issuing marketing information, to be distributed in reply to direct inquiries of individuals and groups or by making more limited reports available to a greater number of people through the Department's Field Service.

Office of International Trade. OIT has three basic responsibilities: (1) to provide information and advisory services to business, the general public, and government regarding economic and trade

conditions in all parts of the world; (2) to consult with business and represent business in the councils of government with regard to international trade policies and specific trade problems; and (3) to promote through all possible means the creation of a balanced, multilateral world trade.

During the fiscal year 1948 these basic service functions continued to be performed; but the year was one of crisis in international political and economic relationships, and heavy demands were made on OIT to contribute its technical services to the solution of critical problems. Of overriding importance in the field of international economic relationships was the growing shortage of dollars throughout the world. This dollar shortage resulted in an increase and intensification of import and exchange controls in many areas and was the basic condition that prompted the European Recovery Program. During the period when the possibilities of an ERP were being explored, the services of OIT's commodity and areas specialists were enlisted to aid in the drafting of the advisory reports; and when the Congress had passed the Foreign Assistance Act and authorized funds, OIT assisted the Economic Cooperation Administration actively in getting the program underway and informing businessmen of ECA procedures and policies.

Another major responsibility of OIT was the administration of an expanded program of export controls. At the end of fiscal year 1947 export controls applied to only about 20 percent of all United States exports. By June 30, 1948, approximately 50 percent of United States exports required export licenses. This expansion was prompted by the increasing use of export controls as an instrument of United States foreign policy and by the increasing pressure of demand upon the United States to supply major quantities of materials and equipment already in short supply domestically. Increased appropriations by the Congress enabled OIT to increase its export staff from 125 at the beginning of the year to approximately 500 on June 30, 1948.

Information on trade conditions was distributed by means of *Foreign Commerce Weekly*, the *International Reference Service*, *World Trade in Commodities*, Trade Lists, World Trade Directory Reports and individual books on specialized trade subjects. Because of the continued surplus of United States merchandise exports over imports, heavy emphasis was placed on the promotion of imports as a means of placing dollars in the hands of other countries. In addition, OIT continued to administer certain operating trade programs such as a British Token Import Plan, the China Trade Act, and the Foreign-Trade Zones Act.

OIT continued to spend much of its effort in interdepartmental councils and international negotiations toward the end of establishing an International Trade Organization, and in the preparatory work for, and the negotiating of trade agreements under the Reciprocal Trade Agreements Act. The guiding aim of all OIT activities is the ultimate establishment of a world trade that will be relatively free of the restrictions, instabilities, discrimination, and bilateral limitations that have characterized international commercial relations in recent years. In the meantime, OIT attempts to help foreign traders in every way possible to carry on their business effectively despite their many handicaps.

The Foreign-Trade Zones Act of June 18, 1934, which authorized the establishment of foreign-trade zones in our ports of entry by qualified public and private corporations, named the Secretary of

Commerce as the chairman of the Foreign-Trade Zones Board. In addition to the Secretary of Commerce, the Board consists of the Secretary of the Treasury and the Secretary of the Army.

During the year the program for extending the usefulness of foreign trade zones in the development of United States import and reexport trade received considerable impetus. On Mar. 10, 1948, following the recommendation of the Committee of Alternates, the Foreign-Trade Zones Board issued a grant to the Board of State Harbor Commissioners to establish and operate a foreign-trade zone on pier 45 in the Port of San Francisco. Operation of Foreign-Trade Zone No. 3 in this port began on June 10, 1948.

Port surveys conducted at Los Angeles, Seattle, and San Antonio during the fiscal year have materialized into formal applications to establish foreign-trade zones at these locations.

Office of Field Service. A substantial cut was made in the Field Service virtually offsetting the expansion which took place during the previous fiscal year. With 46 field offices in operation, compared to 77 during the previous year, heavy demands were made on the existing facilities due to the unsettled economic conditions throughout the world. The problems created by dollar shortages in many of our important markets and the signing of the General Agreements on Tariffs and Trade in October brought forth a large number of inquiries. The field offices continued to play an important part in the administration of the export control powers vested in the Office of International Trade under the Second Decontrol Act of 1947. The Trade Conference Program of utilizing services of Foreign Service officers in the United States on leave was expanded, and there was an increase of 50 percent in the number of cooperative offices maintained by the Field Service. A continuing interest existed throughout the year in information on local and regional economic trends and a wider use was made of material provided by the Department on national income and national product, with constant use being made of the wide range of data provided by the Bureau of the Census.

Office of Small Business.* In cooperation with trade and professional associations, bureaus of business research, veterans' organizations, manufacturers, wholesalers, and public interest groups, a program was developed to disseminate management information to small businessmen throughout the country. Emphasis was placed on this type of information because of the recognition that lack of management "know-how" is a leading cause of small-business failures. The Office of Small Business published booklets useful to the small-business operator.

FOREIGN EXCHANGE. In 1948 the deficit of foreign countries in their transactions with the United States was considerably reduced as compared with the previous year. The excess of exports of American goods and services over imports was approximately \$6,000 million as against \$11,000 million in 1947. In part this decline reflected an increase in United States imports due to partial recovery abroad and high business activity at home. To a greater extent, however, it was caused by a decrease in exports brought about by the trade and exchange restrictions imposed by foreign countries as their gold and exchange resources were depleted and production of industry and agriculture increased.

* O.S.B. was abolished at the beginning of fiscal 1949 and its major functions were transferred to a Division of Small Business in the Office of Domestic Commerce.

While the nations abroad continue to buy in the United States large quantities of essential commodities, particularly grain, fuels, industrial raw materials and machinery and equipment, they cut down drastically on imports of non-essentials. This applied not only to the countries receiving aid under the European Recovery Program but also to countries in the Western Hemisphere that were suffering from an acute shortage of dollars because of their previous large purchases in the United States and the fact that a considerable part of their earnings in Europe were in sterling or other inconvertible currencies that could not be used to offset their deficits in trade with the United States. This situation led to widespread tightening of controls on imports from the dollar area and to special efforts to increase exports to the United States.

The deficit of foreign nations in their dealings with the United States was made up in part through the shipment of gold and the liquidation of dollar assets here, the increase in the gold stock of the United States amounting to \$1,500 million during the year. In the main, however, the negative balance of payments was covered by loans and grants received from the United States under the European Recovery Program (ERP) and the credits extended prior to its inception. Credits received from the International Monetary Fund and the International Bank also helped alleviate the dollar shortage.

The manner in which foreign nations were able to finance the goods and services received from the United States is shown in Table 1 which summarizes the transactions for the first three quarters of 1948.

TABLE 1—EXPORTS OF GOODS AND SERVICES
AND MEANS OF FINANCING, 1948

Foreign Aid. During the fiscal year ending June 30, 1948, assistance provided by the United States Government to other countries in the form of grants or credits totaled \$5,400 million as compared with \$6,500 million in the previous fiscal year. Aid in the form of grants increased by almost one-fifth, however, the decline being accounted for by smaller foreign loans. These totals reflected mainly commitments made before the European Recovery Program, which was authorized under the Foreign Assistance Act of Apr. 3, 1948, and made itself felt mainly during the second half of the year.

Included in the 1948 fiscal year totals was \$1,700 million remaining on the British loan, which was completely utilized by Mar. 1, 1948. Civilian supplies shipped to occupied and liberated areas by the military agencies accounted for \$1,075 million, while loans and credits of the Export-Import Bank made up an additional \$1,102 million. Grants under the post-UNRRA, Greek-Turkish, and Philip-

pine rehabilitation programs amounted to \$643 million, while the interim aid authorized by Congress to bridge the gap during the first three months of 1948 provided an additional \$535 million.

The foreign transactions of the United States Government for the fiscal years from 1946 to 1948 are summarized in Table 2.

^a Less than \$500,000.

The Foreign Assistance Act authorized grants and credits of \$5,300 million to the 16 Western European nations, Trieste, and the zones of Western Germany, comprising the Organization for European Economic Cooperation. While these funds were to be used over the 15-month period ending June 30, 1949, the President was authorized to utilize the entire amount within 12 months if he considered it advisable. A special program of economic and military aid to China, totaling \$400 million, was also voted by Congress.

By the end of 1948, authorizations by the Economic Cooperation Administration (ECA), the governmental agency carrying out the program, totaled \$4,233 million. Of this total, the United Kingdom received \$1,110 million, France \$946 million, Italy \$498 million, Western Germany \$401 million, the Netherlands and Indonesia \$373 million, Austria \$213 million, China \$171 million, Greece \$145 million, and Belgium-Luxembourg \$139 million, with smaller amounts for the other countries.

Of the total procurement authorizations through December 24, food and agricultural commodities made up 45 percent. The principal items were wheat and wheat flour to the amount of \$731 million, cotton \$353 million, fats and oils \$179 million, tobacco \$106 million, sugar \$92 million, meats \$86 million, coarse grains \$81 million, and dairy prod-

ucts and eggs \$75 million. Raw materials, fuels, equipment, and other industrial commodities made up 46 percent of the total authorizations. In this group the major items were petroleum \$394 million, machinery \$393 million, nonferrous metals \$268 million, coal \$206 million, vehicles and equipment \$175 million, iron and steel products \$101 million, lumber, pulp and paper \$101 million, chemicals and related products \$101 million, textiles \$55 million, metallic ores \$46 million, hides and leather \$40 million.

Ocean freight, totaling \$349 million, absorbed over 8 percent of the total. At the start of ECA operations, the greatest emphasis was placed on foodstuffs and other relief commodities. As recovery proceeded in Europe, however, a larger proportion of shipments was made up of capital goods. Thus, in the period from October 1 to November 15 the ECA procurements of industrial equipment and commodities constituted 60 percent of the total as compared with 41 percent in the April-June quarter.

Aside from the contributions to European rehabilitation made by the direct shipments under the program, ECA aided European recovery through the use of the so-called "counterpart funds," which are the shipments in local currency deposited by each of the recipient nations in special accounts in amounts corresponding to the total of the American grants. Under the Foreign Assistance Act, approval of the ECA must be received before these funds can be released, the aim being to avoid their employment for inflationary purposes. Release of counterpart funds in France, Italy and other European countries provided means for the development of local industries and for public works projects, while in Great Britain large amounts were used to retire part of the national debt held by the banking system, thus reducing the money supply.

An important step toward the attainment of another major objective of the ERP, the development of intra-European trade, was taken with the conclusion of a clearing and payments agreement among the Marshall Plan countries. Under this arrangement, ERP nations running a deficit in their trade with other participants are enabled to obtain credits from the latter, while the creditor countries, in turn, are reimbursed with an equivalent amount of dollar grants from the ECA. A clearing organization settles each month's trade payments among the 16 countries. It was hoped that this plan, by making possible more extensive multilateral trade to replace the bilateral arrangements by which accounts had been largely settled, would stimulate the volume of trade within Europe. This, in turn, would reduce the deficits of Western European countries in their trade with the Western Hemisphere.

During the year, the countries making up the Organization for European Economic Cooperation drew up long-range plans for economic development envisaging a steady decline in the payments deficits of the member countries. It was anticipated that the dollar aid needed in 1949 would be somewhat less than in 1948.

The International Monetary Fund and Currency Reform. The International Monetary Fund continued to play an important part in promoting international exchange stability by making available to members experiencing exchange difficulties limited amounts of foreign currencies. These transactions take the form of sales of the desired currency, usually dollars, in exchange for the buying country's currency.

As of Nov. 30, 1948, transactions of the Fund totaled \$649 million as compared with \$468 million at the end of 1947. Of the total Fund sales of all currencies, \$631.5 million consisted of United States dollars. The principal purchasers of United States dollars from the inception of the Fund were the United Kingdom (\$300 million), France (\$125 million), and the Netherlands (\$62.5 million). With Switzerland and Austria signing the articles of agreement, the number of members was increased to 47 as against 38 when the Fund started operations. The applications of Siam and Liberia were also approved. On Sept. 30, 1948, gold holdings of the Fund totaled \$1,403 million and holdings of members' currencies the equivalent of \$5,448 million.

During the year a number of important currency reforms were effected, particularly in France, China and Western Germany. In most of the other countries, with certain relatively minor exceptions in Latin America, the exchange parities remained fairly stable. Table 3 shows the average rates of exchange on 21 countries in December, 1948, and December, 1947. Averages are based on daily noon buying rates for cable transfers in New York City certified by the Federal Reserve Bank of New York.

On Jan. 25, 1948, the French Government, in order to stimulate exports and attract gold from hoards and abroad, devalued the franc by 44.4 percent, thus raising the official rate for the United States dollar to 214.4 francs (1 franc = 0.47 cents). Simultaneously, a free market was established for the United States dollar and the Portuguese escudo and later for the Swiss franc, operating at the Paris Bourse under the control of the Bank of France.

Although the rates of the "hard" currencies on the free market fluctuated in accordance with demand and supply, the demand was effectively controlled through the issuance of licenses for authorized transactions by the Exchange Control Office (Office des Changes). Moreover, the Bank of France intervened in the free market from time to time through purchases and sales. Nevertheless, the black market in foreign exchange was still very active. On December 17 the United States dollar sold for 545 francs (290 francs on February 1).

The drastic devaluation of the franc and the institution of free-market dealings in only three currencies was strongly opposed by the International Monetary Fund on the ground that it produced a pattern of exchange rates in France at variance with the parities established by the Fund.

On Oct. 16, 1948, the exchange rate of the dollar for export and import transactions was fixed at the average of the official rate of 214 and the free market rate of 313 francs, or about 263 francs. Thus, importers of essential commodities had to pay 263 francs per dollar instead of the former rate of 214 francs. The free market for the dollar, Swiss franc, and escudo continued unchanged for non-commercial transactions.

In an effort to curb the catastrophic inflation which had virtually wiped out the purchasing power of the currency, the Chinese Government on August 19 introduced a new managed gold standard currency called the "gold yuan." The new currency, with a gold content of 0.222 grams, was to be backed by 100 percent reserves consisting of a minimum of 40 percent in gold, silver, and foreign exchange and the remainder in negotiable instruments.

All outstanding legal tender notes (fapi) were to be exchanged for the new currency at the rate of 3 million for 1 gold yuan. Gold, silver dollars and foreign currency held by the public were either to be surrendered to the Government in exchange for gold yuan, at the exchange rate of 4 gold yuan to one United States dollar, or deposited in Government banks to be used for the payment of licensed imports or other authorized purposes. The currency reform was accompanied by a series of emergency measures designed to control and stabilize prices and wages.

With the continuance of the civil war and the huge budget deficit, the emergency measures proved completely ineffective to stem the rising tide of inflation. On November 11 the Government made a number of additional revisions in the currency system. The basic unit of the currency was to be gold yuan coins instead of gold yuan notes, each coin to have a legal content of 4.44 milligrams of fine gold. Possession of gold, silver coins and foreign currency was again legalized, but their circulation and dealings in them were not permitted. United States bank notes could be exchanged for gold yuan coins at the rate of 20 gold yuan coins to one United States dollar. The critical military situation and the collapse of the Chinese economy in the closing months of the year made it highly improbable that the new regulations would have much greater success in stabilizing the currency than the old.

As a step towards the restoration of normal economic life and the establishment of an independent economy in Western Germany, the United States, British and French military Governors introduced a sweeping reform of the currency in June. Under this reform the greatly depreciated reichsmark was abolished and in its place was issued a new deutsche mark at the rate of 10 old marks for one deutsche mark. In general, all unpaid debts were to be written down to one-tenth of their normal value, but salaries, wages, pensions and similar payments had to be continued on a 1-to-1 basis.

Under a new currency law issued at the beginning of October, the Allied Military Government wiped out a substantial part of the blocked balances of currency holdings and bank deposits, estimated at approximately 5 billion deutsche marks. The new law cancelled 70 percent of the blocked holdings, released 20 percent to the owners, and

kept 10 percent blocked, with the provision that it could be used for investment purposes subject to government regulations. The months following the reform were marked by a substantial increase in industry and trade.

On August 19 the New Zealand Government raised the exchange value of its currency by 25 percent, bringing it to parity with the British pound sterling. This upward revaluation of the currency from the level where it had remained since 1933 was stated to be necessary in order to reduce the cost of imported goods so as to lower production costs and the general cost of living.

International Bank. The International Bank was relatively inactive in 1948 so far as loan operations were concerned. The only new loans were one in Swiss francs to the equivalent of \$4 million made to the Netherlands Government and one of \$12 million made to four Dutch shipping companies, the first loan to private enterprise made by the Bank. The latter credit, given for the purchase of ships, was secured by notes guaranteed by the Dutch Government, the bulk of which were immediately sold to American banks.

As of December 1, loans made by the Bank totaled \$509 million. In addition, there was outstanding a commitment of a loan to Chile of \$16 million subject to ratification by the Chilean Government. The Bank reported it had under consideration applications from many nations for loans for reconstruction purposes. Discussions were being conducted in more than 20 countries with regard to the Bank's participation in the financing of projects such as power developments, transportation and communication facilities, irrigation works, mining plants and industrial enterprises.

Gold Imports. During 1948 foreign nations continued to draw on their gold reserves in order to redress their payment deficits with the United States, although at a slower rate than in the previous year. In the 12 months ending Dec. 15, 1948, the monetary gold stock of the United States increased by \$1,507 million as against \$2,225 million in 1947 aside from \$687 million paid to the International Monetary Fund as the U.S. subscription. Of the total gain in 1948, approximately \$75 million was represented by domestic gold production and the remainder by gold exported for sale in the United States or gold released from earmark for foreign account to be sold to the United States Government. At the year's end the nation's monetary gold stock reached the record total of \$24,243 million. The decline in gold imports in 1948 was due to grants under the European Recovery Program (ERP), to reduced imports of American goods brought about by exchange restrictions imposed by European and Latin American countries, to the depletion of foreign gold and exchange reserves, and to increased commodity imports by the United States as a result of economic recovery abroad.

—SAMUEL S. SHIPMAN

FOREIGN LIQUIDATION COMMISSIONER, Office of. The Office of the Foreign Liquidation Commissioner of the U.S. Department of State was created by order of the Secretary of State, effective Oct. 30, 1945, with authority to carry out the functions transferred to the Department of State by Executive Order 9630 dated Sept. 27, 1945, i.e., disposal of surplus property located in foreign areas and residual lend-lease functions. At the same time the Secretary of State named Mr. Thomas B. McCabe as Commissioner and Maj. Gen. Donald H. Connolly as Deputy Commissioner.

Maj. Gen. Connolly was later appointed Com-

missioner to succeed Mr. McCabe who resigned on Sept. 20, 1946, and held office until Mar. 31, 1948, when he resigned as Commissioner and was succeeded by Mr. Fred W. Ramsey, former Deputy Commissioner who administered the affairs of the OFLC until his resignation on July 31, 1948. Maj. Gen. Clyde L. Hyssong, former Central Field Commissioner for Europe, succeeded Mr. Ramsey and assumed responsibility Aug. 1, 1948. The remaining lend-lease functions (except for certain field operations) were subsequently transferred from OFLC to the Office of Financial and Development Policy of the Department of State on Mar. 24, 1947.

OFLC is the disposal agency for United States surplus property located outside the continental United States, Alaska (including the Aleutian Islands), Puerto Rico, and the Virgin Islands. Property declared surplus by agencies of the government is sold through field offices in various parts of the world subject to supervision by the Washington Office. These field offices are located in Paris, Manila, Sydney, Shanghai, Tokyo, Guam and Balboa. In addition, a field commissioner for Military Programs and a field commissioner for Canada and North Atlantic areas are stationed at the Washington office.

Property is sold on a "where is—as is" basis and prospective customers are therefore advised to inspect property. Importation into the United States of surplus sold in foreign areas is prohibited generally although some exceptions are provided for in FLC Regulation 8. Owning agencies are responsible for the care, handling and storage of surplus property until removed by the purchaser or abandoned. As of Sept. 30, 1948, property having an original cost of \$10,246 million had been declared surplus to the OFLC. Operations through Sept. 30, 1948, disposed of property which had originally cost \$10,067,927,000 for a total realization in the form of cash, credit and foreign currency amounting to \$1,882,959,000.

The OFLC is responsible, also, for the sale of any returned lend-lease property which is subsequently declared surplus and for the sale of properties allocated to the United States Government by the Inter-Allied Reparation Agency, as reparations from Germany. German manufacturing equipment made available by the Allied Control Authority as reparations for allocation among the Western allies is requested for the United States only when the U.S. Department of Commerce has determined that such property can be utilized directly by United States industry or Government Agencies and its use will be generally beneficial to the American economy.

—CLYDE L. HYSSENG

FOREIGN-TRADE ZONES BOARD. A Board constituting the Secretary of Commerce, the Secretary of the Treasury and the Secretary of the Army, which was created by the Celler Act in 1934 to provide for the establishment, operation and maintenance of foreign-trade zones in the United States. The Chairman is the Secretary of Commerce. Foreign-Trade Zone No. 1 at Stapleton, Staten Island, New York, was opened in 1937. Foreign-Trade Zone No. 2 was opened on May 1, 1947, in New Orleans, La. Foreign-Trade Zone No. 3 was opened at San Francisco, Calif., on June 10, 1948. Applications for zones from Los Angeles, Calif., Seattle, Wash., and San Antonio, Tex., were under consideration.

FOREST SERVICE, U.S. Fifty years of development of national forests in the United States was reviewed

in the 1948 report of the Chief of the Forest Service. The national forest system, which began with the reservation of certain areas of public domain land in the western States in the 1890s, now embraces nearly 180 million acres, located in 40 States and the territories of Alaska and Puerto Rico. It is being administered by the Forest Service under a multiple-purpose system of management that looks to the development and maintenance of its resources for permanent public use and benefit.

Establishment of national forests marked the first great step in the forest conservation movement in the United States, the report said. The national forest system still represents the Nation's largest tangible accomplishment in forest conservation.

Timber output from the national forests has increased rapidly in recent years. The total cut of nearly 4,000 million board feet in 1948 was nearly treble that of 10 years earlier. With construction of more access roads and intensified management, the report said, the sustained yield of timber can be increased another 50 percent within a few years, and eventually even greater production can be obtained.

With 16 percent of the nation's commercial forest land, the national forests now contain more than 30 percent of the nation's total volume of standing sawtimber. National forest timber is therefore becoming increasingly important in meeting the country's needs for forest products. But with only 16 percent of the commercial timberland, the national forests cannot supply all of the nation's requirements for wood. The report said that timber growth on forest lands in all ownerships must be built up if adequate future timber supplies are to be assured.

In addition to producing timber, national forests, mainly in the western States, are providing seasonal grazing for some 9 million head of cattle and sheep. Demand for grazing privileges greatly exceeds the amount of national forest range available. National forests harbor more than 2 million deer, elk, and other big-game animals—about a third of the nation's total big-game population. Some of the deer and elk ranges have become too heavily populated, with resulting damage to the range and loss of animals through starvation and disease. The Forest Service is cooperating with State game departments in measures to bring game numbers into balance with natural food supply.

More than 21 million recreationists visited the national forests in 1947, and recreational use in 1948 was expected to exceed this figure. The Forest Service has developed 4,500 camping and picnic areas and 230 winter sports areas. Four hundred organization camps are maintained by the Forest Service and civic and welfare organizations to provide low-cost vacations for underprivileged children and other groups. Within the national forests are 90,000 miles of fishing streams. More than 50,000 miles of national-forest highways and roads are available to motorists, and 88,000 miles of trails to hikers and horseback riders.

Watershed protection is a major objective in national forest administration. National forest lands are the source of water supply for hundreds of towns and cities, for many industrial plants and power projects, and in the western States for most of the irrigation agriculture.

For further development of the national forests, the Chief Forester recommended more intensive management of timber, water, and forage resources; more tree planting and range reseeding, and strengthening of protective work against fire, insects, and tree diseases. He also recommended con-

solidation of existing national forests through public purchase of intermingled private lands within forest boundaries, and extension of national forests in certain areas of critical watershed importance or other high public value.

Alaska Timber Sale. In August, 1948, the Forest Service accepted a bid for 1,500 million cubic feet of timber in Tongass National Forest in southeastern Alaska. The purchaser was the Ketchikan Pulp and Paper Company, an affiliate of the Puget Sound Pulp and Timber Company of Bellingham, Wash., which plans the establishment of a modern pulp mill with an ultimate capacity of some 500 tons per day, near Ketchikan.

This pulp-timber sale was the culmination of 30 years of effort on the part of the Forest Service to bring a pulp and paper industry to Alaska. The Ketchikan pulp-timber unit is the first of several such units in the Tongass National Forest which the Forest Service plans to develop. The sale marks the first step in opening up the Territory's huge pulp-timber resources, the largest untapped resources of the kind on the continent.

Looking to the establishment of a stable major industry, with year-round operation and employment, the timber sale is expected to play an important part in expanding the economy of Alaska on a sound and secure basis. The sale contract requires handling the timber on a sustained yield basis, safeguarding of salmon spawning streams, preservation of outstanding scenic areas, and prevention of stream pollution.

Cooperative Work. Under authorization of the Clarke-McNary Act, the Forest Service cooperated with 43 States and Hawaii during the year in the prevention and suppression of forest fires on State and privately-owned lands. Organized protection was provided for 328 million acres, an increase of 9 million acres over the preceding year. There are 111 million acres of private land, however, which as yet receive no organized fire control. The U.S. Congress raised the Federal appropriation for cooperative fire protection from \$8.3 million in fiscal year 1947 to \$9 million (the ceiling under present law) for 1948.

Latest estimates by Federal and State foresters of the cost of providing complete protection for all State and private forest lands was \$40 million, of which the Federal Government's share in a cooperative program would be \$20 million.

The Forest Service also cooperated with 42 States and two Territories in production and distribution of trees for farm woodland and shelter-belt planting. More than 42 million trees were distributed to farmers at cost or less under this program during the year.

Research. A number of promising hybrid pines have been produced at the Institute of Forest Genetics, Placerville, Calif., a branch of the Forest Service's California Forest and Range Experiment Station. Among the hybrids are various crosses between Ponderosa pine and Jeffery and Coulter pines, between jack pine and lodgepole, and between eastern and western white pines. Several of the hybrids show "hybrid vigor," growing faster than either parent. Others combine rapid growth of one parent with hardness of the other. During the year 1948 the station began mass production of seed and nursery stock for large-scale testing of these hybrids under forest conditions.

A special study of the relation of watershed conditions to flood run-off was made by a group of Forest Service watershed specialists during the Columbia River flood of 1948. Immediate causes of the flood were abnormal accumulations of snow

in the mountains, late spring, prolonged rains, and a sudden unseasonable hot spell that quickly melted most of the snow. The watershed technicians found ample evidence, however, that damage would have been less severe, and that considerable water would have been held back until after flood peaks had passed, if millions of upland acres had not previously been depleted of their plant and forest cover.

As late as June 14, about 15 days after the flood peaks had passed, timbered areas were found that were still blanketed with snow, while burned-over areas nearby were snowless. In many instances, burned and denuded north and east slopes, that normally should hold their snow longest, had lost all snow, while timbered south and west slopes were still snowbound.

Rough ground measurements on a number of small drainages showed peak discharges from denuded lands averaging 50 percent higher, and in some cases nearly 100 percent higher, than those from lands of similar elevation and topography with good forest or vegetative cover. Water runoff from burned, destructively logged, or overgrazed drainages also carried more debris, caused more channel and bank cutting, more sedimentation in lower streams and damage to roads and bridges.

The effect of shelterbelts on snow in the Great Plains region led the Forest Service to investigate possibilities for saving water that might otherwise be lost in semi-arid regions. Experiments in Utah, with snow fences used as shelterbelts, indicated that shelterbelts planted at right angles to prevailing winds in open areas at high elevations would accumulate snow to great depths. Then, with the protection of the trees, melt would be delayed and water would be made available for later spring or early summer flow.

By applying techniques developed through Forest Service research, private stockmen have successfully reseeded more than 680,000 acres of depleted range land in Utah, Idaho, Nevada, and Wyoming. In addition the Forest Service has reseeded some 150,000 acres of national forest range in the Intermountain region.

Many species and strains of grasses and legumes from different parts of the world are being tested in nurseries in the western, southern and southeastern regions. Tests of the preference of grazing animals for a number of species, conducted by the Forest Service in the Intermountain region during the year, showed that some little known species have a higher preference value than crested wheatgrass, an introduced species that has been widely used for range seeding.

On the Jornada Experimental Range, maintained by the Forest Service in the semi-desert country of New Mexico, beef production per breeding cow has been almost doubled through improved range and cattle management measures. In the early '20s, calf crops on this range averaged 74 percent and calves weaned at about 275 lb. In recent years, the Forest Service reported, calf crops on the same area have averaged 90 percent, and the calves 411 lb. at weaning. The increased production has come about through more conservative stocking, deferred grazing of parts of the range, and other management procedures developed through research.

At the Forest Products Laboratory, maintained by the Forest Service in Madison, Wisc., more than 20 tons of molasses were prepared from wood during the year and shipped to various agricultural experiment stations for tests as supplementary feed

for livestock and poultry. Tests are under way on dairy and beef cattle, lambs, calves, hogs, chickens, and turkeys.

Production of molasses or yeast from wood sugars for the feeding of poultry and livestock is a promising field for use of large quantities of waste material from sawmills and wood-working plants and of lowgrade wood now unused. One ton of dry wood can yield approximately one-half ton of sugars, and sugar can be made out of practically any wood, with or without bark. There is also a large potential field of use for wood sugar in the production of industrial chemicals, such as ethyl alcohol, butanol, glycerine, and 2,3 butylene glycol.

Although nails have been used since early times to fasten wood members together, little attention has been given to a recommended practice or standard procedure for good nailing. To fill this gap in technical literature on home building, the Forest Products Laboratory, in cooperation with the Housing and Home Finance Agency, issued a publication on the *Technique of House Nailing*. Based on data obtained from observations of nailing practices, information from architects, engineers, and carpenters, and laboratory tests, the publication gives recommended nailing procedures to insure satisfactory strength and rigidity of the structural parts of a house.

To meet a need for specifications that will permit the segregation of sawlogs into quality classes according to their yields of the various grades of lumber, the Forest Products Laboratory completed a set of hardwood sawlog grades for application on a national basis. The standard grade specifications will help the timber owner realize the full value of logs he markets, provide the lumber manufacturer the option of buying quality classes of logs that best meet his requirements, and the forester with the means of making more accurate inventories and estimates. Work was started on the development of southern pine log grades.

A new type of structural material known as "sandwich" construction is now available to the designer, architect, or engineer for use in aircraft, housing, or wherever a lightweight, strong, rigid material is desired. The "sandwich" is made of high density, high-strength facings firmly bonded to a light, low-strength core.

To facilitate its full utilization, the Laboratory undertook to establish design data through tests of the properties of the component materials. Properties of the most common facing materials, such as veneer and plywood, and of many core materials have been established, and evaluation studies of others are being continued.

Paul Smith's College in New York made available to the Forest Service 2,000 acres of the college's land for an experimental forest, to be devoted to research and demonstration of timber growing and harvesting methods in the Adirondacks region. The Interstate Commission on the Delaware River, in cooperation with the State of Pennsylvania, procured a tract for an experimental forest and turned it over to the Forest Service's Northeastern Forest Experiment Station for studies of forest and water relationships.

Publications issued by the Forest Service during the year included *Tree Breeding at the Institute of Forest Genetics; the Anthracite Forest Region; Red Pine Management in Minnesota; Silvicultural Management of Black Spruce in Minnesota; Some Principles of Visibility; Tree Planting in the Central, Piedmont, and Southern Appalachian Regions; Know Your Watersheds; Watershed Management for Summer Flood Control in Utah; and a fiftieth*

anniversary booklet on *The Black Hills National Forest*.
—CHARLES E. RANDALL

FORMOSA (Taiwan). An island near the southeast coast of China. It was under Japanese control from 1895, when it was ceded by the Chinese to the Japanese, until V-J Day in September, 1945, after which the Chinese resumed the administration of the island. Total area, including the Pescadores: 13,889 square miles. Total population (1946): 6,083,617, exclusive of 4,318 foreigners. Chief cities: Tei-pei (340,114 inhabitants in 1940), Tainan, Ki-lung (Kurun), and Taichu. Principal crops are rice, tea, sugar, sweetpotatoes, ramie, jute, and turmeric. Camphor is worked under government monopoly. Estimated tea production (1947), 15 million lb.; sugar 300,000 tons in 1945 against only 100,000 in 1946. Mining is progressing and includes gold, silver, copper, and coal. Governor General: Wei Tao-ming (appointed May, 1947).

FOUNDATIONS. Probably the most significant event in this field during 1948 was the Second International Conference on Soil Mechanics and Foundation Engineering. Some 400 delegates from nearly every country in the world met in Rotterdam, Holland, on June 22-29. In addition to the many papers read and discussed at the meetings, more than 350 papers were presented and incorporated in the 7 volumes of proceedings.

The first meeting of the group, held at Harvard in 1936, presented methods and theories concerning the stability and settlement of various bodies of soil under load. Most of that knowledge was theoretical or based on laboratory tests. The 1948 meeting mainly outlined the findings of practical engineers in relation to these theories, and showed where modifications and future study are most needed. For instance, the findings for cohesionless soils were generally correct, while clay soils behave with less regularity and each formation has its individual characteristics. Also the theories presuppose a few well-defined strata of soil, which is often not the case, as with the land for Stuyvesant Town in New York City. Here some of the buildings are constructed on solid ground while others are on areas reclaimed from the East River, consisting of fill on coarse to fine silty sands. The foundations on the higher ground are of spread footings, while the others are constructed on cast-in-place button-bottom concrete piles, some of which are supported on solid strata and others by friction.

The General Electric Company at Schenectady made an interesting experiment on the settlement of various types of friction piles under both static and vibrating loads to determine the best type for their new turbine assembly and testing plant. Button-bottom, pedestal, composite pipe and cased-concrete, composite wood and cased-concrete were tested. From these tests it was decided to support the precision equipment and heavy crane columns on steel H piles driven to hard pan and to use pedestal piles in areas of lighter load.

The new five-story Coca-Cola bottling plant in New York City which is designed to support a considerable weight on a minimum number of pillars is founded on 38-in. caissons, 60 ft. apart, which are socketed 6 ft. in bed rock and extend to the second floor level.

Plans for the Pacific Telephone and Telegraph Company's building at Oakland, California, called for a load of 18,300 pounds per square foot on one wall as against an average of 6,000 psf for the building as a whole. No rock bottom could be reached so 18-in. steel-tubes with a 20-in. clearance

were driven to a layer of dense sand at 80 ft. The rest of the building will rest on a 5 ft. concrete slab.

In the marine field where strength and stability are desired, the steel H pile is finding favor, as in the Humble Oil Company's derrick platform, 8 miles off the Louisiana coast, which was constructed of one hundred 96 ft. H piles encased in pipe and arranged in braced towers of four. This 5,000 ton structure, standing in 48 ft. of water, was designed to withstand a hurricane force of 125 m.p.h. and 32 ft. waves and to last for 30 years. It provides a stable 5-acre island for drilling operations and quarters for a crew of 54.

These piles with a concrete cap were also used in a new pier for the Seatrain Lines in New York harbor which supports a huge fixed crane, and in mooring islands for the reserve fleet at San Francisco designed to hold ships against a 50 m.p.h. wind and a 4 knot tide. The new Rickenbacker Causeway between Miami and Key Biscayne, which is also designed to withstand hurricane winds and waves, is constructed on a concrete filled fluted steel shell pile.
—J. W. HAZEN

FRANCE. A republic of western Europe, and the chief division of the French Union (q.v.).

Area and Population. Area: 212,659 square miles. By the peace treaty of Feb. 10, 1947, Italy ceded 4 small frontier districts to France, including the villages of Tenda and Briga, which voted for inclusion in France on Oct. 12, 1947. Population according to 1946 census: 40,518,884. Chief cities (1946 census): Paris, 2,725,374; Marseilles, 635,959; Lyons, 570,622; Toulouse, 264,411; Bordeaux, 253,751; Nice, 211,165; Nantes, 200,265; Lille, 188,871.

Education and Religion. Education is free in all elementary state schools and is compulsory for all children of the 6-14 age-group. In 1947-48 there were 3,773 infant schools (both state and private) with 343,600 pupils; 80,939 elementary schools (both state and private) with 4,702,284 pupils; and 17 state universities with 123,313 students. No religion is officially recognized by the state.

Production. Average monthly production in thousands of metric tons in 1947: coal, 3,769; lignite, 175; crude petroleum, 4.2; iron ore, 1,558; pig iron and ferro-alloys (excluding ferro-alloys made in electric furnaces), 407; steel ingots and castings, 479; woven cotton fabrics, 11.2; cotton yarn, 17.0; wool yarn, 9.7; rayon filament yarn, 3.10. Total production in 1947 in metric tons: wheat, 3,600,000; barley, 1,110,900; oats, 2,770,000; sugar beets, 6,980,000. In 1946, the output of wine totaled 830,080,000 U.S. gallons. On Dec. 31, 1945, the number of farm animals were: horses, 2,257,000; mules, 87,000; asses, 103,000; cattle, 14,273,000; sheep and lambs, 6,632,000; pigs, 4,386,000. In September, 1948, the industrial production index number (1938 = 100) was 104.

Foreign Trade. In 1948, exclusive of silver bullion and specie, the estimated value of imports was 618,116.4 million francs (346,692 million francs in 1947); exports totaled 398,661.6 million francs (213,420 million francs). Beginning in April, 1948, the values of imports and exports includes the external trade of the Saar.

Finance. For 1947 revenue totaled 610,583 million francs, and expenditure 416,505 million francs. The public debt (Dec. 31, 1947), excluding 1914-1918 war debts, totaled 2,499,073 million francs, of which 2,117,597 million francs represented domestic public debt. At the end of October, 1948, currency in circulation totaled 918 million francs.

The cost of living (cost of food in Paris) index (1937 = 100) in October, 1948, was 2,204.

Communications. The railways, in 1946, carried 696,280,000 passengers and 125,789,000 tons of merchandise. In 1947, the telephone systems had 1,997,335 subscribers.

Government. According to the Constitution of the French Republic (passed by the second Constituent Assembly on Sept. 29, 1946, and adopted by referendum on Oct. 13, 1946), which came into force on Dec. 24, 1946, the sovereignty of the "indivisible, laic, democratic, and social republic" (Art. 1) is vested in the French people and exercised through its representatives and by way of referendum (Art. 3). The National Assembly of 618 members, elected by equal, direct and secret universal suffrage, is the dominant power in the French legislature. There is a Council of the Republic of 320 members elected by communal and departmental bodies, by means of direct universal suffrage. The President is elected, by both houses, for a 7-year term; he may be reelected once. President of the Republic (1947-53): M. Vincent Auriol (Socialist); Cabinet: see *Events* below. See *FRENCH UNION*.

Events, 1948. During the anniversary year of the founding of the short-lived Second Republic, the course of business and politics in the Fourth Republic was calculated to convince even the most ardent optimists of the soundness of the judgment expressed by André Gide in his *Journal* in 1939: "Everything seems, alas, to prove to me that Frenchmen, of all the peoples I know, are the ones most deficient in civic spirit and in that solidarity without which a republic comes to be the greatest detriment to all."

The so-called Monnet Plan, first announced in 1946, promoted increased production in many lines, but produced no stability and little prospect of the full utilization of resources required to repair the ravages of war and make the French economy prosperous and secure. The farmers and upper bourgeoisie, enjoying many privileges and occupying a strategic political position, lived well but exhibited a minimum of enthusiasm for sacrifices for the sake of the national welfare. The lesser bourgeoisie and the industrial workers suffered acutely from constantly rising prices while wages, salaries, and profits of small business steadily lagged behind.

Effective remedial measures were rendered politically impossible by the increasingly precarious position of the parties of the "Third Force." Marshall Plan aid seemed less likely to effect any permanent cure of France's economic ills than to alleviate symptoms and defer a major financial and economic crisis which would inevitably play into the hands of the Communists and DeGaullists.

The extremists of the Right, in the name of ultra-nationalism and anti-Communism, capitalized ambivalently on the radicalism of the petite bourgeoisie and the conservatism of the peasantry. The extremists of the Left, tightly controlled from Moscow via the Cominform since the summer of 1947, exploited the grievances of the workers and bent their efforts toward wrecking the Marshall Plan in the name of resisting "American imperialism."

The political center stumbled and tottered and yet, almost miraculously, retained power—without being able to use it effectively to achieve unity and recovery at home or prestige and influence abroad. A year which opened darkly came to a close with even blacker shadows falling over the hopes of those for whom *Liberté, Égalité, Fraternité* were more than mere words.

Frenzied Finance. The Schuman Cabinet of Nov. 24, 1947 survived the strikes of December and obtained a temporary respite from disorders through the defeat of Communist plans. At the turn of the year the anti-Communist elements in the Communist-controlled General Confederation of Labor (CGT) seceded to form the *Force Ouvrière*, led by Socialist Léon Jouhaux, which won the support of perhaps a million of the six million members claimed by the CGT.

Early in January the Cabinet staked its fate on an anti-inflationary and budget-balancing program of Finance Minister René Mayer by which all persons with incomes over 450,000 francs would be obliged to pay a super-tax or invest in government bonds. On January 3 a Communist-DeGaullist amendment to the tax bill was defeated in the National Assembly, 322 to 262.

Despite British protests and criticism from the International Monetary Fund, the Cabinet on January 25 announced a new rate for the franc for export and essential import purposes: 214.3 to the dollar (instead of 119.1) and 864 to the pound (instead of 480). An internal "free market" for gold and for American, Swiss, and Portuguese currencies was likewise established, with exporters permitted to convert half of their proceeds at the new fixed rate and half at the "free rate," which was fluctuating around 313 francs to the dollar by the close of the year.

On January 30 the Assembly approved legislation authorizing possession of, and free trade in, gold; legalizing the ownership of foreign securities by Frenchmen, subject to repatriation of such assets and payment of a tax of 25 percent of their value; and requiring all 5,000 franc notes to be turned in and exchanged for receipts which were to be redeemed later, in new currency, at a part of their face value.

These steps, combined with the reopening of the Spanish frontier in February, were designed to expand exports, increase public revenues, reduce the illegal hoarding of gold and foreign securities, encourage production, halt inflation, and balance wages and prices. After much controversy and by a narrow margin, the Schuman Cabinet secured parliamentary approval for supplementary fiscal measures early in March.

ECA grants were extended in generous measure throughout the year and were regularized under the terms of the accord signed on June 28. But the objectives of economic stability and ultimate self-support were not attained. Production increased in some lines. Unemployment increased in others. Profiteering on the black market by many farmers and some businessmen was matched by the progressive impoverishment of wage-earners and salaried employees as prices continued to climb.

That France's economic disorder was uncured, and perhaps incurable, by year's end was suggested by the Cabinet's astronomical budgetary proposals of December 14: total state expenditures for 1949 were estimated at 1,250,000 million francs, with military costs at 350,000 million francs and "capital investments" (reconstruction, merchant marine, and industrial equipment) at 615,000 million francs—of which 280,000 million were expected to be derived from Marshall Plan counterpart funds; all taxes were to be raised 10 percent; 100,000 million francs were expected to be realized from internal loans.

Such prospective "budget-balancing," undertaken to induce the U.S. Congress to continue ECA subventions, was widely recognized to be fictitious,

with the solvency of the state and the recovery of the economy both receding into an ever more remote distance.

Mid-Summer Crisis. Politics in springtime found the Cabinet harassed by steadily rising living costs, mounting demands for wage increases, DeGaullist maneuvers to effect a "coalition" with the "Third Force," and Communist defiance of the Government's domestic and foreign course.

Proposals to dismiss 150,000 state employees provoked a crisis within the Cabinet which was resolved by a "compromise" involving few or no dismissals. A strike of rubber workers in Clermont-Ferrand in mid-June led to rioting, sympathy strikes elsewhere, and a Communist-led one-hour general strike in protest against "police violence."

The *Force Ouvrière* and the Catholic Unions resisted Communist demands for a general 20 percent wage increase, but warned M. Schuman on July 5 that his price-reduction program was "weak, timorous, and insufficient" and that "the working class will no longer be duped." Various groups of civil servants went on strike in July.

On July 19 the eight Socialist Ministers resigned in protest against the Premier's refusal to reduce military appropriations—a position in which he was also opposed by the Radical Socialists but supported by the MRP. The Assembly voted 297 to 214 to amend the budget in accordance with the Socialist demand. The fall of the Schuman Cabinet led President Auriol to appoint Radical Socialist André Marie to the Premiership on July 21. Three days later he was upheld by the Assembly, 352 to 190. His Cabinet was composed as follows:

Vice Premiers: Léon Blum, Socialist; and Pierre Teitgen, MRP (Popular Republican Movement).
 Foreign Affairs: Robert Schuman, MRP.
 Interior: Jules Moch, Socialist.
 Armed Forces: René Mayer, Radical Socialist.
 Finance and Economic Affairs: Paul Reynaud, Independent Republican.
 Commerce and Industry: Robert Lacoste, Socialist.
 Agriculture: Pierre Pfimlin, MRP.
 National Education: Yvon Delbos, Radical-Socialist.
 Reconstruction: René Coty, Independent Republican.
 Colonies: Paul Coste-Floret, MRP.
 Public Works: Christian Pineau, Socialist.
 Labor: Daniel Mayer, Socialist.
 War Veterans: André Maroselli, Radical Socialist.
 Justice: Robert Lecourt, MRP.
 Health: Pierre Schneider, MRP.
 Ministers of State: Henri Queuille, Radical Socialist; and Paul Ramadier, Socialist.

Reynaud's proposals for drastic economies and the lifting of many controls over business activity soon brought the new Cabinet to grief. On August 11, despite a Communist filibuster, the Deputies, 325 to 215, voted economic emergency powers to the Ministry. The Assembly resolved on August 25 to postpone the local elections planned for October (later scheduled for March, 1949). But on August 28 Socialist opposition within the Cabinet to Reynaud's program compelled the Ministers to submit their resignations.

The ensuing crisis was prolonged and difficult. Following Ramadier's abandonment of the task, Schuman tried his hand anew at Cabinet-making, only to be defeated, 295 to 289, on September 7. On the next day Radical Socialist Henri Queuille was named Premier. He was supported by the Assembly, 351 to 196, on the 10th. His Cabinet was virtually identical in composition with its predecessor, save that Marie became Vice Premier and Minister of Justice. DeGaulle's bid for power in a southern campaign tour was without immediate results.

Socialist anxieties over labor unrest were met by a cost-of-living bonus, pending wage increases.

The Autumn Strikes. The Queuille Cabinet survived numerous parliamentary attacks but soon found itself confronted with fiscal problems and labor demands which precluded any enduring solution of the French economic dilemma. The franc slumped. Police and strikers clashed in Paris on September 15. DeGaullists and Reds fought at Grenoble on the 18th, with one Communist killed. Parliamentary approval of a 15 percent wage increase did not prevent numerous protest demonstrations and work stoppages provoked by continued inflation.

On October 3 some 300,000 coal miners went out on a strike of indefinite duration, with an estimated loss in coal production of 150,000 tons per day. That the miners were desperate is shown by initial support of the strike by the Catholic Unions and the *Force Ouvrière*. On October 27 John L. Lewis, while condemning "the cast-iron and Oriental philosophy of Communism" demanded that President Truman intervene, through control of Marshall Plan funds, to "stop the shooting of French coal miners who are hungry. . . . Oppression and hunger beget Communism."

At the same time, as in 1947, the Communist Party, under Cominform directives and with Soviet support, did all in its power through its leadership of the CGT to intensify and prolong the strike and to cripple French economy in other sectors by brief "rotating" strikes, with the ultimate objective of aiding the U.S.S.R. against the U.S.A.

Premier Queuille declared on October 9 that the Government "will take all measures necessary to halt an agitation which is taking on an insurrectionary character." ECA Director Paul G. Hoffman opined that the mine strike was "Moscow-directed." Jules Moch asserted that the Cabinet had documentary evidence of Soviet machinations. When sabotage and sit-down tactics were resorted to by the miners, troops were ordered to occupy the properties.

Widespread rioting and bloodshed ensued, accompanied by arrests, deportation of alien agitators, and cancellation of family allowances for strikers. On October 29 the *Force Ouvrière* and the Catholic Unions instructed their members to return to the pits. Not until November 27 did the CGT follow suit, after an estimated nine-tenths of the miners had already resumed work. Communist prestige suffered badly from this defeat. French production suffered more.

Electoral Demi-Tasse. Meanwhile, the members of the Electoral College chosen in October cast their ballots on November 7, in the only French election of the year, for a new Council of the Republic. This test of party strength was scarcely indicative of popular preferences in view of the complex system of indirect choice for the upper chamber of the national legislature. The trend of the balloting, however, doubtless reflected public sentiment to an appreciable degree. Of the 320 seats, DeGaullists supporters or sympathizers won 130. The Communists, who formerly held 84 seats, were reduced to 20. The MRP and the Socialists also suffered heavy losses, while various moderate and independent groups, including the Radicals, scored gains. The DeGaullists however offered no candidate for the Presidency of the Council, with the result that centrist President Gaston Monneville, Negro Councillor from French Guiana, was re-elected on November 21. By December the Radicals were threatened with a split (barely averted by the appeals of the venerable Edouard Herriot) because of the desire of some of their members to join DeGaulle's RPF.

That the Queuille regime survived was due less to the enfeeblement of the Communists, who retained a mass following and still controlled most of organized labor, or to the loud outcries and timorous confusion of the DeGaullists, than to the reluctance of Socialists, MRP, and Radicals, bound together by common fear of their foes to Right and Left, to carry their quarrels to the point of dissolving permanently their uneasy union.

Such a regime might survive further parliamentary crises and ministerial reshuffles. It could not impose effective discipline on farmers and businessmen without driving most Radicals and independents into DeGaulle's camp. It could not impose effective discipline on labor without driving many Socialists into Communist arms. It could therefore rule, but could scarcely govern in any fashion adequate to the exigencies of the chronic economic and social crisis.

Diplomatic Dilemma. A France thus afflicted could scarcely hope to act with vigor, independence, or success in foreign affairs. Diplomatic weakness reflected military weakness, which in turn was not to be overcome so long as no funds were available for rearmament and the endless and hopeless war in French Indochina wasted the energies of 100,000 French troops and constituted a steady and futile drain on the finances of the Republic.

During 1948 the Quai d'Orsay found itself, willy-nilly, more and more the instrument of the diplomatic purposes of Washington and less and less able to oppose effectively those aspects of American policy which it deplored. In February Bidault joined Bevin and Marshall in a joint protest against the Communist coup in Czechoslovakia, thereby abandoning previous hope of acting as a neutral mediator in the "cold war."

DeGaulle in March called for American aid in assuring the military security, as well as the economic recovery, of Western Europe. In the Brussels Pact of March 17, France joined Britain and the Benelux countries in a fifty-year defensive alliance, inspired by fear of Soviet aggression. In April Bidault rejected Soviet protests against the Three-Power talks in London looking toward a West German Government. Schuman and Bidault nevertheless opposed Anglo-American plans for the Reich and finally accepted them with heavy heart. The London accords for Western Germany, defended without enthusiasm by Bidault, were approved by the Assembly, June 17, 297 to 289.

When this program led to the Soviet "blockade" of the Western sectors of Berlin, Schuman and Bidault sought cautiously to play a conciliatory role. Bidault's political eclipse and removal from the Quai d'Orsay were in large measure attributable to French fears regarding his German policy. Endorsement in August by the new Cabinet of the Brussels Conference project of a European Parliament effected no change in the international tension and apparently brought European Federation no closer to realization.

On September 30th the Politburo of the Communist Party, led by Thorez and Duclos, declared: "The French people will never make war against the Soviet Union. . . . The French people will not become the ally of Western Germany to make war against the country of socialism." When DeGaulle asserted early in October that Western defense plans must be based on France, not on Britain, the Cabinet asked delay in the strategic discussions in London. On November 4 it was reported from Frankfurt, without denial, that the U.S.A. had quietly armed and equipped three French divisions on a war footing.

By autumn almost all Frenchmen of all parties were registering alarm at Anglo-American plans to restore Western Germany. When the British and U.S. military governments on November 10 abruptly announced a policy of restoring the Ruhr industries to German ownership and control, Foreign Minister Schuman formally protested to London and Washington. Protracted friction followed at the London conference. DeGaulle declared that French security against Germany was more important than Marshall Plan aid.

Anxiety was not diminished by a \$300 million trade agreement signed on November 19 by France and Trizonia. French notes of November 20 informed Britain and the U.S.A. that Generals Clay and Robertson had no authority to pledge a restoration of the Ruhr to a German state and that Paris would never consent to such a program. Marshall's evasive reply of November 24 led the Assembly, by a vote of 377 to 181 on December 2, to ask the Cabinet to tell London and Washington that "the French people unanimously reject" the Clay-Robertson proposals.

This problem, like so many others, remained unsolved at the turn of the year, despite rumors of a "compromise" and of a Herriot mission to the U.S.A. Beggars cannot be choosers. Yet Anglo-American insistence on restoring the Reich as a bulwark against the U.S.S.R. could not safely be pressed to the point of making new political capital for Fascists and Communists in France.

The instability and fragility of the French regime were thus diplomatic assets, useful for bargaining purposes. But those who bargain from weakness rather than strength almost invariably lose more than they gain. The scope of prospective French losses—in the arena of diplomacy as in the domestic struggle to preserve democracy—was, perhaps happily, unclear at the opening of the year 1949.

FRANKLIN INSTITUTE. The Franklin Institute of the State of Pennsylvania was founded in 1824 as a permanent memorial to Benjamin Franklin. It is dedicated to the promotion of the mechanic arts and the dissemination of scientific knowledge. Its technological library contains 130,000 volumes and 46,000 pamphlets, as well as a collection of patent literature. The Institute also maintains a scientific and technological museum containing thousands of action exhibits; the Fels Planetarium; an observatory open to the public; and a seismograph. About twenty lectures are given annually at the Institute by persons distinguished in science and industry. Branches of the Institute are the Bartol Research Foundation (research in pure science); the Biochemical Research Foundation (for the study of disease from the chemical viewpoint); and the Franklin Institute Laboratories for Research and Development (applied research in the physical sciences for industry and government).

An important activity is the Committee on Science and the Arts, formed of 61 members of the Institute, which reviews in detail many of the advances of science and technology. It recommends to the Board of Managers candidates for the annual awards of the Institute, which are formally presented at Medal Day exercises in October. *The Journal of the Franklin Institute* was established in 1826 and is the official organ of the Institute.

In 1948 the Franklin Medal, highest award of the Institute, was presented to Dr. Wendell Meredith Stanley, Professor and Head of the Depart-

ments of Biochemistry in Berkeley and in the Medical School in San Francisco, and Director of the Virus Laboratory of the University of California, for outstanding work in virus research, and to Dr. Theodor von Karman, Chairman of the Scientific Advisory Board of the U.S. Air Force, and Director of the Guggenheim Aeronautics Laboratory, for his contributions to the development of advanced aerodynamic conceptions.

Membership is about 5,500. The President, elected in 1947, is Richard T. Nalle; the Executive Vice President and Secretary, Henry Butler Allen. The Institute is located on the Benjamin Franklin Parkway at 20th Street, Philadelphia 3, Pa.

FREEMASONRY. Masonic recovery continued in the war-devastated countries, as did membership expansion in the United States and the British Commonwealth. Recent gains in China were threatened by the spread of the civil war, but there was hopeful activity in the new states of India and Pakistan. Unexpected progress was reported in two Central European countries, Hungary and Czechoslovakia. Masonic contacts in Latin America continued closer than before World War II.

Statistics. The year's net membership increase in the 49 United States grand lodges amounted to 181,925; there were 114 more lodges. Total: 15,362 lodges and 3,287,991 members. Of the latter, about 500,000 were also Scottish Rite Masons, about 575,000 were Royal Arch, 200,000 Royal and Select Masters, and 270,000 Knights Templar.

Canadian membership was over 200,000, Australasian about 250,000, and the Philippine 5,000. A very general estimate for Great Britain and Ireland was 1 million. Numbers in the rest of the world are relatively small, and few estimates of any kind were available.

Welfare. Charitable activities on a grand lodge or larger scale are of two general kinds: relief of indigent Masons and their families; and, welfare work for the community at large. The second kind increased greatly during the War and has continued to grow. The first, Masonic relief as such, is also of two distinct types: the care of the aged and orphans in institutions maintained by the Fraternity for this purpose; and, the support or partial support of the same needy persons by individual financial grants without institutional care. The increase of the latter has not so far diminished the former.

Costs of Masonic homes for children and the aged, like other costs, are rising. The situation is being met in some cases by increasing the regular per capita tax on members, but there are also plans to obtain voluntary contributions, as in Virginia and New York. The need for more funds to maintain and restore existing facilities has not prevented expansion, either in the United States or abroad.

The Royal Masonic Institution for Boys held its 150th anniversary festival June 9, 1948, and the 160th for Girls on May 12. Subscriptions for the year to these two charities plus the Royal Masonic Benevolent Institution (for the aged) totaled more than \$2 million. The Royal Masonic Hospital will not be taken over by the British Government, as was at first feared, under the National Health Service Act.

The European Relief Fund of the Masonic Service Association of the United States dispensed overseas aid from its 30 member grand lodges and others. Independent work was done by groups and grand lodges in the United States, Australasia, and especially Canada. Sweden has been giving special help to Norway and the Netherlands.

Veterans' welfare work continues, especially the large-scale hospital-visitation program of the Masonic Service Association and the personal guidance service of the New York grand lodge. Veterans are also forming their own groups to give rather than to receive charitable attention.

For the community as a whole, the largest single undertaking by Masons is the chain of Shriners' Hospitals for Crippled Children, to which the 17th unit is about to be added in Los Angeles. The newest major undertaking is New York's Masonic Foundation for Medical Research and Human Welfare, whose first grant of \$200,000 was allocated Sept. 21, 1948, among 8 research institutions working on rheumatic fever and arthritis problems.

Youth. Like other welfare activities, the majority of youth programs are local and innumerable. Some national projects, more or less Masonically sponsored, may be mentioned. DeMolay growth has been phenomenal. 146 new chapters were formed in a year and 106 old ones revived; 1,277 total, including two new groups in Australia and four in the Philippines. 34,475 initiates brought active membership up to 143,206 when the Grand Council met in March, 1948. Boys need no longer leave the Order after the age of 18, but may receive "knighthood" in priories now supplementing the chapters.

The Acacia Fraternity (Masons in colleges and universities) held a biennial meeting at Northwestern, Chicago, in August. Three reactivated undergraduate chapters were reported, making 27 in all. Deserving college students, with or without Masonic antecedents, continued to receive loans from the Knights Templar Educational Foundation.

Books. In addition to special periodicals and a great many official proceedings and transactions, there is a considerable Masonic literature. Some notable books have been published recently.

Famous Masons, by H. L. Haywood (Chicago, Masonic History Company, 1944. 312p.). Short biographies of 12 Presidents and 100 others.

The Genesis of Freemasonry, by D. Knoop and G. P. Jones (Manchester, [Eng.] University Press, 1947. 334p.). Development from the 14th century to the middle of the 18th. The first really new and comprehensive work on this period since Gould's in the 1880's.

The Temples in Jerusalem, by H. K. Eversull (Cincinnati, Masonic Memorial Chapel Assoc., 1946). A factual account of the three famous temples, in their historical setting, with 38 illustrations.

Supplement to Mackey's Encyclopedia of Freemasonry, by H. L. Haywood (Chicago, Masonic Hist. Co., 1946. p. 1143-1570). The first revision since Clegg's in 1929, and the first substantial enlargement since 1873.

—W. K. WALKER

FRENCH EQUATORIAL AFRICA. A French colonial territory in north central Africa consisting of four territories: Chad (capital Fort Lamy), Gabon (capital Libreville), Middle Congo (capital Brazzaville), and Ubangi-Shari (capital Bangui), with a total area of 959,256 square miles. In 1946 the population comprised 7,808 Europeans and 4,120,000 Africans, composed of Bantu and Sudan Negroes with strong Hamitic and some Arabic intermixture. There were (1946) 169 official schools with 17,034 pupils, and 132 mission schools for 15,442 native pupils.

Production, etc. Tropical agriculture and grazing are the chief occupations. Principal products are cotton (1947 export: 21,064 metric tons), wool,

coffee, oil, palm kernels (1947 export: 9,289 metric tons). An estimated 300,000 square miles of forest yields timber, rubber, wax, and copal gum. Mineral resources include diamonds, gold, copper, lead, and zinc. Ivory is an important export item.

In 1946 imports were valued at 1,549.5 million francs; exports at 1,321.7 million francs. Metropolitan France received 71.7 percent of all exports and supplied 53 percent. Chief imports are foodstuffs, spirits, coal, cement, and gasoline. The chief ports are Port Gentil, Libreville, and Pointe Noir, the latter being connected with Brazzaville on the Congo by a railway. There are 8,750 miles of road, part of which is suitable for heavy, all-year traffic.

Government. As reorganized by a decree of Oct. 16, 1946, French Equatorial Africa is administered as a unit by a governor general (at Brazzaville) who makes up a budget for the entire area. In 1946 the budget was balanced at 1,104,458,000 francs. He is assisted by a Government Council, a General Assembly and a Secretary General. Each of the four colonies has a Governor who administers local affairs with the assistance of a Privy Council. Eight delegates represent the colonies in the Council of the Republic, 6 in the National Assembly, and 7 in the Assembly of the French Union.

FRENCH GUIANA. An overseas department of Metropolitan France (since Jan. 1, 1947) on the northeastern coast of South America, comprising the colony of French Guiana and the Territory of Inini (30,301 sq. mi., pop. 1946, 5,024). Total area: 34,740 square miles; population (1946 census), 36,975, of whom 7,057 constitute government officials, military, and penal elements. Chief towns: Cayenne (capital, pop. 11,704), Mana, Oyapock, St. Laurent, Sinnamary. Principal crops: rice, maize, manioc, cacao, coffee, bananas, and sugarcane. The forests are rich in varied kinds of timber. Gold mining is the chief industry (19,749 oz. in 1946); silver, copper, iron, lead, mercury, and phosphates are also found. In 1946 imports totaled 255.7 million francs; exports 96.2 million francs.

The department is administered by a prefect. The Council General of 12 members is represented in the National Assembly, the Council of the Republic, and the Assembly of the French Union with one deputy for each. The Territory of Inini was administratively reunited with French Guiana on Jan. 1, 1947.

FRENCH INDIA. The five French settlements in India—Chandernagor (pop. 48,766); Karikal (pop. 64,332); Mahé (pop. 14,764); Pondichéry (pop. 211,468); and Yanam (pop. 6,820). Area: 196 square miles. Population (1946): 346,150. Capital: Pondichéry, 53,101 inhabitants. Education (1946): 67 primary schools and four colleges with 13,179 students. The chief crops are rice, manioc, and groundnuts. There are cotton and jute mills at Pondichéry and Chandernagor. Trade at the ports of Pondichéry and Karikal (1946): imports, 80,343,000 francs; exports, 7,748,000 francs. Shipping (1946): 41 vessels entered and cleared.

Finance (1947): local revenue 6,981,000 rupees; expenditure 6,581,000 rupees. The administration is headed by the Commissioner of the Republic, assisted by a Government Council of 5 members. There is also an elected Representative Assembly. Commissioner of the Republic: Charles Baron.

FRENCH INDOCHINA. Situated in southeastern Asia, south of China and east of Siam, French Indochina comprises Vietnam (uniting Tonkin, Annam and Cochinchina), Cambodia, and Laos. Total area:

285,000 square miles. Total population of Vietnam which is inhabited mainly by Annamese: 21 million. Chief Vietnamese cities: Hanoi (capital) 151,500, Saigon-Cholon (port and commercial center) 1,174,687. Population of Cambodia: 3 million (capital, Pnom Penh). Population of Laos: one million (capital, Vientiane). Chinese population of Indochina: 850,000. French population (apart from a French expeditionary force of over 100,000): some 40,000.

Education and Religion. Instruction is given in lay and religious schools, both public and private. In all, 720,000 students were attending French sponsored schools in 1944, including elementary, secondary, vocational, and technical institutions and one university (Hanoi). One of the first acts of the Democratic Republic of Vietnam in September, 1945, was the inauguration of a Vietnam literacy campaign to teach *quoc-ngu* (romanized Annamese). In September, 1948, it claimed 7 million people had been taught to read and write. Principal languages are Annamese, Cambodian, and French. Buddhism is the chief religion, with some 2 million Catholics, about one million Cao daists (adherents of an eclectic religious sect), and a smaller number who belong to the Hoa Hao sect.

Production. Chiefly occupying the coastal plains, the population is predominantly agricultural. Rice is the principal crop, before the war claiming 83 percent of the cultivated land. Because of continuing war with the Vietnamese Republicans in which the French have lost control of the greater part of Vietnam, holding just the big cities and some other fortified places, output has sunk far below peacetime levels. In 1947 the rice crop was 3,965,000 metric tons (61.5 percent of prewar production), and maize 54,000 metric tons (10 percent of prewar). In Cambodia and Cochinchina 39,000 metric tons of rubber were produced, 57 percent of the 1939 figure. Other crops include potatoes, beans, sugar, tobacco, tea, and manioc. Fishing and forestry are important.

Mineral resources include anthracite coal (250,000 metric tons in 1947), tin, zinc, iron, tungsten, phosphates, manganese, lead, and bauxite. Manufacturing has been limited to processing and light industries such as rice mills, distilleries, sugar refineries, and factories for cotton goods, cement, soap, and tobacco. In 1947 some 40,000 metric tons of cement were produced.

In Vietnamese Republican territory war plants are also manufacturing war material such as bazookas, antitank grenades, and mines. The Republic claims to have increased agricultural production in the areas under its control. It is directing its efforts toward economic autonomy and the blockading of French-controlled cities.

Foreign Trade. Total imports into French controlled areas in 1947 were worth 973 million piastres, and exports 473 million, leaving an adverse trade balance of 500 million piastres. From France came 57 percent of the imports and France took 45.5 percent of the exports. The United States was second in French Indochina's trade, in January-June, 1947, taking 7.9 percent of Indochina's exports and providing 19.3 percent of its imports. Principal exports were rice, rubber, coal, maize; principal imports, mineral oils, metals and metal products, textiles, chemical products.

Finance. In addition to separate budgets maintained by each of the states there is a common budget for the French Indochinese Federation. The federal budget for 1948 was fixed at 975,745 piastres. In December, 1948, the official exchange rate for the piastre was \$1 = 12.60 piastres; the ef-

fective free rate, \$1 = 18.65 piastres. On Aug. 26, 1948, the French National Assembly voted to withdraw from the Bank of Indochina the right to issue banknotes and vested it in a government-appointed Currency Board. (The Vietnamese Republican Government, which has remained outside all federal arrangements, issues its own banknotes.) The cost of living index rose steadily in French-controlled areas. For the working class in October, 1948, it was (1939 = 100) 3,614 in Saigon, 12,812 in Hanoi, and 3,032 in Pnom Penh.

Communications. Of the 1,873 miles of railroad in 1941 only 714 were open in 1947. Railroad traffic was almost at a standstill because of the fighting. There were 20,242 miles of highway in 1942 but only 16,150 were open in 1947. As even armed convoys are not safe from attack, an increasing proportion of travel is done by air. In 1947 the monthly average of merchant shipping entering the ports of Saigon, Campha, and Haiphong was 126,000 tons and 136,000 tons were cleared each month, as compared with 617,000 and 584,000 tons respectively in 1938.

Government. France's plan, announced early in 1945, to create a centralized federation of five states in Indochina with strictly limited self-government has been modified by events. The Annamese people who live in three of the states (Tonkin, Annam, and Cochinchina) demanded a single, virtually independent government of Vietnam. On March 6, 1946, France signed an agreement with the Democratic Republic of Vietnam (which had declared its independence on Sept. 2, 1945) headed by President Ho Chi Minh, recognizing the union of Tonkin and Annam in a free state of Vietnam within the Indochinese Federation and the French Union. French opposition to including Cochinchina within Vietnam was one of the reasons for the breakdown of negotiations with the Ho government. Since December, 1946, they have been at war, with the Republic controlling the greater part of South Vietnam (Cochinchina), Central Vietnam (Annam), and North Vietnam (Tonkin). In 1948 the French recognized the unity of Vietnam, not under Ho but under a pro-French "Provisional Central Government of Vietnam." Premier: Gen. Nguyen Van Xuan.

Although there are certain federal arrangements linking together the different states and there is a High Commissioner for Indochina (Léon Pignon, appointed October, 1948), Cambodia and Laos also have more direct relations with France. They were recognized as associated states within the French Union in December, 1947. France controls their armies and foreign affairs, as well as their economic life, and they are represented in the consultative Assembly of the French Union. Both constitutional monarchies, Cambodia is ruled by Norodom Sihanouk (Premier: Penn Nouth); Laos by Sisavong Vong (Premier: Souvannarth).

Events, 1948. The war in Vietnam continued the central problem in Indochina with Ho Chi Minh, a Soviet-trained nationalist, leading the majority of the Vietnamese in resistance to the French. Toward the end of 1947 the French Government decided to stop trying to reach an agreement with Ho and began negotiations with Bao Dai, ex-emperor of Annam who had abdicated to make way for the Republic. Like Ho, Bao Dai insisted on unity and independence for Vietnam.

A Provisional Central Government which looked to Bao Dai for leadership was established on May 20 by pro-French Vietnamese elements and Xuan became premier. On June 6 Xuan and Emile Bollaert (then French High Commissioner) signed

an agreement recognizing the unity and independence of Vietnam as an associated state within the French Union. But in later negotiations Bao Dai and the French could not agree on what constituted independence. Bao Dai refused to return to French Indochina. The Xuan government remained in existence but without popular support and, contrary to French expectations, did not succeed in splitting the resistance which remained solidly behind Ho Chi Minh.—ELLEN HAMMER.

FRENCH INSTITUTE (Institut de France). Founded in 1795 and comprising five autonomous academies: Académie Française; Inscriptions et Belles-Lettres; Science; Beaux-Arts; and Sciences Morales et Politiques. Library: 800,000 volumes. Membership: Limited to 294 Members, 44 Foreign Associates, and 298 Corresponding Members. Prizes are awarded annually by the various Academies, notably the Prix de Rome (Beaux-Arts). Governing Board for 1947-48: Clovis Brunel (Acad. Inscriptions), Georges Lecomte (Acad. Française), Henri Villat (Acad. Sciences), Emile Aubry (Acad. Beaux-Arts), Edouard Payen (Acad. Sciences Morales). Secretary, Maurice J. A. Merlin. Headquarters: Palais de l'Institut, 23 Quai Conti, Paris VI, France.

The Institute publishes *Journals des Savants*, *Comptes rendus des Sciences* (Annual), *Mémoires et publications*, and a historical series.

FRENCH LITERATURE. The year 1948 was a period of political turmoil and social uncertainty in France; to many observers the country seemed to be on the brink of civil war. Yet these disturbed conditions were not reflected in literature, which continued to be active and of a high artistic quality. The two European countries in which the political life is most tense and the revolutionary ferment most conspicuous, France and Italy, also are those in which letters, arts, the cinema, and philosophical speculation flourish most brilliantly.

If the average level of literary production was high in France, however, the number of unchallenged masterpieces was, as is natural, small and no new movement emerged to succeed Existentialism or Surrealism. The average life of a literary movement is ten or fifteen years at the least, and the Existentialist writers are as yet hardly over forty. Their prestige is still great, though they are far from having a monopoly on talent.

General Characteristics and Literary Events. A reaction has set in against the literature of World War II and of the Resistance. In politics, the events of 1948 pointed to a failure of the men of the Resistance to renovate the antiquated fabric of French economy and administration and to replace the traditional parties. In literature, men like Aragon, Cassou, and even Eluard, whose poetry was recited by large numbers during the war, lost the ear of the public.

On the other hand, Giono, Jouhandeau, Montherlant, suspected and even silenced for some time after the liberation, have sprung back into vogue and the last two have won acclaim. The old *Revue des Deux Mondes* has reappeared under a slightly different name, but has not gained youth and vigor from its enforced silence. The *Mercure de France*, *Etudes* (a Catholic monthly of broad, non-partisan inspiration), *La Nef*, and the *Revue de Paris* are the finest reviews of general interest; *Les Temps Modernes* is the most original one. New series of *Cahiers*, devoted to Péguy, Rostand, Mallarmé, are often launched. Literary prizes continue to plague Parisian literary life and attract

slight attention from being too numerous and too widely advertised.

The outstanding features of 1948 were: (1) The decline in the vogue of American novels in translation. The French have apparently assimilated all that Faulkner and Dos Passos could teach them in the way of technique and dynamic psychology. They have wearied of the indiscriminate multiplication of translations from third-rate American writers. (2) The decline in the fashion for brutal and immoral fiction: represented by Henry Miller and, in French, by Boris Vian and Raymond Guérin. There is a limit to coarseness which had apparently been reached. (3) The celebration of the revolution of 1848, which, though it failed as a revolution, influenced the whole course of subsequent French history by dividing workers from the bourgeoisie by a ditch of blood. This revolution had impressed literature deeply: Proudhon, Flaubert, Lamartine, Michelet, Hugo, Renan, Baudelaire, Leconte de Lisle. Its influence was discussed in many a volume in 1948. (4) The writers who died this year included a powerful novelist, Bernanos; an original essayist, Suarès; a fine poet, Fargue; the Swiss Ramuz; Rosny *jeune*; Sertillanges; and Tristan Bernard.

Literary History and Criticism. The French seldom cease reinterpreting their past masterpieces and emphasizing the living links between their long literary tradition and the present. Some of the most sustained attention of their critics and writers is directed toward Montaigne, Pascal, Racine, Rousseau. Lately, a return to Corneille seems to have set in; Malraux and Sartre have expressed their Cornelian sympathies, and critics like Nadal and Bénichou have (in 1948) published studies on love in Corneille and on the dynamic heroism of his conception of virtue.

Rousseau and Sadé fascinate the psychologists of today who hail these 18th century novelists as pioneers in the discovery of the abysses in man's subconscious and erotic life. Chateaubriand aroused much interest on the occasion of the centenary of his death in 1848; his *Mémoires d'Outre-Tombe* were published in the first complete edition by Levaillant. Balzac received much retrospective light from a bulky and detailed study of his political and social thought by Bernard Guyon. Other scholars have identified the true prototype of Flaubert's *Madame Bovary* as the wife of the sculptor Pradier.

An excellent edition of Baudelaire's *Letters* was launched by Crépet, which will for the first time enable readers to follow the poet's tormented life closely and accurately. Mallarmé fascinates lovers of poetry more than any other poet; his slim hundred or so pages of impeccable and mysterious verse will soon have inspired a hundred volumes of comment. Jacques Schérer, Emilie Noulet, Antoine Orliac, and the Australian Gardner Davies have contributed the most valuable Mallarmé items this year.

The Drama. For reasons apparently inexplicable, the drama lately produced has been the most brilliant province of French letters. Yet there was neither the presence of a stable public nor the atmosphere of prosperity and serenity which are often taken to constitute the conditions for a great dramatic age. The cinema and sports lost little of their appeal, even though the quality of the former was frequently questioned. But the public goes to the theaters where plays of literary merit are given even more than to the conventional stages on which theater is divorced from literature. The *Comédie Française* seemed to have triumphed over her

crisis of three years ago and again was attracting good actors and good plays.

Jean-Louis Barrault is the most superb actor and stage manager in Paris; Hébertot and Jouvet have scored continued success. Great writers in France seem to be proud to write for the stage and strike responsive echoes in a wide and understanding audience.

One of the most famous French writers, Mauriac, failed to arouse enthusiasm with his *Passage du Malin*, a bitter and venomous play which does not appear possible or likely. Montherlant was highly praised for his *Maître de Santiago*, a fine character-study in which the speeches are perhaps overdeveloped as a means of revealing character; the severity of that almost Jansenist drama is in keeping with Montherlant's latest evolution as a moralist of inner heroism. *Montserrat* by Robles presented a forcible and tense moral dilemma such as often faced the Resistance leaders during the war.

Three plays, in a lighter vein, skilfully composed, blending drama and humor, and dealing with the old and ever-new subject of love and infidelity, have entertained Parisian audiences; all three make excellent reading also and probably will lose little in translation. They are *l'Archipel Lenoir* by Salacrou, *Lucienne et le Boucher*, a tragic farce by Marcel Aymé, and the delightful and fanciful comedy *Nous Irons à Valparaiso* by Marcel Achard.

Two dramas stand out above the current production as important literary events. One is *Partage de Midi*, which Claudel composed and published for only 150 readers over forty years ago. The aged poet, now in his eightieth year, has allowed the play to be reprinted and staged. It is a superb lyrical tragedy of devastating passion, meeting with death and frustration, and ending in an exalted hymn to God. No greater delineation of love has perhaps been achieved since Wagner's *Tristan and Isolde*.

The other play to win almost unanimous acclaim and popular success is Sartre's *Les Mains Sales*. It courageously treats a political theme, that of Communist fanatical obedience vs. a modern Hamlet tormented by the scruples of his conscience, or of end and means. The author remains objective throughout and, although he and his doctrine of Existentialism have been branded as enemy No. 1 by the Communists, he raises the conflict to the lofty plane of a moral and psychological debate. The play is long, somewhat too voluntary and geometric in its structure, but represents a masterly attempt to bring the drama abreast with the gravest preoccupations of our time. Part of the drama was published in the United States, and Existentialism was thoroughly discussed and weighed in the first number of the *Yale French Studies*, in the Spring of 1948.

The Novel. Masterpieces in fiction are rare in any given year, or in any given decade. There were few striking new novels in France in 1948, but many of good workmanship. *La Fille Pauvre* by Van der Meersch is, along traditional lines, a moving story of a factory girl, crushed by adverse fate but always firm and delineated with sympathy, unlike the heroines of Naturalist fiction. *L'Accident* by Armand Hoog is a clever utilization of psychoanalysis for fictional purposes. *Les Forêts de la Nuit* by Jean Louis Curtis presents an objective picture of occupied France, drawn with simplicity and art. *Planète sans Visa* by Jean Malaquais is a bulky network of several plots, not all convincing, reviving the years of German control over the South of France.

In several recent novels, a return to the solid,

prosaic fiction of the realistic type, grasping details firmly and setting men and women in their environment, is conspicuous. But the most original work of fiction is that of the unconventional writer with a powerful temperament that distorts and recreates reality, steeping it in tragedy or in poetry. Since the recent disappearance of Bernanos, Jouhandeau is the most powerful of the tragic novelists. His *Essai sur Moi-même* affords a valuable insight into his egotistic and tormented self. Pierre-Jean Jouve, well-known as a poet obsessed with the Christian sense of tragedy, has aroused enthusiasm, in France and England, among the happy few, with his *Aventure de Catherine Crachat*, a picture of hatred, cruelty and pitiful misfortune in a woman. Neither Sartre nor Camus has published any new fiction this year. Maurice Sachs, in his posthumous *Chronique Joyeuse et Scandaleuse*, failed to repeat the success of his *Sabbat* of 1947.

Among the novelists of earlier generations, Proust is again attracting much interest and the complete lack of any disciples or imitation of an inimitable writer adds to his stature as one of the giants of French fiction. Mauriac, Romain, and Duhamel seem to have nothing valuable to add to their former writing of fiction. Maurois, who never really counted as a novelist, has apparently understood that his talent lay in the skilful retelling of history or in the journalistic writing of light moral essays. Saint-Exupéry's posthumous *Citadelle* is a lengthy and rambling series of lyrical reflections on man, his place, and his duty in this world. It should probably not have been published in its bulky entirety. Giono returned to literary life with an entertaining picaresque story, *Roi sans Divertissement*, and a more didactic tale, *Noé*. Marcel Aymé, in *Uranus*, is one of the very few writers today who maintain the claims of Rabelaisian humor in a world haunted by fear and by tragedy.

The Essay and Conclusions. The originality of French literature at present lies less in its artistic achievement than in its lively fermentation. Few first-rate poems have appeared; fiction eschews the conventional, smooth path, and repudiates Flaubert as a dangerous master whose example would drive the novel into too neat and well-made a pattern. Writers seem no longer to aim at eternal values; they write for their own time, as Sartre asked them to do in a noteworthy article. In so doing, they turn literature into a vehicle for all the intense and immediate preoccupations of their contemporaries. French writers are constantly being called upon to express their views on politics, on international problems, on social and economic issues, and they do so with a lofty conception of their duties to the public. Their prestige as men of letters is enhanced by their active participation in the problems of their age. More so than in America and Great Britain, they are the "directors of conscience" of the young.

Hence the most significant part of French literary production is that which appears in reviews and in volumes of essays, difficult to classify under any given label, but translating into literature, that is to say into artistic and dynamic expression, the ideas and the beliefs, or quest for beliefs, of our contemporaries. Sartre founded with David Rousset a political group, the Democratic Revolutionary Rally (R.D.R. in French initials) which is anti-Communist and anti-Capitalist: its aims were interestingly clarified in *les Temps Modernes*, No. 36, September, 1948. It may act as a ferment in renovating the Left in France and in achieving a synthesis between revolutionary views (many Frenchmen are convinced of the need for some kind of

revolution) and Socialism which has become timid and lifeless lately.

Sartre also published two remarkable collections of essays, *Situations I* and *II* which establish him as the most important essayist of his generation. Malraux, who has sided with an opposite party, that of De Gaulle, has written on politics and, even more, on art: his two-volume *Psychologie de l'Art* is rich in pregnant though enigmatic statements which alternately throw light, and obscurity, on the problem of modern art and of a renovation of humanism.

Simone de Beauvoir is undoubtedly the leading woman of letters today. In *Pour une Morale de l'Ambiguïté*, she attempted to formulate an Existentialist ethic. In *La Femme et les Mythes*, she wrote a subtle and bellicose defense of feminism, characterized by an immense store of anthropological and sociological information and by an uncanny insight into the view of woman held by man: the latter is vigorously taken to task. Finally, in a volume *L'Amérique au Jour le Jour*, she related her American tour with more liveliness in perceiving the concrete, more sympathy, and more straightforward criticism of America than are usually displayed by foreign visitors.

Among the Catholic essayists of note, Gabriel Marcel was much praised, reread, and discussed on the occasion of his receiving the Grand Prix de Littérature of the French Academy; and Michel Carrouges published a keen analysis of the Nietzschean disease of our age, the attempt at self-deification on the part of man: *La Morale du Surhomme*. Other influential essayists are Maurice Blanchot, haunted by the problems of language and literary expression; Georges Bataille, whose paradoxical *Haine de la Poésie* challenged the poetic idols of today; Jean Paulhan, always attracted by subtlety and occasionally misled by it, who revealed a new poetic "genius," Malcolm de Chazal, from the Mauritius island. Henri Peyre's *Les Générations Littéraires*, which proposed a fresh view of literary history; Nelly Corneau's *Physiologie du Roman*, Buraud's *Les Masques* attracted some attention.

On the whole, the French literary output of 1948, in spite of an acute slump in the book publishing business which had overexpanded since the war, was considerable. If the works which appeared during this year of crisis lacked serenity and finish, they were varied, challenging, alive. France seems destined to live in a state of crisis, political and literary, and even to enjoy it. Crisis is doubtless preferable to stagnation. The eyes of cultured groups in Europe including Great Britain, in the Near East, in South and even in North America, remain fascinated by what, for better or for worse, in revolt against current morality and in search of a new ethics, in rebellion against traditions and in the formulation of new philosophical and esthetic truths, is being proposed on the Banks of the Seine.

—HENRI PEYRE

FRENCH OCEANIA. A French colonial possession in the South Pacific, about midway between the Panama Canal and Australia. The colony consists of some 110 islands falling into the following major groups: Society; Marquesas (480 sq. mi., pop. 2,988); Gambier, Tuamotu (pop. 5,127); Leeward (Iles sous le Vent, pop. 12,445); Austral; Rapa Islands. Clipperton, an island 670 miles southwest of Mexico has been included in French Oceania. Tahiti (600 sq. mi., pop. 24,820 in 1946) of the Society group is the main island. Total area: 1,520 square miles. Total population (1946 cen-

sus): 55,734, of whom 6,385 were Chinese. Capital: Papeete (on Tahiti), 12,428 inhabitants in 1946. French is the official language.

Production and Trade. The production and export of copra and phosphate form the basis of the economy. Vanilla beans and mother of pearl are also important. Coffee, tobacco, tropical fruits and vegetables, rice, and sugarcane are grown for local consumption. Foreign trade (1947): imports valued at 368,837,000 Pacific francs; exports at 431,598,000 Pacific francs (Pacific franc equals U.S. \$0.020 since 1946). A total of 205,221 quintals of copra valued at 178,049,000 Pacific francs and 2,083,164 quintals of phosphates valued at 120,896,000 were exported in 1947. Chief imports are consumer goods, cotton cloth, machinery, petroleum products, and timber. The United States supplied 44 percent of all imports in 1947.

Government. The colony is administered by a governor assisted by a Cabinet, a Privy Council, and a Representative Assembly (elected for 5-year term). Representation in the National Assembly, the Council of the Republic, and the Assembly of the French Union is made by one deputy to each. Governor: Pierre Maestraci.

FRENCH SOMALILAND. A French colony in northwest Africa, near the southern end of the Red Sea. Area: 9,071 square miles. Population (1946 census): 44,800, of whom 1,500 were Europeans. Capital, Jibuti (10,421 inhabitants). The production of salt is the only industry. Gypsum, mica, amethyst, sulfur, and petroleum are said to exist. Trade (1946): imports 216,900,000 CFA francs; exports 38,800,000 CFA francs (CFA franc = 1.70 francs). The principal imports are cotton yarns and cotton goods, cattle, coal, and sugar. Exports in 1946 included coffee, hides, and salt (25,730 metric tons). French Somaliland is administered by a governor, assisted by an administrative council. The colony is represented, in the National Assembly, the Council of the Republic, and the Assembly of the French Union, by one deputy in each. Governor: Paul Sirriex.

FRENCH UNION. According to the French Constitution passed on Sept. 29, 1946, and confirmed by referendum on Oct. 13, 1946, "the French Union consists, on the one hand, of the French Republic which comprises Metropolitan France, the overseas departments and territories, and on the other hand, of the associated territories and states" (Art. 60). The central organs are the Presidency (occupied by the President of the French Republic), the High Council (composed—under the presidency of the President of the Union—of a delegation of the French government and of the representatives of the associated states, accredited to the President of the Union. Its function is to assist the government in the general management of the Union), and the Assembly (half the members represent Metropolitan France and half the members represent the overseas departments and territories and the associated states).

FRENCH WEST AFRICA. A federation of 7 French overseas territories, which are listed in the accompanying table.

Population. Out of the total population of 15,943,000 (1946), 32,044 were Europeans (21,116 French). The natives are mainly Sudanese Negroes, but with strong Hamitic influences in many areas of the Sudan and in the Sahara. These elements introduced the Moslem faith professed by many of the inhabitants in the drier parts of French West

Africa. Approximately half the population is Moslem. The southern zone, lying in the belt of tropical rain forests, is largely pagan except where Christian missions have made converts.

<i>Territory</i>	<i>Sq. Mi.</i>	<i>Pop. (1946)</i>	<i>Capital</i>
Dahomey.....	43,232	1,458,000	Porto-Novo
French Guinea.....	96,886	2,125,000	Conakry
French Sudan.....	590,966	3,797,000	Bamako
Ivory Coast.....	184,174	4,056,000	Abidjan
Mauritania.....	323,310	497,000 ^b
Niger.....	499,410	2,168,000	Niamey
Senegal ^a	77,790 ^a	1,895,000 ^a	St. Louis
French West Africa....	1,815,768	15,943,000	Dakar

^a Includes Dakar and dependencies, reunited with Senegal on July 1, 1946. It is administered by a delegate of the governor of Senegal and called the "Delegation of Dakar." ^b The lieutenant governor of Mauritania resides in St. Louis, Senegal.

Education. In 1946 there were 832 elementary classes with a total of 78,547 students enrolled, 23 secondary, technical, and Moslem schools with 1,552 students, and a number of private schools with a total of 24,213 students. At Dakar there is a normal school for training in the various professions, and an institute for the study of African culture and languages.

Production. Agriculture, lumber production, and stock raising are the principal economic activities, and engage about 96 percent of the population. The peanut is the most important agricultural product (365,000 tons in 1946), followed by coffee, cocoa, palm kernels, peanut oil, and other oil seeds. Minerals include iron ore, manganese, diamonds, and gold; however, they have not been commercially exploited. Except for 20 oil mills producing approximately 40,000 tons of peanut oil yearly, industry and manufacture are on a small scale and mainly for local consumption. Livestock (1945): 171,309 camels, 4,533,957 cattle, 459,331 asses, 11,140,000 sheep and goats, 179,150 horses, and 145,566 pigs.

Foreign Trade. In 1946 imports were valued at 5,990,770,000 francs—the main items were textiles, fuel oil, mechanical implements, foodstuffs, and beverages. The value of exports in 1946 totaled 4,120,592,000 francs—the important commodities were peanuts, peanut oil, coffee, cocoa, palm kernels, gum, dried bananas, and cotton.

Transportation. In 1945 there were 2,705 miles of railway in operation, 11,532 miles of telephone line, and 22,179 miles of telegraph line. A considerable part of the middle Niger is navigable for shallow draft vessels. During 1946 a total of 5,745 vessels entered and cleared the ports of French West Africa. Dakar, Conakry, Abidjan—Port Bouet, and Cotonu are the chief ports.

Finance. The general budget for 1947 was estimated to balance at 5,117,234,000 francs, and the estimated local budgets at 3,711,214,000 francs.

Government. French West Africa consists of 8 territories loosely organized for administrative and customs purposes. Its form of government had not been finally established to conform with the provisions of the new French Constitution of October 1946. The executive head, the Governor General and High Commissioner, who resides at Dakar, is assisted by a Government Council and a Grand Council. Each of the territories is under a governor, assisted by a Privy Council and a General Council. French West Africa is represented in the French legislature by 12 delegates to the National Assembly and 19 delegates to the Council of the Republic. High Commissioner of the French Republic, Governor General of French West Africa: Paul Béchard (appointed February, 1948).

GALAPAGOS ISLANDS. A territory of Ecuador consisting of a group of 13 large and hundreds of small volcanic islands in the Pacific Ocean about 600 miles west from Ecuador. Officially called Archipiélago de Colón. Chief islands: San Cristobal, Santa Maria, Santa Cruz, San Salvador, and Isabella. Total area: 3,028 square miles. Population: 2,156 (1941). During World War II, the United States maintained air bases on some of the islands; efforts to purchase or lease the islands failed, however, and their possession reverted to Ecuador on July 1, 1946.

GAMBIA. A British Crown colony and protectorate in West Africa, extending on both banks of the Gambia River for a distance of some 250 miles from its mouth. Total area, 4,101 square miles; area of colony (comprising Bathurst and vicinity), 96 square miles; area of protectorate, 4,005 square miles. Population of the colony (1944 census), 21,152; protectorate (1946 census), 223,114. Capital: Bathurst, on the Island of St. Mary. The population is predominantly Mohammedan, but there are several pagan enclaves in the protectorate.

Production and Trade. Chief export products (1946): groundnuts (valued at £595,859), palm kernels (valued at £18,587), beeswax, hides, and skins. A variety of crops are produced for domestic consumption. Clothing, agricultural and domestic implements, foodstuffs, and medicines are imported. Imports (1946): £949,093; exports £696,292.

Government. Finance (1946 est.): revenue £616,328; expenditure £545,854; public debt £38,760. With the exception of the Island of St. Mary and the contiguous district of Kombo St. Mary, Gambia is administered as a protectorate. A governor, assisted by an Executive Council and a Legislative Council, heads the administration. In Bathurst, a town council was established in 1946 and a similar self-governing body, the Kombo Rural Authority, was created on Jan. 1, 1947. Governor: Sir Andrew B. Wright (appointed Nov. 21, 1946).

GENERAL ACCOUNTING OFFICE. An agency of the U. S. Government under the control and direction of the Comptroller General of the United States. The Office is a part of the legislative branch and independent of the executive departments. Comptroller General of the United States, Lindsay C. Warren; Assistant Comptroller General, Frank L. Yates.

The basic tasks assigned to the Office by Congress are the independent audit of the financial transactions of the Federal Government including those of Government corporations; the prescribing of forms, systems, and procedures for administrative appropriation and fund accounting including the prescribing or approving of systems for inventory accounting in independent agencies; the settlement of claims by or against the United States; the rendition of legal decisions pertaining to governmental fiscal matters; the conduct of investigations relating to the receipt, disbursement, and application of public funds; the maintenance of accounting controls in connection with appropriation and fund accounts; and other related and necessary functions.

GENERAL EDUCATION BOARD. An institution founded in 1902 and incorporated by Act of Congress in 1903, with the stated object of promoting education within the United States of America without distinction of race, sex, or creed. At the present time the work of the Board is confined to the southern states. The Board is empowered to spend the

income and the principal of its funds. From the time of its establishment until Dec. 31, 1947, its expenditures totaled \$282,466,599. As of Dec. 31, 1947, its assets amounted to \$12,667,903 (not including a pledge receivable of \$7,500,000 from The Rockefeller Foundation).

In 1948 the General Education Board's program included aid toward the following general purposes: general improvement of teaching and facilities; promotion of graduate education and research; training of youth in the fields of business and technology and subjects tending to contribute to the economic and industrial development of the South; improvement of health and community life, and improvement of public education.

Grants illustrative of such purposes are: to five Negro institutions comprising Atlanta University Center, for the employment of additional faculty members and/or increases in faculty salaries, a total of \$150,000; to St. Augustine's College, Raleigh, N.C., for construction and equipment of a science building, \$140,000; to Vanderbilt University, Nashville, Tenn., for strengthening the social sciences, primarily through additional staff, library materials, and support for research, \$130,000; to the University of Florida, Gainesville, toward the development of research on the graduate level, \$30,000; to the Regional Council for Education, toward study and preparation of a program of cooperation among the states in the development and support of graduate, professional, and technical education on a regional basis, \$30,000; to the National Planning Association, Washington, D.C., toward the research program of the Committee of the South (concerned with the economic development of the South), \$25,000; to the University of Georgia, Athens, toward support of a program for regional coordination of education in agricultural engineering and vocational agriculture to be undertaken by the Southern Association of Agricultural Engineers and Vocational Agricultural Educators, sponsored by the University, \$30,000; to the Alabama Polytechnic Institute, Auburn, toward the cost of equipment for the Human Nutrition Research Laboratory, \$10,868; to Tuskegee Institute, Alabama, toward support of the rural life program, \$70,000; and to the Southern Association of Colleges and Secondary Schools toward support of a study in elementary education, \$30,000.

Officers: President until June 30, 1948 (retired), Raymond B. Fosdick; President from July 1, Chester I. Barnard; Vice President and Director, Robert D. Calkins; Secretary, William W. Brierley; Treasurer, Edward Robinson. Offices: 49 West 49th St., New York 20, N.Y.

GEOGRAPHIC NAMES, Board on. Successor to the United States Board on Geographical Names. The Secretary of Interior and the Board conjointly standardize geographic nomenclature for the Federal Government. Executive Secretary: Meredith F. Burrill.

The Board on Geographic Names issued during the calendar year 1948 a total of 2,161 decisions on individual names and standardized more by routine procedures without formal individual decisions. Directions for treatment of geographic names in nine separate countries were published, and many policy and procedure rulings made that were reflected in names and other published material.

Work on Antarctic names was continued, with about 250 names being approved in addition to those previously published. There was close cooperation with American expeditions to Antarctica

during the year. Working arrangements were completed with the Canadian Board on Geographical Names for exchange of decisions and other information, to the advantage of both Boards.

GEOLOGICAL SURVEY. Modern civilization is dependent on the use of large quantities of three natural resources: metals and minerals for machines; fuels for power and heat; and water for power, irrigation, industry, and the home. These resources come from the earth, and their most efficient discovery and development require a knowledge of geology. In the fiscal year 1948 the Geological Survey—as it has since its organization in 1879—remained the hub of Federal activities relating to the discovery, evaluation, development, and conservation of the nation's mineral and water resources. During the year considerations of national security kept the activities of the Geological Survey focused even more intently than before on problems relating to the discovery and appraisal of mineral raw materials and this work has expanded to the limit of available facilities.

Organization. Beginning Jan. 1, 1949, the units within the Geological Survey have been renamed to conform to the subdivisions of other agencies of the Government. The term "Branch," used for many years for the four major units of the Survey, has been replaced by "Division" and the smaller units, formerly called "Sections," are now termed "Branches." Exceptions are that the former Atlantic, Central, Rocky Mountain, and Pacific "Divisions" of the Topographic "Branch" become "Regions" of the Topographic "Division."

Funds. During the fiscal year 1948 there was available for expenditure by the Geological Survey a total of \$22,410,915. Of this amount \$10,241,443 was appropriated directly to the Survey and \$12,169,472 was made available by other Federal agencies, and by States and their political subdivisions. In addition, \$10,995 was allotted from the contingent fund of the Department of the Interior for miscellaneous expenses.

Geologic Division. Progress has been maintained in all important directions to determine the ultimate capacity of this country to produce the mineral raw materials required by industry, in the completion of the geological map of the United States, and in the correlative programs of general research. Geological maps are an essential tool in many fields, not only in the search for an appraisal of mineral and water resources but also in providing information for mineral and mining technology; in land classification; in soil conservation and soil sciences; in the activities of the national parks; in dam, highway, and other kinds of heavy construction; and in military planning.

Mineral Deposits. Early in the fiscal year 1948 the consolidation of the sections of Metalliferous Deposits and Non-metalliferous Deposits resulted in an expanded program of research, geologic mapping, and explorations of mineral deposits. Seventy-one projects were active in 37 States. Because of the critical need for base metals, 24 of the projects dealt with copper, lead, and zinc, and 15 with deposits of iron and ferro-alloy minerals, such as tungsten, chromite, and manganese. Investigations were also continued on mercury, alunite, bentonite, fluorspar, magnesite, potash, talc, and granite. Five exploratory drilling projects—one each in Arizona, Colorado, Idaho, South Dakota, and New York—were undertaken, 3 of which were completed during the year.

Geochemical prospecting for mineral deposits by chemical studies of soil, vegetation, and water

was carried on by 6 projects and 10 minor field studies. Greatest emphasis was placed on the development of quick analytical tests that may be used in the field. Greenhouse experiments on plants growing in soils containing known concentrations of copper, lead, and zinc were in progress during the year. Cooperative work in 10 States was continued and 6 projects were under way in the Missouri River Basin. New publications for the year embraced a wide range of subjects resulting in 32 reports available to the public. In addition 15 reports were prepared for publication by cooperating State agencies and 27 reports were published in professional and technical journals.

Fuels. Continuation of the investigations on oil and gas resulted in the release of 19 maps and charts covering work in Alabama, Colorado, Georgia, Mississippi, Montana, New Mexico, Ohio, Utah, Virginia, and West Virginia. About 17,000 copies of these and earlier maps and charts were sold during the year. In order to increase the distribution of maps, field sales offices have been established at Tulsa, Denver, Casper, Billings, and Los Angeles. The preliminary reports on the investigation of Naval Oil Shale Reserves 1 and 3 and adjoining areas in Colorado were completed. Further field investigations were begun in the area west of the Naval Reserves. Considerable field data were obtained on the distribution and thickness of some of the oil-shale beds in Tennessee.

The definitive reappraisal of the coal reserves of the United States is one of the most urgent tasks confronting the Geological Survey, which was able during the fiscal year to make a beginning in this detailed examination by a complete study of the available data on the coal resources of Montana. Field work was continued in Colorado, North Carolina, Pennsylvania, and Washington.

General Geology. Although the rate of general geological mapping has continued to increase, nearly 12,000 fifteen-minute quadrangles remain to be mapped before the work covering the entire country is complete. To do this job requires the active participation of the geological profession and will require the enlistment of aid from organizations representing the mineral industries, universities, and State geological surveys. As a first step in such planning the Survey has prepared, for every State, a bibliographical index of all published geologic maps, and this information will be brought up-to-date periodically.

In the field of structural geology new concepts regarding the mechanics and forces involved in crustal movements resulted from study in the Great Smoky Mountains National Park and in New England. Places where present-day crustal movements are suspected were discovered in the Great Basin area of Nevada, western Utah, and southern California. Studies in Utah, northern Pennsylvania, and eastern Maryland have contributed to a better understanding of the effect of geologic processes on soil genesis. This study resulted in the discovery, in a fossil soil in Utah, of a lime-free clay that has superior properties for the manufacture of structural clay products.

Geophysics. Geophysical exploration, both aeromagnetic and ground surveys, were continued during 1948. A total of 66,400 miles of useful aeromagnetic traverse was flown, covering 36,000 square miles in 7 States and in the Aleutian and northern Pacific Islands. Ground surveys were made in 9 States, in the District of Columbia, and Alaska for determining the extensions of oil sands from producing wells, locating ground water, obtaining information on metallic deposits, and meas-

uring the depth and extent of permafrost in Alaska.

A new type of magnetometer was designed and constructed and is undergoing field tests. A new seismograph was completed for observation in Alaska, in connection with volcanic research. Devices for the orientation of drill cores were designed for use by field geologists.

Geochemistry and Petrology. This branch, primarily concerned with the application of specialized techniques of chemistry, physics, mineralogy, and petrology conducted research on a rapid method for the field determination of zinc, of uranium in low-grade material, and for quantitative spot-testing for several other elements. Six major projects ranging from the study and description of new minerals through comprehensive study of mineral groups were carried on as well as many cooperative projects with other sections. Three previously unknown clay deposits were discovered in Utah. Several hundred mineral determinations were made during the year for Survey geologists, ranging from the rapid determination of specimens to complete chemical analyses.

To keep pace with the expanding work of the Geological Survey a number of the modern tools of research have been ordered and will soon be put into use. These include an electron microscope, a mass spectrograph, a physical laboratory for determining physical properties of rocks and minerals, a microchemical laboratory, and facilities for conducting a program on radioactive age determinations and research on methods for the determination of radioactive materials.

Paleontology and Stratigraphy. The branch has continued to support the work of the economic geologists by identifying and correlating strata by means of fossils, making numerous examinations of materials submitted by field geologists and consulting with field parties on the ground. Studies have been made of the Woodbine formation of Texas, Jurassic faunas of the western interior region and Alaska, the floras of late Cretaceous and early Tertiary rocks of the West, the echinoid faunas of the eastern United States, foraminiferal faunas of various regions, the stratigraphy and conodont faunas of the black shales of the East and the invertebrates of the fossil faunas of the Canal Zone. Most of these investigations are long-range projects, and many will be continued beyond the end of the year.

Engineering Geology. Mapping projects active during 1948 were in cooperation with the construction work of the Bureau of Reclamation in North Dakota, Kansas, and central Utah, and with the United States Engineers' Lower Monumental dam site on the Snake River in Utah and the Puerto Rico Water Resources Authority's dam site and tunnel sites. Studies of construction materials include a map and report on the sand and gravel of Wyoming, and in several counties in Kansas and in Colorado. Areas in the States of Colorado and Utah where landslides occur frequently were mapped in detail. A geological dictionary for engineers was compiled during the year.

Military Geology. Nine major reports and 36 shorter reports were completed during the year. One of these, Technical Manual 5-254 *Military Geology*, will be published by the Adjutant General's Office, United States Army, for use as a guide in training or operations involving the application of geology to military problems. The other reports deal with terrain analysis, construction materials, water supply, airfield sites, construction of underground installations, permanently frozen ground, and mineral resources. Projects were carried on at

Fort Benning, Ga., Japan, Okinawa, Palau, Guam, Bikini, and Alaska. Many of these projects were completed and the reports on them are being prepared. One geologist was assigned to Task Force 30, a U.S. Navy Antarctic Expedition.

Investigations in Alaska. The details for long-range geologic mapping in Alaska were developed during the year; and projects geared to this planning and carried-over projects from the previous year constituted the Alaskan program. The work included investigations of metals, non-metals, coal, petroleum and trace elements, and special attention was given to projects more apt to aid in short-range territorial development.

Work in other American Republics. The other American republics cooperated with the Geological Survey by furnishing funds and native geologists to assist in carrying on the work. As a result of these investigations, joint reports were prepared with maps containing bilingual legends. The reports published during the year covered such subjects as: Tungsten investigations in Argentina; nickel-cobalt manganese-oxide deposits, and manganese and iron deposits in Brazil; the mineral deposits of Central America; the mercury and tungsten deposits in Chile; the mineral deposits of Colombia, and the manganese deposits of Costa Rica; the chromite, manganese, and tungsten deposits of Cuba; the mineral deposits and aluminous lateritic soils of the Dominican Republic and Haiti; the volcano Sangay in Ecuador; the quicksilver, lead, zinc, and copper of Peru; and a number of projects covering several mineral commodities in Mexico.

Topographic Division. With the modern methods and increased production afforded through the use of aerial photography, the Geological Survey has produced more maps during the past year than in any corresponding period in its history. The demand for maps by Government and State agencies and private concerns continues to increase in volume. To meet these needs, plans have been made for the acceleration of mapping operations which, if adequately financed, would accomplish complete coverage of the United States in approximately 20 years.

Geodesy and Control Surveys. During the year this newly reorganized branch prepared instruction manuals, conducted projects in new control-survey methods, and inspected current control-survey projects. Information from all available sources for application in control for mapping was collected. The development of an electrical device for adjustment of survey nets was completed and it is now in use for adjustment of leveling and transit traverse nets. A new vacuum chamber has been procured, making it possible to calibrate precise altimeters in sets of six. Two new instruments that measure elevation continuously in an automobile or trailer have received extensive field tests. The use of shoran and other electronic methods of position determination are being observed as possible means to establish horizontal control for mapping.

Photogrammetry. New designs for plotting instruments were prepared and new adaptations and combinations of photogrammetric equipment and technique have been used as a basis for the design of more accurate plotting instruments. New plotting instruments have been designed and others are being manufactured and placed in use. Work has also been started on the design and manufacture of a near distortion-free photographic lens, which, if successfully accomplished, will have a marked influence on all mapping activities. Approximately 35,000 square miles of new photographs were contracted for during the year and

photographs of nearly 50,000 square miles were delivered on contracts placed in previous years.

Topographic Surveys. Technical instructions covering four new procedures or changes in treatment of map features were issued and others are in progress. Bulletin 788, *Topographic Instructions*, issued in 1928, was reviewed and an appraisal citing the technical memorandums required to cover changes in procedure since the original date of publication was issued. A revision of Bulletin 788 is in progress. New stadia reduction tables and a field notebook for supplemental control surveys were designed and issued.

Cartography and Map Editing. In the past year 845 new topographic maps were edited and published and in addition, 450 maps, the stock of which had been exhausted, were reprinted. A total of 120 maps for 26 professional papers, bulletins, and water-supply papers were examined. The editing and printing of military maps for civil use was instituted. Included in the totals listed above were 6 new topographic maps of this type and approximately 70 of the reprint group.

The drafting, editing, and reproduction of standard topographic maps compiled by other agencies in compliance with our current distribution policies was inaugurated. A style and symbol sheet was developed during the year in collaboration with other Federal map-making agencies to insure uniformity in the use of symbols and in format. Specifications were developed for the production of maps at the scale of 1:500,000. Division representation was supplied for the interagency committee on symbolization of topographic maps of the Joint Mapping and Photography Committee.

Map Information Office. The growth of the Map Information Office as a central source of information regarding maps, aerial photographs, and control surveys has exceeded all expectations. This is shown by the fact that the volume of correspondence regarding these maps increased more than 113 percent in 1948 over the previous year. The principal users of this service have been engineers and geologists in highway planning, oil research, and industrial development projects. This office also provided technical data for use in connection with drainage, flood control, irrigation, water supplies, hydroelectric, television and radio broadcasting, and transportation projects. Numerous requests were received from educational institutions for mapping and surveying data.

During the year this office continued to maintain and further augment information regarding all published or otherwise available topographic and planimetric maps, aerial photography, aerial mosaics or photo maps, geodetic control, and data pertaining to work in progress and new schedules of the various Federal agencies interested in surveying, mapping, and photogrammetry.

Compilation of two new status of topographic mapping indexes was completed. These indexes evaluate topographic map coverage in the United States, Alaska, Hawaii, Puerto Rico, and Panama. One index shows map scales of one inch to the mile or larger, the other shows only reconnaissance maps at smaller scales. Publication of these maps is scheduled for early in 1949.

Also in preparation is a new edition of *Map Collections in the District of Columbia*. This publication briefly describes the map collections of Government and district agencies as well as some private collections, and will be printed during 1949.

Compilation of the first edition of two new indexes showing the status of geodetic control was completed and forwarded for reproduction. These

indexes will show horizontal and vertical control by the Geological Survey and other agencies, and will be available early in 1949.

The third edition of the status of aerial photography in the United States was compiled and published. This issue shows available primary photography, additional coverage in areas photographed more than once, and new projects under way—all as reported by Federal agencies, numerous State agencies, and commercial concerns. A supplementary series of small State maps showing all the aerial photographic holdings of the Survey, scales, dates, lens focal lengths, and project symbols were completed. While this is not a regular publication issue, copies are available under certain conditions to interested users.

Other major items now available from the Map Information Office through arrangements initiated or augmented during the year include photographic or photostatic copies of map manuscripts and other official records as well as reproductions from aerial film held by the Survey. Four division laboratories have been equipped and staffed to meet the demand for this type of material.

The office has continued to serve as a central clearing point where any agency contemplating new surveying, mapping, or photogrammetric projects can learn of similar existing or contemplated work in their area of interest, thus preventing unnecessary duplication or overlapping of mapping activities. It also acted for the Survey on a committee of representatives of all Government agencies which procure and use aerial photography for mapping or related cartographic purposes. One of the major accomplishments during the year was the establishment of uniform prices for aerial photographic reproductions sold by Federal agencies. The sale of aerial photographic prints during the year increased nearly threefold.

A continuing interest was shown by foreign engineers in the Geological Survey methods of mapping and visitors were entertained from China, Siam, India, New Zealand, New South Wales, Switzerland, France, Holland, Turkey, Liberia, Argentina, Brazil, Ecuador, Chile, Mexico, and Canada.

Special Map Projects. Eight sheets of the International Map of the World were published or were in the process of publication at the end of the year. Preparation of the Transportation Map of the United States, scale 1:250,000, for the Public Roads Administration was in progress. Sheets of these maps for West Virginia, Nevada, Ohio, and Virginia were in various stages of reproduction, and Alabama and Louisiana were transmitted for reproduction. Those for Indiana, Missouri, Mississippi, and Kentucky were in various stages of compilation. New series of State base maps for Indiana, Illinois, Iowa, Oklahoma, and Mississippi were in progress of compilation, and those for Massachusetts, Rhode Island, Connecticut, Wyoming, New Jersey, Maryland, and Delaware were in various stages of reproduction.

A cartographic program for the publication of two general-purpose maps of Puerto Rico, scales 1:120,000 and 1:240,000, was undertaken for the insular government. Another program, also for this government, involves the publication of a special edition of the 1:30,000 scale quadrangle maps of the island, emphasizing political subdivisions. These maps are being prepared for use in the census of 1950.

Trimetrogon Mapping. The trimetrogon method of mapping and charting was continued for the U.S. Air Force. The maintenance of adequate world coverage of aeronautical charts is a part of the

work of this branch which also reviews and evaluates and, if necessary, revises or compiles charts by photogrammetry. The branch also maintains the only world-wide reference library of trimetrogon photographs. During the year the branch completed more than 850,000 square miles of new compilation and revised over 1 million square miles of charts and more than 450,000 square miles of cartographic compilation. This charting covers practically every part of the world. Special photo-mosaics were prepared for use by the U.S. Navy Task Force operating in Antarctic regions, and the compilation of Antarctic aerial photography is now in progress.

Mapping Accomplishments. During the year topographic mapping was carried on in 38 States, Alaska, and Puerto Rico. Cooperative projects were conducted with 18 States and with the Tennessee Valley Authority. The mapping of 467 quadrangles was completed and mapping was in process on 259 additional quadrangles. In addition, work on 1,401 quadrangles prior to actual mapping was in progress. In addition mapping was completed for 14 posts, camps, and stations on a cooperative basis with the military departments. The areas covered approximately 52 fifteen-minute quadrangles.

Water Resources Division. Water is one of a few natural resources that are renewable. When a known deposit of our minerals and mineral fuels is used up, we must either find new deposits or turn to the development of low-grade or less valuable deposits. However, water is constantly being replenished in the continuous operation of the hydrologic cycle—water transformed from the sea and the land to vapor in the air, and then precipitated back upon the earth. Only by keeping records of the never-ending changes in our water supplies can we know what our water resources are and what they can be used for. As the limit of a water supply is approached, the demand for reliable data becomes more insistent. The importance of this work is recognized when we consider the number of cooperative projects carried on with more than a score of Federal agencies and with 50 State and Territorial governments.

In 1948 this work was conducted from more than 100 field offices which maintained close contacts with State, municipal, and Federal officials. These offices are also local sources of information as to available water resources, fluctuations of the water table, and the chemical and physical quality of surface and ground waters.

Surface Water. There has been a steady increase during the year in demands from many sources for surface-water information, and at the end of the fiscal year about 6,000 gaging stations were in operation. Laboratories and shop equipment for the development and improvement of equipment for stream measurement were expanded. This included a special type of snow-mobile, for winter observations in remote mountain areas, which was developed and constructed in cooperation with the Soil Conservation Service.

Progress was made in cooperating with the Public Roads Administration and various State highway departments on better utilization of stream-flow records in hydraulic and hydrologic problems connected with highway structures. Research has been carried on in the field of indirect measurements of stream-flow in efforts to improve the accuracy of determination of peak discharges. A comprehensive study and report of the record-breaking 1948 Columbia River flood will be completed during this year.

Ground Water. It is the purpose of ground-water

investigations to define the location, areal extent, and thickness of underground reservoirs and to determine the amount of water that is stored and can be economically recovered from them. These investigations involve collection of well data, geological studies, test drilling and pumping, and geophysical surveys. Some of the important studies completed during the year were: In the Piedmont area of North Carolina statistical studies of the factors relating to the yield of wells showed that topographic location is of great importance, and the results of the studies, which are applicable over the entire Piedmont area from southern Pennsylvania to Alabama, make possible more effective locations of successful well sites; in Michigan a study of mine-drainage problems laid the foundation for attack on similar problems elsewhere; completion of the intensive phases of a comprehensive investigation of water resources in southeastern Florida made available a large mass of data, much of which is applicable to other coastal areas where sea water is contaminating ground water.

During the year nearly 400 projects were carried on in nearly every State and Territory. Nearly 250 formal reports of various kinds were prepared and several thousand requests for information on ground-water conditions were answered.

Quality of Water. Pure water does not exist in nature. Every drop of rain water carries dust, pollen, smoke, and the atmospheric gases. Because water is a powerful solvent, the rain water running over rocks and percolating through the soil gathers more and more mineral matter in solution. This dissolved matter, or suspended matter carried by the water, is of primary importance in determining the suitability of the water for many uses. During 1948, 17,500 samples of water were analyzed in the 12 laboratories of the Geological Survey, in Washington and in the field, adding to the growing storehouse of information on the chemical composition of the Nation's water resources.

Cooperation in these investigations was carried on with the States of Virginia, North Carolina, South Carolina, Georgia, Pennsylvania, Florida, Arkansas, Texas, Oklahoma, Ohio, Iowa, New Mexico, and Colorado. The importance of the large quantities of sediment transported by rivers becomes apparent when considered with the increasing demand for large dams to impound water for irrigation, power development, and industrial use, as this sediment is dropped in the reservoirs created by the dams. More than 80,000 samples were analyzed for sediment content during the year.

Missouri River Basin. The coordinated projects of the Bureau of Reclamation and the Corps of Engineers, Department of the Army, for the development of the Missouri River Basin require extensive water investigations, which are generally conducted in cooperation with States and municipalities. These investigations were supplemented by the operations of 165 stream-gaging stations; by studies in the vicinity of 33 reclamation units, related to ground-water supplies or conditions that may result from reservoir construction and irrigation; by 40,200 measurements of sediment content at 48 stations; by 2,500 chemical analyses; and by hydrologic studies related to proposed plans of development. The information obtained through these investigations is furnished to the above agencies.

Interstate Compacts and International Treaties. Interstate compacts for division between States of waters of interstate streams, which require the Geological Survey to establish and operate gaging stations, are now in effect in Colorado River (Wyoming, Utah, Colorado, New Mexico, Arizona, Ne-

vada, California); Belle Fourche River (Wyoming, South Dakota); Republican River (Nebraska, Kansas); Rio Grande (Colorado, New Mexico, Texas); and Costilla Creek (Colorado, New Mexico). Similar compacts are in progress of negotiation for Arkansas River (Colorado, Kansas) and Bear River (Idaho, Utah).

International problems related to water are increasing. The Geological Survey, using funds transferred by the State Department, makes the water-resources investigations along the Canadian boundary that are required by orders issued by the International Joint Commission, United States and Canada, under the treaty of Jan. 11, 1909.

In addition to these continuing investigations needed for division and control of waters along the international boundary, several special investigations were made in 1948 in connection with references before the Commission, particularly those relating to the Columbia River Basin, Sage Creek, Mont., Waterton and Belly Rivers, and Souris and Red Rivers. The Geological Survey, through agreement with the State Department, has continuing obligations for obtaining water-resources information along the Mexican boundary as required by the Mexican Water Treaty of 1944. Members of the Geological Survey serve on several international engineering boards.

Conservation Division. Under delegation of authority from the Director of the Geological Survey the branch classifies public lands of the United States as to mineral and water resources and under authority delegated by the Secretary of the Interior it supervises mineral recovery operations under leases, permits, and licenses on public, acquired, Indian, and Naval petroleum reserve lands. The staff makes field surveys; prepares maps and reports dealing with water power, fuels, minerals, and chemicals; and supervises mining and drilling methods essential to the conservation of, and economical and safe production of, coal, oil, gas, and other minerals.

Mineral Classification. All phases of the service rendered by the Mineral Classification Branch were maintained at a greatly accelerated pace in 1948. In all, nearly 29,000 cases (an increase of 76 percent) involving the disposal of public lands and the determination of the mineral character of such lands were acted on during the year. In addition the branch prepared determinations of the potentialities for fissionable source material on 3,715 parcels of land in practically every State and possession. Investigations were conducted from field headquarters in Colorado, Wyoming, Montana, Utah, California, New Mexico, and Oklahoma precedent to public-land and mineral-leasing law investigations, resulting in numerous maps and reports for official use; a published map on the areal and structural geology of the Mush Creek area, Weston County, Wyo.; and the completion of similar maps on several areas in Montana.

Oil and Gas. At the end of the fiscal year nearly 13,500 oil and gas properties were under supervision, aggregating nearly 11 million acres in 22 States and Alaska. This represents an increase of 23 percent in the number of properties and 32 percent in acreage since the close of the last fiscal year. Oil and gas production of about 76 million barrels from some 7,500 producing wells rendered a royalty return of \$20,834,000 to the United States. Approval of 41 new plans for unitization of oil and gas operations involving Federal land brought the total of such plans to 163, covering 2,366,000 acres. Supervision of oil and gas leases on Indian lands, covering 5,913 leaseholds in 12 States, and

containing 4,574 producing wells, returned annual revenues in royalties, rentals, and bonuses amounting to \$7,609,000. Supervised operations on Army and Navy leases brought in additional revenues of \$1,393,000.

Water and Power. Field work to determine water and power resources included topographic surveys of 3 dam sites, 26 square miles of reservoir sites, and 200 linear miles of river channel surveys; supervision of construction and operation of 159 power projects under license with the Federal Power Commission; 263 projects under permit or grant from the Department of the Interior; and 173 in cooperation with the Bureau of Indian Affairs. Classification of lands decreased slightly the average of power-site reserves in 23 States and Alaska, leaving 6,768,997 acres in these reserves. Published maps covered 1,640 miles of channel of 14 rivers, 43 square miles of reservoir sites, and 37 dam sites.

Mine Supervision. This involves the supervision of prospecting and producing such minerals as coal, potash, lead, zinc, sodium, phosphate, etc. There were under supervision at the end of the year 956 properties—607 on public domain, 256 on Indian, and 84 on acquired lands. The minerals produced under Geological Survey supervision during the year were valued at nearly \$86 million and the royalties therefrom amounted to \$2,794,000. About 97 percent (more than 1 million tons K_2O equivalent) of the national output of potash salts was produced from leased Government lands in California and New Mexico. In all, more than 30 minerals or mineral products were produced under the supervision of the Geological Survey during the year.

Publications. During the year 75 manuscripts were sent to the printer, and 61 publications were issued. A total of 264 new maps were printed, including 188 multicolor topographic maps, 10 index maps, 19 preliminary geologic maps, and 22 special maps. Reprints were made of 364 maps, resulting in the delivery of nearly 2 million copies of new and reprinted maps.

The Division of Distribution received a total of 3,907 publications (maps and reports) during the year, and in addition 3,021 Army maps were turned over to the Geological Survey. The division distributed 104,928 books and pamphlets, 2,992 folios, and 1,054,720 maps, a total of 1,162,640. Total net receipts from the sale of maps and folios were \$154,439, representing approximately 70,000 sales.

—CHALMER L. COOPER

GEORGIA. A south Atlantic State. Area: 59,265 sq. mi. Population: (July 1, 1948) 3,128,000, compared with (1940 census) 3,123,723. Chief city: Atlanta (capital), 302,288 inhabitants in 1940. See AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS.

Finance. For the fiscal year ended June 30, 1947, total revenue amounted to \$151,516,000; total expenditure, \$141,791,000.

Elections. Truman won the State's 12 electoral votes by gaining a popular majority over Thurmond, Dewey, and other candidates. Herman Talmadge, Democrat, won the governorship, contested since the death of his father as governor-elect in late 1946. Incumbent Democratic Senator Richard B. Russell was reelected without opposition, and all 10 seats in the lower house remained Democratic.

Officers, 1948. Governor, Melvin E. Thompson; Lieut. Governor, (Vacancy); Secretary of State, Ben W. Fortson, Jr.; Attorney General, Eugene Cook; State Treasurer, George B. Hamilton; State

Auditor, B. E. Thrasher, Jr.; Comptroller General, Zach Cravey.

GEORGIA WARM SPRINGS FOUNDATION. A medical institution founded by Franklin D. Roosevelt, in 1927, for the study and treatment of the after-effects of infantile paralysis and for the dissemination of observations and methods of proved merit resulting from its work. It is located at Warm Springs, in west-central Georgia. Patients are admitted only after the disease has passed the acute state. Over 800 were treated during 1948.

No profit is derived from patients. Although some pay part of the cost of treatment, no one is refused admission for lack of funds. The institution is financed primarily by grants from The National Foundation for Infantile Paralysis which conducts an annual Fund Raising Campaign including the March of Dimes. Officers: President and Treasurer, Basil O'Connor; Executive Secretary, Raymond H. Taylor; Medical Director of the hospital staff, C. E. Irwin, M.D. Chief office of Georgia Warm Springs Foundation: 120 Broadway, New York 5, N.Y.

GERMAN LITERATURE. The year 1948 lent itself to commemorative events which the German world of letters marked in such a way that characteristic literary trends came to light. A glimpse of hope was injected into a dismal picture and a cosmopolitan strain admitted through a narrow door, since the ideas of reevaluation and reconstruction emerged stronger and stronger from the writers' minds.

The Revolution of 1848 was reviewed as an unsuccessful and unfinished attempt which placed the present generation before the challenging task of completing a movement that failed a hundred years ago. Addresses possessing documentary value that centered around this theme included: Fritz von Unruh, *Rede an die Deutschen*, delivered and published at Frankfurt am Main; Friedrich Meinecke, 1848 *Eine Säkularbetrachtung*; E. Kaeber, *Berlin 1848*; a collection of pamphlets and poems entitled *Geistige Freiheit, persönliche Freiheit*, with the meaningful subtitle *Bekennntnis und Ruf des geistigen Berlins*.

In Vienna Rudolf Kissling interpreted copiously *Die Revolution im Kaisertum Oesterreich 1848-1849*. (2 vols. with plates and maps.) Not a single periodical failed to devote a special number to the reinterpretation of historical, cultural, and literary events of 1848.

Another commemoration went back to the year 1248 when the cornerstone of the Cathedral of Cologne was laid. For this seventh centenary the present scene of devastation formed frame and background. The damaged spires that rise above the ruined city served as a reminder that past and present are closely connected and that the new can only spring from a deeply rooted foundation. This strange combination of beauty, grandeur, and devastation inspired such works as: Heinrich Lützelers, *Der Kölner Dom in der deutschen Geistesgeschichte*, published in a series of academic treatises at Bonn; Hermann Claassen, *Gesang im Feuerofen: Reste einer alten deutschen Stadt*, a picture book with text, published at Düsseldorf, a beautiful publication with superb photographs. Representative in its very title is an article "Feier in wunder Stadt, 700 Jahre Kölner Dom," printed in the periodical *Die Brücke*.

Commemorations in an atmosphere of ruins may be indicative on one hand of an attitude of acceptance and resignation, may on the other hand lead to a glorification of the past; if, however, a retro-

spective mind is anxious to review and render account, critical writings result. Many of the 1948 publications were dominated by a conscious will to bridge existing gaps both in time and space.

As in preceding years, the trend was away from the big tome to the booklet, from the essay to the pamphlet, from the epic to the lyrical poem; brief forms being better suited to give expression to the tension and anxiety of an uncertain era. Consequently the series of essays and radio talks, the lyrical anthology, the periodical, and the literary almanac have all grown in importance, and are again a clear indication of the currents of this age. Even the titles are suggestive: *Erbe und Zukunft*, *Der Anfang*, and *Besinnung und Ausblick*.

It is strangely paradoxical that, geographically speaking, it is as correct to talk of a continuously dwindling as it is to talk of a steadily expanding area. We do not find a compact national unit, but rather a group of islands scattered over a wide area within and without the boundaries of Europe. While Sweden, Holland, and Switzerland continue to be firmly established as important centers of German publications, former outstanding centers such as Königsberg and Breslau in Eastern Germany have practically ceased to exist.

In contrast to this, reports from Austria and Western Germany show that a remarkable improvement in quantity and even in quality has been achieved. German literary activities have taken place in practically all corners of the globe. Contacts were established and reestablished between intellectuals inside and outside of Germany, between *émigrés* and the so-called *inner emigration*, between the old and the young.

The dean of German historians Friedrich Meinecke was made an honorary member of the American Historical Association—the first since Theodor Mommsen; Fritz von Unruh received both the plaque of the Paulskirche and the Goethe prize of the city of Frankfurt on his first visit to his native country; Paul Hindemith received the honorary degree of Ph.D. from the University of Frankfurt.

The names of literary awards as well as of the recipients of such prizes point to a decided change in literary approach. Herbert Eulenberg—whose voice had been silenced during the Hitler era, and who published a short biography of Heinrich Heine, written in the witty vein of Heine's travelogues, was honored with the Heine prize; Anna Seghers who returned from Mexico to Berlin, was awarded the Büchner prize for 1947. The Immermann prize of the city of Düsseldorf went to Emil Barth, author of *Lemuria-Aufzeichnungen und Meditationen* and of *Xantener Hymnen*.

Victims of the Third Reich received a belated, sometimes posthumous, recognition. Many poets of the 19th century were reevaluated and their works reedited: Annette von Droste-Hülshoff, Franz Grillparzer, Georg Herwegh, Gottfried Keller, Fritz Reuter. But above all Heinrich Heine and Georg Büchner aroused interest. One of Büchner's editors, Kasimir Edschmid, is working on a novel based on Büchner's life and literary achievements. Eugen Diem wrote a biography *Georg Büchners Leben und Werk: Seine Gestalt, sein Leben, sein Werk, sein Fortwirken*.

In Lübeck, Thomas Mann archives were opened; in Stuttgart, the Reclam Universal Library was reestablished. An exhibit of German books published since the end of the war was arranged in Academy Hall in London. The Austrian P.E.N. Club met in Copenhagen under the leadership of Franz Theodor Czokor, and a German P.E.N. Club was founded at Göttingen. The presiding officers were: Pro-

FASHIONS IN 1948. This was a year of dress-up fashions with stress on femininity in styling, richness of fabrics and elegance of accessories. In suits and dresses shoulders were rounded and narrow; back fullness was a notable feature; tasteful detailing and draping were important. Large collars and wide, cuffed sleeves also were common. Hats were small to accommodate the new short hair-dos, and spring featured the "Rooftop of Paris"—a small, flat ledge of straw bonnet, veiled and bowed under the chin. In shoes, unusually low-cut vamps and straps were the rage, as the formerly popular open-toe styles almost completely disappeared, and ballerina shoes were in favor until the fall.

British Information Services

FASHIONS in fine, light woolens. (Top left): Negligee in dawn-blue, washable, fine wool, cut on extremely full lines. The yoke and cuffs are quilted and embroidered with pink sequins, and pink satin outlines the yoke. (Top right): White wool lace in a housecoat with shawl collar and full skirt. (Bottom left): Housecoat in old rose wool falls in deep folds from a laced waistband. Black velvet lines the wide collar and gauntlet cuffs of black-and-white checked wool. (Bottom right): Nightgown in fine wool delaine, with cream lace threaded with blue silk.

AIRLIFT. Night and day through 1948 the airlift poured supplies into Berlin in a spectacular demonstration of the fact that such an operation was possible. (This picture was taken at Rhine-Main airport in Frankfurt.)

IN BERLIN AN OLD WOMAN, weak with hunger, faints in the arms of a policeman. Bystanders hold their places in line, waiting for low-cost municipal food. Diplomats signed no German or Austrian peace treaty in 1948.

A PETITION FOR UNITY, addressed to the four Allied Military Governors, is signed by the people of the Russian sector of Berlin. The Western powers did not allow participation in their sectors.

PRINCE CHARLES Philip Arthur George of Edinburgh, born on Nov. 14, 1948, the infant son of Princess Elizabeth and the Duke of Edinburgh. The photograph was taken when Prince Charles was one month of age.

Photos from British Information Services

COMMONWEALTH CONFERENCE began at 10 Downing Street in London, on Oct. 11, 1948, under the Presidency of Premier Attlee. Some of the Prime Ministers are shown walking into the garden at 10 Downing Street,

ROOSEVELT MEMORIAL. Mrs. Roosevelt unveiled the Memorial to Franklin D. Roosevelt on Apr. 12, 1948, in Grosvenor Square, London. The picture shows King George VI and Mrs. Roosevelt leaving after the unveiling.

fessor Friedmann from London, Johannes R. Becher from the Soviet zone, and Ernst Penzoldt from the American zone. Erich Kästner and Rudolf Schneider-Schelde were elected secretaries. Karl Zuckmayer, whose play *Des Teufels General* is a continued success on the German stage, addressed the second International Youth Congress at Munich.

Among the authors who attended the German Writers Congress at Frankfurt were: Walter Kolbenhoff, Elisabeth Langgasser, one of the most outstanding poets, Kurt W. Marek, Hans Mayer, Theodor Plivier, Rudolf Alexander Schröder, Fritz von Unruh, and Leo Weismantel. A younger group assembled near Darmstadt, where under protest and acclaim Wolf-Dietrich Schnurre read his allegory *Das Begräbnis*, a strange mixture of realistic, surrealist, religious, and nihilistic elements. This assembly consisted of relatively unknown names: Wolfgang Bächler, Günther Eich, Sebastian Grill, Ilse Schneider-Lengyel.

For several writers the renewed contact with Europe or Germany resulted in literary works. Fritz von Unruh tells of *Diaries* in the making, of a comedy based on actual experiences in Germany during his trip. Alfred Döblin has been honored on his 70th birthday with a *Festschrift*, beautifully edited by Paul E. Lüth. Among the contributors the following names are found: Johannes R. Becher, Otto Flake, Hermann Kasack, Heinrich Mann, Günther Weisenborn, Wolfgang Weyrauch. Alfred Döblin contributed an *Epilogue* and a bibliography, from which we learn about Döblin's literary achievements during his years of exile. Many stories, among these the novel *Hamlet* are awaiting publication. Alfred Neumann, after a lecture tour through Norway, Sweden, Denmark, Holland, Switzerland, and Italy, is working in Florence, trying to carry out plans of a decade ago.

In enumerating the passing of German and Austrian writers who died in foreign countries, we are again reminded of the expansion of German literary creation. Karl Wolfskehl, Stefan George's friend, died in Australia; Egon Erwin Kisch, the "mad reporter" from Prague, in Mexico; Emil Ludwig, biographer and journalist, and Jakob Haringer, the Austrian lyrical poet, in Switzerland. Adam Scharrer and Georg Kolbe, the sculptor, died in Germany.

It has almost become immaterial where the reviewer of German literature has his observation point. The exchange of books has been greatly facilitated, and excellent bibliographies are at his disposal, even in the United States. The most reliable of the latter are: *Deutsche Nationalbibliographie*, published in Leipzig; and *Deutsche Literaturzeitung für Kritik der internationalen Wissenschaft*, published in Berlin. *Deutsche Vierteljahrschrift für Literaturwissenschaft und Geistesgeschichte* as well as *Philobiblion*, and *Zwiebelfisch* have reappeared, and the *Maximiliansgesellschaft* is functioning again.

Periodicals continue on a high level, some have changed names or are looking for new ones. *Die Fährde* changed its name to *Literarische Revue*. Among the contributors are Stephan Andres, Werner Bergengruen, Bert Brecht, Hanns Henny Jahn, Thomas Mann, Albrecht Schaeffer, and Karl Zuckmayer. *Karussell* counts among its contributors Otto Flake, Manfred Hausmann, Anton Schnack, Georg von der Vring. Contrary to the policy governing the publication of books, periodicals have been issued in large numbers.

Literary research has offered a strange mixture of scholarly attempts and immature and irrespon-

sible publications. Paul E. Lüth, a talented poet and essayist, editor of the periodical *Der Bogen*, author of the essays *Meditationen-Gestalten-Geschichten*, and editor of a lyrical collection *Der Anfang* (1947), is definitely not qualified to write a history of literature. His *Literatur als Geschichte* which claims to be the first postwar history of literature, has been branded as a book of plagiarism.

F. C. Weiskopf's *Unter fremden Himmeln* is a survey of German literature in exile (1933-1947). Stephan Hermlin and Hans Mayer have jointly published 30 essays on contemporary literary problems under the unassuming title: *Ansichten über einige Bücher und Schriftsteller*.

Theater and Drama. Stirring events in music and in the theater took place throughout the year. From many places exciting performances have been reported. Bert Brecht's comedy *Herr Puntila und sein Knecht*, introduced by a prologue in verse, consists of loosely connected pictures in which the author is searching for the old conception of human values. Hans Rehberg, author of Tudor dramas and other historical plays might be called an interesting counterpart to Maxwell Anderson, since many of his subjects resemble those of the American dramatist. *Elisabeth und Essex* was performed in Stuttgart and Wuppertal; *Bothwell* in Kiel and Karlsruhe; *Heinrich VII*, a drama about power and arrogance, is to be performed in January, 1949, at Munich.

Hanns Henny Jahn who received the Kleist prize in 1920, is the author of *Armut, Reichtum Mensch, und Tier*. Ilse Langner wrote *Iphigenie kehrt heim*. Fritz von Unruh's *Der Befreiungsminister* is to have its first performance in Westphalia. Ernst Wiechert's comedy *Die Unsterblichen* was performed in Italy, Switzerland, and Belgium.

Among young dramatists who caused quite a stir with their sensational, often shrill and scurrilous plays, we mention: Jochen Thiem, *Der Zirkus brennt*; Hans Mundt, *Unter Fahnen und Galgen*; Wolfgang Borchert, *Draussen vor der Tür*; Renate Uhl, *Um den Menschen wird noch gekämpft*. Max Frisch's drama *Die chinesische Mauer* has met with great success.

Books on the theater include: Benno Fleischmann's, *Max Reinhardt-Die Wiedererweckung des Barocktheaters*; Oscar Maurus Fontanas', *Wiener Schauspieler*; Franz Herterich's, *Das Burgtheater und seine Sendung*.

Lyrical Poetry. There has been an intensified production of poetry, partly reminiscent of Rilke's and Hölderlin's rhythms. Firmly established is the reputation of Oda Schäfer, Elisabeth Langgasser, and Rudolf Hagelstange. Manfred Haushofer's beautiful sonnets *Moabiter Sonette* were posthumously published in Switzerland. New names of a younger generation include the authors of seven little volumes, entitled *Ruf der Jugend*: Klaus Prager, Nino Erné, Traute Quade, Siegfried Borries, Paul Heinz Quade, Heinrich Graef, Siegfried Heldwein. Georg Maurer's *Sonette, Gesänge der Zeit* and Wolfgang Weyrauch's poems are remarkable. There are also several anthologies, such as *Das Erbe, Lyrik des Abendlandes, Frauenlieder aus drei Jahrtausenden*, and *Die Sammlung*.

Fiction. Many novels were written in the United States: Leonhard Frank's *Matilde* and his short *Deutsche Novelle*—with the nostalgic title—is ready for publication following its appearance in England under the title *The Baroness*. Also Martin Gumpert, *Der Geburtstag*; Alfred Neumann, *Der Pakt, Die Goldquelle*. Wilhelm Speyer's *Das Glück der Andernack* is a novel about Berlin in the 1880's, which the author wrote in California.

Friedrich Torberg published his first fiction in ten years: *Hier bin ich mein Vater* while Heinrich Mann wrote *Der Atem*. Novels written in Germany include: Hermann Kasack's, *Stadt hinter dem Strom*; reminiscent of Kafka, with a title suggesting that the city is no man's land between this world and beyond. Elisabeth Langgasser, Anna-Seghers and Wolfgang Weyrauch are outstanding novelists. Wolfgang Borchert's short stories, *Es geschah an einem Dienstag* and Alfred R. Böttcher's *Mensch ohne Maske* deserve to be singled out.

Fritz von Unruh's novel *Der nie verlor* followed last year's English translation *The End Is Not Yet*. German fiction in English translation included Stefan Heym's, *The Crusaders*; Thomas Mann's, *Doctor Faustus*; Richard Plant's first novel *The Dragon in the Forest*; Theodor Plivier's, *Stalingrad*; and Reinhold Schneider's, *Imperial Mission*.

Memorable achievements were made in the field of literary, philosophic, and esthetic writings. Ernst Robert Curtius wrote *Europäische Literatur und lateinisches Mittelalter*; Karl Jaspers, *Der philosophische Glaube und Von der Wahrheit*; Georg Lukacs, *Deutsche Literatur während des Imperialismus und Der junge Hegel*; Thomas Mann, *Neue Studien*; Leopold Ziegler, *Menschwerdung*. Autobiographical writings in the field of art and music included: Käthe Kollwitz, *Tagebuchblätter und Briefe*; Wilhelm Furtwängler, *Gespräche über Musik*.

Throughout the year preparations were made for the celebration, in 1949, of the bicentennial of Goethe's birth.

—ANNA JACOBSON

GERMANY. A former Federal Republic of Central Europe, wholly occupied by Allied military forces for an indefinite period. It is divided into four zones of occupation: Russian (east), American (southwest), British (northwest) and French (west). The former capital, Berlin, is similarly divided into four occupation sectors.

Area and Population. The total area of occupied Germany (exclusive of territories annexed or provisionally administered by the Soviet Union and Poland, and of the Saar territory) is 136,237 square miles, of which the Americans occupy 41,260, the Russians 41,043, the British 38,010 and the French 15,600, the remainder being the Berlin city district. Germany's population was established by the census of Oct. 29, 1946, as follows (in brackets: est. pop. on Apr. 1, 1948): U.S. zone, 17,174,367 (18,640,331); British zone, 22,344,900 (26,417,764); Russian zone, 17,318,581; French zone,—then including the Saar—5,939,807; Berlin, 3,182,852, making a total of 65,955,507. The sharp increase in the population of the American and British zones is due to a further influx of refugees from the east since the census was taken. The resident population of the bizonal area, on Apr. 1, 1948, was 37,753,000 and the number of refugees living there was 7,305,095, making a total of 45,058,095 for the combined zones. Population of the principal cities in 1946: Hamburg, 1,427,000; Munich, 758,000; Leipzig, 608,111; Essen, 506,000; Cologne, 496,000; Dresden, 463,032; Dortmund, 436,198; Frankfurt-am-Main, 430,000; Düsseldorf, 421,506; Stuttgart, 411,000; Bremen, 389,000.

Education. In 1947, there were in the U.S. zone, including the U.S. sector of Berlin, 11,802 elementary schools with 2,458,528 pupils; 603 secondary schools with 252,955 pupils; six universities with about 26,000 students. In all of Germany there were 23 universities at the end of 1948.

Production. The index of industrial production rose sharply in the bizonal area, following the

currency reform of June, 1948 (see under *Events*, below). In September, 1948, the index stood at 70 percent of the 1936 level, as compared with 53.6 in April, 1948, and 44 in November, 1947. Ruhr coal production reached 300,000 tons per day in October and 315,000 early in November, 1948. The output of ingot steel was 610,000 metric tons, and that of pig iron 509,000 tons in October, 1948. The harvest, in 1948, produced substantially higher yields than in the preceding year. Total grain crops were estimated at 7,419,000 metric tons in the bizonal area, as compared with 5,297,000 tons in 1947. Of potatoes, 12,815,000 tons were harvested in 1947, in the combined zones. Livestock in the two zones numbered 8,851,000 heads of cattle, 4,384,000 hogs, 1,499,000 horses, and 27,567,000 poultry in June, 1948.

Foreign Trade. Exports for the first three quarters of 1948 were valued at \$397 million as compared with \$222 million for the entire year 1947 (bizonal area). Coal exports accounted for about 50 percent of the total export value in 1948. Imports into the bizonal area—including those classed as "non-commercial"—totaled \$723 million in 1947. For the French zone, imports were valued at \$135 million and exports at \$134 million in 1947.

Government. Theoretically, the supreme authority in Germany is the Allied Control Council, which ceased, however, to function in 1948 (see *Events*, below). Since then the bizonal area (American and British zones, joined in 1946), the Soviet zone, and the French zone have been subject to the authority of their respective Allied commanders only. (For the administrative setup created after the German surrender in 1945, see *YEAR BOOK, Events* of 1947, p. 200.)

There are 16 *Länder* or states (4 each in the American and British zones, 5 in the Russian zone, and 3 in the French), each with its Cabinet headed by a Minister-President or corresponding chief executive. The status of Berlin is similar to that of a *Land*. Four-power rule in that city also came to an end in 1948 (see *Events*, below).

Events, 1948. More pressingly than in the heyday of Hitler's power, defeated and divided Germany held the world's attention in 1948. Once again, the eyes of fifty-odd peace-loving nations focussed on Berlin as the potential springhead of a new world war.

The division of Germany into two rival states, or groups of states, was all but completed during the year. In the west, a trizonal federation was taking shape, while in the east the Russian-occupied zone was welded into a compact instrument of future expansion. The schism reached and engulfed even the four-power-ruled city of Berlin, similarly dividing it into rival halves and turning it into a focus of discord for the entire world.

Military Government and Occupation. For the first time since the war, an early end to the Allied occupation of Germany loomed as a distinct possibility. Early in the year the Soviet-controlled German press began to beat the drum for a withdrawal of all occupying forces. In May, Stalin, in his reply to an open letter from Henry Wallace, declared himself in favor of an early peace treaty with Germany and an end to the occupation. The Warsaw Conference of eastern foreign ministers in late June followed suit. On September 21, the Red Army's mouthpiece in Berlin, the *Tägliche Rundschau*, set the tune for a new propaganda drive aimed at the evacuation of Germany within one year after a peace treaty had been signed.

When it became apparent that the western Allies were cool to the idea, the Russians changed

their tack somewhat. At the end of October, they let it be known through German spokesmen that the Red Army was prepared to evacuate Eastern Germany even without a corresponding move by the western Allies. However, it was pointed out that as long as the western powers stayed in Berlin, the Russians would have to do likewise and that in this event they naturally would have to "guard their communications" between the U.S.S.R. and the Soviet garrison in Berlin. Thus by the end of the year it was evident that the Russian move was inspired mainly by propaganda reasons and would not amount to an effective withdrawal of all military forces, save perhaps in the event that the western Allies agreed to do the same.

Neither the Americans nor the French showed any inclination to follow the Russian lead in the matter. While the French were guided by their traditional policy of demanding a maximum of security measures against German aggression, the Americans' unwillingness to withdraw was based on the presence of large numbers of Communist-trained shock troops in eastern Germany which, it was felt, would make a quick end of the democratic institutions developed in the West.

On the other hand, Gen. Sir Brian Robertson, British Military Governor in Germany, expressed cautious approval of the idea of a general withdrawal from Germany, at a press conference in Berlin on October 27. "In abstract principle," he said, "I feel that a solution of that sort may well be the only means for resolving the differences to which Allied disagreements over Germany have led." The general made it clear, however, that such a solution could be envisaged only under conditions of real freedom for the Germans. They should not be allowed to fall under the domination of a "minority well organized and able to impose its will in defiance of the desire of the majority of the people."

The Germans themselves appeared to be swaying between a natural desire to manage their own affairs and fears of Communist subjugation. A public opinion survey conducted by the American Military Government in Berlin in October showed 51 percent of the city's population in favor of a general withdrawal of foreign troops. The Berlin City Council, in a declaration issued on September 27, formally called for such a move. "We urgently appeal to the occupation powers and to the world to withdraw the occupation troops from Berlin as part of an overall end of the occupation throughout Germany," the resolution read.

The German attitude was influenced in large measure by dissatisfaction with the high cost of occupation. German experts figured the cost, in the bizonal area, at 4,600 million marks in the fiscal year of 1946 and 4,900 million marks in 1947. In the French and Russian zones, the cost was substantially higher, comparatively speaking.

Pending agreement on a general withdrawal of occupation forces from Germany, the outlines of a so-called "occupation statute" were worked out in lengthy negotiations between German representatives from the three western zones and the American, British, and French military governments. Negotiations began in April and were concluded in late November. The statute, exactly defining the respective powers of the occupation authorities and the German organs of self-government in the West, was regarded as the forerunner of a "peace statute," which might have to take the place of a peace treaty in view of the apparent impossibility of settling the East-West differences in the near future.

Basically, the occupation statute, as drafted toward the end of the year, aimed at the establishment of German home rule in all branches of government except military and foreign affairs. It also provided for an almost complete fusion at the top of Military Government authority, substituting a tripartite control board to the hitherto independent authority of the three western military governors. On November 16, Gen. Lucius D. Clay, American Military Governor in Germany, announced that the occupation statute was "about 90 percent finished." A few points still at issue were to be resolved at government level.

End of the Control Council. Four-power rule of Germany, as defined by the Yalta and Potsdam agreements, virtually came to an end during the year. What little collaboration between the western military governments and their Russian partner had survived the mounting conflicts of 1947 broke down completely under the strain of the Berlin crisis (see below).

On March 20, the Soviet delegation dramatically walked out of what was to become the last meeting of the Allied Control Council in Berlin. Marshal Vassily D. Sokolovsky, at the time chairman of the Council, in a bitter statement assailed the western powers for destroying the quadripartite machinery by holding the London conference on Germany (see below), from which Russia was excluded. Under the circumstances, he declared, the Control Council "no longer exists as an organ of government."

From that day on, the Russians also boycotted the meetings of the Coordinating Committee and other subordinate divisions of the Council. The Berlin *Kommandantur* likewise lapsed into a coma. Realizing that the Russians could not be induced to come back, unless and until plans for the establishment of a West German state were cancelled, Gen. Clay made no move for reconvening the Council, when the chairmanship fell to him in April. After that, none of the powers concerned requested further meetings of the Council and none were held.

There were no major changes in personnel in any of the four military governments. Generals Clay, Robertson, Sokolovsky, and Koenig all retained their posts throughout the year. The position of Gen. Clay remained unshaken in spite of recurrent reports of disagreement between him and policy-making officials in Washington. The general's earlier expressed intention to retire from public service was apparently abandoned.

On January 27, it was officially announced that the State Department would take over from the Army all non-military aspects of the occupation. July 1, 1948, was set as the provisional target date for the transfer of power. But a few months later, on March 23, this policy once again was reversed, "following a review of the present situation." The Army remained in charge.

Western Germany: The Making of a State. When the London Conference, the second of the two Foreign Ministers' meetings on the German problem held in 1947, ended in failure in mid-December, as had the Moscow Conference earlier in the year, it became quickly apparent that the die was cast for the creation of a West German state. Although all hope was not abandoned for the eventual reunion of the four occupation zones under a common government, both the western Allies and the German leaders in their zones agreed that it was not possible to wait any longer for an agreement with the Russians. Western Germany, it was realized, could not be put back on its feet economically

without an administrative setup tantamount to a government, even though for various reasons it was not given that name.

As a first step, the American and British military governors on January 7 "proposed but not dictated" to the German Economic Council at Frankfurt and to the eight state governments of the combined zones the formation of a "Bizonal Economic Administration." The proposal was accepted by the Germans, after a number of minor concessions had been made to them on organizational issues.

Accordingly, by a charter proclaimed on February 6, the new Bizonal Economic Administration was organized. The legislative branch consisted of an enlarged Economic Council of 104 members elected by the eight state assemblies of the bizonal zone; and of a 16-man Council of States (two representatives for each state), roughly comparable to the U.S. Senate. The executive was made up of six members, headed by a chairman (*Oberdirektor*) without portfolio. At the same time a Supreme Court of ten, with headquarters at Cologne, was set up. Otherwise the seat of the new administration remained at Frankfurt.

On March 2, Dr. Hermann Puender, Lord Mayor of Cologne, a member of the Christian Democratic Union, was elected chairman of the new Administration, by a minority vote of 40 out of 96 (with 48 abstentions), of the Economic Council. His election was confirmed three days later by the Council of States and was approved by the military governments.

Meanwhile a new conference, concerned with the problems of western Germany only, had been held in London, without Russian participation. The conference, which lasted from February 23 to March 6, was attended by representatives of the United States, Great Britain, France, Belgium, The Netherlands, and Luxembourg. One of its principal purposes was to meet objections which had been raised by France and the Benelux countries in regard to the new governmental setup in western Germany, and to prepare the way for a merger of all three zones in the West. Preliminary agreement was reached on internationalization of the Ruhr, a federated form of government in western Germany protecting states rights, and an eventual fusion of the three zones.

The London conference was reopened on April 20 and was brought to a conclusion on June 1. Its recommendations, published on June 7, called for the establishment of a West German state with a federal constitution; control of the Ruhr coal, coke, and steel industry by an International Authority composed of the six nations represented at the Conference; and military guarantees by the United States, Great Britain, and France.

In Germany, the six-power recommendations met with a lukewarm reception. The proposed international regime for the Ruhr satisfied neither the owners nor the workers of the affected industries. Political leaders shied away from the responsibilities involved in collaboration with the western Allies in what the Communist press promptly labeled a "treasonable" undertaking.

For their part, the Russians and their satellites voiced emphatic protest. A hastily summoned counter-conference of the Soviet bloc (U.S.S.R., Poland, Yugoslavia, Czechoslovakia, Rumania, Bulgaria, Hungary, and Albania) met at Warsaw on June 23-24. A communique was issued berating the western powers for disregarding international agreements and dividing Germany. The Warsaw declaration called for reestablishment of four-power rule in Germany, including the Ruhr; for-

mation of a provisional government for all of Germany; and a peace treaty with that country, to be followed within one year by a general withdrawal of occupation forces. Unofficially it was reported that the conference had decided upon the establishment of an East German state as a counter-move to the West state planned by the United States, Great Britain, France, and the Benelux countries.

The recommendations of the six-power London Conference were embodied in formal proposals presented to the Germans by the three western military governors at a meeting in Frankfurt, on July 1st. The proposals called for a constituent assembly to be convened not later than September 1, state referenda on the constitution to be adopted, and the drafting of an "occupation statute."

On July 9 the Minister-Presidents, after a two-day conference at Coblenz, accepted the Allied proposals, but with certain reservations which were presented in writing on the following day. The gist of their reservations was that they did not wish to preclude the eventual formation of an all-German government by formalizing the provisional regime in the West with such terms as "constituent assembly," "government," and "state." This reluctance to call things by their proper names, while accepting their essence, was due to fears of being branded as "quislings," by the eastern zone Communists and their "People's Council" (see below).

Instead of a constitutional assembly, the Germans proposed to call a "parliamentary council" for the purpose of "drafting a basic law for the uniform administration" of the three western zones. The western military governors, though disappointed at the Germans' overcautious attitude, yielded on this question of semantics, and the Germans withdrew some of their other objections.

On July 22 the Minister-Presidents announced that they were ready to proceed in accordance with the powers delegated to them. Two committees were set up, one to prepare the draft of a basic law for presentation to the Parliamentary Council, the other to deal with proposed state boundary changes.

The Constitutional Committee, composed of 22 representatives of the eleven states of the western zones met on August 10 at Herrenchiemsee, an island chateau in a lake near Munich. Its deliberations resulted in a draft constitution completed on August 22. The project envisaged a federal republic with a bicameral system of legislature (*Bundesrat* and *Bundestag*) and a fairly strong central authority headed by a federal president. Also in August, the Committee on State Boundaries agreed to propose that the three southwest German states of Wuerttemberg-Baden, South Wuerttemberg, and South Baden should be combined into a single territorial unit.

On September 1, the Parliamentary Council met, as scheduled, in the Rhenish city of Bonn to pass on these proposals. Elected by the eleven state assemblies, on the basis of one delegate for each 750,000 persons, the Council consisted of 65 members, including 27 representatives of each of the two major parties, the Social Democrats and the Christian Democratic Union.

After many weeks of strenuous committee work and at times heated argument, which revolved primarily around the issue of states rights vs. federal authority, the outlines of the Bonn Charter began to emerge in mid-October. A Bill of Rights, including habeas corpus and the fundamental freedoms on the American model was adopted on Oc-

tober 9. Final organization of the new state, for which the name *Bundesrepublik Deutschland* was provisionally chosen, and of its administration was expected by January or February, 1949. On October 18, an almost complete economic merger of the three western zones was announced as the first formal step toward the establishment of "Trizonia."

The Currency Reform. Meanwhile, in the economic field, an event of utmost importance had taken place, which was to have far-reaching repercussions not only on all German affairs but also in the field of great power relationships and on world peace.

After many a false start, and heated debate of all pros and cons, followed by months of indispensable psychological preparation, the long-awaited currency reform finally took place in mid-summer. It was carried out simultaneously, but not jointly, in the western zones and in the Russian zone, creating conditions which at times bordered on financial chaos, but nevertheless paving the way for spectacular economic recovery.

Prior to this reform, hoarding of foodstuffs and consumer goods had been general among manufacturers, farmers, and the public, despite stringent price and production controls. Black markets and profiteering were rampant, and widespread misery ensued.

In western Germany, the currency reform was carried out in four stages. First, on June 18, it was announced that the old *Reichsmark* would become invalid, effective June 21, and would be replaced by a new currency, called *Deutsche Mark* or *DM*. Each inhabitant of the western zones was allowed to exchange 60 old marks for an equal amount of new ones, the remainder of his holdings being frozen. A second law, issued on June 21, granted to the newly organized "Bank of the German States" in Frankfurt the exclusive right to issue banknotes and coins in the new currency for the three western zones (the original amount of *DM* paper money needed for the reform had been printed in the United States and shipped to Germany several weeks earlier). On June 26, a third law proclaimed a conversion rate of one new mark (*DM*) for ten old ones (*RM*) for all holdings and obligations, except the initial "head quota" of 60 marks. However, only one half of the money left to each individual or firm after this drastic cut was transferred to a "free account," while the other half remained blocked for three months. A fourth currency law, on October 1, wiped out seven-tenths of the blocked accounts, thus in effect increasing the cut from the original 1:10 to a ratio of 1:16 for cash and bank holdings.

As soon as the first announcement of the currency reform in the West had been made, the Russians followed suit. As a first step, Marshal Sokolovsky, on June 19, issued a proclamation forbidding the entry and circulation of the western *DM* into the Soviet zone, including Berlin. This edict marked the beginning of the all-out Berlin blockade (see below). On June 24 an eastern zone currency reform went into effect, also at a 10:1 ratio, except for a slightly larger "head quota" (70 marks) and certain alleviations in favor of small holders. The Soviet zone currency reform was concluded on July 24 with the introduction of a new money, also called *Deutsche Mark* and issued by the *Deutsche Notenbank* in Potsdam, which had been organized specifically for this purpose.

Needless to say, the more or less simultaneous introduction of two new currencies with the same name, and both seeking circulation in four-power controlled Berlin created an enormous confusion,

which was enhanced by the innumerable technicalities of the double-headed reform. From the first day, "East Mark" and "West Mark" engaged in a battle for supremacy, easily won by the latter. By October, the exchange rate of the East Mark had fallen to 3.20 for one West Mark.

Although accompanied by much confusion and bitter hardship, especially to small rentiers, the western currency reform proved on the whole successful. It brought out long-hoarded goods and, aided by the good harvest, put an end to the worst food shortages; it also gave a tremendous impetus to industrial production (see *Production* above). Throughout the western zones there was a noticeable upswing in individual initiative and enterprise. As living conditions improved, so did labor efficiency and public morale. The widespread unemployment which had been predicted by some economists failed to materialize.

However, the haste of the Frankfurt regime in removing price and rationing controls had an untoward effect. In October and November, prices went up by leaps and bounds, threatening the new currency with the possibility of another runaway inflation. Labor was aroused and on November 12, a one-day general strike was called by the unions in protest against high prices.

The Berlin Blockade. Whatever its final results in the economic field might be, the currency reform caused a sharp deterioration in international relations. It brought the Berlin crisis, which had been brewing ever since the breakdown of the Control Council, to a sudden head.

More or less stringent highway and railroad restrictions, designed to make the position of the western Allies in Berlin uncomfortable and eventually squeeze them out of the city, had been initiated by the Soviet authorities as early as April 1. But it was not until June 24 that the Russians clamped an iron-clad blockade on Berlin by halting all rail traffic from and to the western zones, after having previously suspended road and water transportation into the city. At first the Soviets did not openly concede that their blockade of the western sectors of Berlin was a political move, designed to drive the Americans, British, and French out of Berlin or to force them to abandon their plans for western Germany. Instead, they pleaded "technical" difficulties of all sorts and the necessity to protect the economic life of their zone against alleged ill effects from the smuggling of West Marks into it. But as the months passed, and the technical excuses became ever more threadbare, all the world understood that the clash over the question which currency should circulate in Berlin was little more than a handy pretext for starting the all-out blockade and that the real stake in the contest was predominance in Germany.

From the first day of the blockade, the western Allies let it be known that they would not yield to the Soviet pressure but would stand firm on their rights. Secretary of State Marshall, on June 30, keynoted this stand with a "no surrender" speech in Washington. On July 6, the United States, Great Britain, and France, in similar notes, formally demanded that Russia lift the blockade.

Meanwhile the spectacular "airlift" had begun to operate, increasing from month to month in scope and achievement. In order to relieve the inevitable shortages inflicted by the blockade upon the population of the western sectors, American, British, and French cargo planes, carrying every necessity from foodstuffs to coal, daily delivered huge loads of airborne supplies to the city. By the end of October, more than half a million tons had

thus been flown in by the combined western air forces.

On July 14, Moscow flatly rejected the western powers' protests and indicated that the siege of Berlin would be lifted only if the western powers agreed to reopen negotiations on the whole German question. A beginning towards such negotiations was made on July 31, when the envoys of the western powers in Moscow called on Foreign Minister Molotov with proposals to settle the Berlin dispute. On August 2, the same envoys met with Premier Stalin at the Kremlin, giving rise to worldwide hopes of an early settlement. More meetings with Molotov and Stalin followed and on August 27 the outlines of a solution emerged under which Russia would lift the blockade in exchange for recognition of the East Mark as the sole currency for Berlin.

Yet, when the military governors met in Berlin on August 31 to implement the Moscow decisions, they were unable to reach agreement on practical measures and the dispute was back where it had been before the Kremlin talks. After another futile appeal to Moscow, the western powers on September 29 referred the case to the United Nations. It was taken up by the Security Council and, after a futile attempt at mediation by the six "neutral" members of the Council, was brought to a vote on October 25. The Council, by a vote of 9 to 2, approved a resolution calling for an immediate end of the blockade and new talks between the military governors with a view to introducing the East Mark in all of Berlin. Russia vetoed the resolution on the grounds that the currency situation must be straightened out before the blockade could be lifted. An attempt by UN Secretary General Trygve Lie and the President of the General Assembly, Herbert Evatt, to break the stalemate by a direct appeal to the powers concerned proved fruitless. Then Argentine Foreign Minister Juan A. Bramuglia, President of the Security Council, took a hand. After long negotiations, which lasted through November, he obtained agreement in principle on the appointment of a commission of experts to study application of the currency reform in Berlin on the basis of the Moscow directive of Aug. 30, 1948.

Meanwhile, however, new and serious complications were shaping up in Berlin. On November 30, the Communists seized the Berlin City Hall, in the Soviet sector, "deposed" the administration elected in December, 1946, and proclaimed Fritz Ebert, Jr., son of the late Reich president, as the new mayor, while the lawful city government withdrew into the western sectors.

The Eastern Zone. Political developments in the Russian zone of Germany, in 1948, mostly hinged on the creation of a comprehensive governmental setup susceptible of being extended, at short notice, to all of Germany.

One of the most important measures taken by the Soviet Military Government in this respect was the establishment of the German Economic Commission (DWK). This body was first organized in June, 1947, as the Soviet reply to the German Economic Council at Frankfurt. It was designed to coordinate the activities of the five state governments of the zone and of the 14 "central administrations" in Berlin, which frequently had been working at cross purposes.

In its original form, the DWK did not work out. Its executive powers were limited and its machinery was hampered by the requirement of a unanimous vote of its seven members. For eight months, the organ led a shadowy existence, while the east-

ern zone economy showed signs of disintegration.

On Feb. 13, 1948, Marshall Sokolovsky issued Order No. 32 which completely reorganized the DWK. The Commission was granted almost unlimited powers in the economic field, with authority to override the state governments. The central administrations, with few exceptions, were dissolved and turned into subordinate agencies of the DWK. The membership of the Commission was broadened to 25 and the prerequisite of unanimity was dispensed with. On March 10, the Commission elected Heinrich Rau, a hitherto little-known Communist who had been Minister of Economic Affairs in the Brandenburg State Government, as its chairman.

In the following months, the DWK took a number of sweeping measures designed to put the eastern zone economy on an even keel. In April, the socialized sector of industry (the so-called "people-owned plants") was declared inalienable and was consolidated into large combines on a zonal basis. A Commission for the Protection of People's Property was set up, which in October and November carried out drastic purges especially in the textile industry of Saxony. According to official figures made public in July, eight percent of the zone's industrial enterprises, representing 40 percent of the total output volume, had been socialized at that time.

On July 1, a Two-Year Plan, designed to raise the over-all level of industrial production to 81 percent of the 1936 output, by the end of 1950, was announced. Vast increases in pig iron and steel production figured among the principal targets of the Plan. In spite of all efforts of the planners, and numerous efficiency drives organized during the year, production in the eastern zone in 1948 showed no signs of appreciably climbing beyond the 60 percent level (of 1936 standards) already attained in 1947.

Meanwhile, on the political front, a "national unity" maneuver in the grand manner unfolded. In December, 1947, a so-called "People's Congress," ostensibly representing all "democratic" parties of the eastern zone, but in fact wholly controlled by the Socialist Unity Party, *i.e.* the Communists, convened in Berlin. At a second meeting, in March, 1948, the Congress gave birth to a 400-man "People's Council," which constituted itself as a provisional parliament for all of Germany, including the western zones.

On March 18,—centennial anniversary of the 1848 Revolution—the Council elected a ten-man executive organ (*Präsidium*) headed by Wilhelm Pieck, Otto Nuschke, and Wilhelm Kuelz (after the latter's death, on April 10, Hermann Kästner took his place). From the first this executive agency of the People's Council quite openly aspired to be regarded as an unofficial central government for Germany.

One of its most spectacular acts was the organization of a referendum on a petition to the four Allied Military Governors to respect the "indivisible" unity of Germany. The referendum was held in the days from May 23 to June 13. It yielded the inevitable 95–96 percent of favorable votes in the Soviet zone, the only one where it was permitted. The three western military governments ignored it, as they did with the People's Congress and the People's Council in general.

A committee entrusted by the People's Council with the task of preparing a draft constitution for Germany completed its labors on October 21. The draft was presented at the fourth plenary session of the People's Council, October 22–24. Based by

and large on the old Weimar Constitution, except for a stronger emphasis on Socialism, it differed from the Bonn charter (see above) especially by its centralistic character.

The Ruhr Problem. Next to the Berlin fracas, the question of what to do with the Ruhr was the principal German issue of the year. To the French, it was a matter of far more absorbing concern than Berlin. The Paris government was thoroughly aroused when the American and British military governors on November 10 issued an ordinance returning the coal, iron, and steel industries of the Ruhr to German ownership. Under this order, German trustees were to administer the industries, under Allied supervision, pending ultimate decision on the question of ownership by a freely elected German government. A formal protest against this move was immediately lodged by French Foreign Minister Robert Schuman, who reiterated the French view that the question of Ruhr ownership should be decided by all "interested powers."

The dispute cast a shadow on the third six-power conference on the Ruhr which opened on November 11 in London for the purpose of drafting a statute for the International Ruhr Authority decided upon in principle in June (see above). While, in the American-British view, the Authority should exercise supervisory functions and regulate the allocation of the Ruhr industries' output during the control period only, the French would give it permanent status. Eventually a compromise was worked out and on December 28 a draft agreement establishing the "International Authority for the Ruhr" was announced.

War Crimes. See WAR CRIMES TRIALS.

—JOACHIM JOESTEN

GIBLALTAR. A British colony and fortified naval base at the western entrance to the Mediterranean. It comprises a narrow peninsula which includes a long mountain called the "Rock." There is a deep-water Admiralty harbor with an area of 440 acres, containing three graving docks. Area, 1½ square miles. Total fixed population (Jan. 1, 1947): 21,233. The supply of fuel and provisions to ships and the transit of goods to Spain and Morocco form the chief trade of the port. In 1946 revenue totaled £545,325; expenditure £751,630. The governor is assisted in the administration by an Executive Council of seven members. Governor and Commander-in-Chief: Lt. Gen. Sir Kenneth A. N. Anderson (assumed office Mar. 21, 1947).

GILBERT AND ELLICE ISLANDS. A British island colony in the Pacific, comprising the Line Islands and the Gilbert, Ellice and Phoenix groups. Total area: 312 square miles. Population (1940): 34,202. The islands, with the exception of Ocean Islands, are coral atolls. The natives are chiefly Polynesians and Micronesians; there is no linguistic similarity between the Gilbert and Ellice groups. Chief crops are pandanus fruit and coconuts. Phosphate of a high quality is present on Ocean Island. Foreign trade (1945-46): imports £45,215; exports £53,140. Finance (1946): revenue £287,281; expenditure £226,561. The High Commissioner for the Western Pacific administers the colony through a resident commissioner with headquarters on Ocean Island. Resident Commissioner: H. E. Maude.

GLASS AND GLASSWARE. The value of total glass output in the United States during the first eleven months of 1948 was estimated at \$710,150,000, a gain of approximately eight percent over comparable 1947 figures. The number of persons employed

in the glass industry during the year roughly equaled that of 1947 but annual payroll totals showed an increase of approximately two percent. This was accounted for by wage increases agreed upon by labor and management in various divisions of the industry.

Chief contributor to over-all production gains was the flat glass industry which, to meet record demands of building construction and automotive production, hit peak figures in the production of polished plate glass, window glass, and safety glass. Glass container production, in spite of a concerted effort on the part of manufacturers to regain war-year markets, was more than ten percent below 1947 totals. Increasing public acceptance, however, of "one-way," non-returnable bottles for beer, soda, milk, etc. was foreseen. Pressed and blown table glassware production also fell below that of the previous year and, as a result, an active consumer publicity campaign was begun to promote American-made ware.

The three-and-a-half-year-old government anti-trust suit against eight major flat glass companies was ended in November by consent decree. The companies involved were permitted to retain all their plants but were placed on probation for three years, at the end of which divestiture will be ordered if full competition has not been restored. By another provision of the decree, 187 flat glass patents were made available to the public on a royalty-free basis and 733 other patents were licensed on a reasonable royalty basis.

Among the technical advancements in the glass industry in 1948 was the development, under the direction of Dr. Alexander Silverman of the University of Pittsburgh, of a new type of glass containing 20 percent tungsten. The product is expected to be of considerable value in atomic research work, offering unrestricted visibility while filtering out harmful rays emitted by radio-active materials. Another development was that of a special glass for use in face plates of television picture tubes. Improvement of methods of production of these tubes permitted a sharp increase in output and gave promise of an ever-expanding field for glass manufacture.

European production of glassware continued to improve as war-crippled factories gradually swung back into operation. Major problems still faced by factories in England, France, Belgium, Czechoslovakia and other countries were fuel shortages and a scarcity of skilled glass workers. In Japan, production of sheet glass in 1948 approximately doubled 1947 figures. Steps were taken toward alleviating the severe glass shortage in Australia with the construction of two large domestic glass furnaces, one at Sydney and the other at Melbourne. A new furnace with a capacity of eight metric tons of glass began operation at Guadalupe, Mexico. (See CERAMICS.)—DONALD DOCTOROW

GOLD. World production has fallen off in postwar years due to rising labor and other production costs that squeeze operators in a market dominated by the U.S. Government buying price of \$35 per fine oz. The Bank for International Settlements estimated 1947 production by all countries, including the U.S.S.R. whose statistics are not released, at 27.7 million oz., which may be compared with the 1940 peak of 40.9 million oz. Last year's output is expected to be even lower.

In 1947, the Union of South Africa continued as the largest producer, with 11,198,000 oz. The Soviet Union was second, with production estimated at 4 to 5 million oz.; Canada third, with 3,069,476

oz.; the United States fourth, with 2,109,180 oz.; Australia fifth, with 937,556 oz.

Domestic mine production in 1948 was reported by the Bureau of Mines to be 2,001,380 oz. Utah, in which gold mining is a by-product of copper production, was edged out by California as the leading gold-producing State due to a year-end strike at the Bingham Canyon, Utah, copper mine. South Dakota was second.

United States Treasury gold holdings reached a record high of \$24,230 million on December 15, estimated at about 64 percent of total world monetary reserves. Gold continues to flow into this country to pay for exports from the United States, supplementing postwar United States loans and Economic Cooperation Administration grants to foreign nations. The principal shippers of gold to the United States were Great Britain, the Union of South Africa, and Belgium. As the result of the flow of gold and limited production, the reserves of many nations are perilously near the danger point.

Gold stocks in most countries were held largely or entirely by central banks or treasuries for monetary reserves. But there were still some free, semi-free, and black markets for gold. The principal ones being Bombay, Hong Kong, Alexandria, Lisbon, Paris, Tangier, Switzerland, and Italy. In the United States, gold can be held by individuals only if it has not been melted, smelted, chemically treated, or otherwise refined. Trade in placer-mined gold, 80 to 90 percent fine, at prices equivalent to \$40 to \$42 per fine oz., as a hedge against inflation was reported in the United States.

—JOHN ANTHONY

GOLD COAST. A British colony in West Africa, along the Gulf of Guinea. Attached to the Gold Coast for administrative purposes are Ashanti, Northern Territories, and the United Nations Trust Territory of Togoland. Total area, including the attached territories: 91,843 square miles. Total population (1948 census): 4,095,267. Chief towns: Accra (1948 census) 135,456, Kumasi 47,054, Sekondi 23,847, Tamale 21,303, Cape Coast 20,242, and Koforidua 15,307. Education (1946-47): 21 government and 557 aided schools with 90,508 pupils; 2,175 unaided schools with 110,880 pupils. There is also a government technical school and a college.

Production and Trade. The country grows sufficient food for domestic needs and the government is making serious attempts to increase cultivation of staple food crops and to introduce new ones. Cocoa is the principal export crop (1947-48 crop est. 200,000 tons), followed by oilseeds, vegetable oils, rubber, copra, ginger, and palm kernels.

Mineral production (1947; 9 months): gold, 468,569 fine oz. troy valued at £4,035,559; manganese ore, 485,890 dry tons valued at £1,821,265; bauxite, 81,035 tons valued at £259,312; diamonds, 474,713 carats valued at £456,157. All of the gold mined is exported to the United Kingdom, as is nearly all of the bauxite and the diamonds.

All timber comes from the Closed Forest Zone which covers about 28 percent of the total land area. Total timber production for the year ended Mar. 31, 1947, amounted to 172,265,100 solid cu. ft., valued at £1,175,000. Of the total log export of 4,093,677 cu. ft., mahogany accounted for 80 percent. There were 13 sawmills in operation in 1947, and two under construction. During the year legislation was passed establishing the Gold Coast Industrial Corporation. Its purpose is to establish

secondary industries based on the country's agricultural output and to set up pilot plants. Trade (1947): total imports £25,453,661; total exports £20,779,154.

Transportation. There were 614 miles of government-operated railroad in 1947. Total mileage of all kinds of roads was 7,955, of which 2,629 miles were all-weather roads. Accra is the West African terminus of the trunk air route between Great Britain and West Africa. In 1947, Accra was made a stop on the Pan American Airways run between New York and Johannesburg, and there are two weekly flights each way.

Government. Finance (1946-47): revenue £9,850,177, expenditure £8,009,655. On Mar. 31, 1947, the public debt amounted to £8,410,000. The Gold Coast is administered by a governor, assisted by an executive council, and a legislative council of 18 elected members and 12 official and nominated members. Under the new constitution which became effective Mar. 29, 1946, the Gold Coast is the first British African colony to be granted an unofficial African majority in the legislative council. Governor: Sir Gerald Creasy (assumed office Jan. 13, 1948).

GOLF. Little Ben Hogan, Texas-born star who plays out of Hershey, Pa., proved the biggest man on the links in 1948 and was named "Golfer of the Year" by the Professional Golfers' Association. Winning six straight tournaments from June 10 through August 22, Ben practically spread-eagled the pro field and closed the Summer season with victories in 9 of the last 16 tournaments in which he competed.

After winning the national P.G.A. championship in May, the Texan annexed the national open in June, thereby accomplishing a feat which had not been achieved since 1922, when Gene Sarazen turned the trick of winning both the prized titles in the same year.

Hogan captured P.G.A. laurels by routing Mike Turnesa of White Plains, N.Y., 7 and 6, in the final at the Norwood Hills Country Club in St. Louis, but his greatest triumph came in June at the Riviera Country Club at Los Angeles, where he shot a 276 to break the U.S. open record by five strokes. Jimmy Demaret of Ojai, Cal., was runner-up with 278 and Jim Turnesa of Elmsford, N.Y., finished third at 280.

Among Hogan's other major triumphs were the Motor City open at Detroit; the Western open championship, in which he defeated Ed Oliver of Seattle, Wash., 64-73, in a play-off; the Denver open; the Reno open; and the Glendale open.

The race between Hogan and Lloyd Mangrum of Chicago for top money laurels held the interest of fans most of the year. Within a week in August, Mangrum captured more than \$20,000 in prizes at Chicago, taking the All-America open with a 277, then winning a special winner-take-all award of \$10,000 in a match with the 12 leading pros over the Tam O'Shanter links. Mangrum carded 70 in a play-off to conquer Dutch Harrison and Sammy Snead after a three-way tie at 135 for 36 holes.

On over-all money earned Mangrum was first with \$45,898 and Hogan second with \$36,812. However, Hogan was top man in P.G.A. contests with \$32,112 with Mangrum a close pursuer with \$31,289.99. Hogan also won the Vardon Trophy with a P.G.A. stroke average of 69.3.

American stars fared badly in the British open championship at Muirfield, Scotland, in July, Henry Cotton capturing the honors for the third time with a 284, leading home Fred Daly, Ireland's titleholder, by five shots. The best of the U.S. dele-

gation, Johnny Bulla of Phoenix, Ariz., scored 291, for seventh place.

However, it was a different story in the British amateur, when Frank Stranahan of Toledo took the crown by routing Charles Stowe of England, 5 and 4, in the final at Sandwich, England, in May. Stranahan, one of the top amateurs of the year, retained his Canadian amateur title by beating Joe Stoddard of Hamilton, 9 and 7, and led the simon-pures in the All-America open with a 283. Charles Congdon of Tacoma, Wash., won the Canadian open with a 280.

The U.S. amateur championship went to a member of the famous Turnesa family when Willie defeated Ray Billows of Poughkeepsie, N.Y., 2 and 1, in the final at Memphis, Tenn., in September. The Masters' tourney at Augusta, Ga., in April was won by Claude Harmon of Mamaroneck, N.Y., who posted 279 to tie the tourney mark set by Ralph Guldahl in 1939.

Honors among the women golfers were divided by several competitors. However, Louise Suggs of Atlanta, and Grace Lenczyk of Hartford, Conn., were consistently in the headlines. Miss Suggs gained her most sparkling triumph in the British championship at St. Anne's-on-Sea in June, defeating Jean Donald, one up, on the thirty-sixth green. Among her other major conquests was a victory in the North-South tourney in which she halted Miss Lenczyk. She also helped the United States conquer Britain's squad to retain the Curtis Cup. Miss Suggs joined the pro ranks in July.

Miss Lenczyk repeated her victories of 1947 in the Canadian amateur and United States intercollegiate championships and succeeded Miss Suggs as U.S. amateur queen. The Connecticut star took the national crown by defeating Helen Sigel of Philadelphia, 4 and 3, at Pebble Beach, Cal., in September. She also led the amateur ladies in the U.S. open and was a member of the Curtis Cup squad.

U.S. women never have been defeated in Curtis Cup play and the 1948 team won by 6½ to 2½.

Patty Berg, Minneapolis pro, Mrs. Mildred (Babe) Didrikson Zaharias of Ferndale, N.Y., and Miss Riley were other stars of 1948. Listed high among Miss Berg's achievements were first prizes in the Western open and the Augusta titleholders' tournament. Mrs. Zaharias captured the U.S. women's open with a 300 and the All-America open with 309. Miss Riley triumphed in many big events including the Florida East Coast, Trans-Mississippi and Texas open tourneys, her victory over Mrs. Zaharias by 10 and 9 in the Texas final being one of the season's surprises. —THOMAS V. HANEY

GOVERNMENT PRINTING OFFICE, U.S. (GPO). The Government Printing Office was created by Congressional Joint Resolution 25, June 23, 1860. A then-existing commercial printing plant was purchased for \$135,000, under an appropriation made Feb. 13, 1861. Possession was taken Mar. 4, 1861, and the office was named the Government Printing Office. It is now the largest and best-equipped printing plant in the world. The activities of the Government Printing Office are outlined and defined in the Printing Act of Jan. 12, 1895, as amended (28 Stat. 603; U.S.C. Title 44).

Purpose. The Government Printing Office executes orders for printing and binding placed by Congress and the departments, independent establishments, and agencies of the Federal Government; furnishes, on order, blank paper, inks, and similar supplies to all Governmental activities; distributes Government publications as required by

law, and maintains necessary catalogs and a library of these publications; prints, for sale to the public, such documents as are not of a confidential nature.

The total area occupied by the Government Printing Office proper in 1948 was 1,396,973 square feet or 32.1 acres. During the fiscal year 1948, it was necessary to place orders with outside contractors for printing in the amount of \$8,672,839.28, as the Government Printing Office was unable to handle the volume of printing ordered. The value of the office buildings in 1948 was \$11,948,735; machinery and equipment, \$7,108,697; making the total value of the plant \$19,057,442. During the fiscal year 1948, there were 6,894 employees on the rolls with a payroll of \$23,502,632. The office made charges for 576,884,346 copies of publications of all classes. This total included 6,467,453 copies of the Congressional Record, 3,563,573 copies of the Federal Register, 3,440,778 copies of specifications of patents, trademarks, designs, etc., and 871,501 copies of the Patent Office *Official Gazette* and annual indexes. The number of postal cards printed amounted to 3,815,964,000 and money orders, 303,803,650. The Stores Section and warehouses handled 2,386 carloads of paper, weighing 116,653,853 lb. The Division of Public Documents mailed out 121,338,654 publications; its receipts from the sale of Government publications during the year amounted to \$3,233,395. The total charges made to Congress and all other Government agencies during the fiscal year were \$55,088,399. —JOHN J. DEVINY

GREAT BRITAIN. Official designation for the political union embracing England, Scotland, and Wales. Great Britain, together with Northern Ireland, the Isle of Man, and the Channel Islands, forms the United Kingdom of Great Britain and Northern Ireland. For statistical purposes the Isle of Man and the Channel Islands are included under Great Britain. Capital, London. See IRELAND, NORTHERN.

Area and Population. The area of Great Britain, the census population of 1931 and the estimated civilian population in June, 1947, are shown in the accompanying table.

Divisions	Area in sq. mi.	Population	
		1931	1947
England ^a	50,874	37,794,003	43,270,000
Wales.....	7,466	2,158,374	
Scotland.....	30,405	4,842,980	5,139,000
Isle of Man.....	221	49,308	140,000
Channel Islands....	75	93,205	
Total.....	89,041	44,937,444	48,549,000

^a Including Monmouthshire. ^b 1941 estimates.

The density of the population in 1947 was 742 per square mile for England and Wales. Chief cities: London (capital), 8,244,370 inhabitants; Glasgow, 1,106,000; Birmingham, 1,097,900; Liverpool, 769,170; Sheffield, 514,290; Leeds, 498,650; Edinburgh, 487,200. In 1947 two population records were set: the birth rate of 20.5 per 1,000 was the highest in 26 years and the infant death rate of 41 per 1,000 was the lowest on record.

Education. Elementary education is provided free throughout Great Britain. Under this heading are included large numbers of schools providing secondary education. The Education Act of 1944, which came into force on Apr. 1, 1945, raised the school-leaving age for all children to 15 immediately, and to 16 as soon as more schools could be built. Secondary education was made compulsory for all, and children leaving school at 16 were required to attend special County Colleges several

hours a week in their employers' time. In Scotland all forms of post-primary education up to 18 are provided free, except in a few schools. The "public" (endowed) schools of England are outside of the state system.

There are 11 universities in England, four in Scotland, and one in Wales. Total university enrolment in 1947-48 was 78,440 in England and Wales. Enrolment in primary and secondary schools in January, 1947, was 5,340,091. The number of students released during working hours by their employers in 1946-47 was 167,403.

Religion. The Church of England, with a Protestant Episcopal form of government, and the Church of Scotland (Presbyterian) are the established churches of the respective countries. In Wales the church was disestablished in 1920. The leading denominations in England and Wales, in order of membership, are Church of England, Roman Catholic, Methodist, Congregationalist, Baptist, and Calvinist Methodist.

Production. Great Britain is a predominantly manufacturing country, with iron and steel and their manufactures and textiles the leading industries in value of product. Manufacturing employed almost 7 million persons in 1948, of whom 1 million were in general engineering and engineers' iron and steel founding. The index of industrial production in mid-1948 (1946 = 100) was 122 for all industries, 127 for building and contracting, 124 for manufacturing, and 111 for mining and quarrying. Steel production in November was at a new annual record rate of 15,756,000 tons, compared with 14,174,000 tons in 1947. Cotton yarn, cotton textiles, and woolen textiles in mid-1948 were above the 1947 averages. Coal production was close to the 1947 figure of 187 million tons of saleable deep-mined coal.

Although only a small fraction of the people live on the land, Britain was producing about one-half of her food supply in 1948, as against one-third before World War II. The number employed in agriculture in June, 1948, was about 850,000. The acreages of the main crops in 1948, in order of size, were those of oats, wheat, barley, and potatoes. Harvests of cereals in 1948 were above the 1947 figures. Food consumption, in calories, was about 2,700 per person, as against 2,880 in 1947 and 3,000 in 1939.

The merchant ship tonnage under construction in June, 1948, was 2,041,000, surpassing the figures for 1947, when more than half of the world's merchant ship tonnage under construction was in Great Britain and Northern Ireland.

Foreign Trade. In the first half of 1948 Britain's total deficit on overseas payments was at an annual rate of £280 million, well under half the 1947 figure. The excess of British commodity imports over commodity exports was at the annual rate of £312 million, compared with £438 million in 1947. The deficit of £192 million in invisible trade in 1947 was replaced by a small surplus in the first half of 1948. In spite of the rise in dollar prices the British deficit with the Western Hemisphere was reduced to the annual rate of £390 million, or £280 million less than in 1947, which was a year of disastrous strain on British reserves.

Machinery, vehicles (which overtook textiles in the fourth quarter of 1947), and textiles were the leading exports in the first half of 1948. Two-fifths of all imports were food and tobacco, with all other classes relatively small. Oil, seeds, and fats were in second place and manufactured oil and resins in third. Total imports for the first 6 months of 1948 were £1,026 million, as compared with £820

million and £460 million in the corresponding periods of 1947 and 1938 respectively.

Transportation. The state-owned British railways (Vesting Day Jan. 1, 1948) had 52,178 miles of track in 1947. Traffic receipts in 1947 were £5,738,000 weekly. The London Passenger Transport Board owned 188 miles of railway in 1947. About 2,400 miles of canals and locked rivers were in use in 1948. Tonnage entering British ports in 1947 was 42,700,108 and total clearances 24,008,548 net tons. British civil airlines flew 3,286 miles monthly in 1947 and carried almost 600,000 passengers in that year.

Finance. For the financial year 1947-48 revenue exceeded expenditure by £658 million. The budget estimates for 1948-49 provided for revenue of £3,765 million; expenditure of £2,976 million; a surplus of £789 million. In the 1948-49 budget (Apr. 6, 1948) a graduated tax of 10 to 50 percent, payable Jan. 1, 1948, was laid on investment income, and concessions were made to low-income taxpayers. The national income in 1947 was estimated at £8,770 million.

Government. The United Kingdom of Great Britain and Northern Ireland is a limited monarchy with an unwritten constitution, under which final legislative, judicial, and administrative authority is vested in a Parliament of two houses, acting through a Cabinet drawn from its members. Parliament is the supreme legislative authority in the territories held by the United Kingdom, except for the self-governing dominions.

The upper house, the House of Lords, consists of 844 peers. These include 26 bishops, 16 Scottish representative peers, 8 Irish representative peers, and several law lords who hold life peerages only, as well as the large body of hereditary peers. Since 1911 the power of the House of Lords in matters of legislation has been severely limited, and in 1948 further limitation was voted; but it remains the highest court of judicature. The lower house, the House of Commons, consists of 640 members elected by universal suffrage on the basis of one member for every 70,000 of the population. The maximum duration of Parliament is five years.

In July, 1945, as the result of the first general election since 1935, the wartime Coalition (largely Conservative) Government was succeeded by a Labour Government with an absolute majority in the House of Commons. The standing of the chief parties after the 1945 election was as follows: Labour, 393; Conservative, 189; Liberal, 12; Liberal National, 13; Independent, 14.

Sovereign, King George VI, who succeeded to the throne upon the abdication of Edward VIII on Dec. 10, 1936; Prime Minister, Clement R. Attlee (Labour); Secretary of State for Foreign Affairs, Ernest Bevin (Labour); Chancellor of the Exchequer, Sir Stafford Cripps (Labour); Leader of the Opposition, Winston Churchill (Conservative).

Events, 1948. Britain's domestic situation improved perceptibly in 1948 and furnished encouraging contrasts to the economic calamities of 1947. Industrial production as a whole increased, the agricultural outlook improved, the deficit in foreign accounts was diminished, and economic planning was given precision by the requirements of the European Recovery Program. At the same time the disturbed situation on the Continent and in Asia required increased defense precautions and the continued austerity at home insulated the majority of the people from any personal benefit from the accelerated national effort.

Economic Gains. By June, 1948, manufacturing

production was 15 percent above 1947 and 25 percent above the prewar level; exports were gaining steadily; and, although imports were also rising, the gap was narrowing so rapidly that the Chancellor of the Exchequer was able by September 16 to congratulate the British people on a "really fine effort." Nevertheless a dollar deficit still existed at the end of the year, and no way was in sight by which Britain could revive net income from foreign investments and other services in order to cover the import surplus.

The last of the American credit of \$3,750 million, which had been expected to cover the external deficit for four or five years, was used in March, 1948, at the end of 20 months. At about the same time the *Economic Survey for 1948*, the annual Government White Paper which sets forth the country's problems and program, estimated Britain's declining dollar reserves at £450 million by July 1, 1948; £225 million by December 31; and nil at a later time in 1949.

Marshall Plan Aid. This forecast took no account of Marshall Plan aid, which at that time was not wholly certain. The Foreign Assistance Act signed by President Truman on April 4 gave Britain a welcome respite from anxiety. The dollar reserves, aided by £22 million interim assistance, stood at £473 million at the beginning of July, when the Anglo-American ERP agreement was debated in the House of Commons.

The House of Commons approved the ERP agreement on July 6 by a vote of 409 to 12, with little criticism of its terms. A Marshall Plan loan of \$310 million announced on October 26 by ECA and the Export-Import Bank was the first American credit since the Anglo-American Loan of 1946. Counterpart funds amounted to \$250 million by the beginning of October, and a guaranteed investment project for a carbon-black plant on the Mersey River was arranged at about that time. By November 22 grants to Britain, exclusive of the loan, were above \$1,000 million.

An Anglo-American Productivity Council, the establishment of which was first suggested to ECA Administrator Paul Hoffman by Sir Stafford Cripps, was organized in September. Because the Council was expected to do something about the persistent American criticism of low output per man in Britain and about the facts behind the criticism, its organization was surrounded by political fireworks. Both the extreme left and the extreme right intimated, not at all delicately, that Britain was selling out to American bosses in order to get ECA aid.

The Council held its first meeting on October 25, with Sir Frederick Bain, President of the Federation of British Industries and Lincoln Evans, Trades Union Council, as co-chairmen of the British group and Philip D. Reed, Chairman of the Board of the General Electric Company, as the head of the American group. Both delegations included trade union leaders. Reed announced in New York in December that the first teams of British management and labor to visit American plants would soon arrive and that thousands would follow eventually.

Britain's Four-Year Plan. Fulfilling the demand of the Organization for European Economic Cooperation on the countries receiving Marshall Plan aid, the United Kingdom's four-year plan for economic recovery was submitted to the OEEC in Paris on October 15. The plan leaked out before there was official comment or explanation, far ahead of its issuance in Great Britain as a White Paper, and in advance of its adjustment to the national plans

of the other OEEC countries, but the details appeared to be well authenticated.

By 1952-53, the first year after the contemplated end of the Marshall Plan, Britain envisaged industrial production one-quarter higher and exports 30 percent higher in volume than in 1947. That achievement, together with the estimated increased agricultural production and higher net income from international services, would make the standard of living 15 to 20 percent higher than when Marshall Plan aid began. As long as the plan operated no relaxation of existing curbs on consumption was planned.

The one-year plan ending June 30, 1949, as sent to the Organization for European Economic Cooperation was issued as a White Paper on October 21. This revised program took account of the agreement on the aid to be given Great Britain and on the conditional aid to be given by Britain to other Marshall Aid participants, and thus replaced *Economic Survey* estimates for the calendar year. With aid to Britain now estimated at \$1,263 million and British grants to other countries at \$312 million, it was believed that in general existing consumption levels could be maintained in 1948-1949, and that the anticipated gains in all major fields of production would go into the restoration of Britain's external financial strength.

As the pressure to develop commodity exports increased the individual leaders in the race were acclaimed as if they were sprinters. The biggest exporter in the first 9 months of 1948 was the motor industry, with cotton second, and iron and steel third. Cotton was flagging, however, and it appeared that iron and steel would forge into second place by the end of the year. The American market took the biggest share of both the 47,000 tractors and the 19,000 cars exported in the first three-quarters of the year.

Wages, Prices, and Rations. Early in the year, following the issuance on February 4 of a White Paper called *Statement on Personal Incomes, Costs and Prices*, the Government got voluntary agreement from manufacturers and trade unions to stabilize prices and wages. This required a change in the food subsidy program, from one of pegging the subsidies and allowing prices to rise to a new plan of stabilizing prices and increasing the food subsidies. Prices of imported food were not susceptible to control, and estimates of subsidy cost for the year rose gradually from £382 million to £500 million.

The Trades Union Congress at Margate in September endorsed the stabilization program, but only after it had adopted a resolution calling on the Government to take more effective action in effecting a substantial reduction in consumer prices, to maintain and if necessary to increase subsidies, and to impose stricter limitations on profits. At this time the cost of living figure had held steadily to 108 since spring, except for a seasonal rise in June on account of the price of potatoes.

Slight increases in rations came at intervals in the course of the year. Increases in children's and priority milk allowances were made in May and bread rationing was given up at the end of July, about two years after its introduction. Potato rationing was ended when the food crops began to come in. Nevertheless the average food intake fell to about 2,680 calories per head in the first half of 1948.

Clothes coupons were given better values early in May, and on May 26 additional clothes coupons became valid. At this time a few articles were taken off the ration list and some reduced rates were

ordered. In July more clothes concessions were made. In December a one-sixth increase in soap rations was announced for 1949.

Steel Nationalization Bill. The introduction in the House of Commons on October 29 of the bill to nationalize the British iron and steel industry was the concluding step in the fulfillment of the Labour Party's socialization program as it was put before the electorate in 1945. In the interval there had been some hesitation, but at the Labour Party's annual conference at Scarborough in May the membership was reassured by a rereading of Prime Minister Attlee's nationalization promise of October, 1947, and by their executive committee's expulsion from the Party of Albert Edwards, M.P., who had declared that it would be suicidal to persist in the nationalization plans.

The special session of Parliament from September 14-24 was actually called because of steel nationalization plans, although it purported to deal with the power of the House of Lords to delay for two years legislation to which it was opposed. In order that the steel nationalization bill should not be delayed past 1950, the year of the next general election, the Labour-dominated House of Commons voted a reduction of the period to one year, with a retroactive provision.

Three days after the new session of Parliament opened on October 26 the Iron and Steel Bill was published. It proposed to nationalize all the major firms engaged in the basic processes of the industry together with their subsidiary companies. The bill named 107 companies which would be transferred to the Government corporation, the new Iron and Steel Corporation of Great Britain, on the vesting date, May 1, 1950, or a later date within 18 months.

This was the first nationalization plan involving a manufacturing industry. It would result in competition between Government plants and private firms. Motor car manufacture was specifically excluded. The Compensation stock to be issued was estimated at \$1,200 million and the number of employees about 300,000. The Government planned to continue the units under their existing names and management and so to retain the good will attached to the products.

The extreme differences of opinion shown as the bill was given its first and second reading in the House of Commons surprised few people. On October 1 the Iron and Steel Board was dissolved when all members except the trade unionists declined to serve longer. This board had been concerned with the execution of a report issued in 1946 by the Iron and Steel Federation, at the instigation of (then) Prime Minister Winston Churchill. Ivor Thomas, former Parliamentary Secretary for Civil Aviation and Colonial Under-Secretary, in resigning from the Labour Party at the end of October, began his explanation to the House of Commons with an attack on steel nationalization.

Bitterness was at its height in the debate on the second reading, which moved the proposal past the critical legislative stage by a vote of 373 to 211. More members of the House voted at that time (November 17) than on any piece of legislation since the Labour Government came into power in 1945. The Labour Government produced 373 out of its possible 393 votes, and the 191 Conservatives were aided by 10 Liberals and a few others.

Coal Problems. The nationalized coal mines required administrative changes in 1948, when operation in general was disappointing. In May Sir Charles Reid, who was a member of the National Coal Board serving as production director, resigned

from the Board. Sir Charles said that neither his resignation nor his explanatory statement should be used against the Government, for nationalization was "wise and right," but he indicated that the managerial duties of the Board members, the over-centralization, and the reliance on Civil Service rather than on business methods were factors in the low output and high cost of the mines.

In a House of Commons debate on coal on June 24, Minister of Fuel and Power Gaitskell argued that changes in organization would not change the psychological problems of the industry. He suggested that it was difficult to get the miners to understand that mechanization, increased output, and reduced costs would give them a higher standard of living.

Action was speeded up after the report of the Coal Board for 1947 was laid before Parliament on July 13. The report showed a deficit of about £100 million, increased costs of production per ton, and improvement over 1946 in total output, output per man, and absenteeism; but a poorer record on all three than in 1938, 1939, or 1940. In the first week in October the Minister of Fuel and Power induced the National Union of Mineworkers as well as the National Coal Board to promise an immediate increase in coal output.

Reforms Proposed. Later in October the Mineworkers' Union accepted a code of conduct for miners worked out by a council of miners, union leaders, and nominees of the National Coal Board for the increase of output. The Yorkshire Division and the Scottish Division of the National Union of Mineworkers rejected the proposals, which included fines for habitual absenteeism and legal action against miners who participated in unofficial strikes.

In the meantime the Coal Board and the Government were working on the problems that were increasingly pressing as production fell behind the goal set. Sir Robert Burrows, himself a member of the Coal Board, was made the chairman of a "stock-taking committee" appointed by the Board. The Burrows report, issued on November 22, recommended increasing the size of the Board from 9 to 12 and urged that board members be freed from the duties of managing departments so that they could concentrate on policy matters.

Proposals were now coming in fast. On November 22 reorganization suggestions by Col. C. G. Lancaster, M.P., were published in pamphlet form by the Conservative Political Center. Sir Charles Reid wrote a series of articles for *The Times* of November 22, 23, and 24 in which he proposed to set up 26 corporations, each with a managing director and other necessary executives. Both reports, in short, put strong emphasis on the need for executive autonomy in the local areas, and both relieved the central board of most of its executive duties.

At the end of November Parliament debated a new bill to increase the size of the Coal Board and alter the duties of the members. *The Times* (November 30) then observed: "These changes clearly do not go to the heart of the matter. When do the Government expect coal to become more plentiful, cleaner, and cheaper?" The deficit reported by the Coal Board on December 6 was £373,000, although a profit of £3,477,000 had been planned.

Other Nationalized Enterprises. In 1948 only the railway part of transport was yet taken over by the British Transport Commission. On January 1 the state took the railways and exchanged Government stock for the railway securities. Costs were rising and a deficit of £20 million was expected in 1948. Cable and Wireless showed a decline in

profits for 1947 but brought little criticism upon itself, for rate reductions and accounting changes were partly responsible.

Three State air companies, the British Overseas Airways Corporation, British European Airways, and British South American Airways, showed deficits for the year ended Mar. 31, 1948, but only 5 percent more than in the previous year. In December BOAC announced a cut in the dollar payroll staff from 1,502 to less than 600, effective by March, 1949. The nationalized Bank of England had an uneventful year, except for the announcement by Lord Catto, Governor, of his plan to retire under the age limit rule in 1949 and the appointment of C. F. Cobbold to succeed him.

Parliament's Year. Parliament sat for three periods in 1948: from January 20 until the end of July, when the outstanding legislation was the budget bill and the bill to curb monopolies; from September 14-24, a special session for pushing ahead the Parliament Bill; and from October 26 until the holidays, a strenuous period in which steel nationalization and the Parliament bill were approved and the extension of conscription was decided upon.

The special session gave the House of Commons, with its large Labour majority, the chance to pass for a second time—the first was in the preceding session—the Parliament Bill which the House of Lords had rejected. To enact the bill it was necessary for the Commons to pass it twice again within two years of its first passage in the Commons. All this had to be accomplished if steel nationalization (certain to be disapproved by the House of Lords) was to go through before the general election of 1950, for until the Parliament Bill was passed the Lords could delay legislation for approximately two years by the procedure outlined, while the new bill reduced the time to one year.

When the Parliament Bill passed its third reading in the House of Commons the attendance was sparse and the debate listless. A final criticism was made of the retroactive clause applying the provisions of the bill to measures introduced before its passage—meaning steel nationalization. The National Service Bill extending conscription from 12 to 18 months received only about 100 Labour votes, with many members abstaining, at the time of the third reading. Conservative votes were responsible for nearly all of the rest of the 218 votes. Twenty-five were opposed.

At the end of October the House of Commons approved unanimously the Government's motion to establish a tribunal to consider allegations of bribery and corruption in the Board of Trade. Prominent names were involved, but Churchill, Leader of the Opposition, urged the members of Parliament to "set the example in not indulging in gossip or the wide diffusion of names and other scandals."

Prime Minister Attlee and Herbert Morrison, Lord President of the Council and Leader of the House of Commons, were absent from their duties for short periods for reasons of health. Former Chancellor of the Exchequer Hugh Dalton, who resigned that office in 1947 because of a budget leak, returned to the Cabinet at the end of May as Chancellor of the Duchy of Lancaster, an office without specialized duties. The foundation stone of the new Chamber of the House of Commons was laid on May 26. The former Chamber was rendered unusable by World War II bombing.

July Fifth. Britain's new charter of social security came into full operation on July 5. Four new acts

—National Insurance, Industrial Injuries, National Assistance, and the National Health Service—all part of a general plan, went into force on that date. Prime Minister Attlee, broadcasting to the nation on the eve of the event, described the completed plan as "the most comprehensive system of social security ever introduced in any country." A half-century of social reform was now embodied in the unified "from-the-cradle-to-the-grave" system advocated and drafted five years before by Sir William Beveridge (now Lord Beveridge).

Arrangements with the doctors who were expected to participate in the Health Act operations were difficult. A plebiscite taken by the British Medical Association in February showed 40,800 against the act and only 4,700 for it. Concessions were made by Minister of Health Aneurin Bevan, and eventually a measure of participation was assured.

Royal Family. The birth of a son to Princess Elizabeth, Duchess of Edinburgh on November 14 was an event which brought many scenes of spontaneous rejoicing and expressions of affection. Only a few days later, on November 23, came the announcement of King George's illness and the inadvisability of his visiting Australia and New Zealand in early 1949 as he, together with the Queen and Princess Margaret, had planned to do. Both Houses of Parliament promptly expressed through the leaders of the chief parties their regret, together with appreciation of the King's onerous labors in the 12 years of his reign.

The silver wedding anniversary of the King and Queen on April 26 was made a day of celebration and thanksgiving in which the public participated. Ceremonies were held in St. Paul's Cathedral and in the City of London. In May Princess Elizabeth and the Duke of Edinburgh made their first visit to Paris, during which most of their time was given to protocol functions.

Commonwealth and Empire. Changes in the Commonwealth—Burma's departure as from January 4, the presence of India and Pakistan as Dominions since 1947, and Ceylon's after Feb. 4, 1948, and Eire's decision to sever all ties with Britain—were reflected in the character of the Conference of Commonwealth Prime Ministers held in London October 11-22. The Prime Ministers of the new Dominions, Nehru of India, Ali Khan of Pakistan, and Senanayake of Ceylon, were active participants, and the Prime Minister of Southern Rhodesia, Sir Godfrey Huggins, whose country was next in line for dominion status, was present as an observer.

The first afternoon was taken by Sir Stafford Cripps' exposition of Britain's four-year economic plan, in order—as the final statement of the Conference phrased it—"to give the other Commonwealth countries an opportunity to examine its implications for their own economies." The United Kingdom won agreement that Western Union "was in accordance with the interests of the other members of the Commonwealth, the United Nations, and the promotion of world peace."

New collateral business was created by the invitation of the Prime Ministers of the old dominions, Canada, Australia, and New Zealand, to representatives of the Irish Government to come to Chequers on October 17 to discuss the Commonwealth implications of the Republic of Eire bill shortly to be laid before the Dáil. Little information was released about the meeting, at which Prime Minister Attlee was present, or about a similar one in Paris a month later, but obviously imperial preferences and citizenship rights of the Irish in other Dominions

ions were matters in which the other countries were deeply involved.

The final statement of the Conference contained a friendly reference to the "new representatives of sovereign nations," India, Pakistan, and Ceylon, who "brought to the deliberations of their colleagues from the other free countries of the Commonwealth the wisdom of their ancient civilizations vivified by the dynamism of the modern age," but by its omissions it stirred up small tempests, particularly in Australia and in the mood of Winston Churchill.

The omission of the words "British," "Empire," and "Dominion" from the Conference statements, undoubtedly in courtesy to the three eastern countries which were newly and aggressively independent, provoked Churchill on October 28 into what *The Times* called "Churchillian broadsides which swept the globe from India to Eire." In the name of the Conservative Party Churchill said that any attempt to abandon these expressions would be resisted. He also criticized the Socialist Government for carrying "the world-famed British Empire in the east from life into history" and Eire's Prime Minister Costello for digging "the gulf between Southern and Northern Ireland deeper than ever before."

Relations with Eire. The cordial relations between Britain and Eire which existed in the early part of the year were not disturbed by the passage in Eire of the Republic of Eire Bill, 1948. A new trade agreement negotiated in June appeared to be advantageous to both countries, with its improved volume of imports for Britain and its higher prices for Eire. As for the technical problems raised by the repeal of Eire's External Relations Act embodied in the Republic of Ireland Bill, Britain seemed inclined to let the issues lie undiscussed as long as possible.

On November 25 Prime Minister Attlee told the House of Commons that despite Eire's move to sever her last connection with Britain, the United Kingdom Government still recognized the "factual ties" between the two countries and would not consider Eire foreign or her citizens foreigners. Churchill replied that this was "inaction" and refused to associate the Conservative Party with it, but Attlee finally suggested that until Churchill could offer a better policy he should accept the Government's decision with better grace.

Palestine Policy. Britain gave up its Palestine mandate on May 15 and by the beginning of July the last of the British troops had left Haifa. The Colonial Office and the Foreign Office took the occasion of the end of the mandate to issue jointly a review of the 25 years of its operation. Since the end of World War II, according to the report, 338 British subjects had been killed in Palestine and the cost to the British taxpayer had been £100 million.

After months of unsuccessful effort from several quarters to solve the Palestine problem, on November 18 the British Government formally introduced in the political committee of the General Assembly of the United Nations a resolution calling on the General Assembly to accept and take steps to apply the conclusions of the Bernadotte report. After consultations with the United States the resolution was so revised as to delete its previous endorsement of the Bernadotte proposals.

Western Union. In opening a foreign affairs debate in the House of Commons on January 22 Foreign Secretary Bevin declared that the time was ripe for a consolidation of western Europe. He anticipated the signing of treaties with the Benelux

countries, thus making, with the treaty with France, an important nucleus of a western union. In the debate the proposal was endorsed by Anthony Eden, Conservative.

The Treaty of Brussels embodying the plan of a Western Union was signed by the five countries on March 17. At the end of April the defense ministers of the powers met in London, and on October 4 the appointment of Field Marshal Lord Montgomery as Permanent Military Chairman was announced.

Relations with Russia. The Russian blockade of Berlin beginning in June harmed Britain's already strained relations with the U.S.S.R. Foreign Secretary Bevin's reports to the House of Commons became more outspoken, and on September 22 he called the blockade "dastardly." On October 11 the British Foreign Office issued a White Paper on the Berlin question in which it was said that the Soviet Union had "embarked upon a carefully prepared attempt to compel the western occupying powers to abandon under duress their rights in Berlin." Britain participated in the airlift and joined with the United States in an appeal to the Security Council of the United Nations.

Relations with the United States. Britain was reluctant to acquiesce in the arrangements made by ECA Administrator Paul Hoffman to halt the dismantling and removal for reparations of industrial plants in western Germany, and on September 14 Sir Oliver Franks, the British Ambassador in Washington, delivered to the State Department a note from Foreign Secretary Bevin deprecating the proposal. Sir Oliver, who succeeded former Ambassador Lord Inverchapel in May, arrived when there was lack of agreement on Palestine policy, and found that the British Consulate and British business offices in New York were being picketed by Zionists urging passersby not to buy, use, or travel British.

—ALZADA COMSTOCK

GREECE. A kingdom in southeastern Europe. King: Paul I, who succeeded his brother, George II, on Apr. 1, 1947. Area: 51,182 square miles. Population (1948 est.): 7,780,000, including the Dodecanese. Chief cities (1939 pop. est.): Athens (capital), 491,120; Piraeus 281,340; Salonika (Thessalonike) 263,690; Patras 72,760; Kavalla 49,980; Canea 26,608; Corfu (Kerkyra) 32,221. The density of population is 133 per square mile.

Religion and Education. School attendance in 1937-38 was: Elementary, 985,018; secondary, 92,687; university, 7,998. The 1928 census showed 5,961,529 members of the Greek Orthodox Church; 126,017 Moslems; 72,791 Jews; 35,182 Roman Catholics; 9,003 Protestants.

Production. While commerce and industry are not negligible, the mainstay is agriculture; despite the limited available arable areas—18.5 percent of total cultivated in 1946. Production of leading crops in 1946, compared with the 1935-38 average, shown within parentheses, was as follows: (in thousands of metric tons): wheat, 700 (767); other grains, 593 (665); tobacco, 33 (60); dried fruits, 95 (229); fresh fruits, 65 (81); olive oil, 90 (112); edible olives, 35 (44); cotton, 25 (44). The total value of agricultural production (including dairy products and table fruits) was estimated at 33,700,000,000 drachmas (\$270 million) in 1940.

Livestock, which is important in Greece, declined considerably during the Nazi occupation. The number of livestock at the end of 1946 (1938), (estimated in thousands): sheep 6,000 (8,139); goats, 3,130 (4,356); cattle and calves, 604 (967); hogs, 400 (430); horses, mules, and

colts, 354 (548); milk cows (including draft milk cows), 252 (411); draft oxen, 240 (343); other oxen, 108 (214); donkeys, 332 (404); and poultry, 7,500 (11,945).

Recovery of industrial production since liberation has been slower than the recovery of agricultural output. In 1939 total industrial output was valued at 14,112,679,000 drachmas (about \$112 million), distributed chiefly among: textiles, chemicals, foodstuffs, electricity, leather, machinery, and building materials. The Athens-Piraeus district is the country's major industrial area; more than one-fourth of the total number of enterprises, which include almost all types of industry, are located here, and production accounts for 60 to 70 percent of total output. The Salonika district ranks second as an industrial area, and includes chiefly food processors, leather makers, machine shops, and tobacco plants. Greece possesses a variety of minerals, of which magnesite, iron pyrites, lead, emery, and chrome ore are prominent in export. Other mineral resources include chiefly iron ore, magnesite, nickel and zinc ore, bauxite, and lignite; there is no petroleum or bituminous coal.

Foreign Trade. Greece is primarily an importer of consumer (including foodstuffs) and capital goods, and an exporter of agricultural (chiefly tobacco and fruits) and mineral products. Normally, exports cover only about 65 percent of the value of imports. Since liberation, Greek foreign trade has recovered very slowly; the major proportion of Greece's imports from liberation until the end of 1946 was supplied by UNRRA. Foreign exchange is subject to official control.

Finance. Wartime inflation has wiped out the internal debt. The basic monetary unit is the drachma (5,000 drachmas = U.S.\$ since Jan. 31, 1946) and the principal fractional unit is the leptons (1 drachma equals 100 leptas). The 1946-47 budget placed revenue at 1,572,000 million drachmas; expenditure at 1,655,000 million. The prewar currency was withdrawn and replaced by a new drachma on Nov. 11, 1944, the exchange being at the rate of 1 new drachma to 50 billion old drachmas.

Transportation. The railway system sustained considerable damage as a result of the war, rolling stock was greatly reduced, and reconstruction is proceeding slowly. The principal lines are those connecting Athens and Piraeus with Patras, Kalamata, and Salonika. At the end of 1940, the length of line of the 7 railway companies totaled 1,767 miles, of which 840 were Government owned and operated. Little highway construction has been undertaken and the general condition of the roads is poor.

At the end of 1939 mileage of Greek highways totaled 8,440, of which 7,064 miles were improved earth, gravel, and waterbound macadam; 1,191, surface treated and penetration macadam; and 185, bituminous concrete and asphalt surfaced cement. There are no navigable rivers, and less than 10 with an appreciable year-round flow. There is only one important canal, the Corinth canal, which separates continental Greece from the Peloponnese. Coastwise shipping constitutes a major form of transport, but the replacements have been slow. Piraeus, the port of Athens, is the most important of the 12 major seaports of Greece; normally about two-thirds of total Greek imports clear here. There is one large free zone at Piraeus, and Greek and Yugoslav free zones at Salonika. The airport service is being steadily expanded.

Government. King George died on Apr. 1, 1947, and was succeeded by his brother, Prince Paul.

Greece is a constitutional monarchy; the Government includes a Cabinet and an elected unicameral legislature. According to a resolution of the National Assembly of Oct. 10, 1935, the Greek Constitution of 1911 was to remain in force until the enactment of a new Constitutional Charter. King George issued a royal decree, on Oct. 22, 1941, regulating the functions of state authorities in cases in which the 1911 Constitution could not be fully applied owing to the absence of the Greek Government during World War II.

Events, 1948. The grim situation, both internal and international, showed no signs of improvement during the year. As in 1947, Greece was unable to devote her energy to the urgent task of reconstruction but forced to keep on fighting the elusive guerrillas on the northern borders, in spite of America's help. Thus agricultural production (attaining 70-80 percent of prewar level by the end of 1946) deteriorated again despite substantial irrigation and drainage schemes, due to the flight of the farmers from the guerrilla-plagued regions. (Some 600,000 lived as refugees in or near the big cities.)

Yet, American aid produced some excellent results. The Corinth canal was reopened, the ports of Piraeus, Salonika, and Volos rebuilt, and good work done in repairing the Athens-Salonika, Athens-Peloponnese, and Salonika-Serres roads. Adequate supplies of food were sent in and industry furnished with essential machinery and raw materials to the limits of its capacity to absorb and employ them.

But the problem of the guerrillas remained as acute as formerly. In the spring, the Greek Army, strengthened, fed, reinforced, equipped with American dollars, and advised by American officers, commenced a major effort to clear the country of the guerrillas. But in October, with snow coming on in the Grammos mountains and in the rest of the ragged, vertical terrain along Greece's northern frontier, the guerrillas were still fighting, and numbered perhaps 22,000 to 25,000 as compared to 15,000 to 18,000 in 1947. Greek rebels were able to escape the defeat by moving across the neighboring frontiers to safety.

On November 10, after more than two weeks' debate, the Political and Security Committee of the General Assembly of the UN found Yugoslavia, Albania, and Bulgaria guilty of endangering peace in the Balkans and decided to keep the UN on-the-spot observation committee at work in Greece for another year. On November 27, sitting in full session, the UN General Assembly formally called on Albania, Yugoslavia, and Bulgaria to cease all aid to the Greek guerrilla forces. However on December 14, Dr. Herbert Evatt, President of the General Assembly announced that efforts of his conciliation committee to bring about a settlement of outstanding problems between the Greek Government and the governments of these three neighboring states had failed because of the Greek Government's refusal "to treat existing boundaries between Albania and Greece as definite."

The military reverses reflected themselves in the economic and administrative problems of the country where the aged (88) and ailing Premier Themostocles Sophoulis resigned on November 12. But the Cabinet crisis was settled on November 21, for the time being, without bringing about any real change in a Government that had been criticized as inept in both military and economic affairs. Sophoulis returned as Premier at the head of a Rightist coalition, with only a few minor Cabinet

shifts; was approved by 168 votes (against 167) of the Chamber; and obtained the Chamber's adjournment until Feb. 1, 1949.

On March 7, the Dodecanese Islands were incorporated into the realm of Greece. The Government protested, on June 2, to Yugoslavia, Bulgaria, Poland, Czechoslovakia, Hungary, Rumania, and Albania, through the United Nations Secretariat, asking for the immediate return of the abducted children. Following the visit of Secretary of State Marshall to Athens on October 17, President Truman told Congress, on December 6, that Greek army efforts to liquidate Communist guerrilla forces had produced "a military stalemate" despite the delivery of \$170 million of United States arms and supplies—and that the Greek army was itself partly to blame for the failure to follow up a series of victories during the summer with a "determined effort" against the remaining rebel front. But by the end of the year, the Greek situation had deteriorated even more rapidly than Truman's pessimistic report indicated. —JOSEPH S. ROUCEK

GREENLAND. This, the world's largest island, is a Danish colony situated between the North Atlantic and the Polar sea. Area: 839,782 square miles, of which more than 75 percent is covered by an ice-cap. Population (1945): 21,384, of whom 569 were Europeans. Chief settlements: Julianehaab, Godthaab (capital), Sukkertoppen, Egedesminde, Thule, and Angmagssalik. The natives speak an Eskimo dialect. Education includes grade schools, high schools, and a training school for teachers. The official religion is the Lutheran.

Production. The mainstay of the native population is fishing and hunting. A total of 7,945 metric tons of cod was produced for salting in 1944. Halibut and seal are also important. Agriculture is limited to sheep raising along the southwestern coast. The important minerals are cryolite (largest deposits in the world), of which 20,106 tons were exported to the U.S. in 1945, and lignite coal, of which about 8,000 tons were mined in 1945. Marble has been quarried and deposits of pure lead ore and uranium layers are present. Except for cryolite, trade is a crown monopoly.

Government. For administrative purposes Greenland is divided into two inspectorates (Godthaab and Godhavn), each with a governor responsible to the Greenland Administration (Grönlands Styrelse) section of the Ministry of State in Copenhagen.

Negotiations between Denmark and the United States over Danish demands for the abrogation of the pact entered into in 1941, have brought various proposals, but no settlement.

GUADELOUPE. A department of France (since Jan. 1, 1947) in the West Indies, consisting of two main islands—Basse-Terre (pop. 113,412) and Grande-Terre (pop. 113,545)—and the five Leeward islands of Désirade, Les Saintes, Marie Galante, St. Barthélemy, and St. Martin. Total area: 688 square miles; total population (1946): 271,262 (1948 est. 304,000). Chief towns: Basse-Terre, capital (13,638 inhabitants), Pointe-à-Pitre, chief port (44,551 inhabitants). The population is mostly Negro and Mulatto. Education (1946-47): 131 schools and 29,221 pupils.

Principal agricultural products (1947): sugar (50,000 metric tons), coffee, cacao, bananas (48,000 tons), manioc, and vanilla. There is considerable manufacture of rum and spirits (202,324 hectoliters of pure alcohol in 1947). Total imports (1946) amounted to 1,115 million francs; exports to 1,495 million francs. Chief exports are rum,

sugar, and bananas. Finance (1947): revenue and expenditure balanced at 1,049,313,000 francs. On Jan. 1, 1948, the outstanding debt totaled 607,627,000 francs. Guadeloupe is represented in the National Assembly, the Council of the Republic, and has one delegate to the French Union. Prefect, M. Philipson.

GUAM. The largest island of the Marianas group was ceded to the United States by Spain at the close of the Spanish-American War in 1898. It is situated in the mid-Pacific, 1,500 miles east of Manila, 1,300 miles south of Japan, 3,337 miles from Honolulu, and 5,053 miles from San Francisco. The island has a land area of 217 square miles, extending 30 miles north and south, and is 4 to 8½ miles wide.

Population. The population, as of July 1, 1948, totaled 25,677 persons of whom 12,993 were males and 12,684 females. Of these 24,452 were native-born and 1,225 foreign-born. The local population is mainly of Chamorro stock, a mixture of the ancient Chamorro people with Spanish, Mexican, Filipino, Anglo-Saxon, Japanese, and Chinese strains. In addition, the transient or off-island population consisting of military personnel and their dependents, civil service and contract employees from the United States mainland and Hawaii and other off-island persons is, on the average, 65,000.

While English is the official language of the government and of the schools, the native Chamorro language is widely spoken in the daily life of the people. The predominant religion is Roman Catholicism.

Education. In the elementary and high schools the enrollment for the 1948-49 school year was 8,735, and 30 university trained teachers and supervisory personnel from the United States were employed in the Guam educational program.

Production and Trade. All forms of agriculture and business were disrupted and the principal towns demolished during the war. Most of the civilian population are earning their livelihood at present from employment by the United States Navy. Imported goods entering the commerce of Guam for the quarter ending Sept. 30, 1948, were valued at \$1,852,878. Total commercial receipts from businesses on Guam for that quarter amounted to \$4,691,474. The Bank of Guam had total resources of \$34,877,299 as of Nov. 4, 1947.

Government. Guam is classified as a United States possession. The inhabitants of Guam are nationals but not citizens of the United States. A senior Naval officer is commissioned by the President as Governor of Guam, and the same officer is designated by the Secretary of the Navy as Commander, Marianas Area. The government is administered by departments. In each municipality of Guam a Commissioner is appointed as a district representative of the Governor in an advisory and informative capacity. The Guam Congress, composed of a House of Council and a House of Assembly, is elected by popular vote; Councilmen for four years and Assemblymen for two years. Prior to Aug. 5, 1947, the Guam Congress acted in an advisory capacity only to the Governor. On that date the Secretary of the Navy by proclamation vested certain legislative powers in the Guam Congress. Pursuant thereto legislation passed over the veto of the Governor goes to the Secretary of the Navy for final decision. Governor: Rear Admiral Charles A. Pownall (inaugurated May 30, 1946).

Events, 1948. During 1948 Eniwetok Atoll in the Marshall group was utilized as a proving ground for routine experiments in atomic energy develop-

ment conducted by the Atomic Energy Commission. During the year the civil administration units at Kwajalein and Yap were consolidated with units at Majuro and Koror, respectively. A leper hospital for the entire area was established on Tinian in October, 1948, and a tuberculosis sanitarium is being completed on Saipan. Three scientific surveys were in progress in the territory during the year: of the people, by the "Coordinated Investigation of Micronesian Anthropology," a group of scientists from 21 different institutions of the United States and Hawaii; of the fishing resources of the area, by the Fish and Wildlife Service of the Department of Interior pursuant to Public Law 329 of the 80th Congress; and of the insect pests of the islands, by the Insect Control Committee for Micronesia, under the auspices of the Pacific Science Board of the National Research Council. In October, 1948, a Chief Justice for the Trust Territory, responsible directly to the Secretary of the Navy, was appointed to preside over the District Court and Court of Appeals. Legislation to provide an organic act for the Trust Territory and to confer local citizenship upon the indigenous people was prepared and introduced in the 80th Congress by the Department of State but no action was taken thereon.

In June, 1948, a committee of 6 senators and 6 representatives was authorized by the Congress to conduct a study of the Trust Territory and of other islands in the Pacific. As of Feb. 15, 1949, no definite time had been announced for the committee's projected inspection trip to the territory. At the present time Admiral DeWitt C. Ramsey is High Commissioner and Rear Admiral Leon S. Fiske is Deputy High Commissioner of the Trust Territory.

GUATEMALA. A republic of Central America. Area: 45,452 square miles. Population: 3,706,205 (1946 est.), of whom 55 percent are Indians; the remainder are either mestizos or of European descent. The largest cities are Guatemala (capital), 176,780 inhabitants, Quezaltenango, Puerto Barrios, Cobán, and Zacapa.

Education and Religion. The Constitution guarantees freedom of worship. Roman Catholicism is predominant. Spanish is the official language, but many of the Indians speak their own dialects. Over 40 percent of the population is literate. According to the school census of 1947, there were 3,290 primary schools with 189,950 pupils; over 62 intermediate schools with 8,916 students. There is a national university with 694 students (1947).

Production. The country is primarily agricultural. Coffee is the most important crop, occupying $\frac{1}{3}$ of cultivated land. Largest export crops are coffee, bananas, and chicle. Coffee production in 1946-47 was estimated at 1 million quintals (of 101.4 lb.); sugar 521,200 quintals; and tobacco (1947) 5 million lb. Banana exports in 1946 were valued at 8,687,588 quetzales (quetzal equals U.S.\$1). Other agricultural crops are corn, beans, rice, and wheat. Livestock slaughtered in 1946: cattle, 136,000; sheep, 217,000. Mineral production included small quantities of gold, lead, chromite, and sulphur. Manufacturing is limited to consumer goods, chief among these are cement, beer, cigarets, lard, and wheat flour.

Foreign Trade. Total exports in 1947 were valued at \$52,080,000; imports at \$57,360,000. Of this amount coffee accounted for some 70 percent, or 20,383,271 quetzales in 1946. Chief buyers are the United States, Canada, Switzerland, Mexico, and Nicaragua. Guatemala's principal imports come from the United States, Mexico, Peru, and Aruba (Netherlands West Indies).

Transportation. There are four railroads operating in the country, with a total of 723 miles of track. Some private lines are owned by the banana companies. Road mileage of all kinds exceeds 5,000. There were over 5,000 motor vehicles registered in 1945. Air service is provided by Pan-American Airways, and some local companies of which TACA is the most important.

Finance. In the 1948-49 budget estimates, revenue and expenditure were balanced at \$44,646,000. The total public debt was \$3,845,695 in 1948. Currency in circulation on Dec. 31, 1947, amounted to 31.8 million quetzales, bank deposits to 20.2 million. Gold reserves at the same date were \$27 million. There is no import or exchange control in Guatemala.

Government. Guatemala is a centralized republic divided into 22 departments. The Constitution of Mar. 11, 1945, provides for a unicameral congress (proportionally elected by universal suffrage for a 4-year term). The President is elected for a 6-year term, and may not be reelected until after a lapse of 12 years. Dr. Juan José Arévalo Martínez was elected President in December, 1944, and took office on Mar. 15, 1945.

Events, 1948. The year opened with public attention centered on the Belize problem; the government policy seemed inclined to present the case to the Ninth Conference of American States to be held in Bogotá.

Reorganization of the Government. On March 10, President Arévalo Martínez substantially reorganized his Cabinet. Minister of Foreign Affairs Muñoz Meany continued in his post, and announced that he would follow a firm policy in the Belize affair. The Congress met on March 11 to consider the severance of diplomatic relations with Great Britain, but the matter was referred to a commission, which has made no decision. Simultaneously, the new Cabinet requested the support of the Pan American Union in Guatemala's trouble with Great Britain, and especially with regard to the tension created by the appearance of British warships off the Guatemalan coast. All through April Belize was in the public mind, and the Congress acted against certain newspapers of a conservative trend who, because of their opposition to the Government, were defending Britain's position. Finally, the administration sent a diplomatic note to Great Britain, to the effect that a favorable atmosphere for the discussion of this problem by the International Court of Justice could not exist until the British battleships were ordered to leave Guatemalan waters.

Labor Protests. On May 27, numerous labor unions took part in a celebration honoring Augusto Charnaut, who had been removed from his post as Minister of Labor. Certain workers felt that this dismissal could be interpreted as a change in the Government's social program. The deposed minister belongs to the *Acción Revolucionaria* party and political circles were inclined to believe that his removal could be traced to disagreements between that party and a new organization formed by dissenters strongly inclined toward the right. Charnaut's removal affected the labor unions for some time, and on August 7 they held a large meeting to resolve that they would stand by President Arévalo. However, if the conservatives violated the Constitution, they warned that a general strike would be called immediately in defense of labor's rights.

International Front. Guatemala participated in the Ninth Conference of American States and signed the Charter of the Organization of American States in Bogotá (see PAN AMERICAN ACTIVITIES).

Apart from this, the international problem of the year, as stated above, was the Belize affair. Tension was at its highest point in February, when the battleship *Sheffield* and smaller units of the British navy were sent to Guatemalan waters, causing public indignation. The *Sheffield* left a few weeks later, and rumor had it that its departure was due to the friendly intervention of Washington's Ambassador to Guatemala.

—MIGUEL JORRIN

GUGGENHEIM MEMORIAL FOUNDATION, John Simon. Established in 1925 in order to improve the quality of education and the practice of the arts and professions in the United States, to foster research, and to provide for the cause of better international understanding, the Foundation offers a limited number of fellowships, tenable under the freest possible conditions, for research in any field of knowledge and for creative work in any of the fine arts, including music. The fellowships are awarded annually by the Trustees upon nominations made by a Committee of Selection and carry a stipend not exceeding \$3,000 per annum. The 1948 fellowships totaled 134, including renewals. Membership: Nine Trustees. Officers for 1948-49: President, Mrs. Simon Guggenheim; Vice President, Francis H. Brownell; Secretary General, Henry Allen Moe; Treasurer, Otto L. Myers. Offices: 551 Fifth Ave., New York 17, N.Y.

GYMNASTICS. The national A.A.U. championships combined with the final Olympic try-outs at Penn State College on May 1 to produce one of the most successful gymnastic meets ever held in the United States. Edward Scrobe, metropolitan amateur king from New York City, was the top performer, finishing first in the all-around competition. Scrobe scored 10 points more than Bill Bon-sall of Penn State, his closest rival. Don Perry, California high-school boy, set a new world record of 3.1 seconds in winning the 20-foot rope climb.

In the A.A.U. tests and Olympic trials for women at Temple University in Philadelphia on May 8, Miss Clara Schroth of Philadelphia was the ace performer, winning titles in four events and leading the all-around competition to capture first position on the Olympic team. See OLYMPIC GAMES.

Penn State carried off team honors in the Eastern Intercollegiate, National Collegiate Athletic Association, and national A.A.U. meets. Minnesota was champion of the Western Conference.

—THOMAS V. HANEY

HAITI. A republic of the West Indies, occupying the western part of the island of Hispaniola. More than 80 percent of the surface is composed of highlands; the remainder is made up of lowlands in the north and west. The northern lowlands are moist and the western lowlands semi-arid. Rainfall is ample in the highlands, but its effectiveness is lowered by high temperatures and excessive evaporation.

Area and Population. Area, 10,700 square miles. Population, 3,500,000 inhabitants (1947). Approximately 95 percent are Negroes, the remainder mulatto. The capital city is Port au Prince, and other important cities are Cap Haitien, Gonaives and Aux Cayes.

Education and Religion. The Constitution guarantees freedom of worship. Roman Catholicism is predominant. French is the official language, but the majority speak the French Creole dialect. Not more than 8 to 10 percent of the population is estimated to be literate. In 1947, there were 212 urban primary schools reported, with 42,858 pupils; and 424 rural primary schools with 44,866. Secondary

education is provided by 25 Lycees with 23,777 students. Besides the Lycees, there are other secondary schools. The University of Haiti with 432 students in 1945 is the only institution of higher learning.

Production. Haiti is an agricultural country depending almost exclusively upon the production of coffee, sugar, cotton, bananas, sisal, and cacao. Coffee exports during the first six months of the fiscal year 1947-48 amounted to 12,307,375 kilograms, valued at 29,851,706 gourds (a gourd equals U.S. \$0.20), as compared with 16,624,082 kilograms and 41,214,355 gourds in 1946-47. Sisal exports for the same period increased 28 percent in volume and 63 percent in value over the corresponding period in 1946. Rice production (1947): 20,393,000 kilograms, an increase of 9 percent over 1946; rice exports (1947) came to 700,225 kilograms as against 667,498 in 1946. Other crops of importance (1946) were (in metric tons): cotton, 4,868; raw sugar, 20,667; molasses, 15,222; cacao, 1,254, and castor beans, 1,986.

Foreign Trade. Haitian exports amounted to \$31.4 million; imports to \$27.2 million in the fiscal year ending Sept. 30, 1947. Exports consisted chiefly of coffee, sisal, raw sugar, and cotton, while imports were iron, steel products, soap, cotton goods, machinery, trucks, and automobiles.

Transportation. There are about 143 miles of railroad and 1,792 miles of fairly good highways. 9,233 motor vehicles were registered according to latest statistics available, which also showed some 2,000 telephones, and 5,000 radio sets.

Finance. Budget estimates for the fiscal year ended Sept. 30, 1948, were: revenue \$10,350,410; expenditure \$10,349,921. The largest appropriations were: Public Debt, \$2,348,405; Interior, \$2,806,970; and Education, \$1,136,966. Currency deposits on Dec. 30, 1947, were 29.4 million gourds.

Government. Under the Constitution of Nov. 22, 1946, Haiti is a centralized republic of five departments. The President is elected for 6 years by a two-thirds vote of the National Assembly. This body consists of the Chamber of Deputies of 37 members (elected for 4 years by popular vote) and a Senate of 21 members (11 elected by the Chamber of Deputies and 10 appointed by the President). Dumarsais Estimé was elected President on Aug. 16, 1946, by the General Constituent Assembly, and took office on the same day.

Events, 1948. Haiti, in recent years the scene of considerable political trouble, had a year of peace and progress.

Domestic Front. Estimé's administration devoted its attention to the development of the educational system and to economic planning, in order to put to good use the favorable trade balance enjoyed by the country. An important project undertaken was the establishment of a hydroelectric plant at Onde Verte and the irrigation of about 40,000 acres of farmland in the Artibonite Valley, at a cost of \$2.5 million. The first installment of \$800,000 was appropriated by the Ministry of Public Works.

In July, the director of the official paper, *Le Moniteur*, Jean Remy, well-known in literary circles, was shot to death in one of the main streets of the capital. At first, a political outbreak was feared when the police captured the assassin who was later snatched away by an angry mob and lynched. The event was reminiscent of the Gaitán assassination in Bogotá and similar repercussions were dreaded, but it was found in time that Remy's murder had a purely personal motive and nothing further occurred. The killer was one Gerard Viau, who

thought Remy was instrumental in his having been denied a scholarship.

International Front. The Haitian delegation was active in the Ninth Inter-American Conference of American States held in Bogotá in April (see PAN AMERICAN ACTIVITIES), and signed the Charter of the Americas. The government began preparations for the International Exposition to be held at Port au Prince in 1949. The purpose of the government to contribute to this international event was favorably commented upon in inter-American circles, and in Haiti it was considered as economically helpful to the laborers of the country.

—MIGUEL JORRÍN

HANDBALL. A record entry of 91 singles players and 54 teams sought handball's biggest prizes in the thirtieth annual national A.A.U. four-wall championships at the Town Club, Chicago, in April. Gus Lewis, Hollywood A.C., California, retained his title by defeating Bob Brady, San Francisco Elks Club, in the final. The doubles crown went to Frank Gluckler and David Pahl of New York, who previously had won national Y.M.C.A. honors.

In the national one-wall tournament at Brighton Beach, Brooklyn, in July, Victor Hershkowitz, New York, took singles honors then combined with A. Wolfe, Brooklyn Central Y.M.C.A., to win the doubles.

—THOMAS V. HANEY

HAWAII. A territory of the United States consisting of some 20 islands, 8 of which are inhabited, in the North Pacific Ocean about 2,091 miles from San Francisco. The principal islands of the group are: Hawaii (4,030 sq. mi., pop. 70,871 in 1946); Maui (728 sq. mi., pop. 45,336); Oahu (604 sq. mi., pop. 358,911); Kauai (555 sq. mi., pop. 34,689); Molokai (260 sq. mi., pop. 5,258). Total area of 8 principal islands: 6,435 square miles. Capital, Honolulu, 268,913 inhabitants in 1947.

Population. As of June, 1948, the population was 540,500, an average density of 84 per square mile. Of the total population 466,480 or 86.3 percent are citizens. The largest single racial group is the Caucasians who constitute 33.4 percent of the total. The second largest is the Japanese with 32.6 percent of the total. In 1940 the Caucasians had only 24.9 percent and the Japanese 37 percent of the total. During a period of eight years the Caucasians increased from 106,381 to 180,480, an increase of 69.6 percent, while the Japanese increased from 157,990 to 176,280, an increase of only 11.6 percent. The percentage of other racial groups also shows considerable change, the Puerto Ricans having increased by 18 percent and the Hawaiians and part-Hawaiians by 24.6 percent.

Education. The public schools of the Territory are operated by a single school board consisting of seven members. The school system is made up of 185 schools comprised of elementary schools, intermediate schools and high schools. As of June, 1948, there was an enrollment of 83,347 pupils and an employed staff of 3,461. Total expenditures for the fiscal year ending June, 1948, were \$15,159,040. In addition, there is the University of Hawaii which in its organization and purpose is similar to the state universities of the mainland. It had an enrollment in 1948 of 4,346 and a faculty of 433. Public library service extends to all important localities of the Territory.

Production and Trade. The three most important products are sugar, pineapples, and coffee. In 1947 a total of 872,187 tons of sugar valued at \$108,-439,000 were produced; 18,443,675 cases of canned pineapples and juice, which together with

fresh and frozen pineapples were valued at \$75,-165,940; 7,250,000 lb. (green) of coffee valued at \$1,892,000. Fruits, vegetables, and miscellaneous crops amounted to \$8,829,000; livestock and poultry products to \$18,500,000. During 1947, 818 overseas vessels, representing a gross tonnage of 6,212,436, arrived at ports in Hawaii.

Hawaii purchased from the mainland United States merchandise valued at \$340,446,264 and sold to the mainland goods valued at \$181,330,471. Edible and animal products, vegetable food products, beverages, textile fabrics, and manufactured goods were the chief imports. Principal exports were sugar, canned pineapple, and coffee.

Transportation and Communication. Before World War II Hawaii depended almost entirely upon surface transportation for both freight and passengers. Ocean-going vessels of the United States, Canada, and Japan called regularly at the port of Honolulu. Disrupted by the war, this service has now been partially reestablished. The majority of passengers coming to and departing from Hawaii travel by air. Pan American World Airways, Northwest Airlines, and United Air Lines operate regular scheduled flights between Hawaii and the mainland. Overseas scheduled air service through Honolulu is provided by China National Aviation Corporation, British Commonwealth Pacific Airlines, Ltd., and Philippine Air Lines, Inc. Within the Territory the Hawaiian Airlines, Limited, makes 50 scheduled flights daily and flew 314,608 paying passengers a total of 2,116,108 air miles during 1947.

The Mutual Telephone Company of Hawaii provides telephone and radio-telephone service for the entire Territory and the 4 principal islands with the United States. Communication with other parts of the world is also provided. There are 8 commercial broadcasting stations.

Finances. Bank clearings in 1947 amounted to \$1,679,938,888. The volume of business transacted was \$1,092,080,323, an increase of \$109,262,962 over the previous year. Total territorial tax collections on business and otherwise amounted to \$54,-240,000 as compared with \$42,356,209 for the previous year. The net bonded indebtedness was reduced to \$8,993,617. The net assessed valuation of real and personal property was \$737,450,986, the highest in the history of the Territory. Internal revenue collections for the fiscal year ending June 30, 1947 totaled \$107,651,471 as compared with \$105,865,662 in 1946.

Government. Hawaii has had over a century of experience in government—first under the monarchy, then under the provisional republic and, since 1900, as a Territory of the United States. The Organic Act, under which it is governed, was approved by the Federal Congress on Apr. 30, 1900. The head of the government is Ingram M. Stainback, who holds office by appointment of the President of the United States for a term of four years. The Governor appoints all department heads with the exception of the Secretary of the Territory, who is appointed by the President. The legislative branch of the government consists of a Senate of 15 members and a House of Representatives of 30 members elected by the voters of the Territory. The powers and prerogatives of this legislative body corresponds closely with those of mainland state legislatures. The judiciary consists of a supreme court and five circuit courts. All judges of these courts are appointed by the President of the United States. District magistrates are appointed by the Chief Justice of the territorial Supreme Court. Hawaii elects a delegate to Congress who has the right to debate and to serve as a member

of committees of the House but who has no vote.

Events, 1948. Statehood. At the time Hawaii was annexed to the United States and organized as a Territory, there was a general understanding that when the social and economic structure of the Territory warranted it, Hawaii would be admitted to the Union as a State. Through a period of a half-century the people of Hawaii have aspired to statehood. On 14 different occasions their elected representatives in the Legislature have petitioned Congress for Statehood, and in 1940 the people voted for statehood in a plebiscite by a majority of over two to one.

A bill was introduced (H.R. 49) in the House of the 80th Congress of the United States calling for immediate Statehood. This was adopted by a vote of 196 to 133 on June 30, 1948. Although there was a great deal of support for the bill when it was sent to the United States Senate, it was not permitted to come to a vote before that body, and consequently died with the 80th Congress. Plans were made immediately for reintroducing the bill in modified form in the 81st Congress.

—INGRAM M. STAINBACK

HAY. According to the Crop Reporting Board of the U.S. Dept. of Agriculture, as of December, 1948, the production of hay in the United States during 1948 was estimated at 99,846,000 tons. Of this amount alfalfa accounted for 34,083,000 tons, clover and timothy 29,309,000 tons, wild hay 12,848,000 tons, lespedeza 7,627,000 tons, soybean, cowpea, and peanut hay 3,358,000 tons, grain hay 2,867,000 tons, and miscellaneous kinds of hay for 9,754,000 tons.

In 1948 the yields of the principal producing States (in tons) were: New York 6,306,000, California 5,718,000, Wisconsin 5,501,000, Minnesota 5,145,000, Missouri 4,803,000, Nebraska 4,382,000, Iowa 4,046,000, Michigan 3,606,000, Illinois 3,567,000, Kansas 3,565,000, Ohio 3,516,000, South Dakota 3,443,000, Pennsylvania 3,430,000, North Dakota 2,975,000, and Montana 2,932,000.

HAYDEN FOUNDATION, Charles. A Foundation established in 1937. The founder, Charles Hayden, gave his residuary estate to establish this Foundation to assist needy boys and young men, stating in his will that he was "firmly convinced that the future of this nation . . . depends in no small part upon the young men of the United States and that if they receive proper training in boyhood and youth . . . and are encouraged in the manner of right and proper living . . . we shall rear a nobler race of men who will make better and more enlightened citizens, to the ultimate benefit of mankind."

Charles Hayden was particularly interested in boys' clubs, boys' camps, and similar projects dealing with underprivileged boys, and for the time being most of the Foundation's activities are devoted to that type of aid, and as the will suggests, preference is given to the metropolitan areas of Boston and New York.

During the eleven years of operations ended Sept. 30, 1948, the Foundation has contributed \$13,637,000 for the above purposes and at that date there was approximately \$50 million in the Fund. Officers: President, J. Willard Hayden, (85 Water Street, Boston 7, Mass.); Executive Vice President and Treasurer, Edgar A. Doubleday; Vice President, Erle V. Daveler. Administrative offices: 25 Broad St., New York 4, N.Y.

HEATING AND VENTILATING. Most significant to those in the heating and ventilating industries and to

consumers, as well as the changing picture of the nation's fuel supply. Trouble in the Middle East, which cut off oil imports, and boom development of the domestic oil-burning market brought home to consumers, producers, and government officials alike the fact that this country does not have the natural crude oil resources to support a refining capacity adequate for peacetime fuel needs, to say nothing of military emergency.

A secondary blow to fuel oil supply is the catalytic cracking process which turns more crude into gasoline and leaves less for heating plants. The United States, however, has a practically inexhaustible supply of coal and lignite. A logical conclusion was that solid fuel resources should be exploited—hence the pleas of Secretary of Interior Krug for an elaborate program of development of synthetic liquid fuels from coal. Hence, too, the steps taken by private industry to develop those fuel resources which are abundant. President Truman signed into law a bill authorizing a three-year extension of the Interior Department's program for development of synthetic fuels, chiefly from coal and oil shales. The bill authorized appropriation of \$30 million.

Significant of the changing pattern of fuel supply was erection of two multimillion dollar plants for conversion of either natural gas or coal to synthetic gasoline and oil. One plant in the Hugoton gas field of southwestern Kansas is owned by Stanolind Oil and Gas Co., a wholly owned subsidiary of Standard Oil of Indiana.

At Brownsville, Texas, another installation of the same type is a joint project of eight companies which have set up Carthage Hydrocol, Inc., to operate it. It will consume 50 million cu. ft. of oxygen and 90 million cu. ft. of natural gas daily to synthesize 7,000 barrels of oil products and 150,000 pounds of chemicals. Oxygen in such quantities had never been produced before, but feasibility of the idea was demonstrated by two plants for extracting oxygen from the air.

The U.S. Bureau of Mines and Bethlehem Steel both set up successful variations of the German Linde-Frankl process which can extract a ton (24,000 cu. ft.) an hour of oxygen from air. Effective use of the vast lignite deposits of the Dakotas and Montana became a possibility upon completion of test runs of a Bureau of Mines pilot plant at Grand Forks, N.D.

More than 900,000 million tons of lignite (almost one-third of total solid fuel reserves in the United States) in these three states is a potential source of manufactured water gas made by a process set up in the plant. This plant represents the first successful attempt to manufacture water gas by a continuous process in an annular vertical metal retort, according to James Boyd, Bureau of Mines director. The Bureau of Mines dedicated a new \$3 million synthetic fuels laboratory and pilot plant at Bruceton, Pa. Coal-to-oil conversion by both the Fischer-Tropsch and Bergius processes will be studied at the plant.

A second and larger underground coal gasification test at the Gorgas, Ala., mine of the Alabama Power Co. was launched under contract signed at midyear by the company and the U.S. Bureau of Mines. Tests will continue for a full year and will cost about \$411,000. The company will provide engineering and operating services at cost and the experiment will involve some 300 acres of Pratt seam coal averaging 40 inches in thickness. Last year's experiment at Gorgas showed that combustion could be maintained and controlled, that coal in place could be gasified completely, and that roof

rock would become plastic, expand, and settle down behind the burning coal face without cutting off the air or gas. Gas obtained was of lower heating value than desired, and new trials will go deeper in an effort to avoid dilution by leaking air.

Natural gas made strides in the fuel market as Texas Eastern pushed capacity of the Inch lines from 140 million cu. ft. a day toward its goal of 433 million cu. ft. daily delivery to ten eastern utilities. Total expenditures for new lines by natural gas transmission companies was planned to exceed half a billion dollars. A 1,200-mile pipeline from the Texas-New Mexico natural gas fields to the Los Angeles Area, cooperative venture of the southwestern gas companies, was completed at a cost of \$70 million.

The Federal power Commission approved application of Trans-Continental Pipe Line Co. for construction of a 1,840-mile pipeline to bring Texas natural gas to the Philadelphia, New Jersey, and metropolitan New York areas. Condition of approval was that the line must be completed before Oct. 1, 1950. In an effort to assure adequate handling of peak loads by natural gas lines already pushed to near capacity, the American Gas Association and the U.S. Bureau of Mines have embarked upon a cooperative research project to find means of removing nitrogen from natural gas and thereby increasing the heating quality of the remaining gas.

A pilot plant has been completed at Amarillo, Texas, and various physical and chemical means of nitrogen removal will be tested. Automatic domestic heating equipment which burns natural gas in mild weather and switches automatically to fuel oil in severely cold weather was developed by the Midwest Research Institute on a project sponsored by The Gas Service Co. of Kansas City, Mo. Equipment is intended to relieve peak loads of natural gas lines and to forestall consequences of oil shortage. Midwest will license manufacturers on a non-exclusive basis.

Development of equipment for burning extremely fine sizes of coal resulted in an upsurge in the reclamation of anthracite fines from river beds where it has been dumped as a waste product from mines over the years. Over a million tons a year of this so-called river coal now reach the market.

Anthracite silt, the hitherto unusable fines which have been accumulating at mine heads for years, will be converted to gas and liquid fuels by adaptation of a German process for utilization of brown coals. About 200 million tons of anthracite silt are available now.

The largest capacity circulating system ever built for firing pulverized coal was put into regular standby service at the Independence, Kan., plant of the Universal Atlas Cement Co. System will grind and fire 18,250 lb. of coal in three kilns at once when natural gas supply is interrupted.

Smokeless burning of bituminous coal received the attention of Bituminous Coal Research, Inc., in experiments resulting in development of a new low pressure heating boiler said to meet requirements of the most stringent anti-smoke ordinances. Boiler is a gravity-feed, magazine type unit which operates successfully on the natural draft of average chimneys. It was made available to manufacturers by BCR in cooperation with Batelle Memorial Institute.

A study of 12 electrically heated houses in the Tennessee Valley showed heating costs for resistance heating installations averaging from 0.6 to 1.4 cents per cu. ft. of enclosed space for the season. Fuel (electric) bills were from \$45 to \$116

for four to six rooms. The average bill was \$70.50, and average electric rate was 0.58 cents per kwh. One heat pump installation in Chattanooga ran up a heating bill of \$52.69 and the house was cooled the rest of the year for \$17.54. This house had a calculated heat loss of 66,000 b.t.u. per hr at a 70° F. temperature difference, inside to outside. A Knoxville house of 6,384 cu. ft. (23,400 b.t.u. per hr loss at 70° F. difference) was heated by U.S. Rubber's conductive ceiling panels for \$53.79. Degree days in the area run from 3,200 to 3,900.

Dr. Maria Telkes of Massachusetts Institute of Technology spent winter weekends in a \$20,000 house with a \$3,000 solar heating unit that traps and stores heat in chemical bins. The heat trap is built into the roof and consists of 800 sq. ft. of black sheet metal behind two glass plates. Air is circulated behind the sheet and conducted to bins containing Glauber's salt which melts at 90° F. The heat of fusion of the salt increases its heat storing capacity within the range of temperatures required for house heating. From the bins, heat is released as required by living spaces. To offset cloudy days, enough heat can be stored for ten days supply in normal weather.

Promise of a new tool for air cleaning was held in development of new and powerful generators of high frequency sound. Sound at inaudible frequencies is capable of coagulating smokes and mists. The problem of developing high energy densities of sound at high frequency has been solved by at least two siren-like devices, and Ultrasonics Corp. of Boston is putting sound to work precipitating lampblack, and recovering chemical dusts.

A quarter-mile of heated roadway was installed as a cooperative snow-melting venture by nine families living on Snake Hill in Belmont, Mass. Residents formerly had been frequently isolated by heavy snow falls. The U.S. Department of Commerce Construction Division reported that 52 percent of houses erected in 1948 have warm air furnaces for heating.

—WILLIAM B. FOXHALL

HOCKEY, Field. The World Festival of Women's Hockey at Amsterdam in May provided the highlight of the sport in 1948. A strong English team captured the title by defeating The Netherlands lassies, 1-0, in a thrilling final. Scotland placed third, Ireland fourth and the United States fifth. Prior to participating in this world championship tourney the United States women toured Britain for a long series of exhibitions.

Men's field hockey enjoyed a marked revival featured by a number of international contests. The climax came at the Olympic Games when 18 teams saw action. India carried off premier honors. See OLYMPIC GAMES.

—THOMAS V. HANEY

HOCKEY, Ice. Toronto, after winning the National League title, swept over the Detroit Red Wings in four straight games to keep the Stanley Cup, emblematic of world supremacy. The Maple Leafs won the coveted trophy for the third time in four campaigns by halting the Red Wings, 5-3, 4-2, 2-0, 7-2.

Toronto gained the final play-offs by eliminating Boston while Detroit reached the cup round by defeating the New York Rangers. The champions lost only the fourth game to Boston, bowing by 3-2, but took the required four out of seven from the Bruins, 5-4, 5-3, 5-1 and 3-2. Detroit stopped the Rangers, 2-1, 5-2, only to have the Rangers come back and tie their semi-final series, 3-2, 3-1. Then the Red Wings clinched a place in the finals by nipping the New Yorkers, 3-1, 4-2.

The National League enjoyed its most successful campaign at the gate, a total of 2,519,278 fans paying to see the scheduled 180 games. These figures represent a gain of 116,168 over the previous season's attendance.

Scoring honors were won by Elmer Lach of the Montreal Canadiens, whose 62 markers led Buddy O'Connor, Rangers' star, by only one point. O'Connor, however, came in for his share of glory by winning the Hart Trophy as the league's most valuable player and the Lady Byng Trophy, awarded for sportsmanship and gentlemanly conduct combined with playing ability. The two prizes carried a league bonus of \$2,000, and the Rangers gave the young ace a \$500 bonus for being runner-up in scoring.

Turk Broda, Toronto star, was the recipient of the Vezina Trophy, awarded to the goalie with the best defensive record. Broda allowed only 143 tallies. The Calder Trophy for the season's best rookie went to Jimmy McFadden, Detroit center.

A heated dispute as to who would represent the United States in the Olympic Games marred the amateur campaign, the Amateur Athletic Union and U.S. Amateur Hockey Association both claiming the right to select Uncle Sam's sextet. The result was that the United States had no official entry in the Winter Olympics, the big prize going to the strong Royal Canadian Air Force team. See OLYMPIC GAMES.

National A.A.U. honors went to Colgate, which defeated the Holling Press team of Buffalo, 7-4, in the final. Other major champions were: American League, Cleveland Barons; United States League, Houston Huskies; U.S. Amateur Hockey Association (senior), Toledo Mercurys; Metropolitan League, Manhattan Arrows; National Collegiate Athletic Association, Michigan; International Intercollegiate, Toronto University; Allan Cup, Edmonton Flyers.

—THOMAS V. HANEY

HONDURAS. A republic of Central America. Apart from a small coastal lowland and river valley, the country is essentially mountainous. The north has a wet tropical climate, and dry winters prevail in the south and southwest.

Area and Population. Area: 59,161 square miles. Population: 1,240,000 (1947 est.); 1,200,542 (1945 census). About 80 percent are mestizos, 10 percent Indians, 8 percent of European descent, and 2 percent Negroes. Principal cities are Tegucigalpa (capital), San Pedro, Sula, and La Ceiba.

Education and Religion. The Constitution guarantees freedom of worship. Roman Catholicism is the predominant religion. Spanish is the official language. About 40 percent of the population is illiterate. In October, 1947, there were 136,031 children of school age, of whom 70,360 were receiving education from 2,292 teachers. There were 26 secondary schools, with 4,316 pupils, and a National University with 484 students.

Production. Honduras is essentially agricultural. The latest available production figures, in quintals (crop year 1945-46) are as follows: bananas, 14,111,000; corn, 3,547,000; plantains, 2,971,000; indian corn, 1,033,000; sugar cane, 507,000 and beans, 359,000. In the same year, the cattle population amounted to 98,000 head, and 83,000 hogs. Industrial production is limited to consumer goods. Production in pounds for 1946 was as follows: wheat, 9,042,000; soap, 3,328; lard, 712,000, and coconut oil, 266,000. Other items of consumer goods include matches, shoes, carbonated beverages, drill cotton, and straw hats. Silver was produced in the amount of 2,986 Troy ounces.

Foreign Trade. In the fiscal year ending Sept. 30, 1947, total exports were valued at \$17.5 million and imports at \$29.4 million. Principal exports were bananas (27 percent), silver, coconuts, coffee, cattle, and tobacco. Chief buyers were the United States (62.8 percent), El Salvador, Canada, Nicaragua, and Mexico. Most important exporters to Honduras are the United States (76.2 percent), El Salvador, Mexico, the Netherlands West Indies, and Peru.

Transportation. There are 830 miles of railway and 780 miles of highways. In his last message to Congress (December, 1947), the President reported the construction of 126 bridges and also the addition of 14 miles of railway. Latest data show 1,342 motor vehicles registered, 12,000 radio sets, and 1,943 telephones.

Finance. In the budget estimates for 1947-48, revenue and expenditures were equally estimated at 15,819,006 lempiras (a lempira equals \$0.49). Foreign debt on June 30, 1947, was 2,323,875 lempiras; internal debt, 10,353,464 lempiras. Exchange control is established in Honduras. Foreign exchange holdings in December, 1947, amounted to \$14 million.

Government. Honduras is a centralized republic of 17 departments and one territory, under the constitution of 1936. Legislative power is vested in a unicameral Congress of Deputies, composed of 45 members. Executive power is exercised by a President assisted by a Cabinet. On Oct. 10, 1948, Dr. Juan Manuel Gálvez was elected President, to take office on Jan. 1, 1949.

Events, 1948. Most significant event of the year was the announcement made by dictator Tiburcio Carias Andino that he would give up the political control he had held since 1932. Noteworthy were the general elections, and the diplomatic tension between Honduras and the other Central American and Caribbean countries.

Electoral Campaign. Presidential elections were scheduled to take place on October 10, and President Carias stated that all parties would have full guarantees. The government-backed Nationalist Party held a convention that nominated Dr. Juan Manuel Gálvez to the presidency. He was Carias' Minister of War. Julio Lozano, ex-Ambassador to the United States, won the Vice Presidential nomination. It was rumored early in the year that Angel Zúñiga Huete, Carias' old opposer, would return to his country to be the Liberal Party candidate. The electoral campaign was conducted under strong Government pressure in favor of the Nationalist candidate. Although the Government stated that suffrage would be compulsory, it was expected that many would abstain from voting, if full guarantees were not given the opposition. In several anti-administration rallies, the army intervened and used force against the public.

Election Results. Shortly before the elections, the Liberals withdrew their candidate, Zúñiga Huete, because: (1) guarantees were insufficient for the normal development of an honest campaign; (2) the Government had prevented the organization of Liberal committees in several places; and (3) in most of the villages, Liberal Party councils had been dissolved by Government pressure. The elections were held as scheduled on October 10, and no serious disturbances were reported. Many voters cast blank ballots, and many more abstained from voting. As was expected, Gálvez' victory was immediately announced by the Government. It was generally felt that the Liberals would revolt if help from neighboring countries, Guatemala in particular, could be obtained.

International Front. Toward the end of the year, there were rumors that a revolutionary force, called the Caribbean Legion, was being organized in Guatemala in order to overthrow the Carias regime. This plan was said to be part of a large movement in which political exiles residing in Costa Rica, Cuba, and Venezuela were planning to do away with the governments not only of Honduras, but also of Nicaragua and the Dominican Republic, where severe dictatorships exist (see NICARAGUA and the DOMINICAN REPUBLIC). Honduras signed the Charter of the Americas at the Ninth Inter-American Conference at Bogotá.

—MIGUEL JORRÍN

HONG KONG. A British crown colony in southeastern China at the mouth of the Canton River. It consists of the island of Hong Kong (area about 32 sq. mi.), the Kowloon peninsula and the New Territories. Total area of colony, 391 square miles. Population (1947 est.): 1,750,000 of whom some 7,000 were British subjects and 2,500 were Indians. Capital, Victoria (pop. 447,829). Education (1947): 101,921 students attended the various government, grant, subsidized, and private schools. Two training colleges had 97 students and the University of Hong Kong 276 undergraduates.

Production and Trade. Chief industries are shipbuilding and fishing. The manufacture of paint, cement, matches, and tobacco also is carried on; chief agricultural products are sugar and rice. Hong Kong is a free port and a port of call for trans-Pacific steamers, approximately 500,000 tons of shipping entering and clearing the port monthly. Foreign trade (1947): imports \$HK1,550 million; exports \$HK1,217 million.

Finance. Budget estimates for 1947-48 placed revenue at \$HK109,839,750; expenditure at \$HK109,834,355. The 1948-49 budget was estimated to balance at \$HK150 million (\$HK3.970 equals U.S.\$).

Government. The colony is administered by a governor assisted by an Executive Council and a legislative council of appointed members, both official and unofficial. Proposals for a constitutional revision were approved during 1947, providing for an unofficial majority in the legislative council, and for the creation of a municipal council of 30 members, 15 to represent the Chinese and 15 the non-Chinese sections of the population. Governor: Sir Alexander Grantham.

HORSE RACING. Citation, bred and owned by Warren Wright's Calumet Farm, wrote the story of the turf for 1948. The bay colt, competing on nine different tracks during his arduous campaign, was hailed by many as the greatest racer of all time. Trained by H. A. (Jimmy) Jones and ridden most of the time by Eddie Arcaro, Citation went to the post for 20 races and won 19, his sole loss coming after a bit of bad racing luck.

During the year, Citation earned \$709,470, for a two-season total of \$865,150. Citation now ranks second on the world roster of all-time money winners, Stymie holding the top spot with \$911,335. However, Stymie's imposing total was compiled in 126 starts while Citation has gone postward only 29 times and won 27 races.

Citation started the year by capturing the famous "triple crown," the Kentucky Derby, the Preakness, and the Belmont Stakes, and quickly added to his feats by annexing the Empire Gold Cup in an international field. The lone setback for the Calumet star came at Havre de Grace, Md., in April when he lost to Saggy in a 6-furlong sprint

after being carried wide at the head of the stretch by a horse named Hefty.

Other turf leaders of the campaign were Blue Peter, 2-year-old colts; Myrtle Charm, 2-year-old fillies; Miss Request 3-year-old fillies; Conniver, Coaltown, Mr. Busher, Stymie, and Shannon II. Blue Peter, the property of Joseph M. Roebeling and a grandson of the immortal Man o' War, was the champion 2-year-old of the year and won the fastest Futurity ever run.

Johnny Longden became the first American jockey to ride more than 3,000 winners early in the year and went on to again capture honors as the leading rider. Calumet Farm was first among money-winning stables, with its Jimmy Jones gaining the first spot among trainers on the basis of winnings. Willie Molter led the trainers in number of winners saddled.

Although New York had 196 days of racing, its longest campaign on record, both attendance and wagering fell off, a trend that seemed to be nationwide. Unofficial reports showed a shrinking of approximately 8 percent in pari-mutuel betting and 5 percent in turf audiences. However, almost 25 million fans pushed their way through the nation's turnstiles to pour \$1,555 million into the betting machines.

Harness racing on the other hand had one of its best campaigns of all time, attracting 6,530,417 fans to the pari-mutuel plants, where they wagered \$193,781,300 for a 64 percent attendance gain and 41 percent betting advance over the previous year.

Demon Hanover, owned and driven by Harrison Hoyt, won the classic Hambletonian at Goshen, N.Y., blue-ribbon event of the harness world. Hoyt became the first amateur driver to ever win the event. However, a poll of turf experts selected Rodney, who won the \$50,000 Golden West Trot, among other big races, as the harness "Horse of the Year." Bi Shively was at the reins for most of Rodney's outings.

—THOMAS V. HANEY

HOUSE OF REPRESENTATIVES. See CONGRESS, U.S.

HOUSING EXPEDITER, Office of. This office has responsibility for the administration of rent control and certain controls remaining in effect from the Veterans Emergency Housing Program.

The Expediter's office was established formally in January, 1946, with authority to develop programs and recommend legislation for the provision of housing at moderate prices and rentals for veterans and to make use of existing Federal authority to that end. The Office of Housing Expediter and the National Housing Agency were shortly consolidated and had joint responsibility for administering the Veterans Emergency Housing Program subsequently authorized by Congress. Following the termination of most of this program, the two agencies were separated in January, 1947, with the Expediter retaining responsibility for continuing emergency controls and for liquidating certain other phases of the program. In May, 1947, administration of rent control was transferred to this office.

The first rent control legislation in December, 1941, was authorized only for the District of Columbia and in the following month, under the Emergency Price Control Act, it was authorized for all other areas in the United States where it was determined to be essential for the successful prosecution of the war. Under this legislation the Office of Price Administration froze rents in designated defense-rental areas at the rates being charged at specific dates for the accommodations and accom-

panying services, made adjustments when conditions warranted, established ceilings for accommodations made available for rent after the freeze dates, prohibited evictions except under certain conditions, and prosecuted violations. The ceiling rents applied to all rental accommodations in the defense-rental areas, including family dwellings, hotels, rooms, tourist courts, trailers, and the like.

In June, 1947, Congress extended rent control, but with modifications reflecting its expressed intent to terminate such control as soon as feasible. In March, 1948, rent control was further extended, with minor modifications, until Apr. 1, 1949.

Rent control under the 1948 Act is authorized only for family dwellings or other housekeeping accommodations and for rooms in rooming and boarding houses in defense-rental areas designated under the Emergency Price Control Act. Excluded are hotels with customary hotel services, tourist courts, trailers or trailer spaces, tourist homes serving transient guests exclusively and individual rooms in private dwellings containing not more than two paying guests outside the immediate family, all of which were at one time under rent control. Also excluded are new housing accommodations completed or made available by conversion after Feb. 1, 1947 (except that contracts for the rental of housing accommodations to veterans and their families which were assisted by allocations or priorities under the Veterans Emergency Housing Act remain in force) and other accommodations not rented for any continuous 2-year period between Feb. 1, 1945 and Mar. 30, 1948.

For the accommodations still under control the ceilings established under the Emergency Price Control Act remain in effect with important exceptions.

The Expediter is required to make individual or general adjustments to remove hardships and correct inequities. He is authorized to remove in whole or in part maximum rents in any defense-rental areas if he determines the need for control no longer exists, and is required to make periodic surveys to determine such needs. He is required also to follow recommendations of local advisory boards established in defense-rental areas as to decontrol, general adjustments of maximum rents, and operations of local rent offices, if the recommendations have been appropriately substantiated and certain requirements as to hearings, notices, and records have been complied with. If he does not approve these recommendations, he is required to submit all essential documents to the Emergency Court of Appeals which enters a final judgment and decree as to the case.

Under leases which fulfill certain requirements of the Housing and Rent Act of 1948, landlords and tenants may voluntarily agree to increases up to 15 percent over the maximum rents otherwise in effect.

As of June 30, 1948, rent control covered approximately 14 million housing accommodations, exclusive of those subject to the District of Columbia Act. Since June 30, 1947, the effective date of the Housing and Rent Act of 1947, 56,257 units had been decontrolled and rent adjustments had been made on 485,856 other accommodations by administrative action. A total of 1,660,906 individual adjustments had been made since rent control began. Voluntary lease agreements had provided increases averaging 15 percent on 2,000,000 accommodations.

A further responsibility under the Housing and Rent Acts of 1947 and 1948 is the enforcement of the veterans' preference in the occupancy of new

housing accommodations completed prior to Apr. 1, 1949. Single-family dwellings may not be offered for sale, prior to the expiration of 30 days after completion, for occupancy by persons other than veterans and their families and may not be offered to others at prices lower than those available to veterans. Similar restrictions apply to the rental and rental rates of new housing accommodations made available for rent (except to transients).

The Office of Housing Expediter also investigates complaints of veterans regarding violations of provisions as to construction and other matters for housing assisted by allocations and priorities under the Veterans Emergency Housing Act and, if substantiated, pursues corrective measures and prosecution.

—TIGHE E. WOODS

HOUSING IN THE UNITED STATES. Homebuilding activity continued at a high level in the United States during 1948. By late summer, however, housing starts had begun to decline, giving some evidence that homebuilding was showing the effect of high construction costs and prices. With the large need for new housing and for a continued high volume of home construction, legislation was directed toward a lowering of housing costs and toward the encouragement of building for rental purposes, the housing shortage being felt most acutely in the rental and low-cost sales market.

Residential Construction. Preliminary estimates of nonfarm residential building place the volume of new homes started in 1948 at about 925,000 family dwellings, almost 9 percent more than the 849,000 dwellings started in 1947. Most of this increase occurred during the first seven months of the year, when each month's volume of homebuilding was substantially in excess of that estimated for the corresponding month of 1947. By August, however, the trend reversed, and 1948 homebuilding for that month and for the three succeeding months fell below the volume reported for August, September, October, and November, 1947, the latest months for which figures are available at this writing.

Home Financing. Home mortgage lending continued at a high volume. However, throughout the third quarter of the year there were indications that real estate lending involving loans of \$20,000 or less was leveling off. During the first nine months of 1948 a total of 1,894,000 loans were recorded in amounts of \$20,000 or less. The aggregate amount of these loans is \$8,769 million. This represents an increase of 1.7 percent in the number and a gain of 5 percent in combined amount as compared with activity during the corresponding nine months of 1947. However, in July, August and September, the number of loans recorded in each month was less than the number recorded in the corresponding month of 1947, and in September the dollar amount of these loans fell below that reported in September.

Home Loans to Veterans. Home loan activity under the Loan Guaranty Program of the Veterans Administration dropped sharply during the first nine months of 1948. The 281,737 guaranteed home loans aggregating almost \$1,551 million that were closed during the January-September period represented a decline of 31 percent in number and 37 percent in amount in comparison with lending under this program during the corresponding nine months of 1947.

Increase in FHA Mortgage Insurance. During the first nine months of 1948 a total of 228,545 new homes was started under FHA first compliance inspection. This represents an increase of more than

50 percent over the number started under FHA inspection in the first nine months of 1947 and accounts for approximately one-third of all nonfarm housing started. In the first nine months of 1947, FHA inspected starts accounted for less than one-sixth of the nonfarm total.

FHA mortgage insurance written under Titles II and VI of the National Housing Act (covering the financing of both new and existing small homes and new rental housing projects) totaled \$1,970,140,987. This nine-month volume is 57 percent greater than the volume of mortgage insurance written by FHA during the entire 12 months of 1947, which in itself had been a record year.

More than one-fourth of the face amount of this mortgage insurance was written on new rental housing projects in the first nine months of 1948—all such rental project mortgages being insured under the liberal Title VI provisions. This represented an increase of 40 percent above the volume of rental housing mortgage insurance written in the entire 12 months of 1947.

The foregoing paragraphs relate largely to the expansion of FHA insuring operations under the authority of the National Housing Act as it existed at the beginning of the year. Substantial changes were to be made in the nature and scope of these functions in the course of the Special Session of Congress in the Summer of 1948. A discussion of these changes is contained in a subsequent section on legislation.

Estimates of Housing Need. The large volume of housing production that has taken place in this country since the war has been a partial reflection of the enormous need for housing that had been accumulating throughout the depression and war years. In March, 1948, the Joint Congressional Committee on Housing estimated the quantitative need for dwellings over the next 12 years at between 15,450,000 and 17,300,000 nonfarm units and from 2,400,000 to 3,600,000 units of farm housing. To meet these needs, the Committee estimated, it would be necessary to build at an average annual volume of from 1,300,000 to 1,500,000 nonfarm homes and from 200,000 to 300,000 farm houses.

The housing need, as measured by the severity of shortage and the condition of occupied structures is concentrated in urban areas and is the more pressing among two overlapping population groups, i.e., among those seeking rental housing and among the nonwhite population. The intensity of the housing shortage among the nonwhite population, and the higher incidence of overcrowding and substandard housing conditions were indications of nonwhite housing need. With the rise in incomes of nonwhites their demand for housing likewise has increased.

The institution of legal action to bring court enforcement of restrictive covenants based upon race was an outgrowth of this increased housing demand among nonwhites. In the Spring of 1948 one of these cases was appealed to the Supreme Court of the United States, at which time it was ruled that the courts could not be used to enforce restrictive covenants based upon race, thereby removing a formidable legal barrier which had confronted minorities seeking housing.

Housing Costs. Although a large volume of housing was started in 1948, a substantial portion of this construction was being built at cost-price ranges beyond the financial reach of a great portion of the homeseeking public. In that respect, our housing production was not tailored to meet our housing need.

Homebuilding costs had continued their upward course throughout 1948. By September, 1948, the cost of residential construction was two and one-fifth times as high as it was in the prewar year of 1939. In the first nine months of 1948 the cost of residential building had increased almost 7 percent. Higher materials prices and higher wage rates had both contributed to this rise. Wholesale prices of all building materials, which in 1947 had averaged 200.7 percent of the 1935-1939 base index in 1947, had increased to 227.7 percent by September, 1948.

By 1948 most of the shortages in materials which had aggravated the rise in building costs immediately after the war had been overcome, although a few items, such as nails and cast iron soil pipe, were still difficult to obtain in a number of localities. The continuing rise in costs in 1948 was primarily the result of the heavy demand for construction of all types.

Attack on High Building Costs. Among other things, apprehension as to the effects of the rise in building costs upon the economy in general as well as upon future trends of homebuilding had led to the establishment of the Joint Congressional Committee on Housing in 1947. Following extensive hearings conducted throughout the country, the final majority report of this committee was submitted on Mar. 15, 1948. Most of the Committee's recommendations were incorporated in amendments to S.866, the Taft-Ellender-Wagner bill, a long-range housing bill then pending before the Senate.

In its final majority report, submitted in March, 1948, the Joint Committee on Housing recommended a three-way approach to the housing cost problem. First, it made a series of recommendations designed to lower costs by increasing the efficiency of the homebuilding industry. Second, it made recommendations to encourage a larger volume of lower-cost sale and rental housing without contributing to further increases in costs, and, third, it recommended approval of a Federally-aided program of locally-sponsored public low-rent housing to meet the housing need of low-income families whose housing needs cannot be met economically by private enterprise.

Housing Legislation. The investigation conducted by the Joint Committee on Housing which culminated in the report of March, 1948, was the latest in a long series of Congressional investigations of the over-all housing problem. Stemming from earlier investigations long-range housing legislation had been introduced for the purpose of expanding and adapting the Federal role in housing to the nation's housing needs, and this pending legislation was amended to incorporate most of the Joint Committee's recommendations. This bill was passed by the Senate, but failed to reach the House floor before the adjournment of the 80th Congress in June, 1948.

However, during the course of the Special Session of Congress in the Summer of 1948, most of those provisions of the Taft-Ellender-Wagner Bill which provided aids to private homebuilding were enacted in the Housing Act of 1948. This Act, however, omitted those provisions of the Taft-Ellender-Wagner Bill which would have authorized Federal aids to communities for the clearance and redevelopment of slum areas, and Federal aid for locally-sponsored low-rent public housing. The Housing Act of 1948 also omitted the aids to rural housing contained in S.866, and provided for only limited housing research by the Federal government.

The Housing Act of 1948. The Housing Act of 1948

concentrated the more liberal aids of sale housing on new construction, particularly low-cost construction; continued and expanded aids to rental and cooperative housing projects, and provided means for the encouragement of a lowering of building costs. The concentration of the more liberal financing aids for sale housing was accomplished by amending Titles I and II of the National Housing Act, which provide authority for the permanent program of FHA home loan insurance.

Title I was amended to increase the maximum loan amount on mortgage financing new small home construction under this title to \$4,500. These loans, which may be made for terms as long as 20 years and 5 months, bear interest at $4\frac{1}{2}$ percent plus $\frac{1}{2}$ of 1 percent insurance premium and may cover a mortgage up to 95 percent of property valuation.

Title II, Section 203 of the National Housing Act was amended to provide expanded aid for the financing of new construction, particularly low-cost building. On new single-family homes valued up to \$6,300, loans up to 95 percent of property value may be insured, such loans bearing terms of up to 30 years. On homes valued up to \$11,000, loans may be made up to 90 percent of the first \$7,000 of value plus 80 percent of the valuation in excess of \$7,000. In effect, this places a maximum insured loan limit of \$9,500 on a home valued at \$11,000.

One- to four-family housing valued at more than \$11,000 is eligible for loans up to 80 percent of value, with a maximum valuation under Section 203 of \$20,000, making the maximum loan insurable under this section not more than \$16,000. Mortgages insured under Section 203 bear interest at $4\frac{1}{2}$ percent plus $\frac{1}{2}$ of 1 percent insurance premium. With the exception of the 30-year loans on new low-cost homes, loans under Section 203 financing new housing may have terms up to 25 years. The maximum term on mortgages on existing homes insured under this section is 20 years.

All mortgage insurance relating to the financing of one- to four-family structures is now being written under Title I and II—the permanent programs of FHA home loan insurance based on economic soundness (long term value). Emergency authority to insure loans on one- to four-family structures on the basis of "current necessary costs" under Title VI expired at the end of April, 1948, and was not included in the reconstituted version of Title VI contained in the Housing Act of 1948.

Aids for rental housing and cooperatively-owned projects were contained in amendments to Section 207, Title II and Section 608, Title VI, as well as in the new Title VII of the National Housing Act.

Section 207 of Title II, which permits the insurance of loans up to \$5 million for the financing of new rental housing projects was liberalized as to the maximum loan size by substituting an average limitation of \$8,100 per family unit for the previous limitation of \$1,350 per room. Loans insured under this title are permitted to bear a ratio of up to 80 percent of the value of the project, based on long-term value. However, where such loan is made for the purpose of financing a non-profit cooperative housing project, the maximum ratio is 90 percent of value. In the case of a loan to a veterans' cooperative, the maximum ratio is established at 95 percent of the replacement cost on the basis of replacement costs prevailing on Dec. 31, 1947. For cooperative projects permits, the cost limit may be either \$1,800 per room or \$8,100 per family unit, whichever is the more

appropriate to meet the financing requirements of the cooperative. Further amendments to this title authorize the insurance of loans up to \$50 million to Federal, State, or municipal instrumentalities or limited dividend housing corporations for the purpose of financing projects restricted by law as to rents, charges, capital structure, rate of return or methods of operation.

Section 608 of Title VI was reconstituted in modified form to permit the insurance of loans financing new rental housing projects. Loans under this Title may be made up to 90 percent of replacement costs prevailing at the end of 1947. The loan may not exceed on the average \$8,100 per family unit. Furthermore, it was required that as a condition to mortgage insurance, the borrower agree that there would be no discrimination against families with children in the selection of tenants.

The other major aid to rental housing contained in the Housing Act of 1948 was FHA authority to insure yields on equity investments in new rental housing constructed for the moderate-income market. Title VII, which was added to the National Housing Act, authorizes FHA to approve rents estimated to produce a net annual return of $3\frac{1}{2}$ percent on insured projects, and to insure an annual amortization of 2 percent of the original investment plus an annual return of not more than $2\frac{3}{4}$ percent of the outstanding investment. This provision is designed to encourage large aggregates of long-term investment capital, such as funds of insurance companies and trusts, to look to rental housing projects as one field of long-term, secure investment.

To encourage a lowering of basic construction costs, the Housing Act of 1948 reconstituted and expanded Section 609, Title VI of the National Housing Act to permit FHA insurance of production loans to manufacturers of prefabricated housing and to insure dealer credit where the production loan was FHA insured. A new section, Section 611, was added to Title VI to allow the insurance of construction advances to builders for the purpose of financing the construction of developments of 25 or more single-family houses in order to encourage large-scale cost saving operations and techniques. Insured loans to builders may not exceed \$6,000 per home or 80 percent of the value of the homes, whichever is the lesser amount.

In addition to the credit aids intended to lower basic building costs, a program of housing research was authorized to promote standardized and improved design and production methods relating to materials production and site construction. This program of research, which was placed under the administration of the Housing and Home Finance Agency, was also intended to promote the adoption of standardized and improved local building codes.

Other provisions of the Housing Act of 1948 afforded a government secondary market for GI guaranteed home loans by expanding the authority of the Federal National Mortgage Association. FNMA was already serving as a government secondary market for FHA insured mortgages.

Other Housing Legislation During 1948. In addition to the Housing Act of 1948, the second session of the 80th Congress enacted the following laws affecting housing:

Public Law 464 continued national rent control with some modifications until Apr. 1, 1949. Under this law, local rent control boards are empowered to authorize rent increases or to decontrol rents in their areas, subject to the approval of the Housing Expediter. Landlords and tenants may enter into voluntary agreements for leases providing up to

15 percent increase in rents. Rents were decontrolled for transient accommodations and for certain categories of housing including that constructed after February, 1947, with the exception of priorities-aided rental housing for veterans of World War II.

Public Law 702 provided plans at government expense for the building of special-type homes for veteran paraplegics and for payment by the Federal government of one-half the cost of such homes, subject to a maximum dollar limitation per house on the government's contribution of \$10,000.

Public Law 796 authorized the Federal government to transfer temporary government-owned housing used for student veterans and located on land owned or controlled by educational institutions to the educational institutions without monetary consideration.

Public Law 689 permitted the sale of permanent-type government war housing to veterans for their own occupancy at a purchase price not in excess of the cost of construction, or the long-term market value, whichever is the lesser amount.

Scope of Government Activity in Housing. The scope of Federal government activity in the housing and related fields in 1948 covers aids to private enterprise as well as assistance to educational institutions and local government bodies. It includes programs intended to stimulate a greater volume of new residential construction and regulatory functions such as control of rents and the enforcement of regulations affecting priorities-aided veterans housing.

The administrative structure of Federal housing functions places the major activities in a single housing agency, the Housing and Home Finance Agency, which was established by Presidential Reorganization Plan No. 3 on July 27, 1947. The Housing and Home Finance Agency consists of the Office of the Administrator and three constituent agencies: the Home Loan Bank Board, the Federal Housing Administration, and the Public Housing Administration.

The Housing and Home Finance Administrator is responsible for the coordination of the operations of these constituent agencies, for the determination of policy governing the management and disposition of Federally-owned war and veterans emergency housing, and for the administration of the program of technical research intended to promote the standardization of local home building codes and the standardization of dimensions and methods of assembly of home building materials.

The Home Loan Bank Board is responsible for the supervision of the Federal Home Loan Bank System, a reserve banking pool serving home financing institutions; the management of the Federal Savings and Loan Insurance Corporation, which insures savings in insured savings and loan associations up to \$5,000 per investor; for the chartering and supervision of Federal savings and loan associations; and for the liquidation of the Home Owners' Loan Corporation, a relief agency organized during the depression to halt the wave of foreclosures of distressed home mortgages.

The Federal Housing Administration is responsible for administering the programs of home loan insurance and equity yield insurance authorized in the National Housing Act of 1934, as amended.

These include the Title I programs of insurance of lending institutions against loss on property improvement loans and the insurance of mortgage loans financing the construction of small homes; the Title II program applying to the insurance of mortgage loans financing one- to four-family hous-

ing and large-scale rental and cooperative housing projects; the Title VI programs covering the insurance of mortgages on large-scale rental projects, the insurance of production and dealer credit extended to manufacturers and distributors of prefabricated housing, and the insurance of construction advances to large-scale builders using modern building methods; and the Title VII program of insurance of minimum yields on equity-financed new rental housing for moderate income families.

The Public Housing Administration, the third constituent agency of the Housing and Home Finance Agency, is responsible for administering the program of Federal loan and subsidy aids to locally sponsored public low-rent housing projects provided under the U.S. Housing Act of 1937, and for carrying out the HHFA Administrator's policies for the management and disposition of Federally-owned war housing and emergency housing for veterans. PHA is also responsible for the disposition of Federally-owned subsistence homesteads and Greenbelt towns.

Through the various programs of the Public Housing Administration, the Federal government had a direct interest in more than 800,000 dwelling units in mid-1948, three-fourths of which consisted of war housing and postwar veterans' emergency housing, and over 189,500 units of which were low-rent housing units operated under provisions of the prewar low-rent housing program.

The National Housing Council, created by Presidential Reorganization Plan No. 3, was organized for the purpose of promoting the fullest use of the Federal government's housing resources, assuring the conformity of housing policy with the overall fiscal and economic policy of the government, and avoiding duplication and overlapping functions.

The Administrator of the Housing and Home Finance Agency serves as chairman of the National Housing Council. Other members of the Council are the Chairman of the Home Loan Bank Board, the Commissioner of the Federal Housing Administration, the Commissioner of the Public Housing Administration, and the following officials or their designees: the Secretary of Agriculture, the Secretary of Commerce, the Administrator of Veterans Affairs, and the Chairman of the Board of the Reconstruction Finance Corporation.

The housing functions of agencies and departments other than the Housing and Home Finance Agency and its constituent agencies are as follows:

The Department of Agriculture has primary interest in matters related to farm housing as part of its general farm programs.

The Department of Commerce collects housing and construction statistics, tests building materials, and administers export controls.

The Department of Labor collects and analyzes residential construction statistics and conducts programs to increase the volume of construction labor.

The Veterans Administration is responsible for handling GI home loan guarantees as part of the general GI home loan program under the Servicemen's Readjustment Act.

The Reconstruction Finance Corporation directs the Federal National Mortgage Association, which provides a secondary market for eligible FHA-insured and VA-guaranteed loans. RFC also has authorization to make plant and equipment loans to manufacturers of prefabricated housing.

The Office of the Housing Expediter (q.v.), except for a few remaining functions carried over from the Veterans Emergency Housing Program of 1946-1947, is primarily concerned with administration of rent control.

—JACK H. BRYAN

HOWLAND ISLAND. A mid-Pacific island (0° 49' N. and 176° 40' W.), belonging to the United States. It lies athwart the main steamship lanes and the Pan American Airways route from Honolulu to New Zealand and Australia. An aerological station was established during 1936 by the United States Department of the Interior.

HUNGARY. A central European republic. Area: 35,902 square miles. Population in 1947 was estimated at 9,368,000. In 1947 the population of Budapest was estimated at 1,073,444. Magyars comprise about 93 percent of the total population, Germans 5 percent, and Slovaks 1 percent.

Education and Religion. In the school year 1946-47 there were 1,173 infants' schools with 2,544 teachers and 77,031 infants; 4 training colleges for teachers of infant schools; 364 higher elementary schools, to be absorbed next year into general schools (for age-group 6-14), numbering 7,497, with 380,000 pupils; 175 middle schools; 37 agricultural and horticultural schools; 26 industrial and 75 commercial (secondary) schools; and 58 elementary school teachers' training colleges. In 1946-47 there were 44 colleges with about 25,000 students, 26 theological colleges, 3 academies of law, and 9 other academies. School attendance is compulsory for children from 6 to 14.

According to the 1941 census, Roman Catholics comprise 65.7 percent of the population, Helvetican Evangelicals (Calvinist) 20.8 percent, Augsburg Evangelicals (Lutheran) 6 percent, Jews 4.3 percent, and Greek Catholics 2.3 percent.

Production. Preliminary figures for the yields of chief crops in 1946-47 in quintals: wheat, 10,019,743; rye, 4,430,108; barley, 3,813,310; oats, 1,781,128; potatoes, 14,090,986; maize, 18,300,920; sugar-beet, 9,953,741; turnips for fodder, 18,727,159. In 1946 there were 424,364 horses, 1,222,835 cattle, 396,910 sheep, and 1,716,828 pigs. The forest area in 1946 was 2,682,300 acres. In 1947 the average monthly production in thousands of metric tons: coal, 88; lignite, 646; crude petroleum, 47.5; iron ore, 20.3; pig-iron and ferro-alloys, 25.3; steel ingots and castings, 49.7.

Foreign Trade. In 1948 (9 months actual, 3 months estimated) imports were valued at 1,958.2 million forints (1,459.2 million in 1947); exports, 2,395.3 million forints (1,045.2 million).

Communications. In 1946 there were 18,508 miles of road and 5,416 miles of railway. A total of 2,947,348,906 passengers was carried on state railways, and 1,659,494,797 metric tons of freight. There were 79,010 telephones in 1947.

Finance. Budget (1947): revenue 4,045 million forints; expenditure 4,420.7 million forints. Note circulation on Oct. 31, 1948, was 2,586 million forints. The cost of living index number for September, 1948, was 377 (all items) and 537 (food). (1937 = 100)

Government. The Hungarian Republic was proclaimed on Feb. 1, 1946, by the National Assembly. In the preamble of the new Constitution, among other things, it is stated that "The National Assembly, elected on the basis of universal, equal, direct and secret suffrage, will now in the name of and by virtue of the authority vested in it by the Hungarian people, constitute that form of government which best complies with the will and interests of the nation: The Hungarian Republic." For changes in 1948, see *Events* below.

Events, 1948. In the "cold war" between East and West, Hungary's full incorporation into the Moscow-oriented bloc of "People's Democracies" was consummated in the course of 1947 (see YEAR

Book, *Events* of 1947, pp. 226-228). Subsequent developments during the centenary year of the revolutionary upheavals of 1848 were marked by the consolidation of the new order, by closer ties with the U.S.S.R. and sharper conflicts with the U.S.A., and by further steps toward "socialism" of the Eastern variety.

Magyar Economics, Moscow-Style. The diminution of marketable farm produce which almost invariably accompanies the division of large estates into small farms troubled the new Hungary no less than its neighbors. In 1945 over 600,000 peasant families, comprising 3,000,000 persons, shared in the partition of the lands of the magnates. Any program for collectivized agriculture on the Soviet model was certain to meet with widespread peasant resistance. The Government therefore moved cautiously, relying for increased rural production on agricultural cooperatives, popular education, and promotion of improved methods of cultivation.

By November, however, Communist leader Matyas Rakosi was declaring that farmers must learn to see the advantages of the *kolkhoz* form of agriculture. "Class war" against "kulaks" or more prosperous peasants was hinted at. Yet the Communist Party still shrank from coercive measures, lest the economic and political price of open conflict with the peasantry should prove too great for the regime to pay.

With 80 percent of industry nationalized, the economic structure of urban Hungary came more and more to resemble that of the U.S.S.R., despite flourishing private business in small-scale manufacturing and in the distributive and service trades. For all practical purposes, strikes were outlawed. Wages were frozen. Production norms were set. "Stakhanovite" methods of raising output were introduced, along with piece-work, bonuses, and other incentives.

The three-year plan of reconstruction and industrialization inaugurated in the summer of 1947 was officially declared to be progressing successfully. In December, 1948, Communist Ermo Gero, Minister of Communications, announced that Hungary would overcome the effects of the American loan embargo and of U.S. restrictions on trade, through heavier taxation to meet the needs of the proposed five-year plan, to begin Jan. 1, 1950. This program contemplated State investments of 25,000 million forints (\$2,000 million), roughly equal to estimated total national income for the year 1949. In spite of a substantial one-way flow of goods toward the East on reparations account and through Soviet participation in joint companies, urban workers shared in the benefits of increasing production, relative prosperity, and expanding social services. The extent to which political regimentation and demands for new sacrifices provoked popular dissatisfaction remained uncertain and highly controversial.

Politics by Purge. In Hungary, as elsewhere in the Soviet sphere, official preoccupation with "spies" and "subversives" was even greater than in the U.S.A. On March 8, the Social Democratic Party (cleansed of dissidents in February and led by Arpad Szakasits) voted unanimously at its 37th annual congress to merge with the Communists in a United Workers' Party. On July 30, President Zoltan Tildy resigned, following the announcement that his son-in-law, Victor Csornoky, former Minister to Egypt, had been arrested for espionage and high treason. "It is not political disagreement that made me resign," asserted Tildy. "A person who belongs to my close entourage committed a great crime against the interests of the Hungarian

State Republic and our people, and consequently I feel that I cannot expect the confidence of the Hungarian people that is indispensable."

On August 3, as 58 members of opposition groups walked out of Parliament, Deputy Premier and former bricklayer Arpad Szakasits, now chairman of the United Workers' Party, was elected President, unanimously and by acclamation. Csornoky was subsequently found guilty of conspiring with émigrés and Anglo-American agents to overthrow the government. He was hanged on December 7.

The Cabinet remained, in form, a coalition of the Smallholders, National Peasants, and United Workers' Party. Premier Lajos Dinnyes resigned on December 8, following a purge of "bourgeois elements" in his party and sharp criticism directed against him for insufficient vigilance. He was succeeded in the premiership by Istvan Dobi, Minister of Agriculture and a leader of the Smallholders.

Church and State. Parliament adopted a bill in June nationalizing all church-conducted schools, comprising some 5,000 institutions or 60 percent of all schools. Joseph Cardinal Mindszenty bitterly fought the measure and excommunicated all Catholic Deputies who voted for it. The Cabinet retorted that the measure would be fully enforced, since the education of children in church schools was intolerable.

The Cardinal accused the regime of "falsehoods, deceit, and terror." Local riots in mid-June led to the arrest of a number of priests. By the close of the year the Cardinal himself was being threatened with prosecution. The Roman hierarchy, however, was not wholly united against the regime. Father Istvan Balogh, leader of the Independent Democratic Party, urged compromise with Communism and inferentially criticised the Cardinal for making the secularization of education the central issue of conflict. The Calvinist church sponsored complete cooperation with the State.

On December 27, Cardinal Mindszenty was arrested on charges of high treason, espionage, and black-market speculation. This action, to be followed by a sensational trial, precipitated a new crisis of major proportions between the Budapest regime, on the one hand, and the Vatican and the U.S.A. on the other.

Relations With the U.S.S.R. On Feb. 18, 1948, Radio Moscow announced the signature by Molotov and Dinnyes of a 20-year mutual defense treaty, providing for joint action against any future aggression by Germany "or any other State which may unite with Germany directly or in any other form." A *New York Times* report of May that the unpublished Soviet-Hungarian trade agreement of Dec. 9, 1947, had been concluded by the Finance Minister without the approval of the Cabinet was promptly denied by the Budapest authorities.

The rift between the Kremlin and Marshall Tito led to Magyar-Yugoslav friction during the summer and autumn. Rakosi and other Communist leaders denounced the Belgrade regime for its deviation from orthodoxy. On August 27 Belgrade formally accused Hungary of seeking to instigate revolution in Yugoslavia. Budapest replied on September 1 that the charge was "unfriendly, untrue, and malevolent" and intended to "disguise the anti-Soviet policy of the present leaders of the Yugoslav Communist Party." By late October Belgrade was accusing Budapest of using "Nazi police methods" against the Yugoslav Legation in an attempt to compel its members to break with Tito. Ten members of the staff were expelled from Hungary early in November.

Relations With the U.S.A. Budapest's collaboration with Moscow inevitably meant conflict with Washington. When asked in December by Homer Bigart of the *New York Herald Tribune* why the press distorted news of America, Zoltan Vas, head of the Supreme Economic Council, replied (according to Bigart): "It is necessary to teach our people to hate the United States so long as there is danger of attack from the West."

American films starring prominent "Red-baiting" actors were banned in January. Elizabeth P. Pallos, American-born secretary to AP correspondent Jack Guinn (expelled in November, 1947), was brought to trial, with thirteen other defendants, on charges of plotting with foreign agents against the regime. On February 16 she was sentenced to six months in jail for failing to report allegedly subversive activities to the police.

In April Gen. Clay expelled the two Hungarian missions in the U.S. zone of Germany in retaliation for Budapest's failure to reply satisfactorily to protests at interference with U.S. repatriation officials in Hungary, looting of an American repatriation train by Soviet soldiers, and the beating and arrest, by Hungarian police, of a Hungarian girl aboard the train. On July 9 the State Department denounced the Hungarian Government for arresting persons who listened to the "Voice of America." A fortnight later 43 Hungarians, including officials and army officers, were brought to trial at Szeged on charges of setting up an underground organization to cooperate with a future American military occupation of Hungary. On September 20 George Bannentine and Karl Ruedemann, American heads of the Hungarian-American Oil Co. (MAORT, owned by Standard Oil of N.J.), were arrested on charges of sabotaging oil production. Upon their expulsion a week later, they asserted that they had been coerced by bad treatment into signing false confessions. The State Department sharply denounced the arrest and protested strongly in December against Hungarian seizure of the properties of MAORT. On December 15 Budapest accused the U.S. of responsibility, threatened nationalization of the properties, and told the State Department to "mind its own business."

Meanwhile the second postwar conference of the Women's International Democratic Federation met in the Magyar capital early in December, with the Congress of American Women represented by Muriel Draper and some thirty other U.S. delegates. The Federation adopted resolutions condemning American foreign policy and praising the achievements of the "Peoples Democracies." As a sequel to his unsympathetic accounts of the conference and of other developments in Hungary, Homer Bigart was expelled on December 10.

Hungary in Exile. The ranks of anti-Communist émigrés were reinforced during the year. Karl Peyer, right-wing Socialist, fled to Germany in late November, 1947. When Admiral Horthy attended the February wedding of an American Consul in Munich, Yugoslavia protested on the ground that he was a war criminal—a view which Washington repudiated. Horthy was reported in November to be preparing to go to Argentina. In June Aurel Alth, Hungarian Consul General in New York, resigned his post in protest at Communist control of his Government. In October Josef Garzuly, Chargé d'Affaires in Vienna, did likewise, following the example of Lazlo Bartok, former Minister to Austria. Rustem Vambery, Minister to the United States, resigned his post in May and was succeeded by Andrew Sik, a Communist Party member. Dr. Vambery died on October 26.

Among exiled Hungarians the most prominent were former Premier Ferenc Nagy, Dezso Sulyok, Imre Kovacs, and Karl Peyer. They found it difficult to formulate a united program of action against the Budapest regime. A plan to establish a "government-in-exile" in Paris fell through in April because of the alleged insistence of the French General Staff that it be headed by Gen. Ferenc Farkas, a former Nazi living in the American zone of Germany. In August an "Executive Committee of Hungarian Social Democrats in Exile" was founded in Switzerland. Peyer challenged its authority and summoned a rival Social Democratic Congress to meet in Paris in October. Unity among the exiles seemed remote. Their return to power in Hungary appeared to be even more remote.

—FREDERICK L. SCHUMAN

ICELAND. An island republic in the North Atlantic, situated 200 miles east of Greenland and about 540 miles northwest of Scotland. Area, 39,709 square miles, only one fourth of which is habitable. Population in 1947, 132,750. Populations of the chief towns: Reykjavik (capital), 51,011; Akureyri, 6,180; Hafnafjörður, 4,050.

Production. Fishing is the chief industry; it supports nearly 30 percent of the population directly. In 1946, the fish catch amounted to 368,000 tons, well below average. About 36 percent of the inhabitants live by agriculture, sheep raising, and dairy farming. Potatoes, turnips and hay are the chief crops. There are very few trees and only low grade coal deposits, but extensive peat deposits are used for fuel and many buildings in Reykjavik are heated by water from hot springs.

Foreign Trade. Exports in 1947 were valued at 290,400,000 crowns, while imports amounted to 519,600,000 crowns. The official selling rate of the crown was: 6.5050 crowns = U.S.\$1. The cost of living index (1937 = 100) rose from 319 in January, 1948, to 324 in October, 1948.

Government. Iceland has been an independent republic since June 17, 1944, when the union with Denmark was dissolved. Legislative power is exercised by the Althing, the oldest parliament in the world, established 930 A.D. The Althing consists of 52 elected members, one-third of whom are elected to the upper chamber by the whole Althing; the other two-thirds form the lower chamber. President of the republic: Sveinn Björnsson, who was elected on June 7, 1945, for a four-year term. Premier, Stefan J. Stefansson (Labor party), since Feb. 4, 1947.

—JOACHIM JOESTEN

IDAHO. A mountain State. Area: 83,888 sq. mi. Population: (July 1, 1948) 530,000, compared with (1940 census) 524,873. Chief city: Boise (capital), 26,130 inhabitants in 1940. See AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS.

Finance. For the fiscal year ended June 30, 1947, total revenue amounted to \$39,982,000; total expenditure, \$37,183,000.

Elections. The 4 electoral votes, Roosevelt's in

1944, remained Truman's in 1948, who won a small majority over Dewey and Wallace. Democrat Bert H. Miller defeated incumbent Republican Henry C. Dworshak in a race for the U.S. Senate. Democrats and Republicans each got one seat in the lower house, a gain of one for the Democrats. There were no statewide contests for State office.

Officers, 1948. Governor, C. A. Robins; Lieut. Governor, Donald S. Whitehead; Secretary of State, J. D. (Cy) Price; Attorney General, Robert E. Smylie; State Treasurer, Lela D. Painter; State Auditor, N. P. Nielson.

ILLINOIS. An east north central State. Area: 56,400 sq. mi. Population: (July 1, 1948) 8,670,000, compared with (1940 census) 7,897,241. Chief cities: Springfield (capital), 75,503 inhabitants in 1940; Chicago, 3,396,808. See AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS.

Finance. For the fiscal year ended June 30, 1947, total revenue amounted to \$438,745,000; total expenditure, \$399,689,000.

Elections. Democrats made a clean sweep of statewide races. Out of 4 million votes cast, Truman held a plurality over Dewey of about 60,000 and won the 28 electoral votes. Democrat Paul H. Douglas defeated incumbent Republican C. Wayland Brooks in the Senatorial contest; and the Democrats won 6 new seats in the House by capturing 12 to 14 now held by Republicans. Adlai E. Stevenson, Democrat, defeated incumbent Dwight H. Green in the gubernatorial race, and Democrats took the following offices: Lieutenant Governor—Sherwood Dixon; Secretary of State—Edward J. Barrett; Attorney General—Ivan A. Elliott; Treasurer—Ora Smith; Auditor—Benjamin O. Cooper.

Officers, 1948. Governor, Dwight H. Green; Lieut. Governor, Hugh W. Cross; Secretary of State, Edward J. Barrett; Attorney General, George F. Barrett; State Treasurer, Richard Yates Rowe; State Auditor, Arthur C. Lueder.

ILLUMINATION. Perhaps the most important event in the progress of illumination during the year was the June meeting of the International Commission on Illumination in Paris which marked the resumption of the interchange of knowledge after a 7-year wartime interruption. The approximately 300 delegates from some 20 nations considered many important items of standardization.

Improvements in existing types of lamps and introduction of some new types accompanied a continued growth in applications. An arc brightness intrinsically brighter than the surface of the sun was reached with superhigh-wattage mercury lamps on which work was done in England and in the United States. A typical lamp may be rated at 10 kw with a 100-millimeter-diameter quartz bulb operating at 705° C., and requires seals carrying as much as 250 amperes. Its importance lies in providing a small source that may supplement the carbon arc, particularly in studio projection work. At the other extreme, a one-watt fluorescent glow lamp was made available with a parallel-blade plug for insertion in any receptacle as a night light. Rated life is 10,000 hours, and average operating cost is three cents per month.

The tenth anniversary of the fluorescent lamp in the United States was observed on April 21. Total estimated sales in 1948 were 101 million units, compared to 79 million in 1947. New lamps recently announced include a 40-watt decorative lamp with a spiral marking which gives an interesting color pattern as the arc stream is seen

through the clear lines, a photographic lamp suitable for use with color film, and a 25-watt 33-inch lamp which starts at 115 volts and operates on 53 volts. With krypton gas filling and other improvements, an 85-watt lamp was developed having the same light output, life, and over-all dimensions as the older 100-watt lamp. As an aid to starting long slim lamps, a silicone coating was found to be satisfactory instead of a thin metallic strip that formerly was run lengthwise on the tube. The change improves appearance and removes the possibility of grounding.

A warm white or warm-tone fluorescent lamp in several sizes was announced in the United States which matches closely the color of large-wattage incandescent lamps having tungsten filaments. Another new tint is a "soft white" that may appear slightly less orchid than the original soft white. Slightly different tints are standard in Western Europe.

Experimental installations of fluorescent street lighting were made at widely scattered points—Tel Aviv, Buenos Aires, Dublin, and Nairobi among them—as the possibilities of this type of lighting continue to be explored. Experience gained in England, where the first recorded installation was made at Rugby two years ago, suggests spacings of from 80 to 150 feet, a mounting height of at least 25 feet, and an output of 7,000 lumens per unit, or 5,000 per 100 running feet. The English trials generally use three-light fixtures with 80-watt five-foot lamps. Depreciation of light output of the complete unit was found to be 38 percent after five months' service, and total operating cost per mile in London was found to be about \$2,000.

Cold-cathode fluorescent lighting was brought to the attention of the public in New York, N.Y., with the delivery of the first of an order of new subway cars having this type of lighting. Steps were taken toward standardization of length and to increase safety, since the high voltages used with these lamps may become hazardous under some conditions. Very modest trials of this type of lamp for street lighting were reported.

Sales of large lamp bulbs in the United States were estimated to total 880 million, an increase of about six percent over 1947. For a decade the sales curve has paralleled almost exactly the curve of total kw-hr sales, and now indicates per capita consumption in the United States of approximately six large lamp bulbs annually.

New luminaires for street lighting featured more accurate control of the distribution of light. A giant unit for whiteway lighting is designed for lamps up to 25,000 lumens, while another unit features a built-in photoelectric control. To simplify installations and provide flexibility, a universal street-lighting head or holder adaptable to any type of hood, globe, or reflector fitting was introduced by manufacturers in the United States.

Two voltage ratings, 600 volts for multiple and 5,000 volts for series, were established by industry standardization for street lighting service. Lamps in corresponding sizes for series and multiple service now have approximately equal mean lumens, and series sockets have been made interchangeable. Maintenance has been aided by mechanical improvements such as latch-on simplicity and stainless steel fittings.

Growth of airport lighting continued throughout the world, but was particularly stimulated in the United States, where a seven-year program was started which will include the lighting of 2,900 small airports; the first year saw 200 scheduled for completion. For airport use, neon tubes were pro-

duced in which the flash time and discharge can be controlled; with suitable reflectors, candlepowers in multiples of ten from 100 to 10 million, inclusive, may be obtained.

Colored filament lamps in which the color is supplied by a ceramic or glaze coating are becoming available and in some sizes are expected to replace former types of lamps having applied colors. Other lamps showed advancement in the application of white ceramic diffusing finishes and silvering. In England low-voltage projection lamps, for example, 12 volts and 300 watts, were made with the adjacent filament coils uniformly touching each other throughout their length. No arcing occurs with careful proportioning, and a source having minimum area is produced. In the 6-to-8-volt class, several automotive-type sealed reflector-bulb lamps formerly in the 5¼-inch diameter have become available in the 4½-inch diameter bulb.

Germicidal lamp sales in the United States were estimated to total 675,000 units for the year, with a power consumption exceeding 30 million kw-hr. A glass was developed with high transmission in the region of 2,537 angstroms. Evidence of general health benefits from prolonged exposure to mild amounts of short-wave ultraviolet radiation, in addition to the reduction or killing of micro-organisms, was found by investigators, notably in Sweden. Studies of these same benefits have been made in connection with poultry raising.

New fluorescent sun lamps were announced in 20-watt 24-inch and 40-watt 48-inch sizes, with outputs of 55,000 and 140,000 E-vitons, respectively, at 3,000 angstroms. They operate on the same accessories as the corresponding fluorescent lighting lamp. New ultraviolet-radiation measuring instruments also appeared. At least one permanent hotel installation was made using various types of lamps to duplicate sunshine qualities, colors, and intensities.

Ultraviolet radiation or so-called "black light" found a new use in the determination of the age and condition of eggs by the color of fluorescence. New sources included a portable battery-operated hand lantern employing a miniature fluorescent lamp and a 250-watt mercury projector unit self-contained in a cubical box.

Experimental work was conducted with the object of correcting the color of high intensity mercury arc lamps by the use of phosphors on the outer bulb, or on the enclosing glassware, and by the addition of the metal cadmium to the mercury. The latter was investigated for color motion-picture photography.

The rare gas xenon has been used in flash tubes of 10-, 20-, and 30-centimeter lengths in which large amounts of power, of the order of 300 joules, are released at each flash at a frequency of 100 cycles per second. To aid photographers in the indoor production of outdoor scenes with true color and appearance, a photographic flash tube was made available with 750 million peak lumens.

Wide application, notably on roadside advertising signs, of a highly reflective paint based on a military development has brightened the night-driving scene. Tiny glass spheres are contained in the paint, which is laid over a fluorescent tape; the day and night colors may be different.

Progress was reported in plastics and glass, which are closely associated with lighting. Large sectional glass panels in metal frames, tinted sheet prismatic glass, and sheet plastic that can be edge-joined in tongue-and-groove fashion were among the new forms. For the formation of a surface for a searchlight mirror, a process was developed for

depositing vaporized aluminum on a metal base and protecting the specular surface with vaporized and deposited silicon monoxide. An interference filter with low reflectivity in the visible spectrum and high reflectivity in the infra-red may be produced by depositing a semitransparent film of aluminum on silicon-monoxide-coated mirrors. As the year closed, the General Electric Company announced the development of a new silica inside finish providing a diffusion of light superior to that from regular inside frosted lamps and said to represent "the most outstanding improvement in filament lamps since the introduction of the first successful inside frosted lamp in 1925."

—C. ROSS HENNINGER

IMMIGRATION, EMIGRATION, AND NATURALIZATION.

The immigration and nationality laws are administered by the Immigration and Naturalization Service of the United States Department of Justice.

Immigration and Emigration. The continued favorable economy in the United States, and improved transportation facilities were factors leading to further increases in immigration to the United States in the year ended June 30, 1948. Immigrant aliens, those admitted for permanent residence, numbered 170,570 as compared with 147,292 admitted during the preceding fiscal year.

Quota immigrants are those admitted under the established quota from European countries, Asia, Africa, and the Pacific, and colonies, dependencies, and protectorates of European countries. The total authorized quota for all countries is 153,929. The numerical limitations established in 1930 have remained substantially the same since that time. In 1930, quotas were practically filled but in the 18 years since until the year ended June 30, 1948, there has been no time when the quotas were even half completed. In the past fiscal year, more than three-fifths of the quota was filled.

The increase in quota immigration came partially from the increase in displaced persons admitted who could make use of Germany's comparatively large quota, and in a considerable increase in the number of quota immigrants making use of the British quota.

Nonquota immigrants are natives of the independent countries of the Western Hemisphere, their wives and unmarried children under 18 years of age; wives, husbands, and unmarried children of citizens of the United States; ministers and professors who enter to carry on their professions and their wives and children; and other classes. The number of nonquota immigrants admitted in the past fiscal year, 78,044, is only slightly above the figure for last year. Wives of citizens and natives

TABLE 1—NONQUOTA IMMIGRANTS ADMITTED
[Years ended June 30]

	1948	1947
Total nonquota immigrants admitted....	78,044	76,591
Husbands of citizens.....	647	579
Wives of citizens.....	30,086	31,698
Unmarried children of citizens.....	6,097	6,462
Natives of nonquota countries.....	37,506	35,309
Wives and children of natives of non-quota countries.....	462	331
Ministers, their wives and children....	1,592	1,336
Professors, their wives and children....	997	534
Women who had been citizens.....	136	91
Other nonquota classes.....	521	251

of nonquota countries are the principal groups admitted. Of the 37,506 natives of nonquota countries admitted 19,423 were from Canada, 8,060 from Mexico, 3,760 from the West Indies, and most of the remainder from South and Central America.

Numbered among the immigrants were 20,755 displaced persons admitted under the President's Directive of Dec. 22, 1945, and 21,954 war brides. The number of immigrant aliens admitted, showing the countries in which they last resided, and the number of resident aliens departing for future permanent residence abroad are shown in Table 2.

Aliens admitted for temporary stay and resident aliens returning from a brief sojourn abroad totaled 476,006, a 30 percent increase over last fiscal year. This number comprised 16,822 government officials, 4,059 members of international organizations, 284,983 visitors for business or pleasure, 124,780 transits, 32,464 returning residents, 11,914 students, 984 other classes.

Importation of agricultural or industrial laborers is authorized after a showing has been made that there is a need for the labor, that prevailing wage rates in the area of employment will be paid, and that United States residents will not be displaced by the aliens employed.

Approximately 11,000 agricultural laborers were imported during the year from Mexico and 12,000 already temporarily employed in the United States under previous arrangements were recontracted for continued employment. Under informal arrangements made by employers through the British West Indies Central Labor Organization, authority was granted for the importation of some 10,000 British West Indian agricultural laborers. Authority, also,

was granted for the admission of 2,000 Canadian unskilled farm laborers and industrial workers.

Emigrants and Nonemigrants. During the fiscal year 1948, there were 448,218 aliens (exclusive of border-crossers, Mexican agricultural laborers, and crewmen) who departed from the United States. Only 20,875 were emigrants, i.e. aliens who left a permanent residence in the United States for a permanent residence abroad; 25,597 nonemigrants were resident aliens who planned to return to the United States after a temporary stay abroad; and 401,746 were aliens who had been admitted as visitors, persons in transit, and others temporarily admitted.

The greatest volume of travel into and out of the United States from foreign countries occurs at the Canadian and Mexican borders where aliens and citizens frequently make daily or weekly crossings and recrossings. During the fiscal year 1948, there were 78,362,207 such entries of which 38,892,545 were aliens and 39,469,662 were citizens.

Alien Crewmen. There were 63,494 vessels and 85,122 planes inspected by immigration officers on arrival in the United States. The number of crewmen examined on arrival increased by 9.9 percent over last year to 1,937,874 made up of 922,349 aliens and 1,015,525 citizens. There were 4,353 deserting crewmen, a number, no doubt, expanded by the practice of bringing overcrews, or crews considerably larger than the normal number employed to man ships.

Deportation and Voluntary Departures. With greater emphasis placed on ridding the country of aliens illegally present in the United States came an increase in the number of deportations and voluntary departures, as 20,371 aliens were deported and 197,184 aliens who had been adjudged deportable were allowed to depart in the fiscal year 1948. Concerted efforts have been made to ferret out aliens engaged in subversive activities resulting in the issuance of warrants of arrest in a number of cases.

Border Patrol. During the fiscal year 1948 Border Patrol officers patrolled 10,095,461 miles, examined 1,863,409 conveyances, and questioned 5,529,685 persons. They also seized 215 automobiles and trucks and 26 other conveyances, the value of all seizures amounting to \$234,125. Apprehensions again approached the 200,000 figure as compared with the approximate 35,000 in 1929 which was considered to be a peak year for illegal entries for the period 1924 to 1943. The majority of the apprehensions were of Mexicans coming to engage in agricultural labor. The demand for such labor, and the difference in economic conditions, of course, create the incentive which results in the coming to the United States of such large numbers of aliens.

The efforts of the Border Patrol are largely taken up by the illegal entry of Mexican farm laborers, and more effort must be directed to the task of preventing the illegal entry of other classes of aliens. The smuggling of such other aliens ceased to be only a potential problem and during the year began to be a real one.

Aliens and Alien Registration. All aliens remaining in the United States for 29 days or longer are required to register under the provisions of the Alien Registration Act of 1940. The initial registration for aliens began on Aug. 27, 1940, and continued through Dec. 26, 1940. During this period 4,889,770 aliens registered as residents of continental United States. Factors determining the alien population are net immigration, naturalization, and mortality. By using the true figures for immigration and naturalizations, and estimating the alien mortality for the period, it is possible to arrive at the

approximate alien population. On such a basis it is estimated that there were approximately 3 million resident aliens in continental United States on June 30, 1946. This estimate does not take into account those here temporarily; that is nonimmigrants, border crossers, and imported laborers.

Naturalization. The number of noncitizens who were naturalized in the fiscal year 1948 was 70,150, the lowest number since 1911. Of the number naturalized, 69,080 were civilian and 1,070 military naturalizations. The number of noncitizens naturalized during the year ended June 30, 1948, is shown in the table.

TABLE 3—ALIENS NATURALIZED DURING YEAR ENDED JUNE 30, 1948

<i>Country of Former Allegiance</i>	<i>Total</i>	<i>Civilian</i>	<i>Military</i>
All countries.....	70,150	69,080	1,070
Austria.....	1,285	1,283	2

Poland.....	5,136	5,107	29
U.S.S.R.....	3,143	3,107	36
Yugoslavia.....	858	847	11
Other Countries.....	12,584	12,405	179

Throughout the year, 2,887 petitions for naturalization were denied, as compared with 3,953 denied during the previous year. There were 163 judgments of naturalization revoked and certificates of naturalization canceled during the year, an increase of 69 as compared with the preceding year. In 150 cases the Foreign Service of the Department of State initiated the action because naturalized citizens of this country became permanent residents of foreign countries within five years of naturalization. In 13 cases the Immigration and Naturalization Service initiated action because naturalization was otherwise fraudulently or illegally procured.

During the last year there was an increasing number of cases of naturalized persons who had resided abroad for many years, had failed to make a timely return to the United States, and hence had lost their citizenship under Section 404 of the Nationality Act of 1940. These persons returned to this country after the time limited by law, and being admitted as aliens, sought to have their status as citizens reestablished on the basis of meritorious facts. The policy has been adopted of regarding such persons as not having been expatriated if their return to the United States before Oct. 14, 1946, was prevented by conditions of travel beyond their control.

Aside from this ground, nationality may be lost involuntarily through conviction of treason, conviction by court-martial of desertion from the armed forces in time of war, and departing or remaining away from the United States to avoid training and service in the land or naval forces. It may be lost voluntarily by naturalization in a foreign state, taking an oath of allegiance to a foreign state, and the performance of certain acts identified with citizenship of a foreign state. During the year, 6,779 persons thus lost United States nationality.

Petitions for naturalization were filed by 68,265 persons, a decrease of 23 percent from the 1947 fiscal year when 88,802 petitions were filed. Declarations of intention or "first papers" filed increased

to 60,187. There were 37,771 declarations filed in the fiscal year 1947; 28,787 in 1946; 31,195 in 1945; and 42,368 in 1944.

Alien Enemies. Alien enemies include natives, citizens, denizens, and subjects of countries with which the United States was at war—Japan, Germany, Italy, Hungary, Rumania, and Bulgaria.

At the beginning of the fiscal year 1948 there were 203 Germans and 384 Japanese under alien enemy proceedings. Two Germans were received during the year, bringing the total to 589. During the year seven Germans and one Japanese departed voluntarily under removal orders issued by the Attorney General pursuant to the Presidential Proclamation of July 14, 1945, 23 Germans and 17 Japanese were released outright, one German died.

Pursuant to an order by the United States District Court for the Northern District of California issued on Sept. 8, 1947, all of the Japanese who renounced their United States citizenship, pursuant to Section 401(i) of the Nationality Act of 1940, as amended, were released pending final disposition of the court action.

At the close of the fiscal year there were 174 Germans and 27 Japanese still under orders of removal issued by the Attorney General of which number 161 Germans were in custody, and the balance were on parole. The alien enemy family-internment camp at Crystal City, Tex., which was the only one remaining in operation during the fiscal year was closed on Feb. 27, 1948.

New Legislation. The Act of July 1, 1947 (public law 146), provided for membership and participation by the United States in the International Refugee Organization and made general reference to the authority of the IRO in relation to action affecting the immigration laws of the United States.

The Act of July 1, 1947 (public law 155), corrected Section 342(b)(8) of the Nationality Act of 1940, changing the word "maximum" to "minimum" as the word appears the second time in the subsection.

The Act of July 22, 1947 (public law 213), amended public law 271—79th Congress by making eligible for admission into the United States the alien spouses of American citizen members of the armed forces or honorably discharged veterans regardless of race, where the marriage occurred before 30 days after the enactment of the Act.

The Act of July 23, 1947 (public law 221), amended the Act of May 7, 1934, granting citizenship to Indians of the Metlakatla Tribe by extending the benefits thereof to those Indians who have resided continuously in the Territory of Alaska as well as in the Annette Islands since Jan. 1, 1900. This law also amends Section 339 of the Nationality Act of 1940 by including the Metlakatla Indians naturalized by Section 1 of the Act of May 7, 1934, among those who may apply for certificates of citizenship.

The Act of July 25, 1947 (public law 239), terminated certain emergencies and war powers and rendered inoperative Section 401(i) of the Nationality Act of 1940.

The Act of July 30, 1947 (public law 274), amended Section 12 of the Immigration Act of 1917, giving the Attorney General and the Commissioner authority to prescribe the contents of manifests.

The Act of Aug. 4, 1947 (public law 357), dealt with the right of aliens to enter the United States for United Nations activities.

The Act of Jan. 27, 1948 (public law 402), known as the "Cultural Relations Act," dealt in part with the interchange on a reciprocal basis

between the United States and other countries of students, trainees, teachers, guest instructors, professors, and leaders in fields of specialized knowledge or skill.

The Act of Mar. 24, 1948 (public law 450), extended the period of validity of public law 471—79th Congress, entitled "An Act to Facilitate the Admission to the United States of Alien Fiancees or Fiances of Members of the Armed Forces of the United States" to Dec. 31, 1948, and amended the Act of June 29, 1946, by repealing clause (b) of the proviso of Section 1 thereof.

The Act of May 19, 1948 (public law 538), amended the Immigration Act of 1924 to provide that husbands of United States citizens are entitled to nonquota status if the marriage occurred prior to Jan. 1, 1948. The husbands of citizens who marry on or after that date are to be accorded first preference status within the quota.

The Act of May 25, 1948 (public law 552), amended the Act of Oct. 16, 1918, to provide for the exclusion and deportation of aliens who, the Attorney General knows or has reason to believe, seek to enter the United States for the purpose of engaging in activities which will endanger the public safety of the United States.

The Act of June 1, 1948 (public law 567), amended the Nationality Act of 1940 by adding a new Section 324 (A), providing for the expeditious naturalization of noncitizens who served honorably in an active duty status in the military or naval forces of the United States during World War I or during a period beginning Sept. 1, 1939, and ending Dec. 31, 1946.

The Act of June 3, 1948 (public law 600), provided for special return permits for treaty merchants who lawfully entered the United States under Section 3(6) between July 1, 1924, and July 5, 1932, both inclusive.

The Act of June 16, 1948 (public law 647), provided in part that, subject to concurrence, the Secretary of State, the Administrator of Civil Aeronautics, and the Chief of the Weather Bureau of the Department of Commerce, within their respective fields, are authorized within or outside the United States to train foreign nationals in aeronautics and related subjects essential to the orderly and safe operation of civil aircraft.

The Act of June 24, 1948 (public law 759), is the Selective Service Act of 1948 and provided, among other things, that any citizen of a foreign country who is deferred or exempt from training and service may be relieved from liability for such training and service upon his application therefor, but is thereafter debarred from becoming a citizen of the United States.

The Act of June 25, 1948 (public law 774), known as the "Displaced Persons Act of 1948" authorized the admission into the United States during the next two years of 205,000 displaced persons of Europe and the adjustment of the status of 15,000 such individuals who entered the United States prior to Apr. 1, 1948.

The Act of June 25, 1948 (public law 776), amended the Organic Act of Puerto Rico by providing that Section 404(c) of the Nationality Act of 1940 shall not apply to persons who acquired United States citizenship under the provisions of Sections 5 and 5(a) of the Organic Act of Puerto Rico.

The Act of June 25, 1948 (public law 783), corrected Section 332(a) of the Nationality Act of 1940 by inserting the word "seven" in place of the word "ten" which had been erroneously set forth in that Section.

The Act of July 1, 1948 (public law 863), further amended Section 19 of the Immigration Act of 1917 by removing the racial bar to the suspension of deportation and enlarging the class of persons whose deportation may be suspended to include aliens having at least seven years' residence in the United States and who were residing in this country on the effective date of the Act, notwithstanding lack of family ties. The amendment also provided that instead of negative action permissible in Congress under the prior law, the Attorney General shall cancel deportation proceedings only after Congress passes a resolution stating in substance that it favors the suspension of deportation and that if Congress does not pass such a resolution the alien shall be deported.

The Act of July 3, 1948 (public law 893) provided for the recruitment of farm labor in the Western Hemisphere for temporary agricultural employment in the United States.

—WATSON B. MILLER

INDIA, Union of. A self-governing dominion of the British Commonwealth of Nations. The Union, as established Aug. 15, 1947, includes the former British Indian provinces of Assam, Bihar, United Provinces, Orissa, Central Provinces, Madras, Bombay, the newly created provinces of West Bengal (including Calcutta) and East Punjab, the Andaman and Nicobar Islands, and whatever princely states may decide to join (547 by Dec. 1948, forming 20 new provinces.) Capital, New Delhi. (See PAKISTAN.)

Area and Population. The Union of India includes approximately 1,200,000 square miles, the greater part of the subcontinent of India's 1,581,410 square miles, the remainder of which was assigned to Pakistan. The population is approximately 300 million, of whom about five-sixths are Hindus. The population before partition was 87 percent rural. City dwellers were largely concentrated in 1941 in the chief cities (Calcutta, 2,108,891; Bombay, 1,489,883; Madras, 777,481; Hyderabad, 739,159) all of which lie within the new Union, and in other large centers. The density (about 245 per sq. mi.) was one-third that of England and Wales (724) or Belgium (723) and less than that of Switzerland (265 per sq. mi.). The population included more than 45 groups speaking nearly 200 different languages.

Education and Religion. Elementary education is imperfectly developed and illiteracy is high (87.8 percent in 1941). In British India in 1945-46 there were 168,000 recognized primary schools with an enrollment of about 12 million. College and university enrollment was about 175,000.

Classification according to religious communities in 1941 was as follows: Hindus, 66 percent; Moslems, 24 percent; Sikhs, 1.5 percent; Buddhists, Parsees and others, 8.5 percent. The majority of the Moslems thus listed are now residents of the new Dominion of Pakistan.

Production. The greater part of the former India's mineral resources, including particularly large coal and iron deposits, as well as 90 percent of industrial capacity, lie within the Union of India. The latter has all of the jute, paper, and iron and steel works, including the largest steel plant in the British Commonwealth, and nearly all of the cotton mills and glassworks. Although it is not so preponderantly agricultural as Pakistan, because of its size the Union of India retains the greater part of India's agricultural resources. The chief crops are rice, wheat and cotton. Tea, coffee, rubber and jute are also important, although India has only

two-fifths of the jute acreage of the former India. The area planted to cotton in 1947-48 was approximately 7,129,000 acres. The tea crop in 1949 was estimated at 590 million lb. (including Pakistan), as compared with 586.4 million lb. in 1947. A sizeable reserve of food grains in general was accumulated in 1948.

The most important industry is cotton manufacturing. For the period September, 1947-April, 1948, Indian mills consumed 2,225,753 bales of Indian cotton and 437,659 bales of foreign cotton, an increase in each case over the corresponding period the year before. Production in 1948 was expected to total 4,200 million yards, as compared with 3,800 million in 1947. Jute mills, rice mills, tea factories, sugar factories and iron and steel mills employed large numbers of persons.

Foreign Trade. In 1946-47 undivided India's exports were valued at \$959 million, and imports at \$865 million. Exports to the United States were 23 percent of total exports and imports from the United States 19 percent.

Transportation. The Union of India has a railway mileage of 25,970 and a highway mileage of 246,605. Nearly all of the railways are government owned. Gross traffic receipts for 1948-49 were estimated at \$570 million. The Minister for Railways and Transport reported on February 16 that it would be three years before the railways could accept all the traffic offered.

At partition India retained the important ports of Bombay, Madras, Calcutta and Cochin. India's coastal shipping was reported as about 800,000 gross tons in 1948. The air service is extensive (22 routes and 9,361,673 miles flown in 1947) and the June 23 air-transport agreement with Pakistan was expected to extend air routes.

Finance. The first annual budget for the year ending Mar. 31, 1949, showed estimated revenue at \$769 million and expenditure at \$772 million. Undivided India emerged from World War II as a creditor nation, with a debt of \$5,000 million owing from Great Britain. An agreement between the Union of India and Great Britain, signed July 1, 1948, provided for specified releases to India (and to Pakistan by an agreement signed the same week) and reduced the debt owed to the two Dominions to about \$3,540 million.

Government. When undivided India's Interim Government was succeeded by the Government of the Dominion of India on Aug. 15, 1947, the Constituent Assembly became the Parliament. Prime Minister and Minister of External Affairs and Commonwealth Relations, Pandit Jawaharlal Nehru; Governor-General, Chakravarti Rajagopalachari, who succeeded Lord Mountbatten June 21, 1948. Throughout 1948 the Constituent Assembly had a draft constitution under consideration.

Events, 1948. The assassination of Mohandas Karamchand Gandhi on January 30 was a shock felt far beyond the borders of India. Gandhi had devoted the last weeks of his life to efforts to bring an end to violence in India, and early in January he met communal disturbances in Delhi with a five-day fast which had a profound effect and led to solemn promises of greater consideration for the Moslem minority.

All except the minimum essential business activity was abandoned for some days after Gandhi's death, until the period of prayer and dedication to his teachings culminated in the ceremonies held throughout India in connection with the immersion of his ashes in the holy rivers. At the same time sporadic rioting and arson took place, particularly in Bombay and other western centers,

against the right-wing Hindu Mahasabha organization, of which the assassin, Nathuram Vinayak Godse, was a member. This group championed pure Hinduism and insisted that Moslems were a minority in a Hindu state.

Action against Extremist Groups. Although immediately after Gandhi's death Mahasabha branch offices were attacked and the houses of prominent Mahasabha officials were burned, the Government did not take action against the organization as such. Mahasabha was nearly 50 years old and one of its leaders, Shayam Prasad Mukherjee, was Minister of Industries and Supplies in the Cabinet.

On February 4 the Indian Government announced the outlawing of an even more extreme organization, Rashtriya Swayam Sewak Sangh (Association of Volunteers to Serve the Country) which was newer and had recently attracted attention by its drilling and other pseudo-Fascist methods. It was reported that about 350 leaders of the organization were arrested. In December it was reported that the general secretary of the organization was one of the 30 or so members of the R.S.S.S. arrested in Delhi, after there had been demonstrations against the freedom-of-worship clauses in the proposed Indian constitution.

The Communist group of some 75,000 out of India's 300 million people had little success with an effort to show that Gandhi's death was traceable to the British intelligence service. It was observed, in the period of great grief in India, that to the deeply emotional tributes to Gandhi from western leaders of state there failed to be added anything from Moscow. As Communism rose in Malaya and other eastern areas in the summer Indian provincial authorities took several steps to suppress Communist activities, but the Nehru Government postponed or avoided similar action.

Conquest of Hyderabad. The Dominion and the large and rich state of Hyderabad, with a predominantly Hindu population and ruled by the Moslem Nizam (often described as the richest man in the world), were at odds after the latter part of 1947. This princely state, which desired to retain its independence, signed late in 1947 a "standstill" agreement with the Government of India guaranteeing the state's independence for one year. Hindus within Hyderabad held various views; some were anti-Moslem and others feared Brahmin (highest caste Hindu) domination if India obtained control of the state.

After discussions with the Government of India failed to produce a peaceful settlement, the Hyderabad Government on August 24 formally petitioned the United Nations Security Council to take up its quarrel with India, charging that India had conducted a campaign of "violent intimidation" in the preceding few months, had threatened Hyderabad with a crippling economic blockade if it did not give up its independence, and had thus endangered the peace of Asia.

Soon Indian troops were on the march towards Hyderabad, upon which (September 18) the latter asked urgently for an immediate Security Council meeting to stop Indian action. The battle was unequally joined, and on September 17, four and one-half days after the Indian Army crossed the Hyderabad borders from several directions, the Nizam issued a "cease fire" order. The formal surrender of Hyderabad was accepted on September 18, and Prime Minister Nehru announced that the state would be under Indian military government until normality was restored.

At the end of November it was announced that the "standstill" agreement had been extended for

another year, until the Constituent Assembly should decide the future of Hyderabad. Provision was made for the stationing of Indian troops in the state. The matters of defense, foreign affairs and communications remained under the control of the Government of India.

Fighting in Kashmir. Little progress was made until late 1948 in the dispute over Kashmir, amounting to undeclared war between the Dominions of India and Pakistan. On January 17 the United Nations Security Council called on India and Pakistan to take measures immediately to end the fighting in Kashmir and to appeal to their peoples to respect the Council's request for a truce. This was in response to India's accusation that Pakistan was helping raiders in Kashmir and furnishing bases, and Pakistan's accusation that India was guilty of aggression, of plotting the destruction of the state of Pakistan and of an "organized plan to exterminate the Moslems."

In April the Security Council recommended a truce and the holding of a plebiscite, and also set up a commission to bring delegations from India and Pakistan to an understanding. Until late in the year no success had been achieved and the situation in Kashmir had grown worse. Charges succeeded counter-charges. On December 2 the Indian Government through its Defense Ministry replied to a charge made a few days before by Pakistan, arguing that India's military actions in Kashmir had been in self-defense while Pakistan and Azad (Free) Kashmir had launched offensives, some of which caused Indian withdrawals.

At the end of the year India was said to have five army divisions in Kashmir and to have occupied some 1,500 square miles of territory. This operation was for the relief of Hindus and Sikh refugees in Poonch city, while from the same area Moslems were trekking westward in cold weather to seek shelter in Pakistan.

Draft Constitution. As published on February 25 the draft constitution prepared by the Drafting Committee of the Constituent Assembly declared India to be a "sovereign democratic Republic" but in a footnote it was explained that the "question of the relationship between this democratic republic and the British Commonwealth of Nations remains to be decided subsequently." The implication was that India had not yet fully decided whether to continue her membership in the Commonwealth, and, if so, in what form.

The draft provided for a central law-making body of two houses. The Indian Union would be composed of three classes of states, including the existing Governor's provinces, princely states and various territories such as the Andaman and Nicobar Islands. According to the draft, "untouchability" was abolished and its practice in any form forbidden. Child marriage was forbidden, and discrimination on grounds of religion, race, caste or sex was prohibited.

The draft constitution was presented to the Constituent Assembly on November 4. Later, on November 29 the clause pertaining to untouchables was approved. It was remarked that at that time the Indian Government included two untouchables, the Minister for Labor, Shri Jagivan Ram, and the Minister for Law, Dr. B. R. Ambedkar. Dr. Ambedkar, who opened the session of the Constituent Assembly in the absence of Prime Minister Nehru, was married to a Brahmin, a member of the highest of the recognized Hindu castes.

Commonwealth Relations. Prime Minister Nehru took an active part in the Conference of Commonwealth Prime Ministers in London Oct. 11-22,

1948, at which the members from the three new dominions of India, Pakistan, and Ceylon were warmly received, and there was some indication that the give-and-take of the sessions influenced his attitude on India's relation to the Commonwealth. At a press conference in Delhi on November 12, shortly after his return from London, Nehru said that with the world as it was today, no country should seek to break existing links or to isolate itself. At the same time he alluded to the fact that the final decision was in the hands of the Constituent Assembly.

India was one of the five countries of the British Commonwealth to sign the trade agreement with Japan announced on November 8, under which arrangements were made for exchanges worth \$220 million. India sent a delegation to the Commonwealth parliamentary conference which met in London late in October. On November 26 Prime Minister Nehru declared in the Constituent Assembly that India, like Britain, would not consider Eire a foreign country or its nationals as foreigners when Eire's proposed separation from Britain had been completed.

Relations with the United States. Sir B. Rama Rau was designated Indian Ambassador to the United States on June 18, to succeed Asaf Ali, who was to become Governor of Orissa Province. At this time a slight but far from ominous strain existed in the relations between the two countries because of trade difficulties. American Ambassador Henry Grady had recently made representations to Prime Minister Nehru on behalf of American importers who were failing to get jute because of India's quota system. Indians, on the other hand, demanded more favorable treatment from the United States in supplying capital goods and equipment.

The problems created by India's growing inflation were pressing. There was a lively debate on the subject in Parliament on September 3, in which Prime Minister Nehru promised that the Government would soon take the country into its confidence and make known the control measures decided upon.

—ALZADA COMSTOCK

INDIANA. An east north central State. Area: 36,555 sq. mi. Population: (July 1, 1948) 3,909,000, compared with (1940 census) 3,427,796. Chief city: Indianapolis (capital), 386,972 inhabitants in 1940. See AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS.

Finance. For the fiscal year ended June 30, 1947, total revenue amounted to \$197,652,000; total expenditure, \$177,215,000.

Elections. Dewey held the 13 electoral votes which he won in 1944, but by only a small fraction of his 1944 popular majority. There was no Senatorial contest. Democrats won 7 House seats to 4 for Republicans, a Democratic gain of 5. Democrats also swept all statewide races for State office. In the race for governorship, formerly held by the Republicans, Henry F. Schricker, Democrat, defeated Hobart Creighton. Other winners were: Lieutenant Governor—John A. Watkins; Secretary of State—Charles F. Fleming; Attorney General—J. Emmett McManamon; Auditor—James M. Propst; Treasurer—F. Shirley Wilcox; Superintendent of Public Instruction—Deane E. Walker. The voters authorized a veterans' bonus.

Officers, 1948. Governor, Ralph F. Gates; Lieut. Governor, Richard T. James; Secretary of State, Thomas E. Bath; Attorney General, Cleon H. Foust; State Treasurer, Frank T. Millis; State Auditor, Alvan V. Burch.

INDIAN AFFAIRS, Bureau of. The Bureau of Indian Affairs in the U.S. Department of the Interior acts as the administrative agency in carrying out the provisions of treaties and agreements made with the Indian tribes, and statutes enacted by the Congress. It has jurisdiction over approximately 57 million acres of Indian trust lands which are scattered from the northwest corner of the State of Washington to the Seminole reservation in the Florida Everglades. These lands vary in size from individual units of a few acres to the Navajo reservation in Arizona, New Mexico, and Utah, which is larger than the State of West Virginia.

In many of these areas this bureau, often termed the Indian Service, must provide almost all of the services which non-Indian citizens receive from the Federal, State, and local governments. Administration functions through a central office in Washington, D.C., and the field service, consisting of 54 agencies, 10 non-reservation boarding schools, and five detached sanatoriums. Each agency is headed by a superintendent, with a staff of specialists in education, health, welfare, extension, irrigation, forestry, and construction.

As of Jan. 1, 1948, Indians under the jurisdiction of the Bureau of Indian Affairs numbered approximately 400,000 in the continental United States, with an additional 35,000 natives—Indians, Eskimos, and Aleuts—in Alaska. They belong to some 200 different tribes and speak at least 55 distinct languages; their customs and ways of life are varied. In general they are a rural people, depending upon livestock, agriculture, timber, and wage work as their principal sources of income.

In its general policy the Indian Service seeks two objectives: (1) to assist the Indian people in attaining economic self-sufficiency through maximum use of their resources or, where resources are inadequate, through vocational training and placement in off-reservation employment; and (2) to encourage Indians to move in the direction of ultimate assimilation in American society. The attainment of these objectives is sought through programs of education, health improvement, land management, credit financing, and basic resource development, including the construction of roads and irrigation works, soil conservation projects, forestry practices, and related activities.

Indians have made marked progress in the use of land and other resources in recent years. In the years since 1930 they have increased the acreage of crop lands farmed by themselves by 400,000 acres. This land formerly was leased by non-Indians. They have also taken over from leasees more than 7,000,000 acres of grazing land. Indian-owned livestock has increased from 171,000 head (1932) to 408,000 head (1948), and total agricultural income increased in the same period from \$1,850,000 to \$49,000,000. The organization of professional agricultural extension work on Indian reservations in 1931, together with a shift in educational policy which resulted in giving increased training in agriculture and stock raising, has resulted in the rehabilitation of 12,000 or more Indian families.

Resource development has been greatly aided by the construction of some 250 irrigation projects on Indian lands. These projects vary in size from a few acres to areas exceeding 100,000 acres, and represent an investment of \$60 million. The total land supplied with water for irrigation use amounts to 540,000 acres. Surveys and investigations are under way to develop plans for all potentially irrigable Indian lands, estimated at an additional 475,000 acres. The construction of these projects will add greatly to the productivity of Indian lands

and assure a subsistence base for at least 10,000 families.

The schools operated by the Indian Service are designed to serve a community. The courses offered are equivalent or are superior to the courses of study provided in the States in which the Indian schools are located, but in addition they have been adapted to the needs of each reservation or each area, accordingly as the area is devoted to farming, to grazing operations, or to survival on the Arctic coast. The schools provide the main meal of the day for many day school students, they furnish medical examinations, they offer an arrangement by which parents may obtain clothing for the children on a work-payment basis, they supply recreational opportunities, and they serve as a center for adult community life with shops and home economics rooms in which the parents may repair furniture and farm equipment, make clothing, preserve foods, and find entertainment and leisure reading.

More Indian children are in public schools than in Federal Indian schools, the numbers being, respectively, 32,000 and 27,000. An additional group of 7,800 children attend private schools, mostly sectarian. The children attending Federal Indian schools are predominantly full-blood and come from non-English speaking homes. These factors place a limitation on the rate at which additional Indian children can be placed in public schools, since ordinarily the public schools are not prepared to cope with the language handicap.

A separate Indian medical service was organized in 1924, and two years later a cooperative arrangement was entered into with the United States Public Health Service by which the latter agency provides the medical director and certain field physicians to the Indian Service. This has resulted in a greatly improved level of medical care. The Indian Service operates 74 hospitals and sanatoriums in the United States and Alaska, with a total capacity of 4,000 beds. An important program of BCG vaccinations was initiated during the year, following a ten-year experimental study of the effectiveness of the vaccine in the prevention of tuberculosis.

Favorable court decisions in Arizona and New Mexico opened the door to full voting privileges for the approximately 100,000 Indians in those two States. These decisions removed the last legal barriers interposed between Indians and their franchise rights. Although all Indians born within the United States were made citizens by the Act of June 2, 1924, as recently as 1940 seven States barred Indians from voting either by law or by interpretations of law resulting in disfranchisement. Five of these States had allowed their restrictive provisions to go unenforced, and with the formal court actions in Arizona and New Mexico in July and August, 1948, it seems unlikely that any of the States in which discriminatory laws remain on the books will attempt in the future to enforce them against their Indian citizens.

William A. Brophy retired as Commissioner of Indian Affairs in June, 1948, having served since Mar. 15, 1945. William Zimmerman, Jr., who has been Assistant Commissioner since 1933, was named Acting Commissioner.

—D'ARCY McNICKLE

INDOCHINA. The southeastern peninsula of Asia, consisting of Burma, French Indochina, Siam, the Federation of Malaya, and Singapore.

INDONESIA. Official name of the former Netherlands East Indies adopted by an amendment to the

Dutch Constitution effective Sept. 20, 1948. Capital, Batavia, on the island of Java.

Area and Population. Total land area, 733,000 square miles with an estimated 1948 population of 75,000,000. Prior to the Dutch attack of December, 1948, on the Republic of Indonesia, it comprised about 166,000 square miles (25 percent of Java and 80 percent of Sumatra) with 25 million to 30 million inhabitants. Dutch-controlled Federal Territories and other non-Republican areas, about 570,000 square miles with approximately 50 million inhabitants. Total population (1930 census): 60,727,233. Java and Madoera had 48,416,000 inhabitants in 1930; the Outer Provinces, 22,060,000; there were about 250,000 "Europeans," including 220,000 Netherlands and Eurasians, 1,200,000 Chinese, and 115,000 other alien Asiatics. Over 92 percent of the population is rural. Chief cities (with latest available populations): Batavia, 606,800; Soerabaja (Surabaya), 390,700; Semarang, 217,796; Bandoeng, 166,815; Soerakarta, 165,484; Djokjakarta (Jogjakarta), 136,649, all in Java. Palembang (Sumatra), 109,069.

Education and Religion. At the 1930 census 93 percent of the population was illiterate; in 1940, 90 percent (estimated). Total prewar primary school enrollment for all Indonesia, 2,200,000. In 1948 there were in Dutch-controlled territories 2,080,000 children in primary schools using the Indonesian language; 197,000 in Dutch-language primary schools; 50,000 in Chinese schools. In Republican territories there were reported to be 16,094 primary schools, 52,800 teachers, 2,728,000 pupils; 234 secondary schools, 2,058 teachers, 46,513 pupils. About 20 percent of all pupils in the Dutch areas attended missionary schools. Higher education was given at the Bandoeng technical college, Batavia University, the Soerabaya medical school, and newly established Republican institutions at Batavia, Jogjakarta (2), Klatten in Central Java, Soerakarta, and Malang.

About 60 million Indonesians are Moslems, 2.5 million Christians, 1 million Hindus (in Bali), and the rest Buddhists, Taoists and pagans.

Production and Trade. Agriculture is the chief industry, with mining, manufacturing, forestry, and fishing of secondary importance. However the copra industry supports some 75 percent of the population of East Indonesia. Before World War II Indonesia produced approximately the following percentages of the world's annual yields: quinine 90, pepper 85, kapok 70, rubber 40, copra 30, palm oil 25, fibers 20, tea 20, tin 15. Other products are petroleum, bauxite, manganese, coal, rice, coffee, sugar, gums, insecticides, cigar wrappers, spices. Java's 1948 rice output was about 3,800,000 metric tons (4,800,000 prewar). Tin production exceeded the prewar level; but output of most other products was much below the prewar rate due to the continued Dutch-Republican deadlock. In inflated postwar currency, the 1948 industrial output of the Dutch areas was estimated at \$472 million (\$250 million prewar).

In 1939 exports from all Indonesia were valued at \$420 million, imports \$284 million. Exports from Dutch-controlled areas, at inflated prices, were \$130 million in 1947 (\$58 million in 1946); imports, \$269 million in 1947 (\$69 million in 1946).

Indonesian exports by volume as of September, 1948, averaged only 25 percent of the prewar level, the breakdown of the major export items being: tin, 87 percent of prewar; rubber 57, petroleum 48, copra and vegetable oils 26, kapok 23, sugar 7, tea 6, tapioca 5, pepper 2.

Government. For the prewar Dutch administra-

tion, see YEAR BOOK, *Events* of 1947. Following the collapse of Japanese rule in August, 1945, an Allied (British) Military Administration functioned until November, 1946, when the territories under its control were handed back to Dutch civil rule. The Dutch Acting Governor General administered these territories under a state of emergency with the assistance of a cabinet of departmental chiefs and subject to the directives of the Netherlands Government.

Nationalist leaders of the Indonesian Republic proclaimed all of Indonesia independent on Aug. 17, 1945. In the Linggadjati (Cheribon) Agreement signed Mar. 25, 1947, the Netherlands recognized the Republic as exercising the de facto authority over Java, Madoera and Sumatra. However the Dutch-Republican hostilities of July-August, 1947, brought all of Madoera, some three-fourths of Java, and a fifth of Sumatra under the Dutch.

Beginning at the end of 1946, the Dutch sponsored the establishment of the following federal states and autonomous areas in territories under their control:

DUTCH-SPONSORED INDONESIAN STATES

<i>States</i>	<i>Area^a</i> <i>(Sq. Mi.)</i>	<i>Pop.</i> <i>(1000's)^d</i>	<i>Capital</i>
West Java ^a (Pasundan) . . .	14,970	13,000	Bandoeng
East Indonesia ^b	140,000	12,000	Macassar
East Java	9,000	8,000	Soerabaya
Madoera	2,000	2,000	Bangkalan
East Sumatra	35,200	2,000	Medan
South Sumatra	32,200	2,000	Palembang
<i>Autonomous Areas</i>			
Bandjar ^c	1,200	1,200	Bandjarmasin
West Borneo	58,700	1,100	Pontianak
East Borneo	100,000	400	Balikpapan
Bangka-Biliton-Riouw			
Archipelago	10,621	460	Pangkal Pinang
Great Dayak ^c	48,500	200
South East Borneo ^c	4,000	100

^a Excluding Bantam. ^b Comprising all the islands east of Java, Madoera, and Borneo except Netherlands New Guinea. ^c According to Dutch official sources, Bandjar, South East Borneo, Great Dayak, and Kota Waringin were to be united in a federation, to be called South Borneo. ^d Estimated.

Events, 1948. Hopes for a settlement of the stubborn dispute between the Netherlands and the Indonesian Republic rose in January with the conclusion of the Renville Agreements. The Three-Power Good Offices Committee of the UN Security Council induced delegations representing both governments on January 17 to sign a military truce and a statement setting forth the principles agreed upon for continuance of the negotiations. Six additional principles were added to the original eight on January 19.

The most important points called for (1) continued assistance of the Good Offices Committee in working out a settlement based on the principles underlying the Linggadjati Agreement; (2) mutual guarantees of freedom of assembly, speech, and publication; (3) restoration as soon as practicable of economic activity, trade, transportation, and communications through the cooperation of both parties; (4) Dutch sovereignty to continue throughout the Indies until the Netherlands transferred it to the projected United States of Indonesia; (5) a plebiscite to be held within six months to one year "to determine whether the populations of the various territories of Java, Madoera, and Sumatra wish their territory to form part of the Republic of Indonesia or of another state within the United States of Indonesia"; (6) following such delineation of the states, the convening of a constitutional convention through democratic procedures to draft a constitution for the USI.

This agreement permitted the Dutch to hold the

territories seized from the Republic during the 1947 hostilities pending the plebiscites. It was accepted by the Republic in the belief that the plebiscites would bring these and other Dutch-held areas back into the Republican fold. However the negotiations again became deadlocked on the question of where the plebiscites should be held. The Republic wanted to confine them to the Dutch-held territories in Java, Madoera and Sumatra. The Dutch insisted that they should include Republican-held territories.

In an effort to break the deadlock, the American and Australian members of the Good Offices Committee on June 10 proposed that the plebiscites be abandoned in favor of elections throughout Indonesia for a constituent assembly. This assembly would fix the state boundaries, draft the USI constitution, and form a provisional federal government. The proposal was accepted by the Republic in principle but was rejected by the Netherlands. On July 23 the Republic broke off the negotiations charging "Dutch inaction."

Dutch Prepare New Regime. Despite Republican protests, the Dutch went steadily ahead with plans to establish the USI without the cooperation of the Republic if it refused to enter on Dutch terms. The autonomous states of West Java, East Java, Madoera, East Sumatra, and South Sumatra were set up in territories taken from the Republic in 1947. On March 9 Acting Governor General Hubertus J. van Mook installed a Provisional Federal Government of the Netherlands East Indies in which representatives of eight Dutch-sponsored states shared responsibility with Dutch officials. The Republic was invited to participate but refused on the ground that it was not offered fair representation.

The Provisional Government was intended to function until the establishment of the USI, scheduled for January, 1949. On May 12 Van Mook convened a conference of representatives of the non-Republican states and minority groups at Bandoeng to formulate their ideas concerning the constitutional structure for the USI and the Netherlands-Indonesian Union.

Impatient at the delay in setting up an all-Indonesian federal administration, caused by the Dutch-Republican deadlock, the Premiers of the non-Republican states at Bandoeng proposed the immediate establishment of an interim Indonesian federal regime to replace Van Mook's provisional government. The Republic rejected this plan also, but the Netherlands Government was more receptive. At a conference in The Hague with representatives of the non-Republican states in September and October, the Dutch agreed to the setting up of the proposed interim federal government. There would be a three-man Indonesian directorate elected by the governments or parliaments of the member states; a federal council with one member from each state; and a federal legislature with 2 to 10 representatives from each state, depending on the population.

Beel Succeeds Van Mook. Regarding Acting Governor General Van Mook as an obstacle to this program, the Netherlands Government asked for, and in mid-October received, his resignation. A number of Van Mook's chief associates in the Batavia Provisional Government also resigned. The Netherlands Government then permitted the 150-year-old office of Governor General to lapse. It sent former Prime Minister Louis J. M. Beel to Batavia as its High Commissioner with orders to speed the transfer of authority to the Interim Federal Government.

New Dutch-Republican Talks. At the same time The Hague made a final effort to secure the participation of the Indonesian Republic in the proposed Indonesian administration. After talks in Jogjakarta, the Republican capital, by Foreign Minister Dr. D. U. Stikker, a large delegation representing the Netherlands Government and political parties flew to Java late in November for informal discussions with Prime Minister Mohammad Hatta of the Republic. Agreement was reached on most issues. But the parties failed to agree on the powers of High Commissioner Beel and on the question of the number and status of the Republican armed forces under the interim regime.

After the Dutch delegation's return to The Hague, the Netherlands Government on December 11 announced that negotiations for a settlement with the Republic had broken down irretrievably. It stated that no further discussions with the Republic would be held under the auspices of the UN Good Offices Committee.

A Netherlands decree of December 18 established the interim federal government for Indonesia. The same evening the Dutch Government announced the opening of military operations against the Indonesian Republic with the aim of forcing it to enter the interim government on Dutch terms.

Without warning, Dutch airborne troops captured Jogjakarta December 19 and took prisoner the leaders of the Republic, including President Soekarno, Prime Minister Hatta and former Prime Minister Sutan Sjahrir. By midnight of December 31 Dutch troops had occupied all the chief centers of the Republic in Java. The Netherlands Government then belatedly accepted the cease-fire ordered by the United Nations Security Council in Paris on December 24. [In Sumatra, where Dutch troops had not yet gained all their military objectives, military operations continued into 1949.]

In response to another Security Council order for the immediate release of the captured Republican leaders, the Netherlands Government agreed to do this if they undertook to "refrain from activities endangering public security."

The Republican chiefs refused to pledge discontinuance of political activity in return for their release. Consequently they were held by the Dutch in defiance of the Security Council order.

On December 29 it was announced that Netherlands Premier Willem Drees would go to the Indies at once in an effort to persuade the captured Republican leaders and the chiefs of the Dutch-sponsored states to cooperate in the interim federal government. However the cabinets of the two most important non-Republican states—West Java and East Indonesia—had resigned in protest at the Dutch attack on the Republic. And large Republican forces in Java and Sumatra were beginning guerrilla warfare against the Dutch. As the year ended, prospects for an early solution of the Dutch-Indonesian conflict appeared dim.

Events in the Republic. As in previous years, the struggle for power between the parties of the left and right enhanced the difficulties of the Republican government in attempting to reach a settlement with the Netherlands. The Socialist Prime Minister, Amir Sjarifuddin, and his predominantly leftist cabinet resigned January 23 under bitter attacks from opposition leaders who charged them with bowing to the Dutch in signing the Renville truce agreement.

Vice President Mohammad Hatta then formed the Republic's first predominantly rightist government. But Hatta's government in turn was attacked

by Sjarifuddin and his People's Democratic Front for trying to carry out the Renville Agreements. In April Sjarifuddin's policy and the increasingly pro-Soviet orientation of his People's Democratic Front provoked a split in the Socialist ranks. Former Prime Minister Sutan Sjahrir and a minority faction withdrew and formed a rival Socialist Party favoring neutrality in the Soviet-Western struggle.

Pro-Soviet sentiment was strengthened by Moscow's offer of May 12 to exchange consuls with the Republic. Negotiations for the formation of a "national front" government with a more pro-Soviet and anti-Dutch line were under way when a sudden reversal of Moscow's policy plunged the Republic into civil war. This change followed the arrival in Java from Moscow in August of a veteran Communist revolutionary leader named Muso, who had been exiled by the Dutch authorities in 1925.

Muso took over the leadership of the Indonesian Communist Party, which overnight absorbed all of the leftist groups in the People's Democratic Front. He called on Hatta to repudiate the Renville Agreements and align the Republic with the Soviet Union in the struggle with "American imperialism." When Hatta refused, Muso launched a revolt in mid-September by seizing Madiun, an industrial center of East Java, and establishing a "people's republic" with himself as President and Sjarifuddin as Prime Minister.

The bulk of the army and the parties of the right and center rallied behind the Hatta government. Madiun was recaptured. The Stalinist leaders and armed units fled to the mountains but were hunted down and dispersed during October and November. Muso was killed. Sjarifuddin, Alimin, and most of the other key Stalinist leaders were captured. The Communist Party was outlawed. The Hatta government announced that all prospects of close relations with Soviet Russia had been ended by the revolt.

With political power in the Republic now largely monopolized by the right and center parties, Hatta was in a stronger position. But property destruction during the revolt and the continuance of Dutch restrictions on the Republic's internal and foreign trade intensified its grave economic problems. These problems were inherited by the Dutch when they occupied the Republic by armed force in December.

—RONALD STUART KAIN

INLAND WATERWAYS CORPORATION. A Division of the United States Department of Commerce, incorporated to carry out sections of the Transportation Act of 1920, to make possible the coordination of rail and water transportation in the United States. It is organized along commercial lines, with its own executive heads, traffic, purchasing, operating, and accounting departments. Through joint rates with the railroads, it serves the people in 42 of the 48 States. The Corporation does not receive annual appropriations by Congress. It operates barge lines on several important water routes. President: A. C. Ingersoll, Jr.

INSECT PESTS AND PLANT QUARANTINES. Investigations of new insecticides and new or improved methods of applying them continued to be an important phase of entomological research. Large-scale cooperative programs for the control of insects and plant diseases have been greatly aided by the use of new materials and methods. The problem of protecting our agriculture against foreign pests has continued to increase with the rapid growth of world commerce since the war, and dis-

insectization treatments have been introduced where feasible to aid in providing better safeguards. Informational activities were intensified during the winter and spring when the Bureau participated in the Department's grain-conservation program. Emphasis was placed on the presentation of facts that would encourage and aid farmers and others in conserving food and feed by controlling insect pests.

Further Developments of New Insecticides. Two phosphorus compounds, tetraethyl pyrophosphate and the insecticide known as parathion (0,0-diethyl 0-*p*-nitrophenyl thiophosphate), have shown considerable promise for many uses. Chlordane, benzene hexachloride, chlorinated camphene, and tetraethyl pyrophosphate are now in commercial use and are recommended for certain purposes. In laboratory and small-scale field tests, parathion has shown outstanding effectiveness against a wide range of insects, but it cannot be recommended for practical use until more is known about its toxicological effects on persons handling it and possible hazards from residues on plants.

Several materials have been found which when added to pyrethrum and rotenone increase their effectiveness so that smaller amounts can be used in insecticide preparations. Gas-propelled aerosols have been improved, both in formulations and in devices for applying them. Considerable progress has been made in the development of equipment for applying insecticides by airplane, and important modifications were made to improve the mist blowers for applying concentrated sprays. Automatic equipment for applying insecticidal aerosols to airplanes to free them of hitchhiking insects was developed. Such devices will be operated by the pilot and will insure the application of the full prescribed dosage and its distribution to all parts of the plane.

Pests and Disease Carriers Affecting Man. Tests showed parathion to be more effective than DDT against adult yellow-fever mosquitoes and ten times as toxic to larvae of the common malaria mosquito. Chlordane and chlorinated camphene gave better protection than DDT against wood ticks, chiggers, and fleas. Chlordane has also given excellent control of ants in houses, and has continued to be more effective than DDT against cockroaches. This insecticide is now recommended for use against cockroaches, with the usual precautions for handling poisons.

Experimental work in the control of disease-carrying insects, such as lice and yellow-fever mosquitoes, has shown that it is possible in some cases to kill these pests by feeding to animals certain chemicals that will make the blood of the animals deadly to the blood-sucking pests that prey on them.

Livestock Pests. Chlorinated camphene and DDT sprays were found to be equally effective against horn flies, ticks, and lice on cattle. Chlordane appears to be effective against sheep ticks. Progress has been made toward perfecting a laboratory method of testing chemotherapeutic agents for the control of cattle grubs.

Toxicological Studies. Results of the cooperative studies to determine the amount of insecticide secreted in the milk of dairy animals show that small quantities of varying amounts of DDT and TDE appear in the milk of cows treated with these insecticides. The material extracted from the milk of a cow that had received a diet containing large amounts of DDT was equally as toxic to flies and mosquito larvae as a sample of the DDT fed to the animal. Studies are under way to determine

the extent to which the newer insecticides are deposited in the fat, meat, and organs of treated animals. Preliminary investigations indicate that some of the materials may be stored in the fatty tissues.

Fruit Insects. The widespread use of DDT for codling-moth control has reduced populations of this pest; consequently fewer applications are now required to give satisfactory control. The trend to fewer sprays for codling-moth control has been partly offset by the need for additional sprays for mites, woolly apple aphid, and red-banded leaf roller. Preliminary tests with parathion gave excellent results in the control of many fruit insects, including plum curculio, orchard mites, pear psylla, codling moth, red-banded leaf roller, California red scale, and black pecan aphid, and did not injure trees or fruit to which it had been applied. Benzene hexachloride was again promising against the plum curculio on peaches and against woolly apple aphid, but apples sprayed in mid-August were off-flavor when harvested in October. In addition to parathion, several other new materials showed promise in mite control.

Japanese Beetle. Chlordane was found to be as effective as DDT and faster in controlling Japanese beetle grubs in turf. It not only killed the brood of grubs present at the time of application in the spring of 1947, but also eliminated most of the subsequent brood by mid-September. The Federal Japanese beetle quarantine was revised, effective Apr. 30, 1948, to omit the boundaries of the heavily infested area and to provide for the issuance of administrative instructions to designate such boundaries on the basis of seasonal conditions. Special efforts were made in 1947 to prevent the spread of the insect by airplanes flying from the infested area.

European Corn Borer. Losses caused by this insect in 1947 were the highest on record in the United States—50 million bushels of field corn, valued at about \$94 million, and \$3 million worth of sweet corn. In 1948, for the first time, DDT was recommended for the control of the insect on field corn. Of special interest was the demonstration in laboratory and field tests of absorption of insecticides by corn following soil treatment and the resulting kill of corn-borer larvae. Parathion and a water soluble extract of *Ryania speciosa* were the most promising of a large number tested, but the use of insecticides in this way is still in the experimental stage. To supplement parasites of the borer already established in this country, importations were made from France and Italy of the following species: *Apanteles thompsoni* Lyle, *Campobex alkae* H. and S., and *Microgaster tibialis* Nees.

Grasshoppers. Sprays and dusts containing chlorinated camphene or chlordane applied to tall, succulent growth in alfalfa fields, along roadsides, field margins, and similar areas gave satisfactory control of grasshoppers. Sprays were applied at the rate of 1½ lb. of chlorinated camphene or 1 lb. of chlordane per acre. For dusts, the dosages were 2 lb. of chlorinated camphene or 1½ lb. of chlordane. On range, idle lands, or other locations where vegetation is sparse, the standard sodium fluosilicate bait continued to provide satisfactory control. The 1947 cooperative control operations were conducted in 23 central, midwestern, and western states, giving protection to more than 5,698,000 acres of crops and pasture valued at about \$50,-369,000.

Mormon Crickets. The acreage infested in 1947 was almost twice that in 1946, but most infestations were fairly remote from crop lands. Approximately 258,000 acres were baited in the combined

Federal-State operations to protect 151,000 acres of crop lands as well as large areas of pasture and range. The insects damaged 29,000 acres of crops and 347,000 acres of range land.

Stored-Grain Insects. Entomologists have developed a simple and practical method of determining hidden weevil infestation in stored grain. By soaking grain samples for a few minutes in a stain containing acid fuchsin and then washing them in water, little cherry-red dots appear where weevils have laid eggs in the kernels. This discovery provides an inexpensive and practical means of determining quickly and easily the percentage of hidden weevil infestation in wheat, corn, or grain sorghum.

White-Fringed Beetle. There was some extension of infestation by this insect, now known to occur on approximately 215,000 acres in 114 counties in the states of Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, and South Carolina. State and Federal quarantines were revised to include the newly-found infested areas. Additional treatments, which include incorporation of DDT into soil of nurseries supplemented by DDT foliage sprays during the summer, were authorized as a basis for certification of plants and other carrier materials for movement to nonregulated areas. Jeep-mounted concentrated-spray machines and high-velocity blowers are important developments which permit DDT treatment of land more rapidly and effectively at a lower cost.

Vegetable and Greenhouse Insects. DDT was the most effective insecticide tested for the control of the pea aphid and the pea weevil in the Pacific Northwest. Insecticidal sprays were superior to dusts when applied by aircraft to control the pea aphid, but dust gave better results when applied by ground machines. An aerosol containing 10 percent of parathion, with methyl chloride as the propellant gas, gave exceptional control of a number of greenhouse pests without injury to plants. Aerosols containing tetraethyl pyrophosphate gave outstanding results against the two-spotted spider mite and other mites; also aphids and other greenhouse pests. For example, those containing 10 percent of hexaethyl tetraphosphate (tetraethyl pyrophosphate content 20 percent) were very effective against spider mites, aphids, the greenhouse whitefly, and the Mexican mealybug; however, plant injury followed their use on a number of varieties of chrysanthemums, roses, and tomatoes. Appropriate safeguards have been outlined and these aerosols are now in commercial use.

Studies on piperonyl compounds added to low-rotenone-content dust indicate that an increase in toxicity of such dusts to the Mexican bean beetle results. In laboratory and field tests on the comparative performance of the three soil fumigants, ethylene dibromide, 1,1-dichloro-1-nitroethane, and dichloropropane-dichloropropylene (D-D) mixture, for wireworm control in Washington, it was determined that soil temperatures, soil sorption, and diffusion affected the degree of efficacy of these materials. The D-D mixture was most efficient at all temperatures encountered in compact soil, but the other two fumigants were more efficient in loose soil. Benzene hexachloride is the most efficient and cheapest material yet tested for wireworm control, but its use in the soil may cause off-flavor of root crops. This effect may be prolonged for one or more seasons.

Golden Nematode. The control program, begun in 1941, and conducted cooperatively with the State of New York, has been intensified. A detailed survey was carried on at Hicksville, L.I., to determine

the limits of the area infested in and around the original center of infestation. At the end of June, 1948, the Long Island infestations comprised 6,154 acres of potato land on 150 properties in Nassau and Suffolk Counties. This area is still the only known center of infestation in the United States. More than half the area shown by the survey to be infested was withdrawn from production in 1948. No potatoes or tomatoes, which are the only cultivated hosts of the nematode, were grown on land known to be infested at planting time.

Cotton Insects. The boll weevil caused much less damage in 1947 than in 1946 in 9 of the 12 states where it occurs. Only in Virginia, North Carolina, and South Carolina was the damage greater than in the previous year. Calcium arsenate, benzene hexachloride, chlorinated camphene, and chlor-dane have each proved to be effective for controlling the boll weevil in certain areas. Dusts containing 20 percent of chlorinated camphene and at least 40 percent sulfur, or 5 percent of DDT, 3 percent of the gamma isomer of technical benzene hexachloride and 40 percent of sulfur have controlled the boll weevil, bollworm, cotton aphid, cotton leafworm, cotton fleahopper, and red spider mites.

During the year pink bollworm infestations were generally light, largely as a result of the cooperative control program. The Federal pink bollworm quarantine was amended Aug. 22, 1947, to remove the quarantine from Louisiana and to place additional counties of Texas under quarantine. The quarantine was again amended June 11, 1948, to include 43 counties in Texas and 8 counties in southwestern Oklahoma found infested in the fall of 1947. This is the first time the pink bollworm has been found in Oklahoma. DDT used as a 10-percent dust has proved to be the most effective insecticide that has been found for control of this insect. Cultural practices are still considered to be the best method of controlling this pest.

Cooperative work with Mexico was continued during the year. Fixed-planting and stalk-destruction dates in the Matamoros area to conform to those applicable in the adjacent lower Rio Grande Valley of Texas were again enforced by the Mexican authorities.

Forest Insects. Surveys conducted in the fall of 1947 indicated that the Douglas-fir tussock moth control program in Idaho, Washington, and Oregon had been so successful that no further spraying should be necessary.

Aerial surveys have marked a step forward in the field of forest-insect detection. An aerial-reconnaissance survey of 7,750,000 timbered acres in Oregon and Washington was completed in 1947. About 710,000 acres of spruce budworm infestation, 70,000 acres of Douglas-fir tussock moth infestation, and several small outbreaks of other species were mapped, and the general status of the western pine beetle was recorded. All this was done in about 30 hours of flying time—less than 2 weeks' work for obtaining information that would have taken a ground crew most of the summer to acquire. The cost was far below that required for earlier ground surveys.

New types of portable power sprayers mounted on jeeps or weapon carriers were used in 1948 for applying orthodichlorobenzene in fuel oil (1:6) to control the Black Hills beetle and the mountain pine beetle in South Dakota, Wyoming, and Idaho. These new types proved vastly superior to hand sprayers formerly used.

Work was continued on the development of aerial spraying for control of forest insects. Prelimi-

nary steps were taken to study the possibility of improving the spray pattern by varying the position of outlets in the air stream around the plane.

Parasites were responsible for much of the sharp reductions in spruce budworm populations in the Adirondack area of New York.

Except in parts of southeastern Massachusetts, gypsy-moth populations were at the lowest in several years. A total of 265,445 acres in New England, New York, and Pennsylvania were treated with DDT in the Federal-State cooperative gypsy-moth control program.

Benzene hexachloride continued to give promising results for control of ambrosia beetles attacking logs and lumber.

Mist blowers were used to apply DDT to a small number of large elms to control bark beetles. Approximately 1 gallon was required for satisfactory coverage of larger trees.

It was successfully demonstrated that a leafhopper, *Scaphoideus luteolus* Van Duzee, transmits to elm trees the virus causing phloem necrosis. The insect has been found throughout the region where phloem necrosis is known to occur.

Bee Culture. An important advance in bee breeding was the discovery that subjecting virgin queens to carbon dioxide gas causes them to lay eggs. Queens so treated lay drone eggs. They can later be mated with their own sons to produce a 50-percent inbred F₁ generation. With this treatment, together with artificial insemination, closer inbreeding may be accomplished. Sulfathiazole fed in sugar sirup continued to retard the development of American foulbrood, but does not cure it. A container of plastic cloth has been devised for shipping package bees by air.

Foreign Parasite Introduction. Shipments of two species of leaf-feeding beetles, *Chrysolina* spp., totaling 500,000, were received from Australia for colonization in northern California, Oregon, and Washington against the Klamath weed. Many colonies of these beetles released in California in 1945-46 are now well established and are showing definite promise of checking this weed pest.

White Pine Blister Rust. In 1947, 2,4-dichlorophenoxyacetic acid (2,4-D), was used on a practical basis to destroy *Ribes roezli*, the principal alternate host of the rust in the Sugar Pine forests of California. The spray is fully effective only while the plants are in an actively growing stage. Blister rust was reported for the first time on white pine in Tennessee and in the North Central States there was a large southward extension of the rust on ribes. During 1947 more than 22 million ribes bushes were destroyed on 2 million acres, of which nearly half represented initial eradication.

Black Stem Rust. Crop losses to small grains from stem rust were light in 1947. During the year more than 13 million barberry bushes were destroyed on 3,598 properties, covering an area of 23,251 square miles in the 18 states comprising the barberry eradication area. Tests were conducted with some of the new chemicals in an effort to find a cheaper herbicide for eradicating native barberry bushes and for treatment of planted bushes without endangering nearby shrubbery and trees. Preliminary observations showed some species of barberry to be susceptible to severe damage by formulations of 2,4-D. Ammonium sulfamate in solution gave satisfactory kill on others. However, further work is needed before their general use can be recommended.

Foreign Plant Quarantines. Of 44,300 ships inspected during the year, 24 percent were found to be carrying prohibited agricultural material. More

than 90 percent of the arriving ships came directly from foreign ports. Of 57,756 airplanes inspected at 47 ports of entry, 26 percent were found to be carrying prohibited plant material. Inspection in Hawaii of all aircraft and ships upon arrival and of all planes before departing for the mainland was continued. The disinsectization of airplanes was also continued. The rapid build-up of oriental fruit-fly populations in the Hawaiian Islands has increased the importance of preflight inspection and disinsectization of all planes destined for continental United States. Nearly 137,000 interceptions of prohibited or restricted plants and plant products were made during 1948, an increase of 14 percent over 1947. The demand for plant quarantine services in connection with the inspection and certification of plants and plant products for export increased markedly in 1948.

—P. N. ANNAND

INSURANCE. The year 1948 was a difficult one for most insurance companies, since many of the problems which confronted them could not have been foreseen even three years ago. And although generally, the volume of production was higher than in 1947, the year ended on an uneasy note due to troublesome rumblings, as mentioned below in the report on Life Insurance. The investment problem remained a problem throughout the year, with little hope of any material change in the picture, particularly in view of the year-end weakness of the market.

Casualty. The Number One trouble spot in the casualty field was in Automobile Insurance. For, in spite of the fact that the lowest traffic death rate was recorded in 1948, there is still much work to be done to lower highway fatalities to an absolute minimum. Recently, Maj. Gen. Philip B. Fleming, Federal Works Agency administrator, said that in 1946, the President's "Highway Safety Conference" set a goal of 50 percent reduction in the traffic death rate from 12 to 6 per 100 million vehicle-miles.

General Fleming listed a combination of factors responsible for high traffic death rates. He said: "(a) lax enforcement of traffic regulations; (b) inadequate driver license laws; (c) insufficient education on the principals of highway safety; (d) an overly large mileage of obsolete highways not designed for the traffic which they are now carrying, and (e) lack of uniformity in traffic regulations and in street and highway warning and directional signs." This program should aid companies in reducing the staggering number of claims paid last year.

It is estimated that the automobile volume of stock companies will show an increase of 42 percent over 1947, although the increase last year was 36.4 percent over 1946, this causing much hawking at the time. During the year just closed, there was a sharp increase in the cost of Plate Glass protection, and some further tightening of some of the broad clauses formerly in our burglary policies. This was due to the claim losses in these two fields, these reflecting postwar crime conditions and the continued up-swing in robberies and burglaries.

Most companies are well pleased with the 1948 results, and those who are students of trends, have their fingers crossed when they discuss 1949.

Fire. During the summer of 1948, Monsanto Chemical Company of St. Louis received the sum of \$17,312,000 from insurance companies, in payment of losses suffered Apr. 16, 1947, in the Texas City disaster, this being the largest single insurance

payment in history. When, in 1947, the National Board of Fire Underwriters estimated that fire losses in the United States had totaled \$692,635,000—it was felt that this figure, 23½ percent over 1946, would be a peak one. Therefore, it is good to note that the 1948 total will show an over-all decline of approximately 10 percent. These encouraging trends downward cannot help but relieve the ultra-conservative attitude of fire underwriters toward the acceptance of new business.

Inland Marine. Jewelry, Fur and Personal Property Floaters, as well as similar policies, are written by what is called Inland Marine companies. In 1947, these companies showed an 18 percent increase over the 1946 figures, when they hit a premium income of approximately \$172,000,000. In 1948, the increase was judged to be about 10 percent, thus bringing these companies within easy reach of the enviable \$200 million figure.

With business reportedly leveling off in some lines, and with the acute unrest prevailing in foreign affairs, insurance men cannot foresee clearly the trend of premium production for 1949. Rate increases will help, of course, and since the insurable values are not as yet declining, and particularly since the volume of merchandise being shipped over the nation's railroad tracks, airfreight lines and trucks, has in no way been reduced, Inland Marine men are rather optimistic as to the future.

Life. Effective Jan. 1, 1948, the most important change in many a year was made by 167 U.S. life insurance companies representing 96 percent of the total life insurance owned, when these companies adopted the new Commissioners' 1941 Standard Ordinary Mortality Table. At the same time, because of reduced earnings on their investments, the life companies were obliged to reduce their interest factor from 3 percent to 2¾ percent and in some cases as low as 2½ percent and 2 percent.

This reduction meant generally higher premium rates particularly on retirement income and endowment plans. However, due to increased values, the net cost of many of these policies will hereafter be lower. It was also felt more appreciably in 1948 that the taking into the life insurance ranks of former GI's was having a real effect. In most cases, the men are taken on under a commission and salary arrangement, and the salary continues while they are being trained. As a whole, these men are working out satisfactorily and producing results of which they may well be proud.

In view of the increased activity of companies in the multiple housing field, there was written into the National Housing Act, new administrative rules and regulations, which will give this type investment impetus, and which accounts for the renewed interest of powerful life insurance companies in this work.

As for the total life insurance produced in 1948, we once more find an increase of about 5 percent. When one realizes the billions of dollars of life insurance presently in force, such an increase is far greater than the insignificant percentage figure might indicate. This speaks volumes for the confidence on the part of the public in our life insurance companies, and warrants the repetition here of the words of Mr. Leroy A. Lincoln, President of the Metropolitan Life Insurance Company, who said:

"During the five-year period of low employment and low incomes and of heavy borrowing by policyowners, life insurance companies paid to them and to their beneficiaries, the stupendous sum of \$15,000 million. The significance of this figure is not in its size. The unforgettable lesson which is

taught is that, in a period of apprehension engendered by bankruptcies in almost every segment of the national economy, the confidence of the people in the institution of life insurance was never shaken. That confidence was fully justified by the magnificent record during these trying years, which record will bear comparison with the record of any line of business, whether under the aegis of Government or otherwise."

But, in spite of these heartening words, early in December, 1948, a Congressman made a renewal of the suggestion that possibly it would be a good idea for the Government to take over the billions of dollars in assets which the great life insurance companies of America possess. It is difficult for some men to understand why such vast funds are retained by companies, when the money could be put to work building a school in Chicken Foot Corner or a bridge across the creek in Squeedunk. And whereas such ideas have sprung up before and died a natural death, it simply adds another headache to the heads of insurance companies.

In this connection, it is interesting to note that at the thirty-sixth annual meeting of the United States Chamber of Commerce last spring, the encroachment of the Federal Government into any phase of the insurance business "which is now, or can be, successfully conducted by the privately operated insurance companies" was vigorously scored.

Marine. Members of the American Institute of Marine Underwriters seem perfectly content with the results for 1948, and the reason for this may be best shown through the approximations given in the accompanying table.

<i>Premiums Written</i>	<i>Year</i>	<i>Losses Paid</i>
\$ 32,000,000	1921	\$29,000,000
35,000,000	1925	28,000,000
35,000,000	1930	14,000,000
32,500,000	1935	20,000,000
90,000,000	1940	25,000,000
119,000,000	1945	48,000,000
150,000,000	1948	65,000,000

The figures are practically self-explanatory and give an excellent picture of why most marine men are pleased with the results for the year.

Suretyship. Again in 1948, as in 1947, there were several startling defalcations which received great publicity in the daily press. Most prominent of these was the \$657,000 defalcation by Court Judge Pellecchia of Newark, N.J. As the result of this, a bond cancellation bill was signed by Acting Governor Summerill requiring that bonds may not be cancelled for any reason unless notice of intention to cancel is filed with the New Jersey Department of Banking and Insurance at least five days before the effective date of cancellation. But, the over-all experience in the fidelity and surety field continued to be good in 1948 and there was a decided underwriting profit for the year.

It was a boom year in contract bond writings, due to highway building programs and the construction of a great number of new plants, schools, business buildings, tunnels, bridges and private buildings. In some types of bonds, such as bankers and brokers bonds, there were losses because of increased claims and many rate reductions in the last few years. Some underwriters feel that the present rate structure on this type of business will not hold up much longer. But, the general picture for the year was particularly satisfactory.

—MERVIN L. LANE

INTER-AMERICAN AFFAIRS, Institute of (IIAA). The Institute of Inter-American Affairs is administering

programs, in collaboration with the governments of the other American republics, in public health, sanitation, education and agriculture. During 1948 the Institute conducted 25 such cooperative programs, spread over 16 Latin American republics.

The present Institute of Inter-American Affairs was chartered by the Congress of the United States as a wholly-owned Government corporation in an Act approved on Aug. 5, 1947—Public Law 369, Eightieth Congress, First Session. The Institute is the successor of two Government corporations (known as The Institute of Inter-American Affairs and the Inter-American Educational Foundation, Inc.) which had been chartered under the laws of Delaware under authority granted by Congress to the former Coordinator of Inter-American Affairs.

The statute chartering the Institute directs the Institute to seek to strengthen friendship and understanding among the peoples of the American republics through collaboration with the governments of the other republics on programs and projects in public health, sanitation, agriculture, education and related fields. The Institute is governed by a Board of Directors appointed by, and responsible to, the Secretary of State of the United States.

In its work the Institute is confined to cooperation with the other American republics in the development of their basic economies. It has become quite clear that the strongest need of the Latin American republics is for assistance and guidance on what are, perhaps, the three most fundamental problems of any nation: public health, education, and food supply. It is to these objectives that the recent work of the Institute has been confined.

The cooperative programs administered by the Institute during 1948 were, as follows:

Health and Sanitation Division. Since 1942 the Health and Sanitation Division of The Institute of Inter-American Affairs has carried out cooperative health programs on a bilateral basis with 18 Latin American countries. An international agreement called the Basic Agreement, negotiated between an Institute representative and a representative of the Latin American government, states the financial, material, and personnel contributions to be made by each country participating in the particular agreement.

Upon the basis of the original agreement, the work in each country has been carried out through the medium of the "Cooperative Health Service" which is an agency set up within the framework of the local ministry of health and is composed chiefly of national personnel, but under the professional guidance of a "field party" of United States personnel, including one or more doctors, engineers, nurses, entomologists, etc., who work to convey the technical "know-how" of public health work to the Latin Americans. By actually participating in public health projects, Latin American technicians acquire a practical knowledge of public health work.

The objective of the cooperative work is the general improvement of public health in the western hemisphere, with emphasis on preventive rather than therapeutic medicine—i.e. on the eradication of disease by removing the causes of disease.

Among the different categories of activities carried out by the Cooperative Health Services to achieve this end are: (1) *Environmental Sanitation*, which includes the building of water supply systems, sewerage disposal systems, slaughterhouses, laundries, and privies;

(2) the *establishment of health facilities* such as Health Centers which provide numerous services including assistance and instruction in mater-

nal and child care—prenatal, delivery, postnatal, pre-school, and school age child care; instruction in personal hygiene and home sanitation; tuberculosis and venereal disease control; immunizations; dental hygiene; and laboratory examinations; over 2 million visits have been made to these Health Centers;

(3) the *control of specific endemic diseases* such as yaws, typhus fever, schistosomiasis, pinta, onchocerciasis, typhoid fever, hookworm, and malaria, this control encompassing such activities as making surveys, conducting research and experiments on ways of eradicating the vectors of disease and of treating infected persons;

(4) *health education* of the lay public to teach the people the causes of disease and how to avoid infection, through the media of pamphlets, posters, lectures, health clubs, radio programs, and, most particularly, a series of animated cartoons and live-action health films; the latter have been very effective in presenting the basic facts of health and sanitation to the general public;

(5) *training* of professional and technical personnel, locally and in the United States, to carry on the public health work when United States direction is withdrawn.

Primarily, the projects undertaken by the Cooperative Health Services were demonstration projects, carried out in strategic areas, to instruct the local people and interest them in carrying on an expanded program. By 1948 it was evident that the public health movements in the respective Latin American countries where the Health and Sanitation Division had field parties were gaining momentum as more and more communities and community leaders saw the economic and personal advantages of a sanitary environment.

The one-sided financial contributions (in many instances, the contribution of the Latin American country is 8 or 10 times that of the United States) give strong evidence of increasing Latin American interest in public health as do the ambitious plans for expanded nationwide programs which the respective national governments are strongly endorsing.

In addition to the long-range achievements of the Health and Sanitation program, there are immediate benefits to the people from this public health program. It is estimated that about 2½ million people have been materially affected by the environmental sanitation activities of the Cooperative Health Services.

During 1948, agreements to continue the cooperative health programs were consummated with Bolivia, Brazil, Chile, Colombia, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Mexico, Paraguay, Peru, Uruguay, and Venezuela. Programs with Costa Rica, Dominican Republic, Nicaragua, and Panama had been completed prior to 1948.

At the end of 1948, the Cooperative Health Services had undertaken approximately 1,950 separate public health activities, with more than 1,350 of them completed. These included the construction of about 80 health centers, 70 hospitals, 23 dispensaries, 70 water supply systems; 45 sewerage disposal systems, and about 200 general community sanitation projects such as privy construction in rural areas; extensive use of DDT for malaria control; 135 permanent malaria control projects which involved extensive drainage and filling of mosquito breeding areas; assistance to nurse training programs in 13 countries; more than 100 local training courses for visiting nurses, midwives, sanitarians, health education teachers, and countrywide health education projects in almost all of the countries.

During 1948 about 130 United States personnel in Latin America were working with approximately 300 Latin American doctors, engineers, nurses, and other technical and professional personnel and about 5600 unskilled workmen.

Education Division. The work of the Education Division is entirely in the field of fundamental education. It includes those elements of education which are designed to bring to the masses of the people (as distinguished from the few who progress to the university and post-graduate levels) the essential instruction and skills necessary to enable them to read and write, to understand the problems of their communities and contribute to their solution, to improve the health and living standards of their communities, and to learn the fundamental skills which will enable them to add to their earning power and thus contribute also to the economic strength of their communities.

The form which the work takes in an individual country depends upon local conditions, needs, and expressed desires. These are cooperative programs, on a bilateral basis, and it is an essential part of the Division's philosophy that its program is one of helping neighbors to help themselves, in building stronger national systems of education based upon local *mores* and conditions, rather than the introduction of an alien system.

In one country, the expressed need may be for a revamping of rural, elementary education; in another it may be the organization or reorganization of vocational training; in another, the strengthening of vocational agriculture; in another, a combination of activities.

The work is carried on through a "Servicio," an important device for carrying out cooperative projects. The Servicio is a part of the Ministry of Education (or of Agriculture), staffed chiefly by employees of the Ministry. In most instances, however, the Special Representative of the Education Division of the IIAA is named by the Minister as Director of the Servicio, so that in his relations with the Minister he acts substantially as an official of the Ministry.

The Education Division during 1948 had cooperative programs with immediate and long-range objectives in 11 Latin American countries. Altogether, it had sent about 80 educational specialists from the United States to work with the Ministers of Education in the other republics on programs of vocational, health, and rural education, and teacher training and secondary education. During its entire operations, nearly 600,000 books, pamphlets, maps, charts and other teaching materials have been made available to field parties in the other American republics. Also, 200 trainees and distinguished educators from those countries have been brought to the United States for lectures, study, and other educational activities.

Each country has its own peculiar education problems, and consequently the type of program developed by the Division has varied from country to country, in accordance with those problems. All, however, provide for: (1) The sending of a small group of United States educational specialists to work with the Minister of Education and his staff. (2) The development of teaching materials. (3) The bringing of distinguished educators, supervisors and teachers to the United States to lecture, study, and to participate in national, state and local educational programs.

Food Supply Division. In 1948 the Food Supply Division completed six and one-half years of operation in other American republics. Established in wartime to meet emergency food problems, the

Division now combats chronic unfavorable conditions in the other Americas. Need for agricultural assistance of this kind by the United States was recognized in July, 1945, by the Third Inter-American Conference on Agriculture at Caracas, Venezuela.

Immediate objectives of Food Supply program are (1) to increase production of food crops urgently needed for local consumption; (2) to demonstrate tested practices and standards which lead to a higher level of living and increased purchasing power for the people.

The Food Supply program has been carried forward in the other American republics under the technical supervision of field parties from the United States. The technicians in these field parties have usually functioned as members of a Servicio, or cooperative service staffed by representatives of both the United States and the host country. Since 1942 agreements have been signed with Brazil, Costa Rica, El Salvador, Haiti, Honduras, Nicaragua, Panama, Paraguay, Peru, and Venezuela. These agreements outline the type of work to be undertaken in the respective countries, and provide for the execution of specific project agreements describing in detail the work to be done.

Present project operations are classified into two categories, as follows: (1) *Development and Utilization of New Areas:* reclamation through irrigation and drainage; opening new lands through improvement of transportation systems; construction of storage facilities; ground water development; development of fisheries; (2) *Intensification of Existing Agriculture:* introduction of modern equipment and materials on the farm; encouragement of improved farm and home management, including introduction of better crops, livestock, and insect and disease control measures; conservation of soil, including reforestation; introduction of credit systems for farm operations; training of nationals.

During 1948 agricultural programs were carried on in the countries of Costa Rica, Haiti, Paraguay, and Peru.

(a) In Costa Rica emphasis was placed on countrywide expansion of the agricultural extension service and the incorporation within it of home demonstration work.

(b) In Haiti the development work in the Artibonite Valley continued, laying the groundwork for the proposed \$4 million Export-Import Bank loan for rehabilitation of the 150,000 acre area. In the Fonds Parisien valley a project was completed providing for the irrigation of 1,500 acres of farm land in a once important agricultural region. Emphasis is now turning toward development of an agricultural extension service, which will follow up the construction work with instruction in modern farming methods.

(c) In Paraguay, 1948 saw a considerable expansion of the Institute's technical staff to allow for more rapid development of the supervised credit activity, and for greater emphasis on colonization, rice production, and training of Paraguayan technicians. Operation of the National Institute of Agronomy, the 27,000-acre livestock ranch, the model dairy and pasteurization plant, and technical supervision of the credit project continued.

(d) In Peru, where 30 agricultural extension offices and several machinery pools span the country, steady progress was made toward integration of those basic projects. The chief problem, the lack of technicians and agricultural mechanics, is being overcome by increased emphasis on training. A beginning was made in a project for overall economic development in the Camaná Valley in co-

operation with the Education and Health and Sanitation Divisions of the Institute.

—DILLON S. MYER

INTER-AMERICAN DEFENSE BOARD. An organization composed of military delegates representing the Armies, Navies, and Air Forces and appointed by each of the Governments of the 21 American Republics. It was established in accordance with Resolution XXXIX of the Meeting of Foreign Ministers at Rio de Janeiro, Brazil, in January, 1942, and given permanency by Resolution XXXIV of the Ninth International Conference of American States held in Bogotá, Colombia, in April, 1948. The Board is an autonomous international organization within the framework of the Organization of American States. Its mission is to study and to recommend to the Governments of the American Republics measures necessary for closer military collaboration looking toward the defense of the Western Hemisphere. Plenary sessions are held twice monthly in Washington, D.C. Chairman: Lt. Gen. Willis D. Crittenger; Coordinator: Brig. Gen. L. Mathewson; Secretary General: Colonel Douglas B. Smith.

INTERGOVERNMENTAL MARITIME CONSULTATIVE ORGANIZATION, Preparatory Committee for the. Established by the United Nations Maritime Conference at Geneva, Feb. 19 to Mar. 6, 1948, held for the purpose of forming the first permanent intergovernmental organization in the field of maritime transport. The conference grew out of a report by the United Nations Temporary Transport and Communications Commission, issued in May, 1946, stating that there was no permanent intergovernmental organization in the shipping field although there was a large number of international agreements concerned with shipping. Acting upon the report, the UN Economic and Social Council took steps toward the 32-nation Maritime Conference.

The conference adopted the Convention for the Intergovernmental Maritime Consultative Organization (IMCO), which will come into force when ratified by 21 nations, of which seven shall each have a total of at least one million gross tons of shipping. The conference also prepared a draft agreement under which the IMCO will operate as a specialized agency of the United Nations; the agreement subsequently was approved by the UN General Assembly and will come into effect when accepted by the IMCO Assembly. Finally, the Conference established a 12-nation Preparatory Committee to make the necessary administrative arrangements for the permanent IMCO.

The permanent organization will seek to promote intergovernmental cooperation in the technical problems of international shipping; to encourage general adoption of the highest standards for the safety and efficiency of maritime navigation; to seek the removal of discriminatory action and unnecessary restrictions by governments affecting international shipping; and to consider unfair restrictive practices by shipping concerns. The IMCO will work toward these ends through an Assembly of all members, which will meet at least every two years; a Council of 16 nations, eight of which will represent the providers of international shipping and eight the consumers; a Maritime Safety Committee, which will consider such matters as the construction and equipment of vessels, handling of dangerous cargoes, maritime safety requirements, etc.; and a Secretariat headed by a Secretary-General.

The Preparatory Committee, which held its first

meeting at Geneva Mar. 6, 1948, and a second session at Lake Success, N.Y., Nov. 30 and Dec. 1, 1948, has confined its work to procedural matters. At its second session the Committee approved a proposed budget of £20,000 per annum for the first 2 years of the permanent organization, the headquarters of which will be in London. To cover expenses of the interim period, the Preparatory Committee requested a UN loan of \$50,000.

The Committee also adopted a provisional agenda and draft rules of procedure for the first IMCO Assembly, took other action to fulfill the functions assigned to it, and agreed to meet again immediately before the first IMCO Assembly or at an earlier date should urgent and important questions arise. The secretariat for the Committee's interim work is being provided by the UN Division of Transport and Communications.

The following governments are members of the Preparatory Committee: Argentina, Australia, Belgium, Canada, France, Greece, India, Netherlands, Norway, Sweden, United Kingdom, U.S.A.

Chairman, J. V. Clyne, Canada; Executive Secretary, Branko Lukac, Director, UN Division of Transport and Communications.

(This article was prepared by the Specialized Agencies Section, United Nations Department of Public Information.)

INTERIOR, U.S. Department of. A Department of the U.S. Government, created in 1849 and charged with the responsibility for advancing the domestic interests of the people of the United States. In 1948 it comprised the following principal branches:

- Office of the Secretary
- Bureau of Land Management
- Bureau of Indian Affairs
- Geological Survey
- Bureau of Reclamation
- Bureau of Mines
- National Park Service
- Fish and Wildlife Service
- Bonneville Power Administration
- Southwestern Power Administration
- Puerto Rico Reconstruction Administration
- Oil and Gas Division
- U.S. Board on Geographic Names
- Division of Territories and Island Possessions
- Division of Power
- Office of Land Utilization
- Office of the Solicitor
- Division of Information
- Division of Budget and Administrative Management
- Division of Administrative Services
- Division of Personnel Supervision and Management

Secretary of the Interior in 1948: Julius A. Krug; Under Secretary, Oscar L. Chapman.

INTERNAL REVENUE, Bureau of. A division of the U.S. Department of the Treasury, created in 1862. It supervises the determination, assessment, and collection of all internal revenue taxes and enforces internal revenue laws. In addition it is charged with the administration of various taxes which have a regulatory, rather than a revenue purpose, such as fully automatic firearms and oleomargarine. Collections for the fiscal year ended June 30, 1948, included: Corporation and individual income and excess profits taxes, \$31,172,190,533; Social Security and Railroad Retirement taxes, \$2,381,342,353; Miscellaneous taxes, \$3,311,009,409. Major divisions are the Income Tax Unit, Alcohol Tax Unit, Accounts and Collections Unit, Miscellaneous Tax Unit, Employment Tax Unit, Technical Staff, Intelligence Unit, and Excess Profits Tax Council. Headquarters: Washington 25, D.C. Commissioner: George J. Schoeneman.

INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT. An organization conceived at the

Bretton Woods Conference in July, 1944. It came into official existence Dec. 27, 1945, when its Articles of Agreement received ratification by the necessary number of member nations. As of December, 1948, forty-five nations were members of the Bank. The function of the Bank is to facilitate the international flow of capital with the objective of increasing world production. Its purposes, in summary, are: (1) To assist in the reconstruction of economies disrupted by war, their reconversion to peacetime needs, and the development of underdeveloped countries; (2) To promote private investment whenever feasible and supplement it where necessary; (3) To advance the long-range growth of international trade and improvement in world living standards.

The subscribed capital stock of the Bank, in currencies of all member nations, is approximately \$8,000 million, but only 20 percent is paid-in capital and of this amount only about \$730 million is in the form of U.S. dollars immediately available for lending; 80 percent of the capital stock constitutes a reserve fund subject to call if necessary to meet the Bank's own obligations. The major part of the Bank's loanable funds will come from the sale of its bonds to private investors.

On Nov. 15, 1947, an agreement between the Bank and the United Nations came into effect defining the Bank's position as a specialized international agency, emphasizing its cooperative role in relation to the United Nations while preserving its independent judgment with regard to all loan operations. See FOREIGN EXCHANGE.

On Mar. 17, 1947, John J. McCloy, former U.S. Assistant Secretary of War, took office as the new president of the Bank; and Robert L. Garner, former financial vice-president of General Foods Corporation, became its vice-president and general manager. The Management is responsible to a board of 14 Executive Directors chosen by the member nations; final authority is vested in the Bank's Board of Governors, consisting of the highest financial official of each member nation.

As of Nov. 15, 1948, the Bank had approved loans totaling \$525 million to the following borrowers: France, The Netherlands, Denmark, Luxembourg, Chile, and four leading Dutch shipping companies. It was conducting active loan discussions concerning other productive projects in some 20 member countries. For the fiscal year ended June 30, 1948, the Bank reported a net excess of income over expenses of approximately \$4 million. Headquarters: 1818 H St. NW, Washington 25, D.C. The Bank's Marketing Department has offices at 33 Liberty St., New York 5, N.Y.

INTERNATIONAL CIVIL AVIATION ORGANIZATION (ICAO). This organization came into being on Apr. 4, 1947, when the required number of states (26) had ratified the Convention on International Civil Aviation. The ICAO replaced the Provisional International Civil Aviation Organization (PICAO), which had been operating since June 6, 1945. Both ICAO and PICAO derive their powers from agreements drawn up by the Conference on International Civil Aviation held at Chicago, November-December, 1944. Fifty-one nations were members of the ICAO on Nov. 1, 1948.

The duties and objectives of ICAO are summed up in the Preamble to the Convention, as follows: to insure that "international civil aviation may be developed in a safe and orderly manner and that international air transport services may be established on the basis of equality of opportunity and operated soundly and economically." The principal

organs of the ICAO are the Assembly, composed of all member states, which meets annually; the Council, comprised of 21 member nations elected by the Assembly, which meets continuously, and the Secretariat, which is recruited on a broad international basis. There are five special bodies which are subsidiary to the Council: Air Navigation Committee, Air Transport, Legal, Joint Support of Air Navigation Services, and Finance Committees.

Under the terms of an agreement approved by the United Nations General Assembly on Dec. 14, 1946, and by the First Assembly of the International Civil Aviation Organization on May 13, 1947, ICAO is a Specialized Agency related to the United Nations.

Principal Officials: President of the Council, Edward Warner; Secretary General, Albert Roper, Deputy Secretary General, A. R. McComb; Assistant to President, M. H. Higgins; External Relations Officer, E. R. Marlin; Public Information Officer, R. A. Draper. Address: Dominion Square Building, Montreal, Canada.

Outstanding Events of 1948. During 1948 the ICAO Council approved the first six of a series of International Standards and Recommended Practices to guide the conduct of international civil air transport. The Standards were on the licensing of aviation personnel, on aeronautical maps and charts, rules of the air, dimensional practices, meteorological codes, and operation of scheduled international aircraft. Implementation of these standards will be an important step toward the achievement of world-wide unification of practices and procedures in international civil aviation, one of the principal objectives of ICAO.

Another major event during 1948 was the conclusion of an agreement between the Government of Iceland and ICAO for the international financing of air navigation facilities in Iceland needed for the safe and efficient operation of air transport across the North Atlantic Ocean.

The ICAO Second Assembly was held in Geneva in June and Regional Air Navigation Meetings were held in May (for the European-Mediterranean region and the North Atlantic region, in Paris) in July (for the North Pacific region, in Seattle) and in November (for the South-East Asia region, in New Delhi).

Headquarters: North American Office, Dominion Square Building, Montreal, P.Q., Canada. European and African Office: 60 bis Avenue d'Iena, Paris 16e, France. Middle East Office: 10 Sharia Lotfallah, Apt. 7, Zamalek, Cairo, Egypt. Far East and Pacific Office: 522 Little Collins Street, Melbourne, Australia. South American Office: Apartado 680, Lima, Peru.

INTERNATIONAL FINANCE, Office of. An Office of the United States Treasury Department, established July 15, 1947, by Treasury Department Order 86, of July 10, 1947, which abolished the Division of Monetary Research in the Office of the Secretary and transferred all its functions, duties, and personnel, as well as those of the Foreign Funds Control, to the new Office. The Office of International Finance, through its Director, is responsible for advising and assisting the Secretary of the Treasury in the formulation and execution of policies and programs relating to the international financial and monetary field. Acting Director: George H. Willis.

INTERNATIONAL INFORMATION and EDUCATIONAL EXCHANGE (OII and OEX). The agencies within the U.S. Department of State whose function is "to

promote a better understanding of the United States in other countries." OII carries out information activities for this purpose by means of short-wave radio, press, and motion pictures. OEX performs the educational and cultural functions through overseas libraries of the United States Government, exchange-of-persons programs with other countries, projects involving scientific and cultural cooperation with other governments, and related activities.

These programs received legislative authorization on Jan. 27, 1948, with passage of the Smith-Mundt Act by the 80th Congress. This Act and its subsequent appropriation made possible an expansion of existing facilities and permitted the resumption of several functions suspended during the previous year of 1947 as a result of inadequate appropriations.

U.S. Government radio broadcasts were carried on 24 program hours a day to Europe, the Far East and Latin America over 36 short-wave transmitters to an audience estimated at 30 million. Some 800 16-millimeter projectors and 40 mobile units were operated abroad to insure maximum distribution of motion pictures, which are seen by an estimated 900 million persons a month. Most of the films are made by private organizations and adapted to overseas use by OII, which also prepares short film subjects, documentaries, and newsreels. Daily news and feature material for overseas publication was supplemented during 1948 by several additional regional services as well as an expanded flow of photographic material. The Russian-language *Amerika*, published by this agency, continued to prove popular in the Soviet Union, where 50,000 copies were sold each month.

Cultural activities, including the maintenance of libraries and exchange of persons with other nations, were similarly expanded. Sixty-two libraries had been established abroad as of December, 1948, with 21 additional libraries being proposed by June, 1949. In Latin America 28 cultural centers received assistance, as did 270 American-sponsored schools providing American-type elementary and secondary education. The exchange of students, scholars and technicians has been continued in Latin America, and has been authorized for other parts of the world by the Smith-Mundt Act and Fulbright Act of the 79th Congress. In conjunction with foreign governments and 25 technical bureaus within ten agencies of the U.S. Government, co-operative exchange projects have been carried on with other countries in scientific and technical fields such as agricultural development, public health, geological and mineral investigations, and labor and safety standards.

The Government continued during 1948 to seek the widest participation of private agencies in international information and education. More than 500 American organizations now engage in some form of international education activity.

George V. Allen, a career diplomat, was appointed to direct these activities as Assistant Secretary of State for Public Affairs. Lloyd Lehrbas is Director of the Office of International Information; William C. Johnstone, Jr. is Director of the Office of Educational Exchange. Division chiefs include Charles W. Thayer, International Broadcasting Division; Herbert T. Edwards, International Motion Pictures Division; Jack C. McDermott, International Press and Publications Division; Francis J. Colligan, Acting Chief, Division of Exchange of Persons; and L. S. Morris, Acting Chief, Division of Libraries and Institutes. Haldore Hanson directs the program of scientific and technical cooperation.

INTERNATIONAL LABOR ORGANIZATION (ILO). An association of 60 nations financed by governments and democratically controlled by government, labor, and management representatives. The ILO's constitution was a part of the treaties of peace after the first World War. Established in 1919, it functioned in the interwar period as an autonomous associate of the League of Nations. The ILO is now a specialized agency of the United Nations under an agreement approved by the International Labor Conference in September, 1946, and by the General Assembly of the United Nations in December, 1946. The purposes of the Organization are set forth in its constitution, the preamble of which states that "lasting peace can be established only if it is based on social justice."

In order to achieve the objectives outlined in its constitution and in the declaration, the ILO seeks by international action to improve labor conditions, raise labor standards and promote economic and social stability. It brings together representatives of labor, management, and governments to formulate minimum labor standards. These standards are embodied in special treaties which are called International Labor Conventions and in Recommendations. The conventions, which require a two-thirds majority for adoption by the conference, are submitted to member countries for ratification. They cover a wide range of subjects including: hours of work, minimum age for employment, workmen's compensation, working conditions of women and young workers, social insurance, social standards in non-metropolitan territories, vacations with pay, industrial safety, statistics, maritime employment, and migration. As of December, 1948, a total of 90 conventions and 83 recommendations have been adopted. More than 1,000 individual ratifications have been registered on the conventions by member governments. Under the obligations imposed by the ILO's constitution, member governments are required to bring conventions adopted by the conference to the attention of their national legislatures. If ratified, the government assumes an obligation to bring its legislation into line with the provisions of the convention and to report annually to the ILO on the measures taken. Recommendations adopted by the conference are submitted to the national legislatures for information and guidance.

The International Labor Conference at which these conventions are adopted meets annually. Among the duties of the delegates is the election at three-year intervals of the governing body, which is made up of 16 government, 8 management, and 8 labor representatives. The governing body selects items for the agenda of the conference, appoints the director-general, supervises the work of the ILO and of its various committees and commissions. Chairman of the Governing Body: Shamaldharee Lall, Secretary of the Ministry of Labor in India. Employer Vice Chairman: Sir John Forbes Watson of the United Kingdom. Worker Vice Chairman: Leon Jouhaux of France.

The third part of the Organization's machinery is the International Labor Office. It acts as the permanent secretariat of the Organization, prepares reports for the conference, issues publications, and lends technical assistance to member governments. Director General: David A. Morse. Headquarters of the International Labor Office: Geneva, Switzerland.

The 1948 International Labor Conference held in San Francisco in June adopted four conventions covering freedom of association, employment service organizations, and two revisions of conventions

passed by earlier sessions of the conference on night work of women and young persons. The Conference also approved a formal Recommendation designed to supplement provisions of the convention on employment services. It agreed that at next year's conference consideration should be given to international minimum standards governing (1) vocational guidance, (2) labor clauses in public contracts, (3) the full and prompt payment of workers' wages, and (4) the application of the principles of the right to organize.

During 1948 other important ILO meetings, beside the Conference and regular meetings of the Governing Body included: Industrial Committees on Chemicals, Petroleum Production and Refining, and Textiles; the Joint Maritime Commission; the Permanent Migration Committee; the Preparatory Technical Conference on Safety in Factories; and the Preparatory Conference on Labor Inspection in Asian Countries at Kandy, Ceylon.

INTERNATIONAL MONETARY FUND. The International Monetary Fund was established in accordance with Articles of Agreement adopted by representatives of 44 governments at the United Nations Monetary and Financial Conference, Bretton Woods, N.H. in July, 1944. The Articles of Agreement came into force on Dec. 27, 1945, and at the time of the first meeting of the Executive Directors on May 6, 1946, 38 signatory countries had become members. Subsequently, 3 more original signatories of the Bretton Woods Agreement also became members, and 6 others, making a total membership today of 47.

The main purposes of the Fund, as set out in the Articles of Agreement, are: (1) to promote international monetary cooperation through a permanent institution which provides machinery for consultation and collaboration on international monetary problems, and, more specifically, (2) to promote exchange stability and avoid competitive exchange depreciation, (3) to assist in the establishment of a multilateral system of payments in respect to current transactions, which means the eventual elimination of restrictions on the making of payments and transfers for current international transactions and the avoidance of discriminatory currency arrangements or multiple currency practices, and (4) to permit members, under appropriate conditions, to use the resources of the Fund with a view to shortening the duration and lessening the degree of any disequilibrium which may from time to time arise in their balances of payments.

The Fund obtains its resources from the payment by members of quotas, the size of which was agreed for original members at Bretton Woods. Each member pays in gold either 25 percent of its quota or 10 percent of the member's net official holdings of gold and U.S. dollars, whichever is the smaller, and the remainder of its quota in its own currency. The aggregate of members' quotas as of Nov. 30, 1948, was equivalent to \$8,034 million. Total subscriptions paid as of that date amounted to the equivalent of \$6,852.6 million, of which \$1,398 million was held by the Fund in gold. The rights of members, after payment of their subscriptions, to obtain foreign exchange from the Fund are also determined by reference to their quotas.

Members are under an obligation, once the foreign exchange values of their currencies have been agreed with the Fund, to make no change in their exchange rates without consultation with the Fund. The Fund, however, is not entitled to object if the

proposed change does not exceed 10 percent of the original par value. Agreed par values were announced on Dec. 18, 1946, for 32 members, to which 7 others have subsequently been added. Total exchange transactions of the Fund reported through Nov. 30, 1947, were the equivalent of \$648.9 million.

Of the 14 Executive Directors of the Fund, 5 represent the members with the largest quotas: United States, United Kingdom, China, France, and India. The voting power of the Executive Directors is approximately proportional to the quotas of the member or members whom they represent. The United States Executive Director is therefore entitled to cast 30.13 percent of the total votes of the Executive Directors, based on a United States quota of \$2,750 million.

Camille Gutt, former Minister of Finance of Belgium, is Managing Director of the Fund, and Chairman of the Executive Directors. Other officers include M. H. Parsons, Director of Operations; E. M. Bernstein, Director of Research, Andre Van Campenhout, Chief Counsel; C. M. Powell, Comptroller and Frank Coe, Secretary. Andrew N. Overby, United States Executive Director, has been named Deputy Managing Director and will assume that post at a date not yet fixed.

While working relations with the United Nations are close, the Fund, as an organization, is independent of the United Nations. An agreement, setting forth the basis of the working relationships with the United Nations has been approved by the Board of Governors of the Fund and by the General Assembly of the United Nations. Headquarters: 1818 H St., N.W. Washington 6, D.C.

INTERNATIONAL REFUGEE ORGANIZATION (IRO). The International Refugee Organization is a non-permanent specialized agency of the United Nations. It came into being on Aug. 20, 1948, when the constitutional requirements for its official existence were fulfilled. Ratification of the Constitution by fifteen member nations of the United Nations, whose contributions totaled at least 75 percent of its first year's operational budget (as opposed to its purely administrative budget) had been required.

Before IRO came into official existence, its functions were carried on by a Preparatory Commission (PCIRO) which assumed on July 1, 1947, the functions previously exercised by its predecessor organizations—the United Nations Relief and Rehabilitation Administration and the Intergovernmental Committee on Refugees.

Summary of Operations. Under the terms of its Constitution IRO is responsible for the care of approximately 1,600,000 refugees; approximately 550,000 of these are prewar refugees who, although they have not acquired new nationality, are more or less integrated in their present countries of residence. The remainder are victims of the Second World War, the vast majority of whom are in Germany and Austria.

In carrying out its responsibilities to these refugees, IRO provides food, shelter, and other care for those who are unable to maintain themselves. On Sept. 30, 1948, there were 699,815 persons receiving some form of assistance from IRO, either in one of the more than 600 installations maintained in Germany, Austria, Italy, the Middle East, the Far East, or outside of these installations.

In addition to providing minimum subsistence necessities to those persons requiring such assistance, IRO is responsible for encouraging the repatriation of all those who wish to return to their countries of origin. During the period July 1, 1947,

to Oct. 31, 1948, a total of 58,093 persons returned to their homelands with the assistance of IRO.

For refugees having valid reasons against repatriation, IRO makes arrangements for their resettlement in new countries. As of Oct. 31, 1948, a total of 276,650 persons had been resettled in more than 70 countries on five continents. In order to carry out its resettlement program, IRO maintains a fleet of ships operated on a charter basis to transport refugees to such overseas destinations as Canada, Australia, various South American countries, and the United States.

IRO also provides legal protection and assistance to refugees and displaced persons to whom the protection of their countries of former nationality or residence is not available.

Members. The following governments have signed the IRO Constitution and are full members: Australia, Belgium, Canada, China, Denmark, Dominican Republic, France, Guatemala, Iceland, Luxembourg, Netherlands, New Zealand, Norway, United Kingdom, United States, Venezuela. The following governments have signed the IRO Constitution but have not completed ratification (their representatives are present at IRO meetings as observers): Argentina, Bolivia, Brazil, Honduras, Liberia, Panama, Peru, Philippines.

Officers. Chairman of the Executive Committee, Jean Desy (Canada). The Director General of IRO is William Hallam Tuck (U.S.A.); Deputy Director General, Sir Arthur Rucker (U.K.); Assistant Director Generals, Myer Cohen (U.S.A.), Pierre Jacobsen (France), Dr. Petrus N. M. Koolen (Netherlands). Headquarters: Palais des Nations, Geneva, Switzerland.

INTERNATIONAL TELECOMMUNICATION UNION (ITU). Created in 1934 by a merger of the International Telegraph Union, established in Paris in 1865, and the International Radiotelegraph Union, formed in Berlin in 1906. It was at first governed by the Madrid Convention, signed in 1932, but on Jan. 1, 1949, the Madrid Convention will be replaced by that of Atlantic City, N.J., signed on Oct. 2, 1947.

The purpose of the Union is to insure effective telecommunication, and the texts of regulations pertaining to the telegraph, the telephone, and the radio have been annexed to the Convention of the Union. Telegraph conferences have been convened by the Union in: Paris (1865), Vienna (1868), Rome (1872), St. Petersburg (1875), London (1879), Berlin (1885), Paris (1890), Budapest (1896), London (1903), Lisbon (1908), Paris (1925), Brussels (1928), Madrid (1932), and Cairo (1938). Radiotelegraph conferences have been held in: Berlin (1906), London (1912), Washington (1927), Madrid (1932), Cairo (1938), and Atlantic City (1947).

Relationship to the United Nations. Under an agreement reached in 1947 between the UN and the International Telecommunication Union, the UN (in consideration of Article 57 of its Charter) recognizes ITU as a specialized agency responsible for certain actions. The agreement provides for reciprocal representation in the meetings of both organizations, and determines means for the exchange of information and documents, the assistance that the Union agrees to give to the UN, and the relations of the Union with the International Court of Justice.

Annex 1 to the Atlantic City Convention lists 78 countries or groups of territories as full members of the Union, upon signature and ratification of, or accession to, the Convention. Upon the fulfilment of certain conditions, four other countries or groups

of territories may become members. The Convention provides for extension of this list under certain conditions, and for associate members.

For 1949, Chairman of the Administrative Council, Professor Paul Kouzmitch Akoulchine (U.S.S.R.); Secretary General, Dr. Franz v. Ernst (Switzerland); Assistant Secretaries General, Léon Mulatier (France) and Comm. Gerald C. Gross (U.S.A.); Chairman of International Frequency Registration Board (I.F.R.B.) and of Provisional Frequency Board (P.F.B.), Sidney H. Witt (Australia); Director of International Telephone Consultative Committee (C.C.I.F.), Georges Valensi (France); Director and Vice Directors of International Radio Consultative Committee (C.C.I.R.), Balt. van der Pol (Netherlands) and L. W. Hayes (United Kingdom). Headquarters: Palais Wilson, Geneva, Switzerland.

Outstanding events in 1948: Administrative Council of the Union (Geneva, January 20–February 11 and September 1–October 3); VI Meeting of the International Telegraph Consultative Committee (C.C.I.T.) (Brussels, May 11–27); V Meeting of the C.C.I.R. (Stockholm, July 12–31); European Broadcasting Conference (Copenhagen, June 25–September 15); Maritime Regional Radio Conference (Copenhagen, June 25–September 17); International High Frequency Broadcasting Conference (Mexico City, October 22–); International Administrative Aeronautical Radio Conference (Geneva, May 15–September 25); Provisional Frequency Board (January 15–).

The following meetings are scheduled for 1949: Administrative Council (Geneva, August 15); Extraordinary Meeting of C.C.I.T. for election of the Director, May or June; XV Meeting of the C.C.I.F. (Paris, June 7); International Administrative Telegraph and Telephone Conference (Paris, May 17); Region 1 Administrative Radio Conference (Geneva, May 18); Region 2 Administrative Radio Conference (February 15); Region 3 Administrative Radio Conference (Geneva, May 18); Special Administrative Radio Conference for the approval of the new frequency list (Geneva, October 17); International Administrative Aeronautical Radio Conference (Geneva, July 31); Special Administrative Conference for the North-East Atlantic (Loran Conference; Geneva, January 17).

INTERNATIONAL TRADE ORGANIZATION (ITO). This organization will come into being when the Havana Charter for an International Trade Organization has been accepted (by Sept. 30, 1949) by 20 governments. At the end of 1948, the Charter had been accepted by Australia, on condition that it is accepted by the United States and the United Kingdom. The Charter will, it is expected, be considered by many countries including the United States during the first half of 1949. The Havana Charter was completed on Mar. 24, 1948, when after four months of intensive labor, it was signed by 54 countries. The Charter, with its 106 articles covering every aspect of international trade relations, will be administered by ITO. Meanwhile, the ITO Interim Commission, established at Geneva, is preparing for the first ITO Conference. The Commission held its first meeting at Havana and elected an 18-member Executive Committee to which it delegated its powers. The ICITO will go out of existence when ITO is created.

The ITO will be a specialized agency of the United Nations, having close relations in particular with the International Monetary Fund and the Food and Agricultural Organization. A permanent site will be selected at its first Conference.

The Havana Charter is directed not only towards the reduction of trade barriers and the prevention or settlement of trade disputes; it also aims towards promoting economic development, especially in economically backward countries. It codifies for the first time a very wide range of customs and other commercial practices; it makes the first attack on international cartels which restrict trade; and it provides controls over the use of intergovernmental commodity agreements.

Officers: Chairman of ICITO, Max Suetens (Belgium); Chairman of Executive Committee, L. Dana Wilgress (Canada); Executive Secretary, Eric Wyndham White. Outstanding event of 1948 was the completion of the Havana Charter. Of parallel importance was the completion—at the end of 1947—of tariff negotiations, covering two-thirds of the world's imports and exports, by 23 countries. These were incorporated in a multilateral trade treaty known as the General Agreement on Tariffs and Trade. By June 30, 1948, 22 of the 23 countries had brought the General Agreement into effect within the limits of the existing legislation of each.

Apart from the concluding stages of the Havana Conference, the Interim Commission of ITO has met once at Havana, and the Executive Committee has met twice, at Havana and Geneva respectively. The contracting parties to the General Agreement have also met twice, at Havana and Geneva respectively. A further series of tariff negotiations, sponsored by the contracting parties, will open at Annecy, France, in April 1949.

INTERSTATE COMMERCE COMMISSION (ICC). An independent establishment of the U.S. Government empowered to regulate, in the public interest, common carriers engaged in transportation in interstate commerce. (For details, see *YEAR BOOK* for 1940.) Part IV of the Interstate Commerce Act, approved May 16, 1942, conferred upon the Commission jurisdiction over freight forwarders. Chairman: Charles D. Mahaffie.

IOWA. A west north central State. Area: 56,280 sq. mi. Population: (July 1, 1948) 2,625,000, compared with (1940 census) 2,538,268. Chief city: Des Moines (capital), 159,819 inhabitants in 1940. See *AGRICULTURE, EDUCATION, MINERALS AND METALS, SCHOOLS, UNIVERSITIES AND COLLEGES, VITAL STATISTICS*.

Finance. For the fiscal year ended June 30, 1947, total revenue amounted to \$153,343,000; total expenditure, \$132,651,000.

Elections. The 10 electoral votes, which went for Dewey in 1944, were Truman's in 1948. Truman received a majority of about 20,000 over Dewey and Wallace. In the Senatorial race, Democrat Guy M. Gillette defeated incumbent George A. Wilson, but all 8 Congressional seats remained Republican. Control of the State government remained Republican, with the election of William S. Beardsley as Governor, and the following officers: Lieutenant Governor—Kenneth A. Evans; Secretary of State—Melvin D. Synhorst; Attorney General—Robert L. Larson; Treasurer—J. M. Grimes; Auditor—Chet B. Akers; Superintendent of Public Instruction—Jessie M. Parker. The voters also approved an \$85 million bond issue for veterans' bonuses.

Officers, 1948. Governor, Robert D. Blue; Lieut. Governor, K. A. Evans; Secretary of State, Rollo H. Bergeson; Attorney General, Robert L. Larson; State Treasurer, J. M. Grimes; State Auditor, C. B. Akers; State Comptroller, R. E. Johnson.

IRAN (Persia). An empire in southwestern Asia, between the Caspian Sea on the north and the Persian Gulf on the south. Area: 628,000 square miles.

Population. No complete census has ever been taken; estimates of the total population vary from 15 to 18 million. Of these some 13 million are classed as rural and include from 3 to 5 million nomads. Chief cities (with population estimated): Teheran (Tehran) 682,532, Tabriz 213,542, Isfahan 204,598, Meshed 176,471, Shiraz 192,023, Resht 121,625, Abadan 110,000, and Hamadan 103,874.

Education. The educational system of the country was drastically reformed during the modernizing era of Riza Pahlavi. In 1938 there were 8,381 schools, a figure which during recent years has undoubtedly grown considerably. A university has been set up at Teheran. In general, foreign schools have been absorbed into the national educational system or have been abandoned. Most Persians are Moslems of the Shia sect, except for some 850,000 Sunnis. There are small communities of Parsees, Jews, Armenians, Nestorians, Bahaists, and others.

Production. By and large Iran is a barren country abounding in vast deserts and steppes where only a sparse nomadic population can obtain sustenance. Yet much of its soil is fertile and only awaits irrigation. Despite these conditions Iran produces a wide variety of grains, fruits, and livestock. Estimated yields of the principal agricultural products (1947–48) were (in metric tons): wheat 1,945,163, barley 775,893, milled rice 65,000, ginned cotton 17,500, dates 110,000, raisins 20,000, sugar 51,861, tobacco 17,500, and tea 6,597. The number of livestock is estimated as: 13 million sheep, 6.8 million goats, and 2.5 million cattle. Horses, donkeys, and camels also are raised.

Iran long has been a principal producer of the poppy from which opium is derived. Industrialization has already begun in a small way with the production of such goods as textiles, carpets, glass, and sugar.

Many of the mineral deposits have been only partly explored and are largely undeveloped. Oil is by far the most valuable mineral product now exploited in the country. In southwestern Iran the Anglo-Iranian Oil Company has a large concession on which oil is produced, piped to refineries at Abadan on the Shatt-el-Arab and exported in large quantities. In 1947 the petroleum output of the Anglo-Iranian Oil Company was 20,520,000 tons; in 1948 (11 months) 20,774,000 tons.

Foreign Trade. Imports for the year 1947 totaled 5,800 million rials; exports (including oil) 12,630 million rials. The principal imports are manufactured goods, silverware, and art objects. With the exception of sugar and tea, which must be imported, the country is self-sufficient in food. Chief exports are oil, carpets, gum tragacanth, cereals, rice, fruits, nuts, fibers, skins, and wool.

Finance. Budget estimates (1947–48): revenue 7,799,068,000 rials; expenditure 7,762,443,000 rials (since 1946 the official rate has been 32.50 rials equal US\$; free rate as of November, 1948, 56.07 rials equal US\$). On Jan. 1, 1948, the total internal debt amounted to 4,359 million rials.

Transportation. The empire has 1,424 miles of railroads, of which the major railway line, the Trans-Iranian Railway, runs from Bandar Shahpur on the Persian Gulf to Bandar Shah on the Caspian Sea. Total length of roads is about 15,000 miles, of which about 1,000 miles are asphalted. Four international and two national airlines provide regular service between Teheran and other points in the Middle East and Europe.

The main ports on the Persian Gulf are Korramshahr, Abadan, and Bandar Shahpur. Chief Caspian ports are Bandar Pahlavi, Bandar Shah, and Noshahr. Government-operated telegraph lines connect the large cities of Iran. There is international cable and wireless service and a modern broadcasting station.

Defense. An American police mission has been reorganizing the country's police forces. The army, navy, and air forces have also been undergoing reorganization. The country's territorial integrity, sovereignty, and political independence were guaranteed by a treaty of alliance signed at Teheran by Great Britain, the U.S.S.R., and Iran on Jan. 29, 1942.

Government. The reigning Shah is Muhammad Riza Pahlavi, who succeeded his father, Riza Khan Pahlavi, in September, 1941, when the latter was forced to abdicate by concerted Anglo-Soviet action. The constitution provides for a National Assembly, or Majlis, to be composed of two houses: the representatives of both to be elected by the people, except half of the Senate who were to be appointed by the Shah; the second body, however, has never been constituted. The Council of Ministers, responsible to the Majlis, in addition to the Prime Minister, is composed of the ministers of Foreign Affairs, War, Finance, Interior, Justice, Education, Agriculture, Health, National Economy, Communications, Posts, Telephone and Telegraph, and Labor.

The country is divided into ten major provinces, each called an *ustan*; these in turn are divided into sub-units, or *shahristan*. These are administered by governors-general and governors, respectively, each of whom is responsible to the central government and administers his province through heads of departments appointed by the different ministries listed above. The result is a closely integrated central government.

Events, 1948. Internal Political Developments. During the year Iran had three different cabinets, with only four duplications of personnel in the three rosters—a rather small percentage as cabinet shuffles in the country generally go. The first government, which came into power in December, 1947, was headed by Ibrahim Hakimi who had preceded Ahmad Qavam a little less than two years before and had initiated Iran's appeal to the Security Council against Soviet Russia's policies in Azerbaijan.

This government did not receive a vote of confidence from the Majlis until February 26, and then only by 55 votes out of a total of 103, in spite of the fact that one of its first important official acts had been the abolition, on January 13, of the martial law which had been continuously in effect since August 1941. Martial law was reimposed by the government in the Caspian towns of Chalus, Shahi, and Shahsavar when local disturbances brought the arrest of 300 persons reported to be members of the Tudeh Party—the pro-Soviet leftist group which had been forced underground after the elections of the year before. This action elicited from 65 newspaper editors and journalists a resolution calling upon the Majlis to defend civil liberties. Hakimi won a vote of confidence on this issue, but by June 8 was forced to resign by other pressures.

The formation of a new government, led by Abdul Husayn Hazhir, believed by most to be pro-British, precipitated violent public protests on June 17, when several persons were injured in a clash with the Teheran police in Parliament Square. Although this government was finally confirmed, the opposition soon effected its fall, in early No-

vember. The present government took office November 8; its Prime Minister is Muhammad Mara-gh-e'i Saced, who had in the fall of 1944 led the resistance to Soviet demands for an oil concession and was forced out of office by the Russians.

During the year a bill was introduced in the Majlis, and referred to the proper committee for study, providing for the implementation of the constitution by the formation of a second legislative body, to be called the Senate. It is to be composed of 60 members, half to be nominated by the Shah and half to be elected by the people. This was indicative of efforts being made to bring more stability and responsibility into the politically fragmented legislative branch of the Government.

In July Shah Muhammad Riza, an ardent sportsman, arrived in London for a non-political visit to attend the Olympic Games. He was entertained at Buckingham Palace and later traveled in France and Switzerland, in which latter place he had secured his education as a youth. In November the Egyptian court at Cairo announced the divorce of the Shah and Queen Fawzia, King Farouk's sister. They were married in 1939. Following their estrangement, she left Iran for Egypt in May, 1945, and never returned.

The Seven-Year Plan. Without doubt the most important development of the year was the projected long-term plan which called for the expenditure of \$620 million over the next 7 years. To this end the government on October 19 engaged Overseas Consultants, a concern made up of 11 American engineering construction companies, to make recommendations for the completion and implementation of this plan. The money is to be secured from the increasing oil royalties paid by the Anglo-Iranian Oil Company and by loans from the National Bank of Iran and the International Bank of Reconstruction and Development.

At present it is expected that almost one-third will be spent on the basic industry of agriculture; about one-fourth on public utilities, health and sanitation, and technical education; approximately one-seventh each on industry and mines, and on the improvement of roads, railways, ports, and airfields; with the remainder to be spent for other public works and the establishment of an Iranian oil company.

Relations with the Powers. Events in Iran are inevitably bound up with the relations of the Great Powers to each other and to Iran. The year began with considerable tension between Iran and Soviet Russia, a legacy from the previous year. On January 31, Russia presented the Iranian government with a note charging Iran with permitting the United States to establish strategic bases in Iran and, therefore, with violation of the Soviet-Iranian pact of 1921. The Iranian reply to these Soviet charges of February 4 denied each of the Soviet points and in turn accused the Soviet Union itself of violating the 1921 agreement. Meanwhile a spokesman for the U.S. Department of State denied the Soviet charges as far as the United States was concerned. The following March 24 the Soviet Union presented a second note of protest against alleged United States military activity in Iran, describing the previous Iranian denials as "unconvincing." This note also was rejected by the Iranian government.

It was shortly after these exchanges that the Iranian government requested all the three major powers to cease the publication "of any sort of press pamphlet whether magazine, newspaper, or telegraphic news." A fortnight later, on April 15, the Majlis voted to place at the head of its agenda

a bill asserting Iranian sovereignty over Bahrein Island, which has for upwards of a century been under British protection and where American oil interests are heavily involved.

Doubtless connected with this same Soviet protest and the desire of Iran to follow more strictly a "policy of balance" was the decision to reduce the executive powers of Brig. Gen. Norman Schwarzkopf, commanding the Iranian Gendarmerie. On June 20, Col. James R. Pierce replaced Gen. Schwarzkopf as chief of the gendarmerie mission under a new contract. In September Maj. Gen. Vernon Evans replaced Maj. Gen. Robert W. Grow as chief of the United States Military Mission, a mission of purely advisory character for the Iranian Quartermaster.

United States-Iranian relations continued cordial throughout this tension. Ambassador George Allen returned to the United States on February 17 to become Assistant Secretary of State and his successor, John C. Wiley, presented his credentials to the Shah the following April 6.

The Soviet protests referred to above were certainly connected with the United States-Iranian negotiations during the early part of the year which resulted in the United States' furnishing Iran \$10 million worth of "non-aggressive weapons" from war surplus, including guns, light tanks, and fighter planes, to be repaid over a 12-year period with interest at 2½ percent, together with not more than \$16 million—made possible by special legislation—to cover repair and shipping costs of the surplus material, which, of course, was actually worth several times the agreed price. Provision of these supplies on these terms makes it possible for Iran to devote more of its current resources to economic development, in which, as indicated, private American corporations have a large part.

—T. CUYLER YOUNG

IRAQ (Mesopotamia). An Arab constitutional monarchy covering the lower and middle parts of the Tigris and Euphrates river basins in Asia.

Area and Population. Area: 116,000 square miles, over 23,000 of them cultivated (almost half of them fallow) and an additional 39,000 square miles cultivable. Iraq's potential agricultural resources could support many more than the present 5 million, as the country did in the ninth century. Chief cities: Baghdad (capital), about 500,000 pop.; Mosul, about 160,000; Basra (port) about 86,000. Eighty percent of the population is Arab with an important Kurdish minority of 12 percent on the northern and eastern frontiers, zealously guarding its cultural identity. Ninety-four percent are Moslems (including the Kurds), almost equally divided between Sunnis and Shias; the rest are Christians and Jews.

Education. Primary education is free and compulsory. In 1946-47, in addition to the 13 foreign schools with over 1,700 pupils, there were about 1,050 primary schools with almost 150,000 pupils, about 140 secondary schools with over 20,000 pupils, and 15 technical schools (agriculture, commerce, nursing, teachers' training, etc.) with over 2,000 pupils, and 8 colleges (including engineering, medicine, pharmacy and law) with almost 4,000 students. Among the many students abroad in 1948-49 were 250 studying in the United States at government expense.

Communications. Iraqi State Railways operate over 1,500 miles of important roads, 1,000 or more of them good, including Baghdad routes to Damascus and toward Palestine. American, British, French, Dutch, Swedish, and Middle Eastern airlines in-

cluding Iraqi Airways service Iraq airports. The government runs a Baghdad broadcasting station and operates telephone and telegraph facilities.

Production. Today Iraq has 75 percent of the world's date palms and produces 80 percent of the dates shipped in the international market. Wheat, barley, giant millet, and rice are important crops. Livestock is one of the principal industries, and includes sheep, goats, cattle, horses, and buffaloes. Tobacco growing is increasing. Agricultural production could be substantially increased by more intensive use of the cultivated land and more extensive irrigation and drainage works. Cigarette-manufacturing has increased, but other manufacturing industries are still embryonic despite government efforts. Most important is the petroleum industry, controlled by three large concessionaires.

The principal oilfield, at Kirkuk, controlled by the Iraq Petroleum Company representing American, British, and French interests, connects with the Mediterranean by pipe-lines to Beirut and Haifa. In 1947, oil production totaled 4,700,000 metric tons, but a steady 1948 production decrease resulted from the government embargo on oil flowing to Haifa. In October the government, receiving several million pounds annually in revenues, reopened conversations with the Iraq Petroleum Company on amending its concession agreement.

Foreign Trade. Chief exports are oil, dates, livestock, grain, raw cotton and wool, and hides and skins. Manifold imports include iron and steel products, automobiles and other machinery, cement, chemicals, clothing, paper, coffee, sugar, and tea. In 1947, exports amounted to 25 million Iraqi dinars, primarily to the United Kingdom, India, Iran, the United States, Syria, Turkey, and Italy, and 1947 imports amounted to 40 million dinars, of which about 8 percent came from the United States. In the first four months of 1948, exports declined and imports increased. The export decline, due to the embargo on oil flowing to Haifa and to the crop failure, forced the reimposition of import controls, particularly on luxury goods, and an increase in import duties.

Finance. The regular 1948-1949 state budget provided for expenditure of 25 million dinars and revenue of 23.5 million dinars, a rise over the previous year because of defense and agriculture appropriations. The expected deficit, largely due to the loss of royalties because of the Haifa oil embargo, was to be made up by higher taxes. Currency in circulation in November totalled 34.5 million dinars. The year 1948 was the third to reveal a contraction in notes in circulation, a fall in bank deposits, and a decline in trading activity. The cost of living was 600 in November (1937 = 100), compared with a peak of 763 in April. At year's end the foreign exchange situation had improved over that of 1947; 10 percent of Iraq's investments abroad had been liquidated during the year. The 1948 exchange rate remained at \$4.030 to the Iraqi dinar.

Government. King Faisal II, grandson of King Faisal I (brother of Transjordan's King Abdullah) who took the throne in 1921, is represented during his minority by the Regent, Emir Abdul Illah. The 1925 constitution provides for a Parliament consisting of a Senate appointed by the King for 8-year terms and a Chamber of Deputies elected by secret ballot every 4 years, one deputy to every 20,000 males over 21, totalling 138 in 1947. The Senate's size is limited to one-fourth that of the Chamber. The King appoints the Prime Minister and both select a Cabinet of 7 or more ministers.

Events. Relations with Great Britain. In January the

signing of the Anglo-Iraqi Treaty of Portsmouth, replacing the 1930 treaty: 1) gave Britain the right to send troops into Iraq in case of war or its imminence; 2) took away her right to occupy two Iraq airfields; and 3) provided for continued British training and equipping of the Iraq Army. On January 21, after 6,000 students staged a six-hour riot protesting the Treaty, the Regent announced the Treaty could not be ratified because it did not "realize Iraq's national aims."

On January 27 the Cabinet of Prime Minister Salih Jabir (who had signed the Treaty) resigned, after another day of rioting occasioned by his announcement he would fight for the Treaty's ratification. Mohammed al-Sadr, former President of the Iraqi Senate, became Prime Minister with a new Cabinet, members of which were shifted less than two months later. On March 23 the British Foreign Office announced the British advisory military mission would be withdrawn at Iraq's request. In June another cabinet was formed with Muzahim al-Pachachi as Prime Minister. The June 15 general election resulted in a Chamber over half of whose members were new and young.

Economic Development. Development plans include erecting an oil refinery and mechanizing agriculture by buying and operating a large number of tractors and combines under rental to the farmers by the government. Most important irrigation scheme is that of the Bekhme Dam to regulate the Tigris flow, irrigate, and generate electricity. Thirty-three million dinars are to be allocated for development over several years, starting with an appropriation from the 1948-49 budget.

Palestine Problem. The first demonstration against partition, in December, 1947, was marked by an attack on the United States Information Service for which the government apologized. In addition to the declaration of martial law necessitated by the Palestine war, the Chamber of Deputies made Zionist activity a crime punishable by death or life imprisonment. Meanwhile the Chief Rabbi, as spokesman for Jews long resident in Iraq, said Iraqi Jews would fight with the Arabs against Zionism. Iraq joined the other Arab countries in active fighting in Palestine and contributed substantially to the relief of Arab refugees.

—DOROTHEA SEELYE FRANCK

IRELAND, Northern. A part of the United Kingdom, consisting of the 6 counties and 2 parliamentary boroughs in northern Ireland (Ulster). Capital, Belfast.

Area and Population. The area is 5,499 square miles. The estimated population in 1945 was 1,324,000, of whom about one-third lived in Belfast, the only large city.

Education and Religion. Educational facilities include about 1,660 public elementary schools with approximately 187,000 pupils; 76 secondary schools, 69 technical schools and 60 others, with about 50,000 students, and the Queen's University at Belfast, with 2,839 students in 1946-47. The latest available figures show religious affiliation as follows: 83 percent Roman Catholic, 31 percent Presbyterian, 27 percent Episcopalian, and the remaining 9 percent in smaller denominations or unclassified.

Production. Agriculture, linen and shipbuilding are the three basic industries. Potatoes grown in 1947 were 1 million tons and oats 265,000 tons, both less than in 1946. Poultry 21,029,111; pigs 333,583; and cattle 931,470 in 1947; continued to increase.

The linen industry is the most important dollar-

earning enterprise in Northern Ireland. A reduction of flax acreage to 17,450 has increased dependence upon foreign supplies. The Belfast shipping yards, the largest in the world, launched 11 merchant vessels with a gross tonnage of 121,625 in 1947. On Apr. 1, 1948, 21 vessels totaling 201,700 gross tons were under construction.

Foreign Trade. Exports in 1947 were £153 million; imports £157.5 million, yielding a small trade deficit. Direct trade with the United States showed an export surplus of £815,000 in 1947. Nine-tenths of Ulster exports go to Great Britain and four-fifths of imports come from Britain. Food products, textiles, and ships are important exports; manufactured goods, raw materials, and coal are the chief imports. External trade was £232 per capita in 1947.

Transportation. Railway standard gauge mileage is 644 and inland waterway mileage 157. In 1946 the Northern Ireland Road Transport Board operated 680 omnibuses and 1,137 freight vehicles.

Finance. The budget statement of May, 1948, showed a surplus of £612,000. Estimated revenue and expenditure for 1948-49 are close to £59 million. Contribution to United Kingdom or imperial services was set at £21.5 million. Net savings in the financial year 1947-48 were almost £6 per head, as compared with just over £4 for Great Britain.

Government. Although Northern Ireland is an integral part of the United Kingdom and is represented by 13 members in the British House of Commons, the country exercises a degree of local autonomy through a Parliament of its own and a Cabinet responsible thereto. The Parliament consists of a Senate of 2 ex-officio, and 24 elected members and a House of Commons of 52 members, all elected. In 1948, as a result of the election of 1945, the Unionist Party was in power. Governor: Vice Admiral the Earl of Granville. Prime Minister, Sir Basil S. Brooke.

Events, 1948. Throughout the year Northern Ireland felt the repercussions of Eire's proposed repeal of the External Relations Act and severance of all connection with Britain. The Prime Minister, Sir Basil Brooke, took cognizance of the preliminary feelers as early as April 13, when he disclosed that his Government was considering sending some one to the United States to correct the "travesty of present-day conditions in Northern Ireland" being given in the United States, presumably by de Valera in his March visit.

At this stage Eire's desire, as publicly expressed, was merely for the annexation of Ulster—or, in the more diplomatic language ordinarily used in the argument, the "end of partition." By July Eire's plans for a separate republic were maturing, and again Sir Basil Brooke issued a statement in reply to recent speeches by members of the Eire Government. "Do they think our constitutional status is up for auction?" the Prime Minister asked, adding that "Ulster is not for sale."

The vigor of the interchange across the border increased in the late summer. On September 9 the Grand Orange Lodge of Ireland passed a resolution which included an "emphatic protest against the audacious and preposterous claim of Mr. Costello to have any control in any capacity over the affairs of Northern Ireland."

Prime Ministers Brooke and Attlee met at Chequers on November 20 at the request of Attlee, to discuss Eire's forthcoming departure from the Commonwealth. Reporting on the talk to the Northern Ireland Parliament on November 25, Prime Minister Brooke said that Attlee had given

the fullest assurances that the creation of a republic in southern Ireland would have no effect whatever on the constitutional position of Northern Ireland as an integral part of the United Kingdom. Although the British Government was to give Eire citizens full civil rights, control of Eire citizens in Northern Ireland would be continued through the Northern Ireland Safeguarding of Employment Act.

Northern Ireland made the necessary adjustments to secure reciprocity when the British national insurance and health services came into operation on July 5. The respective ministers of National Insurance arranged that the two schemes should operate as a single system and contributions paid in one country would entitle the contributor to benefit in the other country. British ministers who visited Northern Ireland in the latter half of the year included Prime Minister Attlee; Lord Jowitt, the Lord Chancellor; Harold Wilson, President of the Board of Trade; George Isaacs, Minister of Labor and National Service; and Lord Packenham, Minister for Civil Aviation. Nearly all of the officials were concerned in part with economic affairs during their visits.—ALZADA COMSTOCK

IRON AND STEEL. United States production of iron and steel in 1948 was at record-breaking peacetime levels, but the demand for steel products by domestic industry was far greater than could be supplied by wartime and postwar expanded steel plants and available raw materials. Production was restricted by a year-long cycle of repairs to furnaces and other equipment that had been deferred too long in order to meet heavy wartime and postwar demands for steel. The coal mine strike in the spring caused the loss of an estimated 1,500,000 ingot tons.

Domestic production of steel ingots and castings totaled 88,509,083 net tons, less by hardly more than a million tons than peak wartime production in 1944 (1947 ingot production: 84,894,071 tons). Steelmaking furnaces were operated at an average rate of 93.9 percent of capacity, which was placed at 94,233,460 net tons on Jan. 1, 1948. An additional 1,800,000 tons of capacity was added during the year. Barring the possibility of major strikes occurring next year and assuming a continuation of heavy steel demand, industry leaders forecast an all-time-high production rate in 1949 of about 92 million tons.

Domestic production of pig iron in 1948 was 60 million net tons, a peacetime record (1947 pig iron production: 58,507,169 tons).

Shipments of steel products to consumers, including alloy and stainless steels, reached 66 million net tons. (1947 shipments: 63,057,150 tons). The principal steel products shipped were: hot-rolled sheets, 11.8 percent of the total; plates, 10.6 percent; cold-rolled sheets, 10.4 percent; hot-rolled carbon steel bars, 9.4 percent; structural shapes, 6.5 percent. The diversion of tonnage from the less profitable products to those bringing a higher net return is a significant postwar trend. The heaviest steel plant expenditures in the postwar period have been for additional finishing facilities to permit mills to sell a larger proportion of finished steel products to customers. In sheet steel, for example, cold-rolled capacity has been heavily expanded at the expense of hot-rolled tonnage.

For many years the steel industry has sold its products on the multiple basing point pricing system. This method of pricing permits competition among steel producers, some of whom may be reaching into distant market areas. The origin of

this pricing system lies in the need of every steel producer to operate its plant facilities above the break-even rate of plant capacity in order to make a profit. By being willing to absorb freight charges to a distant market area additional tonnages of steel can be sold, at the expense of the sales volume of mills in that area.

The multiple basing point system is one in which a base price (aside from extra charges for gage, size, quantity, alloy, finish, etc.) is established by every major producer for each steel product at its producing point. Competitors may elect to compete within the normal market area of such mills by absorbing the freight costs from their nearest producing points to the remote basing point. Under this system of pricing it is also possible for steel producers in some areas to charge customers so-called phantom freight on certain steel products and yet remain competitive. This term describes freight charges billed the customer that have not actually been incurred by the producer.

A Supreme Court decision at the end of April outlawed the use of the multiple basing point pricing system by the cement industry. The Federal Trade Commission indicated that it was prepared to press similar actions against the steel industry and others using this system of pricing. Within three months practically all steel producers had changed to an f.o.b. mill pricing system.

Steel consumers were thrown into a state of confusion as to their costs, which became more dependent on the locations of their plants and those of their steel suppliers. Many gave serious consideration to the advantages of moving fabricating plants to centers of heavy steel production, such as Pittsburgh, to reduce freight costs. Considerable pressure was brought to bear on Congress by consumers to legalize the multiple basing point system, and a Senate subcommittee on trade practices conducted extended hearings. The sentiment of steel consumers at the hearings and in a survey conducted by The Iron Age was overwhelmingly in favor of the restoration of basing point pricing.

Prices of steel products were advanced during the year as the result of higher wages and other costs. The Iron Age weighted composite price for finished steel advanced from 3.19541 cents per lb. at the end of 1947 to 3.75628 cents per lb. at the end of 1948. This index does not, however, reflect increases made in extra charges. The Iron Age composite price of pig iron increased during the year to \$46.82 per gross ton, from a price of \$38.39. Prices of Lake Superior iron ores were advanced 65 cents a gross ton on April 1. The Iron Age composite price for heavy melting scrap reached a peak of \$43.16 a gross ton in July. Scrap prices weakened toward the end of the year and the composite closed at \$43.00, a net increase of \$3.00 during the year.

Demand for steel products was overwhelmingly beyond the record steel production rates. Gray market steel sales flourished at prices more than \$200 a ton above the mill price level. Such transactions, fed by imported steel products and disposals of unbalanced inventories, represented a very small proportion of total steel shipments. Conversion deals were common, particularly for the automobile industry. The steel consumer would have ingots produced for him, usually at a steel castings plant, to be converted into semi-finished form at a second plant. The final conversion into finished steel products was generally done at a third plant. Freight costs and conversion charges built up the cost of conversion steel to close to that of gray market steel. There was also a wave

of purchases of non-integrated steel plants by large steel consumers or groups of consumers in order to assure their source of supply.

Steel producers attempted to assure equitable distribution of their available tonnages to their customers. But such tonnages were cut down by a voluntary allocations program that earmarked specified tonnages of many steel products for approved consuming industries. The program was worked out jointly by the members of the steel industry in cooperation with the Office of Industry Cooperation of the Department of Commerce. Programs in effect at the end of the year required 476,422 tons of steel a month. Nearly 200,000 tons of plates per month are required, as well as heavy tonnages of structural shapes, hot-rolled bars, sheets and strip. Freight car construction and maintenance require 249,682 tons a month; the Armed Forces, 102,505 tons; tanker vessel construction, 40,380 tons; barges, 25,000 tons; tank and oil field machinery, 16,530 tons; Atomic Energy Commission, 16,414 tons; merchant vessels, 15,415 tons.

The many technical developments in the steel industry in 1948 were directed toward increased production rates, reduced operating costs, the improvement of quality, and new processing techniques. The possibility of future decentralization of the steel industry is promised by the first commercial use of the continuous casting of steel billets. This development is based on a technique by which the heat is cast directly into relatively small semi-finished sections, by-passing the ingot stage and making unnecessary the heavy expenditures for soaking pits, blooming mill, and ingot handling equipment.

The use of oxygen in steelmaking has grown rapidly in the last three years, but for some purposes it is still in the experimental stage. It has been used in conjunction with openhearth furnaces, electric furnaces, bessemer and sideblown converters, the foundry cupola, and most recently in the blast furnace.

The cold extrusion of steel has been developed for low and medium carbon grades and some low alloy grades. Significant cost reductions are possible with this technique as compared with conventional forging or machining methods.

In 1948, domestic steel producers were seriously concerned with the prospect of exhaustion of the high grade iron ore reserves of the Lake Superior region. Experts generally agree that the bulk of the open pit reserves of the Mesabi and other ranges will be used up by 1960. Construction of beneficiation plants has been started to handle the tremendous tonnages of the low grade taconite ores of the Lake Superior region. Producers are also studying the costs of opening up the large reserves of high grade ores in other parts of the Western Hemisphere. Bethlehem Steel Company will start shipping ore from Venezuela in 1949. The high grade ores of the Labrador-Quebec area are being developed jointly by Hollinger Consolidated Gold Mines, Ltd. and the M. A. Hanna Co. The Labrador-Quebec area and the rich reserves of Brazil in the Minas Geraes district require construction of railways through inaccessible country. The development of the St. Lawrence Seaway is considered essential by the industry to bring ore carriers close to the heart of the steelmaking centers. Iron ore costs will be increased considerably by the wide use of foreign ores and the need for beneficiating low grade domestic ores.

World steel ingot production reached a peacetime record in 1948 estimated at 168,812,000 net

tons (1947: 149,506,000 tons). World pig iron production is estimated at 120,650,000 net tons (1947: 106,288,000 tons). Practically all steel producing nations are working toward higher steel capacities. If presently contemplated programs are carried through, it is estimated that the steel ingot capacity of the world should be 200 million tons by 1952.

In the United Kingdom, nationalization of the steel industry in 1949 seems assured. Handicapped by shortages of coal and scrap, Britain produced approximately 16,500,000 net tons of ingots (1947: 14,246,000 net tons), larger production than any previous year. Present objectives call for production of 18 million tons by 1950. Expanded United Kingdom capacity is designed to serve the export steel market.

Steel production of the U.S.S.R. increased appreciably in 1948 due to restoration of steel plants destroyed by the war, construction of new facilities, better handling of raw materials, and higher labor productivity. Russian steel ingot production is estimated at 22,220,000 net tons (1947: 17,050,000 net tons), higher production than any previous year.

German steel production has been reduced to a shadow of its potential. The British zone which includes the Ruhr contains 75 percent of total capacity; the French zone which includes the Saar contains 12 percent; the Russian zone, 10 percent; and the U.S. zone, 3 percent. Russia has dismantled and shipped home practically all capacity in its zone. The United Kingdom plans to dismantle more than 9 million tons capacity, leaving a capacity in its zone of 10.3 million tons. The United States opposes further dismantling of German industrial capacity in the zones controlled by Britain and France, as well as its own. German production in 1948 was approximately 7,350,000 net tons, about 6 million tons from the British zone, 1.2 million tons from the French zone, and 300,000 tons from the U.S. zone. German steel production from these three zones in 1947 was 4,739,000 net tons.

French steel production has been handicapped by shortages of raw materials, strikes, unstable currency, and a poorly defined expansion and modernization program. Nevertheless steel production in France increased to approximately 7,368,000 net tons (1947: 6,338,000 net tons).

—JOHN ANTHONY

ISLAM. Islamdom embraces those areas of the earth where Islam is the religious and social way of life of the majority, or a large minority, of the inhabitants. During 1948 these Islamic peoples experienced turmoil, upheaval, repression, and some successes in international relationships.

In Morocco agitators demanded independence from France, which promised reforms, and from Spain, which responded with suppression. Algerians received greater legislative representation. In Tunisia discord continued. France still hoped to assimilate Northern Africa to make a France Major, but found the forcing process unsuccessful.

The future of Libya, ruled formerly by Italy, at the end of 1948 still awaited decision by the United Nations.

Egypt is not Islamdom's greatest nation in size, power or population. Nevertheless Egypt accepted leadership in the seven-nation Arab League to promote common interests.

The other League nations are Syria, Iraq, Transjordan, Saudi Arabia, Yemen, and Lebanon, the only one with a non-Muslim majority. A political change occurred when the Imam Yahya, Yemen's

king and religious leader for 43 years, was assassinated on February 17 with three of his sons. Another son, Sayf al Islam Ahmad, now rules the only Muslim state where one person exercises religious and temporal power.

Since 1923 Turkey has been a laic, or secular republic. Its Turkish citizens remained Muslim. Only in Istanbul are Armenians and Greeks numerous. The separation of government and religion is official, but the state maintains control of all religious activities. Turkey still belongs to Islamdom, just as France is within Christendom.

Turkey and Iran experienced political pressure from Russia. They and Afghanistan are receiving economic and other aid from the United States.

Pakistan is an outstanding Islamic success. Its amazing birth in 1947 as one nation in two sections 1,000 miles apart was accompanied by calamitous uprooting, expulsion, and influx of Sikhs, Hindus and Muslims, threatening ruin to the infant state.

In the Netherlands East Indies the Muslim nationalist movement was too limited in number and area for lasting success. Most Indonesians placed more hope in Holland than in an independent republic. See ARAB LEAGUE AFFAIRS; INDIA, UNION OF; ISRAEL; PAKISTAN; PALESTINE.

—EDWIN E. CALVERLEY

ISRAEL. The Zionist state of Israel (see ARAB LEAGUE AFFAIRS, PALESTINE) was proclaimed in Palestine immediately following the end of the British mandate, 6 months after the United Nations partition decision and 31 years after Great Britain's Balfour Declaration favoring a "national home for the Jewish people . . . it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country." The Zionists held that since any UN General Assembly vote was binding, the Israeli state was properly authorized.

A 13-man Provisional Council was set up with David Ben Gurion as Prime Minister and Defense Minister and Moshe Shertok as Minister of Foreign Affairs. Chaim Weizmann was elected the Council's President. Hagana became the national army and the first thousand of a series of immigrants were admitted on Israeli visas. The new state was immediately recognized by the United States and shortly thereafter by the Soviet Union. UN membership was applied for and Major Aubrey Eban was appointed Israeli representative to the UN. By November Bulgaria was the eighteenth country to recognize Israel.

While furious battles raged and involved UN negotiations proceeded, the Council organized the new state. The Finance Minister stated that Israel's revenue as of June 21 was more than £900,000 and that £3,500,000 of the £5,000,000 national loan was subscribed. A new currency was issued substituting the Israeli pound for the Palestinian pound (equivalent to sterling). In September an income tax bill was adopted, a Supreme Court established, and the port of Haifa handed to Israel by the British.

The government ruled in October that its proposed citizenship and election laws would apply to all permanently domiciled in any Palestine territory under Israeli Army control. Tariff rates of 15 to 45 percent on manufactured goods were levied, but none on capital goods, the demand for industrial equipment being unlimited. In the face of the spiraling cost of living (with 1939 as 100 it had risen from 274 in October, 1947, to 358 in Septem-

ber, 1948) the Economic Director announced that rationing might be extended from food and gas to other supplies.

The new constitution, released on December 11, established a sovereign, independent, democratic republic with a Chamber of Deputies elected by universal suffrage for 4-year terms. The Chamber elected the President for a 5-year term and he appointed the Executive Council consisting of the Prime Minister, leaders of Department of State, and the Ministers. Toward the year's end the many political parties were narrowed to about 12 in preparation for the first general election in January, 1949.

In December Israel's application for UN membership was considered, with American and Russian support assured. U.S. Security Council Representative Philip Jessup asserted that Israel met the four qualifications of a state: 1) There must be a people; 2) there must be a territory; 3) there must be a government; and 4) there must be a capacity to enter into relations with other states.

Throughout the year Israel faced an internal security problem vis-a-vis extremist groups unwilling to compromise. On May 15, both the Irgun Zvai Leumi and the Stern Gang declared their allegiance and theoretically became part of the national army. However, the first incident exploded over Irgun Zvai Leumi's attempt to land men and ammunition in violation of the UN truce to which the Israeli government had agreed. Angered by government arrests, Irgun leader Menahin Beigin ordered his men not to take the Israeli oath of allegiance. Nevertheless, the Council received a 24-7 vote of confidence on the government's decisive action.

Then came the assassination of UN Mediator Count Bernadotte by unknown terrorists. The government ordered a full search, arresting 200 suspects, and the Council voted unanimously for more severe penalties for membership in outlawed organizations. In reply to a government ultimatum Irgun Zvai Leumi officially disbanded, the Stern Gang announced its dissolution as a separate unit, and its newspaper was closed. Yet in October copies of a Stern Gang paper appeared assuming responsibility for Bernadotte's death and threatening "all other foreigners" who impeded Israelis. In December the trial of the Gang's leader was started.

—DOROTHEA SEELYE FRANCK

ITALIAN LITERATURE. The Italian literary season of 1948 fell into a more normal, if limited, productivity, due partly to the continued lack of printing facilities, and to the scarcity of paper and materials. Beset by these difficulties, Italian publishers smarted under their helplessness to bring the Italian press back to the seniorial and esthetic place it formerly occupied on the international horizon.

Financial difficulties continued to make inroads on the quality of format, illustration, and type-setting, etc. And, to some extent, these difficulties, greatly limited the quantity of books by new authors. This curtailment of production was perhaps for the best, since in retrospect, the previous season (1947) was not one desirable of continuation; with its tendencies toward decadence, amorality, and repulsive realism.

Hence, if the 1948 season was not punctuated with great creations, it was marked by contrast, with an obvious groping for more normal and spiritual attitudes toward life in an Italy still beset by so much misery and abject poverty. Literature reflected perforce, here and there, a benign resigna-

tion during a trying and indecisive moment in the destiny of the Italian people. Once again, literary creation occupied a minor premise on the Italian horizon, yielding a place of major importance to history and politics. Let it be recalled that the victory of the Christian Democrats over the Social Communists and the jostling about of national politics and aspirations relegated all other cultural activities into a remote and humble background.

Drama. The Italian theater lagged far behind the other arts this past season. It was hindered by seemingly unsurmountable obstacles and difficulties, and of course, by the perennial problem of costs of production and the poverty of the stock companies. More than in any other art, the post-war years in the theater have been significant for psychological shifting and readjustments.

Small wonder then, that there should be such paucity of native creations and native productions. Under such conditions chances for successfully producing any plays in Italy were so slim that directors rather took to producing well-known foreign plays, than to gamble with the limited funds on hand. Thus if there was a preponderance of foreign plays, Italy did not show any particular preference for French plays as against English plays or American plays. As much enthusiasm was shown for Sartre as for Saroyan or other well-known names on the international horizon. However, if this can be of any consolation to our Italian dramatists, one can point out that there has always existed a theater crisis in Italy and for that matter all over the world.

Even during the heyday that witnessed so many extraordinary plays by Pirandello and D'Annunzio the familiar cry was "crisis" in the theater. One must bear in mind that Italy was left a defeated nation, bereft of resources and a will of its own. Hence, when we speak of psychological readjustment, we must understand that it is synonymous with gathering strength, fortitude, perseverance for some sort of renaissance in which the Italian theater will, as in the other arts, emerge fruitful, original, and vital. Pirandello made certain philosophic innovations in the theater. The futuristic movement started in Italy as did the "Mask and the Face" movement, and once again, with so splendid a heritage, young dramatists need not despair but should point doggedly toward their work and the future.

Periodical Literature. Noteworthy was the continuation of the magazine literature among which *Martedì (Tuesday)*, a new weekly was launched, by Bompiani, Milan editor. The weekly carries instalments of great books of the world; bringing reading within the possibility of everyone, at a nominal cost. The very reliable and efficient "ICS" (*Italia Che Scrive*) launched some 31 years ago by the enterprising editor, Formigini, continued its regular issues with sharp critical evaluations of almost everything published in Italy. *La Rassegna d'Italia* (Gentile, Milan) of which the notable critic, Francesco Flora is managing editor, went into its third year of publication. It is a scholarly and serious literary review with facsimiles of unpublished letters and source material. It carries splendid reproductions of contemporary artists, and in general treats of the varied arts and culture.

It is also of interest to note the continuation of *Italy's Life*, a bi-monthly, published in Milan. This magazine is printed in English with occasional Italian articles and notes. As a feature, it presents beautiful reproduction of art masterpieces and unusual photographic plates of the Italian panorama. One noted less typographical errors in recent is-

sues, but it is to be hoped that the quality of English used will improve as well. Aldo Garzanti, the energetic publisher of Milan, launched *La Piccola Illustrazione Italiana* in a small format, fashioned after the famous *Illustrazione Italiana*. Garzanti's new venture appears monthly. In miniature, it presents all the features of the older and larger review from which it takes its name.

Fiction. The literary prize "Ines Fila," was awarded to Marino Moretti for his *Il Fiocco Verde* (Mondadori, Milan). The novel depicts the life of an ecclesiastic and his household, composed chiefly of women. Narrated with restraint and reflectiveness, the novel is in contrast with some of the realistic prose which permeated Italian writing of a year ago.

Giuseppe Berto whose *The Sky Is Red* was translated by New Directions in America, received the "Firenze" prize for his new novel, *Le opere di Dio* (Macchia, Rome). It depicts the misery of a peasant family of five caught between the struggle of two armies. Again, Berto showed unusual talent in style and narrative, and the tragic end that befalls the family is poignantly and masterfully handled.
